1459825606-42784941-1c9e-4f74-ba9f-b5c57ceedd0d

A monobloc piston assembly has at least two parts fixedly joined together forming a piston body having an oil cooling gallery. The extended conjugation of the phthalocyanine dye includes at least one benzene moiety of the component being one of joined to an aryl group either indirectly using an alkylene linkage or directly, joined to a benzene moiety of another of the components to form an oligomer of the components, and a combination of and. After the cleaning step, the surface is exposed to a strong gaseous oxidant, preferably hydrogen peroxide vapor. Initially, while the output of the proton exchange membrane rises to a predetermined level, power is supplied by the AC power source to the rectifiers and from the rectifiers to the capacitors and the telecommunications facility. The method includes the steps of first forming a first tensile dielectric layer on a substrate, and then forming a second tensile dielectric layer on the first tensile dielectric layer.

1459825607-48a4865b-a1ce-4f1e-ae25-dc23b938fdc7

An input display apparatus includes the following elements. The process includes solutions of one or more metal precursor and soluble polymers having binding properties for the one or more metal precursor. The RAS server can also receive an IP packet and convert the IP packet to an AAL2 CPS cell, to be transported to the IAD. In this way, the collected thermal energy is transformed into electrical energy for powering the dispensing system. The first range is less than the second range, in various embodiments.

1459825607-520e23a6-4f96-45c6-8786-11c2b8f85521

This invention relates to a process for reducing the level of pollutants in the exhaust of a diesel engine, comprising: operating said diesel engine using as the fuel a water-diesel fuel emulsion; and contacting the exhaust gas from said diesel engine with an oxidation catalyst. In such a single-lever mixing valve, increased hygiene and an improved visual impression are achieved in a simple construction by the pins being rotatably mounted about a rotation axis which is in alignment with the pivot axis of the actuating shank. Only when the safety locking member is actually moved to the unlocking position, the trigger can be depressed to cause the valve assembly to open to release fuel at the outlet port of the nozzle portion and also cause the piezo-electric ignitor unit to generate electrical sparks at the outlet port of the nozzle portion, to thereby produce a flame. An air moving device passes air through the enclosure from the ducts if the cover is an intake cover, and/or into the ducts if the cover is an exhaust cover.

1459825607-bdf650a5-f178-41b2-b584-fdf2d086eab8

Described herein are methods of remodeling the base of a ventricle. The pilot fuel circuit is in close proximity to the main fuel circuit enroute to the pilot fuel atomizer so that the pilot fuel flow cools stagnant fuel located within the main fuel circuit during low engine power operation to prevent coking. The device further includes an electronic control unit configured to activate the ozone generator to produce a comparatively large amount of ozone sufficient to disinfect the evaporator.

1459825608-4d3e6792-3bc8-45a8-b022-80a000973d1e

A mobile station downloading an object over a broadcast channel uses a repair service to obtain data that was received in error during the original broadcast. In one aspect, the inflator includes a longitudinal enclosure having a substantially uniform cross-sectional area along at least a portion of the enclosure, and a gas generant composition positioned along the portion of the enclosure. The transmitting portion and the non-transmitting portion of the photomask each has a reflectivity of energy beam of 30% or less in at least one surface facing the magnetic recording medium. A method for transporting and dispensing a beverage is also disclosed. The invention also provides pharmaceutically acceptable compositions comprising said compounds and methods of using the compositions in the treatment of various disease, conditions, or disorders. The sensors are thus

capable of adopting any relative separation with adjustment operations that are extremely quick and simple, by simply releasing and again locking, while the height of said sensors can also be adjusted by loosening and tightening the clips.

1459825609-121ac3af-d329-4742-bdd8-468b13f1be67

A torque control system for an engine includes a throttle plate having an adjustable throttle position to regulate a first mass air flow into the engine. The sheet stacking portion stacks sequentially discharged sheets. The ruthenium complex reduces enamide to the corresponding amine with up to 99% enantioselectivity. The conductive body has an anchor portion filling the contact receiving cavity and the access hole and connecting electrically with the bonding pad. Preferably, electrical connection between the inner terminal and the wire is tested after the step of removing the inner terminal and the wire from the bath of the molten solder.

1459825609-5a7efc84-fb94-4711-be85-df1e218111e9

An electrical card connector is provided for accommodating various electrical cards. Methods for polishing wafers are also provided. In one embodiment of the method, the oligonucleotides are attached to nanoparticles and have sequences complementary to portions of the sequence of the nucleic acid. Methods and systems are provided to allow multicast packets originating behind the virtual routing bridge to be properly handled to comply with reverse path forwarding.

1459825609-9945fa24-9fc3-4a45-96a5-77197a3a3d68

A rule management system and methods are disclosed. The tuning material and the amplifying material are placed parallel to one another. A detector measures the changes in the flow rate.

1459825610-4d8b2079-3fd4-4186-b12c-c4d5507510f6

A virtual cash system, method, and apparatus has an account record containing a record of money amounts associated with a wireless device and a transmitter for wirelessly transmitting to the wireless device predetermined information from the account record. The method receives a first subset of the set of inputs from the first controller. Based on the specification and the display data, hardware is selected or configured.

1459825610-815fd125-bb11-4577-9e4f-14a8648a6738

A pharmaceutical or medicinal preparation comprising a mixture of herbs including Glycine max, Coleus forskohlii, Camellia sinensis, Allium sativum, Withania somnifera, Boerhavia diffusa, and Curcuma longa, or a mixture of the active ingredients that have been extracted from those herbs. At least one of the capacitance line and the counter voltage line is connected to the interconnection layer between the driver circuit and the pixel. The embedded power bus bar structure has a predefined pattern within a selected area of the stiffener. Thus, if the lamp is configured for a bulb that utilizes AC current, the pin configuration of the receptacle and an AC power cord supply AC current directly to the bulb or a ballast.

1459825610-f6c3709b-c0ab-46ab-8379-ace8da34e3ad

A fiber optic cable includes an optical fiber, strength components disposed on opposite sides of the optical fiber, and a polymeric cable jacket. The rear hood includes a pivot device disposed in an upper front end region thereof and having a pivot axis extending transversely of a vehicle body. Front and back neck connectors are positioned along front and back areas of the collar, both intersecting with left and right shoulder connectors that are attached the shirt's left and right shoulders, respectively, where the front and back pieces of the shirt meet. Partitioning schemes for the current data records in the 2D space are generated. The back-end processing operation is selected from one of the following options: decorrelation, channel estimation, equalization per user, and decoding per user;

channel estimation, equalization, and decoding per user; decorrelation plus maximum likelihood detection per user; and, ML detection over all users. The solid-state image sensor prevents deterioration in MTF which is caused by floating electric charges being trapped in a potential well in a photoelectric transfer section.

1459825611-22cd54ea-e79e-4984-b54b-ba392b4f2fef

A substrate protected by a polymeric lining wherein passageways are provided between the lining and the substrate for channeling of fluids which may penetrate through the lining to the substrate surface. The apparatus is configured to receive a first job request from the computing device to be performed by the peripheral device and transmit the first job request to the peripheral device. In accordance with the present invention, the carbon nanotubes can be attracted to the self-assembled monolayers so as to be attached to the metal oxide surface, or they can be repelled by the self-assembled monolayers bonding to a predetermined surface other than the metal oxide surface containing the self-assembled monolayers. The profiling sessions and the debugging sessions are simultaneously performed via the integrated infrastructure.

1459825611-52674181-bc9f-44e2-9074-092d032319d8

When it is determined that a touch position by a user has shifted on a scroll image display region in a direction different from a first direction, a scroll target image is scrolled and displayed in the first direction. The gas turbine combustor incorporates a unique flow sleeve configuration for directing air to more effectively cool a combustion liner. However, when wetted, the fibers will start to be dissolved, or swell, and the different contents will be released and then interact.

1459825611-be3b159d-685b-4edb-96ef-c3cbfd22cd80

An ink cartridge includes a flexible bag filled with a liquid ink, and a cartridge housing that holds the bag. The data export is accomplished by first reading a time file to determine the last date and time that data was successfully exported to the destination database. Where the population of cells includes diseased cells and healthy cells, the images can be separated into a healthy subpopulation, and a diseased subpopulation.

1459825611-e00cf172-7ed2-4c49-a361-2e5a0ec0cbff

Embodiments of the present invention describe a method of fabricating a III-V quantum well transistor with low current leakage and high on-to-off current ratio. In one aspect, a downhole tool includes a body, and a mandrel disposed in the body and movable in relation to the body. Mobile terminals 7 listen to the broadcast channel, either when registering with the network or subsequently thereto, to determine the routing prefix. An inner surface of the light shield is made as a diffusion surface for evenly diffusing lights inside the light shield, by which a homogeneous line light source for the scanning process is formed at the long slot of the light shield.

1459825612-7080924a-140d-41a2-82d3-ce901d199bba

Improved techniques that facilitate the use of podcasts are disclosed. Movement of the stitch is repeated until the position of the stitch is converged. A current sensor monitors an input current and generates a current sense signal responsive thereto. The optical element includes an input surface for receiving light from the color-corrected light source and an output surface for emitting the received light in a desired emission pattern. The reception state evaluation unit determining the level of the reception condition based on the number of positioning information satellites from which satellite signals are received and the signal level of each received signal, and the display controller displaying the reception level output by the reception state evaluation unit on the reception state display device.

1459825612-94d16908-26e8-4356-81f1-559774b1e8a0

The invention provides, in one embodiment, a method for accessing an operative space within a patient. A series of rare-earth doped silicon and/or silicon carbide nanocrystals that are either combined in a single layer or in individual layers that produce the required Red, Green, and Blue emission to form a white light. Specifically, each sensor set is configured to detect electromagnetic radiation from a one of a plurality of point sources, where each of the plurality of point sources emits electromagnetic radiation of a different frequency. The script program is a computer-executable patient protocol that provides information to the patient about the patient's health condition and that interactively monitors the patient health condition by asking the patient questions and by receiving answers to those questions.

1459825613-5f9c4ec3-d0c6-4fe4-af08-b4f3b9ecac4c

A method for treating a disorder of a patient. The apparatus includes a housing that is configured such that a device may be fitted within the housing and thereby be protected, such as from shocks and/or liquid. The grouping of cells is performed differently for even and odd frames such that, in one type of frame, locations of two or three cells grouped into each group are shifted by one cell, in the direction crossing the electrode pairs, from the locations of cells grouped together in the other type of frame. If the CPE is adapted for call monitoring and includes a speaker assembly, then the speaker assembly is engaged in response to the activate call monitoring data message, thereby allowing hands-free call monitoring. The engaging part is provided for adapting drivingly to engage in a concave-convex manner. More particularly, the present invention provides a method for fabricating semiconductor devices, for example, transistors, which include a hardened gate oxide and which may be characterized by a relatively large nitrogen concentration at the polysilicon/gate oxide interface and a relatively small nitrogen concentration within the gate oxide and at the gate oxide/substrate interface.

1459825613-a89d30eb-3229-4f08-92db-98fdf02655a8

Methods and apparatus in a near-field communication system, in which a modulated signal received in a Reader is clipped by applying upper and lower clip levels. Optionally, an undercoat layer is printed on the substrate prior to applying the first ink jet ink. The two undulated contours 10, 14 do not run equidistant relative to each other. There is further provided a stock having a bedding portion that includes a surface forming a channel in the bedding block.

1459825614-20da3e6a-639c-4bd5-aefc-e1f84ed2ba0d

A method for forming masks for manufacturing a circuit includes providing a design of the circuit, wherein the circuit comprises a device; performing a first logic operation to determine a first region for forming a first feature of the device; and performing a second logic operation to expand the first feature to a second region greater than the first region. According to one aspect, the method comprises processing at a callee mobile switching center associated with a callee device an initial address message received from a caller mobile switching center associated with a caller device. A first telemetry transceiver excites the primary conductors using a second propagation mode orthogonal to the first mode. A side wager hand consists of the at least one 2-card hand dealt to that player and the dealer's face-up card. With the purpose of obtaining a high and good admixing capacity and avoiding the generation of noise, the admixing of the second fluid is effected in the end of a pipe, which pipe has an increase in area of at least 50%, directly after the admixing, viewed in the direction of flow of the second fluid. The process to produce the aromatized particles is also set forth.

1459825614-a4574694-3d17-43a5-9fcd-e8a7b2a81df8

A system is described that includes a power conversion module, a data port, a controller to receive data from the data port, and a data store containing instructions that when executed by the controller perform operations to control the

power conversion module. The latch may have a feedback circuit to generate feedback information based on at least the output information. The device also includes a device for engaging the dispenser such that the blade control is moved upwardly in relation to the dispenser frame to open said capture blades. Battery post extensions couple the battery test module to terminals of the battery. The plug is affixed to an actuator rod which transverses the body of the valve assembly.

1459825615-bd5943e5-fe4f-45fe-ba53-fbada85eff28

An exemplary constant velocity joint includes a first member and a second member rotatably engaging the first member. A cap for the container may include a valve to control product leakage, and may be sized to allow inversion of the bottle. The cutting teeth are juxtaposed with one another on the longitudinal axis.

1459825616-f4848410-cef9-4ea8-a493-2223caf3da11

The present invention describes a method including providing a substrate; forming a photoresist on the substrate; performing a post-apply bake on the photoresist; exposing the photoresist to actinic radiation; performing a post-exposure bake on the photoresist; developing the photoresist; and performing electron exposure on the photoresist to reduce line edge roughness. The actuator includes a field structure assembly having an arrangement of permanent magnets and magnetically soft components, and a moving coil assembly. An output signal from the differential output driver circuit is transmitted through the first and second signal lines. They are fit for being the robot control units with the relevant robot applications installed. 5; adding a biocide in reduced amount; and adding a scale inhibitor to inhibit scale. When a cell within a certain NAND stack is selected for a read operation, a peripheral circuit drives selected gate word line to the well potential and drives the word lines of the other gates within the selected NAND stack to a potential at least equal in magnitude to the magnitude of the a reference voltage plus the threshold voltage of a memory cell in the programmed state.

1459825711-95cfda09-ee31-422d-896d-9bc55d18fde7

A distribution control system control module for a transformer in nuclear power engineering, includes: an input command processing logic unit, a malfunction processing logic unit, a state processing logic unit, an output command generating logic unit and a 6. In another aspect of the invention there is provided a method of depositing a nanomaterial onto a substrate. The method of the present invention has such advantages that reaction runaway does not occur, the control of molecular weight and conversion rate is possible even at low exothermic temperature, and a partially polymerized acryl syrup can also be prepared therefrom. The rail is mounted to be rotated about the optical axis of the antenna, this giving a simple adjustment of the other horns. The feedback unit can be programmed for different biopsy procedures so that the user can actuate a button to select a display or other feedback mechanism for the desired procedure and anticipated tissue to be encountered. The memory is configured to store a first electrocardiogram measurement.

1459825712-3def8c1d-b80b-4c9b-9954-2b8a95336873

A system and method of establishing and simplifying peer-to-peer networking connections among a plurality of computers and devices, whereby network connections may be established whether firewalls, network address translators, or any combination thereof, are present or not. The image data creating step creates the image data on each of the plurality of color inks so that the rate of areas in which all the plurality of color inks are applied, in the black image area, is higher than that of areas to which only some of the plurality of color inks are applied. The identity and concentration of contaminants in a bulk material can also be determined.

1459825712-b11d64c8-49ca-4448-be9c-d076424daca

An apparatus for retaining a heater on an injection molding nozzle comprises a retaining body configured to fit around the injection molding nozzle. In the case with the anti-vibration adapter being attached to the lens supporter, the camera is firstly supported at a camera supporting part formed at the lens supporter through a pedestal adapter, and a screw of the lens supporter is fastened to a nut part of the anti-vibration adapter to support the anti-vibration adapter on the lens supporter. The light-absorbing material and the outer surface of the cladding layer have indices of refraction that are matched, or very close to one another, such that any modes of light that are propagating in the cladding layer that impinge on the interface propagate into the light-absorbing material and are absorbed thereby. A relative difference is determined between the background of subsequent spectral data sets is determined and compared to a predetermined threshold value. Further, the locking cap has a slotted bushing that is positionable in the elongated slot of a rod connector member.

1459825712-fbd622b0-8654-4c46-9919-7ec64e306ae4

A semiconductor device comprising a semiconductor substrate having source and drain regions located in the semiconductor substrate and having similar doping profiles, wherein a channel region extends from the source region to the drain region. A plurality of drive magnets are movably positioned generally adjacent to the rotor magnets. The mobile device may be enabled with a cellular voice and data communication, WiFi connectivity, Bluetooth connectivity, and Internet Protocol connectivity.

1459825713-2a1aafd6-2dc2-40dc-8b58-34c6e8d110b2

Object To discharge printed paper to a different position on a single discharge tray by providing a changing means for changing a discharge direction of paper conveyed and discharged from a paper discharge part. A stream enabled application executing in a virtual execution environment may use the blocks when needed. In another embodiment, half of the coupled sectorial loop antenna is electrically coupled to a ground plane, where the antenna includes one pie-slice shaped sector and two arches. The actuator transfers an actuation force to the head restraint portion for initiating movement of the head restraint portion from the rearward position to the forward position. The control circuit may control the intensity of the lighting load by pulse width modulating the load current when the target intensity is above a predetermined threshold and control the intensity of the lighting load by pulse frequency modulating the load current when the target intensity is below the predetermined threshold.

1459825713-c9827ccf-48d6-4b37-ab97-b716a7ea7a53

A vehicle headrest apparatus has a headrest unit mounted to an upper end of a seatback. By opening and then closing, or opening and then moving the axial members, the user can fit or remove them into or from the fitting holes, respectively, so as to mount or demount the cabinet to or from the supporting base. Update engines are used in conjunction with policy files so that the product's versions and updates on the client computing devices are consistent with each other and with the main development environment as represented by a main policy file. The rotor of an existing generator is mounted on the joined shaft. The layer comes in close contact with the nail and optionally with the surrounding skin.

1459825714-093e7599-1ce6-411d-b664-63322d954352

An impact absorbing unit for a vehicle which is subjected to an axial compressive force from the impact in the event of a traffic collision, which includes a columnar piece of wood and a metallic housing covering lateral faces of the piece of wood. The user-provided specification may identify mandatory data elements along with data elements to be tested. In a further aspect, the enhancements relate to conflict handling with a CSG cell priority. The region of the semiconductor substrate may comprise CMOS sensors, and one or both of filter material and microlens material may be formed within the opening. When the adjusting button is

depressed and moved to a rear or a front end of the guide slot, the internal sleeve is held in place to retract or extend the ink cartridge, respectively, and the rear casing may be pushed toward or away from the front casing to shorten or increase an overall length of the pen. The dry powder formulation has a single active pharmaceutical compound having two major populations in particle size distribution: microfine particles of the active pharmaceutical, of 1-10 microns in diameter, and larger carrier particles, also of the active pharmaceutical compound.

1459825714-55029575-d7fe-4107-b19a-c5dbd3749ddf

In accordance with the present disclosure, a system and method for transmitting communications over a transmission medium between a first component and a second component is provided. The provision of a setting device, which is connected to the reference input and is used to determine an envelope of an amplitude-modulated signal at the input is furthermore expedient. The pivotal attachment of the brackets to one of the stringers and the unattached stringer is moved into contact with the other stringer at mating faces. The single chip 2N OXC may also include a lid overlying and spaced away from the substrate to provide a hermetically sealed package. A release is used to move the reel from the first axial position to the second axial position.

1459825714-a32e00bd-8050-419c-9ae3-dc5a146b149c

The present invention provides a circuit board structure having an embedded capacitor and a method for fabricating the same. The solution involves the incorporation of a manual interlock switch that blocks activation of certain functions during times when such activation would be hazardous and when no properly authorized person has authorized such activation. The system and method significantly lowers the power consumption of the switched capacitor circuit, while overcoming the main issues related to dynamic current biasing in an Op-amp, common-mode feedback interaction, using architecture other than the standard differential input stage of a normal Op-amp. As a result, the process is simplified and a photoresist tail phenomenon does not occur.

1459825715-b5b01380-3c0b-42c7-8606-179ebcc8cea3

The present invention is a hollow article with an integral impact absorbing rib and the method of manufacturing the same. The system also routes an incoming call to a device associated with an enterprise communication network to a plurality of telephony devices including wireless devices and other remote devices. This protective layer is especially effective during the development and resist stripping stages of photolithography which use solutions or solvents that would otherwise cause reductive corrosion of ITO in contact with aluminum. Transition from the traffic state to the AH state may be initiated after a brief period of inactivity on the reverse link.

1459825716-38b780be-6528-4a56-bb6c-b63e17c5b871

An ink jet printing apparatus and a print position adjusting method capable of easily adjusting a relative print position between nozzle lines are provided. In one embodiment, an apparatus includes a data storage unit to store and synchronize a plurality of data line signals with a clock signal. For application in the field of dermatology and nutrition, and, in particular, in the photoprotection of the skin and mucosa, photo-ageing and photocarcinogenesis, including protection of the immune system associated with the skin.

1459825716-92a65e9c-feae-4cbc-b74f-654fd0e02217

Provided is a power supply system including a crane and a power supply truck. The copolymer composition includes a copolymer of 51% to 99. In this manner, one or more embodiments of the invention disclose systems for simplifying and reducing costs associated with upgrading conventional older technology HVAC systems to accommodate modern thermostat technologies. Dummy registry keys are created that are typically used by a debugger to make it appear as if a debugger is present

within the operating system of the user computer. Methods of treatment of diseases such as cancer and diseases caused by pathogenic microorganisms is provide using the composition. In the server apparatus, installing of a plug-in file in a first storage apparatus is detected, binary image data of the detected plug-in file are written to a first storage area, and the binary image data of the plug-in file is copied to the client apparatus.

1459825716-9d5b39fc-d53e-4ae0-a210-8d16f8b34c76

An integrated connection assembly for a global positioning satellite receiver and a personal digital assistance device or cellular phone. Features of the obesity treatment devices include insertion of said devices transorally and without invasive surgery, without associated patient risks of invasive surgery, and without substantial patient discomfort. The passages are arranged in a spiral form in a manner such that a heating wall is provided between the passages. The propellant tape is advanced, carrying another propellant target into the ignition chamber.

1459825717-1b7360f0-a304-486b-8a28-aa8d3538564f

A first printing device forms position alignment marks on a front surface of a web in addition to front-surface images. The coding pattern comprises a plurality of target elements defining a target grid. Both the message and the setting regarding a language setting among the settable items are expressed in the English language and stored. \u2018Top Shelf\u2019 ripens mid-season, and holds up well in storage trials.

1459825717-494b027b-5801-45b9-b1d6-0c0979867ab9

A first motor-actuated expansion valve and a second motor-actuated expansion valve which are connected in parallel with each other in back-to-back connection are provided between an outdoor heat exchanger and an indoor heat exchanger. The network elements include interface devices that are coupled to corresponding stimulus devices. The source substrate includes a front face and a zone of weakness below the front face that defines the useful layer, and the useful layer is sufficiently thick to withstand heat treatments without forming defects therein so that it can be reduced in thickness to form the ultrathin layer. Alternatively, the isolated DNA sequences which encode these proteins can be incorporated into nucleic acid constructs which could be utilized as DNA vaccines.

1459825718-acd988aa-713e-4596-bc67-0fd373544416

The invention provides a comprising one or more ethylene interpolymers, and wherein the interpolymers, or the composition, has a melt viscosity from 1 to 30,000 cP at 177\xb0 C. The control coefficient computing part identifies, as a first vehicle speed, the speed of the vehicle when the detection part detects a start signal for regeneration control, the control coefficient computing part assigning a prescribed value to a control coefficient that determines a value of a control parameter that controls the motor relative to a target value of the control parameter. The handle can be held on the left side by a left hand, on the right side by a right hand, or in the front by either hand. A precautionary action system installed in a vehicle uses this database, or a database derived therefrom, in combination with a positioning system to determine when the vehicle is at a location that corresponds to the location of a precautionary action. Functional separation also allows either a modem's control or data pump operations to be repaired or upgraded independently of one another. A distinction necessity determination apparatus 10 for determining whether or not to perform a distinction of an electroencephalogram signal in an electroencephalogram interface system 1 includes a frequency analysis section 11 for calculating a representative frequency at which frequency power of the electroencephalogram signal becomes maximal, and a determination section 12.

1459825718-bfc3e56d-b88f-4289-b3f2-c1987b6b7707

A line dispenser for a retractable fence which includes a housing for holding a spool of line, the housing having a hole for communicating the line outside the

housing; a crank for rotating the spool to bring the line into the housing through the hole; and a tube located within the hole. The device includes nanowires embedded in a material that exhibits a deformation when properly addressed, e. The selection may include a song, a piece of music, a picture, a video, a film, or a TV program. The conductive pin is configured to insertably connect to a second electronic device. By supporting arbitrary phase resynchronization, this disclosure allows for theoretically infinite bus-length and thus no limitation on device count, as well as arbitrary placement of devices along the bus. The holder is readily adjustments to accommodate samples of various sizes, such as cylindrical shaped samples of various diameters.

1459825718-d434f447-2795-43e6-b6e2-6270cb53ff5e

A monolithic surface mountable monopole antenna. A coupling coefficient of the waveguide structure is gradually increased from the front side of the waveguide structure to the rear side of the waveguide structure. A controller, mounted to the vehicle, determines future environment in the field, makes an operator response plan in response to the determined future environment to determine command, and generates the command.

1459825719-bc7fdb48-c3eb-42a9-a324-1fe767327e3a

The present invention relates to a cache flush system and the method for a cache flush performed in cache memory against at least one corresponding prescribed event in a multi-processor system. The goggles comprise a goggles frame including a frame and a connecting section, a lens, a pair of head strap connecting means, and a head strap. The conditions can vary depending on the nature of the electronic device. These systems also provide significant processing advantages.

1459825720-86df713f-3418-4b35-a78f-6ed745f36cd5

A plasma display panel including a barrier rib for separating a discharge space thereof into a discharge cell unit and a method of fabricating the barrier rib. The structure is constituted by metal plates which are pre-cut so as to comprise complementary elements which can be fitted one inside the other, the plates being assembled so that the complementary elements of two adjacent plates are fitted one inside the other. It is applied to at least one surface of the molding. If the last data element should be located at the location of Px, then the last but one element is located and moved to the buffer. Feedbacks may be provided by the electronic device to the ultrasound power transmitter to increase power transmission efficiency. The display of the schedule is filtered to show only time segments which meet the criteria associated with the individual customer.

1459825720-dc494094-1fa3-4432-af49-eee22c4a0b47

A filter assembly for removing material that is entrained in a gas stream. In one embodiment the method includes, prior to performing a substrate processing operation, forming a layer of silicon over an interior surface of the substrate processing chamber as opposed to a layer of silicon oxide. The isoprenoid compound is contacted with an initiator an optionally with a catalyst.

1459825720-f85ccdae-0501-479d-a631-d5a333202c26

A manycore networks-on-chip formed by a plurality of clusters is provided. The removable front panel includes a plurality of manual controls operable to input instructions for a watering program, a memory operable to store the input instructions and a controller operable to execute the watering program. Where the rate of decrease of pressure is less than the given value, the motor is started when the pressure inside the tank has decreased to the motor restart pressure value. The synthetic fibers are heat shrunk and the laminate is binder free.

1459825721-f796c66b-25a1-41a3-8468-44fb99fce1fa

A card connector dampening assembly comprises a connector coupled to a printed circuit board and configured to receive an electronic card connected therewith and

a dampening member disposed at least partially between the printed circuit board and the electronic card. In the cooling device, a cooling plate is installed in the folder with a predetermined size, and a heat transfer element has one end connected to the cooling plate and the other end connected to a predetermined portion of a mainboard of the main body to transfer heat generated from the mainboard to the cooling plate. The second surface of each of the springs may include an attachment region and two contact regions. A separation metal pattern surrounds the lower electrode and connected to the second lower metal line. The absorbent material may be operable to absorb the liquid from the tissue site.

1459825722-9e4cf551-5c17-462c-897d-7b3b353d6aa1

A method is disclosed for creating an anchor within the gastrointestinal tract for supporting a barrier device therein. The circuit board has traces and mounting pads that are electrically connected to corresponding traces, and that are exposed within corresponding vias. At least the first signal transferring device between the drive spindle and the gear casing comprises a contact free transfer device.

1459825722-a585b7e8-1a36-4414-82e9-51ba251848eb

A multiple conversion tuner comprises a plurality of cascade-connected frequency changers, each of which comprises a mixer and a local oscillator. The method includes providing a support layer having one or more optical waveguides formed on the support layer, the waveguides having exposed interfaces. The existence of the stop code indicates that the system crashed during the previous session, and the type of system crash. The first sensor arrangement is configured to detect the speed of and/or distance to a part of an object located in front of the vehicle. A bubbly fluid producing device configured to produce a bubbly fluid containing a bubble with a desired bubble diameter, includes a first member configured to apply a shear to a bubbly fluid containing a bubble with a bubble diameter larger than a desired bubble diameter so as to produce a bubbly fluid containing a bubble with a desired bubble diameter.

1459825722-c72a17c5-db4b-4bce-9854-5c2f0b965a9d

A golf club head of this invention includes a face, a plurality of score line grooves formed on the face, and a plurality of striations formed on the face. At least one wireless terminal requests a multicast service corresponding to at least one requested layer. The first opening is disposed on a display surface of the housing, and the second opening is disposed on a rear surface of the housing. One or more of the materials forming the array is magnetic such that the magnetic group representation of the array does not include time inversion as a symmetric operator. The connecting members have first and second subsets arranged in first and second regions, respectively.

1459825722-c8447ed3-e466-4e2d-b007-65d08c7f54d1

A plurality of devices and a device system are disclosed, in which a plurality of input devices generate an input AV signal, a related device records and reproduces the AV signal, and a display device displays the AV signal. Such process provides good yields, even when a bulky group is present on the bisamine compound. The method continue with an implantation of the source region and the drain region with a lightly doped p-type sourcedrain implant, followed by an anneal to repair damage in the semiconductor substrate due to the pre-amorphizing implant and the lightly doped sourcedrain implantation. A determination is made that the difference between the power sensed with the first power pickup and the power sensed with the second power pickup exceeds a threshold. Once the quantized positions are determined, a rendering engine either renders the bitmaps for the glyphs, or retrieves cached versions of the bitmaps. The chip-card can then be used in a terminal in accordance with the specified release.

1459825723-14819e38-4c76-46f7-8f1a-9b084e1073f0

A method for controlling routing information for intellectual peripherals in a

subscriber-based ring-back-tone service. The front side lens unit includes a first lens unit located closest to the object side and having a positive refracting power and a second lens unit located on the image side of the first lens unit and having a negative refracting power. A delivery sensor is coupled to the controller to sense when the aid is delivered to a card destruction device. The video and the instructions can be transmitted to a receiving device, which can synthesize the model and the received video to generate a model-based video.

1459825723-5112ae4c-d7c9-4a24-8834-e00d26520645

Light apparatus particularly a headgear light comprising a light body removably securable to a headgear. The first voltage converter converts a direct current power voltage to a first pulse voltage. The BSF generates an authentication challenge and sends it to the MT under a server-authenticated public key mechanism. In addition, the invention relates to a reception device for a system for the transmission of a digital signal in inverse multiplexing, which carries out this method.

1459825723-6c9646b6-ed63-4daf-943c-ef33bcbeccd7

Disclosed is a traction device for detachable association with a motor bike for winter driving, the bike having a rear wheel assembly including an axle and a rubber tire supported by laterally spaced bike struts. By this, a flexible scheme to tailor the source size and radiation characteristic of an LED- or laser based system is provided. The method includes approaching a quasi-steady-state operating point of the friction clutch.

1459825723-da36df0e-18b1-42c5-a882-180729c8659d

A loudspeaker system has a loudspeaker housing that comprises at least a first and a second housing chamber. The precipitator includes a conduit for the passage of particles in an air flow and a generator of an electrostatic field substantially orthogonal to the air flow, and an ion supply, capable of charging the particles, in which the generator includes a point electrode and a two dimensional surface electrode. A printed circuit board interface electrically connects the power module to the control module, and a light source is electrically connected to the PCB interface.

1459825723-e216d867-b748-422f-90a9-2df39238bead

A system for regulating the flow of fluid through a progressing cavity motor includes an annulus restriction for restricting flow through the annulus passageway, and an annular biasing member for biasing the annular restriction toward a closed position. The gate electrode is separated and insulated from the cathode device. Each light detector generates an electrical signal in response to light. The pinning of the top self-pinned layer is enhanced by the layer of alpha-Fe2O3. The cantilevered portion configured to overlap a portion of the head suspension, such that movement of the head suspension toward the shock limiter due to impact or shock loading results in contact between the shock limiter and the overlapped portion, thereby arresting the movement of the head suspension.

1459825724-5f9cfa5c-f25d-4433-a9ba-73baf30d3fda

In a recording medium, the physical characteristic information of the recording medium, and more specifically, the configuration and the moment of inertia of the disc, is recorded. The method facilitates the task of checking the software system's conformity to design during development, testing, and maintenance. Each software component is associated with one or more meta descriptors. In this non-selective epitaxial growth, monosilane, hydrogen, diborane, and germane are used as source gases. Otherwise, the client computer may deem the file or data unit to be free of malicious code.

1459825724-9aa1402c-ae94-4a8b-80a2-82dabb1f41f6

A vent valve assembly includes a first housing component, a second housing

component, and a third housing component, as well as a first valve and a second valve. A substrate having a top surface is firstly provided. A second information layer is formed in accordance with the convexo-concave pattern. Both of a surface roughness value and a sub-surface scattering property of the material are estimated by calculations using the multiple speckle patterns and the incident angle for each such speckle pattern. This change in the optical property of the mark and the configuration of the control key data prevents further reading of the content data after predetermined reading and playback usage of at least some of the content data is permitted. By replacing data in the cache memory that might not be reused prior to replacing data that might be reused, the cache hit may be improved thereby improving performance.

1459825725-ba9c543f-dc01-4b6a-90e9-c3b0d782d04a

DC offset correction is provided with low frequency support. The core bay is in part bounded by the service plane and the rack interface plane. One embodiment of a method comprises the tracking of player game play in such a gaming environment using the portable transaction device or interface. A first convergently tapered portion formed at a tip end of the pipe is pressed against a first pressure bearing surface formed at one end of the sleeve to form a first seal. The material is suitable for use as dental materials.

1459825725-c22c7bf2-68d9-4382-8756-29b6d19f7a33

Level shifting circuits and a related method are disclosed herein. Identification information of each apparatus is acquired through network connection from a network configuration design supporting apparatus. The central office of the network is disposed between the at least one interexchange point of presence and the access loop. The estimation is based on a segmentation of the one or more projection images. The majority of the top surface of the support consists of one or more spill containment areas which are of a non-hydrophobic nature and which are bounded by the hydrophobic surfaces, such that spills on the shelving collect in the non-hydrophobic spill containment area or areas and are prevented from spreading by the hydrophobic surfaces. The subregions can be time offset by a predetermined time duration or by a random time duration.

1459825726-4d6766d1-6352-4987-8e70-f0b604e6e8a5

Integrated circuit device comprising a conductive layer and a poly-crystalline silicon layer, wherein the integrated circuit device further comprises an intermediate counter-stress layer. In a liquid crystal display apparatus in which a liquid crystal layer is aligned to be substantially vertical when no electric field is applied, the angle between polarizing axes of the pair of linear polarizers is  $85^\circ$  or larger and smaller than  $90^\circ$ . The snowmobile may also include an engine connected to the frame and operatively coupled to the track by a drivetrain. While periodic immersion of filter fiber in liquid might achieve appropriate particle removal for some applications, better cleaning is provided by creating a reverse flow of liquid through the filter material. If the effective unicast rate does not exceed the minimum data rate, the access point does not transmit the unicast packet to the station and transmits the multicast or broadcast packet.

1459825726-b76db678-4f10-466f-ad35-03a318bb2412

A Bluetooth-wireless docking station for use with a Bluetooth-enabled cellular mobile handset, which docking station allows mobility to the cellular mobile handset rather than having to be fixed stationarily in the docking station, which docking station couples standard POTS telephone sets, or POTS-like telephone units, connected to in-premises wiring, to the cellular, or cellular like, network. The door locking mechanism includes a lockhead member which includes a door stopping portion. Scrub solids free the inner wall of the reactor and the reactor cooling section of TiO<sub>2</sub> deposits, thereby achieving a better cooling performance, which produces a TiO<sub>2</sub> pigment with a narrow particle size distribution. An electrode advantageously includes two portions with one portion providing excellent bonding

characteristics and the other portion having temperature characteristics corresponding to the body structure and the diaphragm. The forceps may also include a yoke member for insulating the jaw members from one another to prevent short circuiting of the forceps. The method includes performing an action that is the same as an action that would occur in response to a user selection of the target item.

1459825727-1e16614d-3a86-4246-b832-49459954fae4

Iterative metric updating when decoding LDPC coded signals and LDPC coded modulation signals. This method offers simplicity, it is reproducible and could be adopted to screen large numbers of new potential anti-fibrotic agents. If the input does not include a threshold degree of similarity with a prototype symbol, the input is stored as a prototype symbol. The container is removably disposed within the dispenser base and includes a valve inside the outlet. By providing third and fourth secondary windings at right angles to the first and secondary windings it is possible to detect position in two dimensions.

1459825727-34ea678b-21ab-46ff-a966-5d0d0472616f

A method and system for determining similarity or correlation between categories of a hierarchical taxonomy for documents by combining heterogeneous similarity metrics is provided. The probe enables detection of proteolytic activity in extremely small volume and at low concentration. An entire portion of the base which comes in contact with the works is made of insulant material. In addition, the rules processor is configured to access the business rules to assess compliance with the terms of the agreement during delivery of the loans. When there is an abnormality that a power receiving mechanism of the vehicle cannot receive electric power, a vehicle ECU causes the power transmitting device to stop power transmission, opens a relay and further discharges remaining electric power by the discharging unit. Upon expanding in the outward direction, the first bladder bears against the back of the user's neck and forces the cervical spine to curve forwardly.

1459825728-1b31fbce-0d29-4a32-a121-83b64f4ed5b0

Methods and systems are provided for generating a personalized video mosaic from multiple of video sources in a cable television services system. A still another object of the present invention is to provide an expansion agent for CD34+ cells useful for treatment of various hematopoietic disorders caused by dysfunctional hematopoietic stem cells and/or hematopoietic progenitor cells. Connectors comprise a plurality of hinged petals that are shiftable between an open position, which permits access to the connector insert carried by the connector and a closed position in which the petals cooperate to define an appropriately-sized cable sheath termination nipple. The mover moves the transporter along the frame.

1459825728-efd441da-6840-4194-b245-dd5597fca177

A polyether copolymer having a weight-average molecular weight of 104 to 107, formed from 3 to 30% by mol of a repeating unit derived from propylene oxide, 96 to 69% by mol of a repeating unit derived from ethylene oxide, and 0. A laser beam is applied from beside one of the back and the face of a semiconductor substrate and focused onto the other of the back and the face of the semiconductor substrate, or the vicinity thereof, to partially deteriorate at least a zone ranging from the other of the back and the face of the semiconductor substrate to a predetermined depth. The bit error rates for the first sampling points are averaged to produce an average low mask region error rate. In one embodiment, the automated image quality analysis may be directed to an ultrasound image of the carotid artery. The drop-impact display unit and the tilt display unit displays the direction of drop impact and the direction of tilting at the same time.

1459825729-bad5b20e-a94c-41d9-ab5c-a0d4c311ccb9

The invention refers to a measurement probe for measuring magnetization data of at least one item, specifically a security document comprising at least one magnetic

security material, said measurement probe comprising at least one core free magnetizing coil characterized in that at least two magnetic field sensors are disposed at both ends inside said coil at its both ends. The sunroof device also comprises: driven teeth formed on the sliding member, that are meshed with the driving teeth and restrict relative movement of the drive cable and the sliding member in the vehicle front-rear direction; and a mounted portion formed on the guiderail. The control unit may also charge the battery from the external power source, and the lights may additionally be flashed in response to a signal indicating that fire conditions exist. from the outlet end of the ejector tube. On the base layer, aggregated particles are dispersed and disposed.

1459825729-bcddb502-8c13-4d71-9179-78f1a6d38f38

A gaming machine has a display panel with permanent indicia and optionally also adapted for display of transient indicia which act with the permanent indicia as part of the gaming played on the machine. A movable clamping jaw opposes the fixed clamping jaw and is pivotally engaged with the pivotal support, thereby being rotatable between an open jaw attitude and a closed jaw attitude. The capacity of the suction pump can be increased without enlarging the planar shape. An eye cup is mounted on the eyepiece for shielding the eyepiece lens from ambient light. ASi is an OH\u2014, NH2\u2014 or CO2H\u2014 group.

1459825730-734a7b53-aaa8-44c8-8f09-22a869566c5d

The present invention relates to a semiconductor layer applicable to a heterojunction bipolar transistor, a forming method thereof, and a semiconductor device and a manufacturing method thereof, for example. An arm extending from the seat plate has a slot which receives a pin of the main frame to limit forward and rearward tilting of the seat plate. The conveying mechanism is arranged in the sheet conveying path to convey a sheet.

1459825730-dd3dea60-39bc-4e8c-9518-b9235fc9d60d

An electrospray device for a mass spectrometry system is described. The variable attenuator includes first and second differential to single-ended transconductance stages, each biased by a current device. Such reduced pressure requirement translates in an increased flow rate in such region under constant extrusion pressure.

1459825730-f3d8e908-b424-4fe3-83c6-573c9f1db627

For each of pattern projection regions, a mask and a substrate are moved in synchronization with each other in an X direction while projecting a portion of a mask pattern through an optical projection system onto a portion of the pattern projection region. A support platform is located in the lower portion and accommodates a quantity of lip balm having an arcuate surface. In this way, a compact structure can be achieved. It allows a user of the such apparatus to safely suspend items such as paint pots or tools from a ladder for easy reach.

1459825731-1d55d878-7c4c-4755-9b51-5571f84799b0

A magnetic door stoplatch contains a first magnet mounted on or within a door and a second magnet mounted on or within a structure opposing the door, such as a wall, door jamb, door frame or baseboard. The battery module has a plurality of battery heatsink assemblies with the cells disposed therebetween. The housing includes a first manifold defining a plurality of first passages and a second manifold defining a plurality of second passages in fluid communication with the plurality of first passages. The combination has a marbled appearance.

1459825731-60b92ea3-644f-48a6-9523-5d83a84b3e49

A negative pressure generated inside a liquid-ejecting head can circulate liquid between the liquid-ejecting head and a liquid tank, prevent the liquid from leaking out of nozzles while the liquid is circulating, and remove bubbles contained in the liquid. The received transmissions are analyzed to determine the state of the

station, where the state of the station indicates whether the station has authenticated and/or associated with the access point in the wireless local area network. and is formed from at least first and second particle fractions, each of which is present as granules of nanoscale, amorphous, synthetically produced SiO<sub>2</sub> primary particles having a mean primary particle size of less than 100 nm.

1459825731-b2a6e36b-e35f-469c-8bfe-9e7ce937ef64

A nanorod light emitting device includes at least one nitride semiconductor layer, a mask layer, multiple light emitting nanorods, nanoclusters, a filling layer disposed on the nanoclusters, a first electrode and connection parts. A structure having an upper patterned dielectric layer with an opening therein is provided. A force is applied to the first and second levers to bring non-skid pads thereon into engagement with the intersecting surfaces. A global measure of network performance is then computed based on sharing of local performance information between nodes, which each node uses to adjust its parameters accordingly. The catheter may further include one or more additional or auxiliary flow control members located upstream or downstream from the fluid flow divider to further segment the patient's circulatory system for selective perfusion to different organ systems within the body or to assist in anchoring the catheter in a desired position. The bus manager maps the first and second guaranteed unique identifiers to the first and second physical addresses, respectively.

1459825732-0a234778-130e-4934-9509-8ef00aa1f96c

An air induction housing having a perforated wall which simultaneously provides ample air entry into the air induction housing and excellent intake noise attenuation. One embodiment of a method for performing motion estimation includes setting a target complexity for a macroblock of a source frame and performing motion estimation for one or more partitions of the macroblock until the target complexity is met. The second load circuit has substantially the same impedance as the first load circuit, and is connected between the second node and the reference potential terminal of the second drive circuit. A lower portion member, which may be the lower portion that was cut, is re-attached to the reactor vessel by a re-attachment weld at a location below potential differential leakage paths along the CRD housing. In some embodiments, the occluding devices allows adequate blood flow to be provided to adjacent structures such that those structures, whether they are branch vessels or oxygen-demanding tissues, are not deprived of the necessary blood flow. The system comprises at least a lens, a light-guide, and a self-adaptive coupling feature.

1459825732-84c2f326-5130-41b1-8739-e242c94a637b

A processing apparatus includes a processing chamber configured to accommodate a target object to be processed, gas supply paths provided in a corresponding relationship with the kinds of process gases supplied into the processing chamber, and valves respectively arranged in the gas supply paths to open and close the gas supply paths. A header is disposed on the housing and includes at least one feedthrough extending through the housing for providing electrical communication to and from the electronic components within the housing. The WCD may be served by a preferred wireless coverage area and may be likely to roam to a non-preferred wireless coverage area. The additional local metadata may be provided immediately following the application address space mapped to the address space containing metadata. A current sensor generates a first voltage indicative of whether a lamp filament has been reconnected to the circuit.

1459825733-91237adf-f877-439e-a38c-25c08caead65

A composition for lowering internal lipid in a subject which contains a capsinoid substance represented by the following formula wherein n is an integer from 0 to 10. The apparatus of the invention is of a unique configuration that, through the use of a novel practice ball assembly, allows a trainee to positively observe the differences between the inward golf swing and the outward golf swing. The system

and method also includes receiving a response to the request by a third party facilitator from a user of a wireless device interested in completing the transaction. The interface includes an input and an output. The top portion of the caddy member has a recessed storage portion and a handle member.

1459825733-9643da1d-688f-4607-a191-dfcbafef74ae

A process for preparing a bisphosphonate compound comprises reacting a carboxylic acid with a phosphonating agent, in a cresol solvent. The control valve system further includes a slidable valve positionable in a first position, where fluid communication is established between the inlet and the first output; a second position, where fluid communication is established between the inlet and the second output; and a third position, where fluid communication is prevented between the inlet and the first or second output. The mechanical device includes a housing adapted to contain the sensor and an air cylinder adapted to actuate the housing to allow the housing to clamp onto the interior tube. Specifically, the ratio of the width at the outer peripheral region to that at the inner peripheral region is set to be greater than or equal to 0. The plate is fixed to the end of the motor shaft.

1459825733-e5051b6c-54f3-4bce-9a58-b0f1c4aeadb4

A bridge according to an exemplary aspect of the invention comprises a BPDU-receiver which receives a BPDU packet of an STP including failure information and an error-handler which performs error handling according to the failure information. The user could employ a standard word processing editor technique to highlight portions of a document that the user desires to be encrypted. The SoC is configured to generate internal clock signals in response to an externally supplied clock signal.

1459825733-ee932de2-8175-4ab7-865b-beb6ef903e27

A method and system for authenticating IP source addresses by accessing one or more HTTP requests whose source client identifies itself as a legitimate web crawler. The seat cushions of the juxtaposed aircraft seats can be raised or lowered to form a long, generally continuous bed surface, and a further bed section which is normally located beneath the seat cushions or hoisted into the cabin ceiling structure can form a further bed section. The comments include a first and second comment. Additionally, the method may include determining an adjustment of the weight of the first linked node within the plurality of linked nodes. The stand comprises a horizontal platform connected to an underside of an engine and legs comprising vertical portions and strut portions, the vertical portions directly connected to and obliquely extending from the platform and the strut portions obliquely extending from the housing to the vertical portions. Thus, ads can be chosen and generated when the user \u201copens\u201d the e-mail.

1459825734-793d1620-e112-4813-8855-0b9b304c512d

A phantom and associated method for calibrating registration in a multi-modal medical diagnostic imaging system are presented. By laminating a capacitive electrode and a capacitive line with an interlayer insulator interposed therebetween, a storage capacitor can be formed in a region overlapping the scanning line in a plan view. Further, a security or maintenance operation is performed in association with the accessed data.

1459825734-b3667095-6aaf-4aea-af16-f8958bacfeeb

An axial height adjustable, revision cutting in the shape of a final distal femur implant component. The structure includes a link mechanism having a first frame side link swingably connected to a first pivot on the side of a rear frame, and first power unit side links swingably connected to a third pivot on a side of the power unit. The sheet's first end is folded along a first pair of transverse fold lines and secured in a position to present an open cabin, rear deck and tail of the vehicle, whereby the open cabin may provide the container for food and other items. A base carrier parallel to the illumination carrier is disposed under the original

carrier and an optoelectronic scanning head for converting scanning light into picture signals is fixed thereon. Each chamber is designed to minimize intrusion to a clean room.

1459825734-b7d9f4ad-17ed-43ed-8269-1c2337d1b47d

A socket for a PGA package can maintain high reliability of connecting condition for a long period. Other embodiments are described and claimed. Indicia of a position of the object with respect to the housing is output. % of a soluble polymer; b) 4-95 wt. An insulation block covers the central contact bore, and a window opening bolt is set in engagement with and thus closes the observation window opening to force a projection of the insulation block to depress the core conductor to engage the central contact bore for electrical contact therebetween. The method further comprises associating a level of trust with the digital certificate based on the parameter of the cryptographic token.

1459825734-c2f47342-ff77-4741-afb8-d6e29a9ff609

After a charge has been made with a credit card, the charge may be analyzed to determine if it may be transferred to a line of credit. In some embodiments, the etching process involves oxidation of the exposed metal to form a metal oxide that is subsequently removed from the surface of the substrate. The moveable second locking member includes an operating portion and a locking leg defining two connecting slots therein.

1459825735-490b866a-6675-48c2-811c-d48a42106575

The present invention is directed to realizing a suitable electrical setting of a transferring unit as well as calculating the setting earlier than a conventional method. A motor vehicle is also described, which is configured to carry out the method according to the disclosure during a battery charging process. The debugger module receives the commands and converts them into function calls to objects that are accessible by the program.

1459825735-54e8ddf6-bd32-493b-8b08-08415979845e

A calibration and correction procedure for a fingerprint scanner. The stripping occurs at high pressure and temperature with no disengagement between or following the hydroprocessing zones. At least one of the stages comprises a cascade of a linear equalization element and a non-linear equalization element. , MP3 players, nor can a CD be burned for use external to the PC. When a second data transfer is controlled while a first data transfer is controlled, the data transfer control unit writes the first data transfer information and data stored in the data buffer into the second memory, reads the second data transfer information from the second memory and writes the second data transfer information into the data transfer register to control the second data transfer.

1459825736-6847b01f-aea5-4666-afce-0787d0b8f047

It will be understood that an apparatus and method is disclosed, which may comprise a multi-layer reflecting coating forming an EUV reflective surface which may comprise a spectral filter tuned to selectively highly reflect light in a band centered about at a first preferred wavelength and to significantly reduce the reflection of light at a band centered about a second wavelength, e. The system features good abrasion resistance and diffusion barrier effect, and is particularly suitable as a protective coat for plastic substrates. Operands a, b, c are scaled to  $a \times 10^3$ ,  $b \times 10^3$ ,  $c \times 10^3$  and then result  $d \times 10^3$  from the floating-point operation on operands  $a \times 10^3$ ,  $b \times 10^3$ ,  $c \times 10^3$  is calculated. The LED package further includes a lens part disposed on the light emitting diode chip and the encapsulant to radiate light in a wide angle.

1459825736-def91849-43dd-46d7-9309-0480830dfd74

A semiconductor apparatus with a modified pipe support. In one aspect, a method for indexing graphs in a database, the graphs comprising graphic data, comprises the

following steps. electrical power to an LED array includes a rectifier responsive to a. This enables the corner areas of the housing to be kept free for assembly and the reduction of material for manufacturing the housing. Moreover, the need to increase the strength of a frame and so forth can be eliminated, so the webbing retractor can be made compact and lightweight. Electronic lighting ballast is also used to intentionally generate specified harmonics of a certain phase and amplitude to a power source, and further, the method, apparatus and system uses such a capability to cancel undesirable harmonics generated by other equipment in a larger facility.

1459825736-f72c8a16-bf2d-4b09-8a46-373cef3743d6

A termination structure of a cryogenic cable has a cryogenic-cable end portion and a current-lead end portion that are coupled to each other with a flexible conductor. The intermediate film includes at least two layers, i. This first design also at least one controllable circuit that is initialized by a second type of initialization signal. This enables a smaller package to be produced by moving the bond pads laterally inwardly toward the periphery of the microelectronic component. The signal scrubbing is performed in either the time domain or in the frequency domain.

1459825737-ed0c7890-2253-4a81-95ad-dfd0b468802d

A service that augments a key element of Unified Messaging and Unified Communications initiatives\u2014i. The central cassette assembly includes a housing, a deadbolt mechanism, a latchbolt mechanism, a remote locking point mechanism and an anti-slam mechanism. In addition to the NOLM, the laser resonator has a linear cavity section. The trace registers are used to represent the current state best metric and are each configured to send their output to the inputs of the predecessor states representing the possible branches to the current state. The second cylindrical portion is coupled to the aircraft rotor fairing via at least one attachment device.

1459825738-0d07cac9-5296-4c04-95a3-e1f12724c0e0

The present invention relates to an automotive vehicle control system, preferably comprising a control logic with at least two control functions, such as ABS and YTC functions, with a tire sensor, i. The presentation vehicle may be a pop-under, for example. The activating unit is configured to be mounted external to a mold unit that houses the injection chamber.

1459825738-58b2d016-6f71-4cd5-9ac1-ed18d719ed27

System and method for carrier transportation management in a wafer fabrication facility are described. A font character is selected and sub-sampled. By virtue of having a removable applicator, the compact system is portable and convenient, while at the same time the applicator remains clean and intact until a time of use. Otherwise, the value of the depletion verify voltage is modified, and the re-program operation is again executed using the modified value of the depletion verify voltage as adjusted for the actual operating conditions of the memory array. In yet other embodiments, the wound treatment appliance also includes wound packing means to prevent overgrowth of the wound or to encourage growth of the wound tissue into an absorbable matrix comprising the wound packing means. A speckle pattern is generated by impingement of the collimated illumination beam on the surface and detected by a sensor array.

1459825738-6a587e76-1281-4ef2-abaa-dd323b8ce4b5

In an arrangement which including a motor-driven system for the separation of non-magnetisable metals, vibrations and resonances which generally are present in such arrangement, are eliminated. The system includes a computer processor, computer readable medium, and control logic stored on the computer readable medium and executed by the processor. During inner diametric expanding operation, an annular shoulder is formed on the inner circumferential periphery of the cylindrical wall

and plays a role as an undercut of the annular component. Since such branches include both hydrophobic and hydrophilic constituents themselves, and thus act as wetting agents, even after degradation of the initial surfactant compound, long-term wetting and moisture penetration, at least, are permitted.

1459825739-9111e9ee-a712-45d0-952c-6d3e5b2042db

A system for dispensing slushy or frozen beverages having an ingredient of interest or importance to a customer. The apparatus comprises a die having first and second terminals. Corresponding metadata of a subject part may be determined and compared to the metadata stored in the database. To simplify processing on the network side, the network side separates the addition branch candidates from the deletion branch candidates, and carries out sequential processing of them independently.

1459825739-9224a04f-e2cf-41e5-842c-f4dc2596f67a

At least one semiconductor fin for a capacitor is formed concurrently with other semiconductor fins for field effect transistors. P is chosen at a sufficient distance from the beginning of the window such that forward recursion determines a known state metric at the beginning of the window. The laser light source may be battery powered, or may be powered by a solar panel mounted to the light handle; the illuminating light providing sufficient light to power the solar panel. Subsequent reductive amination with the biarylaldehydes a through f completes the synthesis of the 7-piperazinyl-3,4-dihydroquinazolin-2-ones. The first arm, the second arm, and the proximate end substantially form a ring having a gap between the free ends of the first and second arms. Compared with the conventional lampshades that are foldable only in two dimensions, the invention can save the cost of package material and transportation.

1459825739-e3d57ca5-9ca8-4d38-8b5b-ed836ae36327

A method is proposed for automatically adjusting the filter parameters\center frequency, quality and amplification or attenuation\of at least one digital equalizer which is a component of a reproduction device for audio signals in a vehicle passenger compartment. An isolation indicator signal may be obtained by control signals from an isolation valve assembly or by signals from a DCS to indicate that isolation has occurred. Also, by determining whether it is possible to recognize that test disc is capable of recording, it is verified whether the border-out data can be smoothly acquired from the position in the vicinity of the outer periphery of the disc where playback characteristics are apt to be unstable. for water purification and desalination, also for separation of liquid mixtures and mixtures of gases and organic solvent vapors, preparation of ion-exchange materials and materials which are used as stationary phase in chromatography, construction of sensors, transport and targeting of drugs in organisms, and also preparation of materials bearing aromatic or curative compounds.

1459825739-f7d03339-5ef6-4943-a215-c68e46812a78

The gusseted pillow includes a top fabric section, a bottom fabric section and an intermediate gusset portion, wherein the peripheries of the top and bottom fabric sections are each longer than a total length of the gusset portion. A region of the channel layer between the first and second electrodes is exposed by an opening in the capping layer. A plurality of fibers is introduced inside of the film bubble. The stallreorder unit forwards the snoop request to a selector which also receives a request from a processor.

1459825740-b361f247-915b-4f1f-b19b-77acffb21b18

A beam line system includes a hollow tube and a plurality of protruding structures. The camera lens set on each side outside the car are used to capture the image around the car and transmit the images to the present device inside the car. The received optical signal may also include dual polarized signals for increased bandwidth capacity. A receiving side transparent electrode region of one cell is electrically connected to a back electrode region of an adjacent cell through the

first kind groove, the transparent conductive layer and the third kind groove. Thus operation of the pump may be reprogrammed, for example, to change the calibration factor or the operation mode or to change irrigation depending on the patient group to undergo surgery. The fingerprint sensor also includes a controller coupled to the conductive layer to capture a fingerprint image and can further be adapted to control the display.

1459825740-ec288376-e691-4414-a6c6-f81af0fba8d1

A Non-Volatile Memory cell in an NVM array is read out using other NVM cells in the array as a load element. The beaters are optionally also disposed to clean a container in which the ingredients are frozen. A common support structure fixes the antennas with respect to each other. Since the channel is thus formed inside the pedestal portion, the device will not be larger-sized even when the channel is formed. In this plasma processing system, it is possible to reliably prevent undesirable discharge from occurring at the rear surface of the ground electrode when processing a substrate mounted on the ground electrode to deposit a film using a high frequency power in the VHF band.

1459825741-60d0614a-1a4f-4256-8d6f-29f450689bcb

A method for controlling a PWM power stage is based upon dampening current peaks generated by switching of the PWM power stage. The piezoelectric layer extends between opposite front and back sides and is configured to transmit acoustic waves from the front side. Such resources are often subject to local environmental conditions, particularly ambient temperature which varies on a diurnal and annual basis. The visual representation may, for example, comprise a picture with a number of different elements, each representing a part of the shared data. In one particular embodiment, a systems management partition is created inside the VM to provide a persistent and resilient storage for management information. The target device also directs access to a database of the source device while the source database is replicated.

1459825741-f0e50407-08bd-4a6f-acdd-28006f05c03b

A merchandise display case and system are provided, comprising a frame housing an image projector, a mirror and a rear-display panel on which the merchandise is supported and displayed, to provide a view that is a combination of the merchandise and an image emanating from below or behind the merchandise. The method first receives a line rate, a frame rate, and a horizontal total of an electronic display device to calculate candidate resolutions. The system can generate the crop mask as a GIF image in which a portion of the crop mask corresponding to a selected portion of the image is transparent and a portion of the crop mask corresponding to a cropped portion of the image has a checkerboard pattern. Protrusions extend from an outer surface of the sidewall and coil the sidewall. The wildlife guard includes an electrically nonconductive cover for covering at least a portion of the electrical conductor, the cover being adapted to mount upon the bushing and a conductive panel attached to the cover.

1459825742-3fbc3ee9-9f44-4f9b-836e-eeb03da01d67

A micro-sample pick-up apparatus has a probe for picking up a micro sample, a probe holder for holding the probe, an XYZ driver mechanism for moving the probe holder in the three-dimensional directions of X, Y and Z, and an observation mechanism for observing the sample and the probe. The portable devices are configured to be carried by emergency services personnel while at an emergency site. The first wafer, the second wafer, and the third wafer are bonded together. The reamer may be pulled using any suitable pulling device such as a directional drilling machine. When the mandrel is in the second relative axial position the apertures communicate with each other to permit flow from the interior of the mandrel to the exterior of the housing.

1459825742-9c516922-2a73-4f03-bec3-461a31d61c4f

A semiconductor IC includes grooves formed in a substrate to define a first dummy region and second dummy regions formed at a scribing area, and third dummy regions and a fourth dummy region formed at a product area. Other embodiments are disclosed. Each search engine produces a common mathematical representation of each retrieved document. The improved signal quality may support transmission at a desired or higher data rate, which may not be possible without cell blanking.

1459825742-b0ee69d6-f9ff-4aec-b405-3f2120e4d24a

Disclosed is an ink composition which has good storage stability and, in addition, can yield prints having good waterfastness and lightfastness. The housing has an opening and an inner sidewall. The enhanced rate sheet feeding may be for a dual print engine printing system and/or selectively common or reversed sheet facing.

1459825742-bdaa0242-c687-4ea5-8220-431f6a5d2eb0

The crystallization method by laser light irradiation forms a multiplicity of convexes in the surface of an obtained crystalline semiconductor film, deteriorating film quality. And the job execution apparatus can transfer a refund to the payment medium set to the billing apparatus if a refund needs to be transferred. The first built-up layer is located on the substrate.

1459825743-05b1527a-ffce-4dbf-a586-686983c01223

A crash assessment and safety device activation system includes a target object potentially colliding with a host object in motion, is disclosed. A gas from the outer circumference of the housing is introduced between the stationary and orbiting scrolls, and sent to the center by revolving the orbiting scroll in engagement with the stationary scroll. Top expander 48 is axially moveable downward relative to the upper expander body in response to movement of the one or more pistons, and a bottom expander 120 is axially moveable upward relative to a lower expander body.

1459825743-3615b4a1-f4af-4d5d-992a-e4a01da0a632

An apparatus for cooling cassette magazines containing tissue samples is described. Payload data and header data from the data stream are stored contiguously in separate buffers in host memory. The composite can be used to produce a superconducting element with the bronze route which has an improved critical current density.

1459825743-523c91cc-8b47-4814-a282-27ae5ed7c801

An electromagnetic field simulation apparatus disclosed herein replaces a predetermined region in printed circuit board CAD data to be subjected to electromagnetic field simulation with measurement data measured by a near-field measurement device and generates new printed circuit board CAD data. The lower discharge outlet of the capillary tube is positioned adjacent to and above the lid retractor in a position to deposit the drop of liquid into the cul-de-sac. The mounting plate defines a point nozzle opening and/or a track duct nozzle. The switch has a control input coupled to the snubber bias lead, a first terminal coupled to the positive voltage lead, and a second terminal coupled to the positive supply lead.

1459825743-6dbab4ff-e86f-4c56-9948-ea208ffe5c3c

Methods and apparatus are provided for interoperating a device with network based services. A magnetic core of high magnetic moment obtained by compression sintering the thermally annealed superparamagnetic core shell nanoparticles is also provided. 1\xd710<sup>5</sup> Pa to a maximum temperature in a range of from 210\xb0 C. The converted call is then sent over the voice and data network to another PSTN and finally to the end destination.

1459825744-420db227-434a-44e8-a946-3fa7b28ca4db

A growing rod for mounting between attachment mechanisms that are secured to

anatomical structures of a patient having scoliosis. A user or an application may provide data destined for encryption and a public key. Enough memory locations are allocated to cover all of the AC cycle. The mirror is rotatable about a yoke pivot axis to a desired inclination angle, and the yoke assembly is orbitable around the handle to position the mirror at a selected polar angle. Further, an appropriate guidance for dealing with the detected cultural sensitivity is provided. The surgical clip can be formed by a wire that is partially wound onto itself in a spiral-like fashion, with the center portion and the legs being co-planar in the undeflected state.

1459825744-5a749cea-4e73-4a5c-926c-e73debf21c8f

A non-lethal personal deterrent device and system. Active buffer circuits can be eliminated while still minimizing DAC DNL and insuring circuit monotonicity. Two series-connected secondary windings are also disposed on the flux-conducting element, and are connected to rectification and filtering circuitry which may have full bridge, full wave, or voltage doubler configuration.

1459825744-bb5a5cc0-29cb-4f5b-a5c0-e98f2fe7757d

A tool for installing a retainer ring onto the lower portion of a loosely inserted drain fitting for engaging a mounting flange thereto includes a generally resilient cup structure provided with a plurality of axially aligned and resiliently cantilevered peripherally adjacent strips within which the retaining ring is received in a compressed engagement seated on a helical interior shoulder. According to some embodiments, there is provided a system including a video acquisition module, a video analytics module to extract subject features and a subject presence response module adapted to generate a response to an identification of a specific subject or group of subjects. Each of said first and second transmission channels is a two-way channel comprising a first transmission half-channel in one direction and a second transmission half-channel in another direction. A plurality of screens may be placed in an array for increased one-pass filtration. The pattern units have boundaries that define widths of pattern tops and widths of pattern bottoms.

1459825745-0baab19a-192b-4034-a9a1-78c6402200ee

A optical communications network including at least one optical phase conjugator for compensating for non-linear effects. The method includes applying a dielectric layer over the semiconductor dies and communicating the die location information to a laser assembly. Once one portion of memory is tested, another portion is tested and a prior tested portion is used to write a new error map. Cushioning on top of this rigid structure ensures comfort. The second outlet orifice is a pressure release orifice for releasing the pressurized gas upon unanticipated elevated temperatures, such as during bonfire conditions.

1459825745-5b93e6f7-ed36-4340-85d4-664115ce0528

A method and apparatus to automatically reverse the motor of a dispensing gun or similar tool. The lens further includes a multi-order diffractive surface relief structure with an optical add power. A munition module is removably attached to the flight control module and includes a hollow interior configured to carry a payload material. A sector gear is pivotally coupled to the riser adjacent the forward end and includes a mounting pin offset from the pivotal connection.

1459825745-d1172947-2d16-4a13-9a3e-4c6bde2cf617

A system and method for conducting electronic commerce are disclosed. The LSI package has a gap, which serves as a heat resistor portion between the heat radiating portion for the signal processing LSI and the heat radiating portion for the interface module. The method includes applying predetermined scale factors to the subarray beam data magnitude for each subarray to generate scaled subarray beam data magnitudes.

1459825745-f1e1a110-c569-4c6d-a4f7-1e3a677bdc3e

In an MR element of the present invention, an effect of an extremely-high MR ratio is obtained since a crystal structure of a CoFe magnetic layer in the vicinity of an interface with a spacer layer is formed as a close packed structure, such as an hcp structure and an fcc structure, and a total existing ratio of these crystal structures is 25% or more by an area ratio. The apparatus displays a graphical user interface informing a user of a current status of a copymove operation. The remaining liquid effluent from the hydrotreating stage can then be introduced, in total or in part, into a second stagereactor. Next, individual boot slices of the shared boot volume are correlated with individual server blades, which share the shared boot volume.

1459825746-bc10991c-d44e-4c08-a245-320a9e4d8383

A system and method for adding a bonus round to any poker-style card game on a Nevada-style gaming machine. The method includes detecting a deceleration threshold event indicative of the penetrating weapon impacting and traversing a layer of shelter having certain material or structural characteristics. Portions of the print order are directed to the printers in a pattern that minimizes the number of printers having donor ribbon with a fractional donor patch set available after the printing order has been executed. Still further, the vent body includes a pair of longitudinally-extending sidewalls that project from the outer edges of each of the grillwork walls and that are disposed upright with respect to the upper wall. A preferred embodiment comprises a light beam generator including a housing, elongate members removably secured to the housing and complementing the rail for enabling the housing to be retainably slid along the rail, a latch plate pivotally and removably secured to the rail, and a replaceable ambidextrous tail cap switch.

1459825746-db3c4151-2c16-496e-9400-421d983247af

An apparatus and method to position a wafer onto a wafer holder and to maintain a uniform wafer temperature is disclosed. The cell design dedicates minimal internal volume to inert components of the cell. The optical output sampling portion detects the light intensity in synchronization with oscillation of the phase adjustment signal by the FM signal.

1459825746-e2d8a8b2-af66-47de-94f5-be781d7f8664

A method is disclosed for producing a water-absorbent resin by a reversed-phase suspension polymerization method, wherein an odor originating from a raw material component, in particular, a petroleum hydrocarbon dispersion medium, is further reduced as compared with a water-absorbent resin obtained by a conventional method, and a water-absorbent resin obtained by the method. An associated control system and device manufacturing method is also disclosed. The intensity of backlighting may be varied in accordance with the amount of ambient light illuminating the keypad and above a certain intensity of ambient light the light emitting diode is de-energized to conserve battery power. The shunt FET is employed for preventing an inadvertent turning on of the MOSFET device. At least a part of the central portion is directly adhered by the adhesive to the slip without intervening release coating between the adhesive and the slip or the central portion.

1459825747-4e965d22-bd6d-412f-bc65-361d8a8937cf

A method and apparatus for determining a color and brightness of an LED includes a sensor having a plurality of filters and an output probe connected to the sensor, the output probe providing a color output and a brightness output in a single signal. File system operations of the file system operation streams are workloads produced by the devices of the computing environment. Automatically adapting a virtual equipment model associated with the virtual equipment to reflect the determined user skill level. In another embodiment, the three signals are obtained from a column buffer having only one output.

1459825747-afefe6da-50ed-4b7d-8eb8-b04bd16d53d3

The invention relates to a plug module for being received in an attachment component, which must be contacted at least electrically, particularly a fuel injector for installation in the cylinder head region of an internal combustion engine. One such assembly includes a card carrier having a card integrally formed within. The users are identified by endpoint addresses, and may intercommunicate using various types of media via the communications network. The network manager may be further configured to coordinate the first and second network devices of the first and second wireless networks. The integrated circuit may include output registers coupled to the BIST controller and the comparators output a data log substantially serially upon receiving a SHIFTCLK signal from the BIST controller.

1459825748-1ceff31f-ef82-466e-a053-ea31c2d0532e

A piston for the variable delimitation of a pressure chamber in a housing of a hydraulic cylinder, in particular a clutch master cylinder for motor vehicles, has a main section on which a running surface is provided for a sealing element on the housing side. In an embodiment, communication logic of the AV device may be configured at different times for different ones of a plurality of operation modes including an AV source operation mode for providing AV information to another device and an AV sink operation mode for receiving AV information from another device. It is very adaptable and flexible to use the combination of multiple kinds of information to indicate the orthogonal cover code information in the downlink control information. An end part 5b of the second interconnection pattern 5a is electrically connected to an end part 3d of the first interconnection pattern 3a via through holes 7a. Such information and/or other types of data may be conveyed to a user to help improve performance, aid in selecting golf equipment and/or to insure quality of golfing products. The systems and methods synchronize the pump strokes so that fluid flow from the source is essentially continuous while fluid flow to the destination is pulsatile.

1459825748-748f28e2-b4e4-44cc-9e9b-587dd7ba9006

An A-D converter includes an A-D converter circuit, a D-A converter circuit, a subtraction circuit, a second amplifier circuit, a reference voltage control circuit, a timing control circuit 18, an amplifier control circuit 19, and an output circuit. The current generator for providing the first current has a self-bias circuit which uses a single MOSFET to establish the first current, and thereby avoids error caused by mismatched MOSFETs. The application plug-in receives the communication request and obtains application level information from the received communication request. The total thermal exposure of the diamond particles during manufacture in accordance with the present invention is significantly lower than the total manufacturing-related thermal exposure in previously known diamond-impregnated cutting structures. Further features are described wherein the scan information is combined according to a family of trajectories.

1459825748-e4f8167b-48c0-4025-91ce-d842a2a44734

A TOP level switch for use in a drive circuit in power-electronic systems having a half-bridge circuit formed by two power switches, a first so-called TOP switch and a second so-called BOT switch, which are arranged connected in series. To this end, a metric is dynamically associated with each source and with each destination. Attachment of one or more JAZ1 peptide tags as disclosed herein to a target protein in a non-plant cell expressing Arabidopsis COI1 or a homolog thereof results in degradation of the target protein following addition of a molecule that binds the coronatineJA-Ile binding pocket on COI1. The ridge assembly forms a common mating and fit up location for the upper margins of the slope sheets of two lengthwise adjacent hoppers. A carrier control unit outputs carrier recovered by a carrier recovery unit.

1459825749-49959b8f-d457-4bc4-ac6a-4cff368a8292

A control backplane replaces the traditional shared bus with a dedicated communication channel using a high-speed protocol, such as Ethernet. The relay lens

assembly increases the effective  $f$  of incident light to the V-plate assembly or V-prism assembly that serves as dichroic combiner, used to combine modulated light of each color from each light modulation assembly in order to form the multicolor image. This period of delay is used to modify how notes will be played according to control data inputs for later notes.

1459825749-4eab16fb-c71b-4609-80d8-916c232e1991

Chopper stabilized operational amplifiers are in common use. The DLL driver control circuit includes a DLL driver for driving a DLL clock and a DLL driver controller for generating a control signal to control an operation of the DLL driver in response to a signal having information associated with an active mode. A judgment is made as to whether a button number of the specified Button is invalid.

1459825750-1968d789-84f7-481a-8581-90a63f343365

A bite-signaling device comprises a clamp member securing the device to the rod of the rod and reel combination. A moveable plunger resides in the valve bore and selectively seals against the valve seat. A fan is operationally coupled to the motor. Several techniques are provided to determine the optimum transmit weight vector and receive weight vector for communication between the first and second communication devices so that there is effectively joint or composite beamforming between the communication devices. Next all the occurrences are grouped per functional system, parameter and communications medium in order to configure the interfaces of these computers. A T-wave detection unit T\_DETECT\_MEAN converts power of a frequency component making up a T wave of the electrocardio signal ECG into an approximately DC component, and outputs the converted power as T-wave power V\_T.

1459825750-aa831389-fcc8-4f00-b2b1-53cb63de3e50

An inductor comprises first and second winding portions symmetrically arranged in an insulating layer on a substrate. Each of the six control elements is operatively connected to at least one of the planetary gear trains and selectively engageable to produce a set of different speeds between the input member and the output member. It is possible in accordance with the invention to process natural or synthetic polymers, for example polyester, polyether, wood, etc. The wireless client device location is determined based in part on signal strength information in the probe response frames sent by the one or more wireless access points and which signal strength information indicates the signal strength observed by the one or more wireless access points with respect to the broadcast probe request frame transmitted by the wireless client device. In the OFF position, the magnet 14 of the lever 11 approaches a valve 3 formed with a magnetic member, and the member 3 is shifted upward within the case 4 to shut off the fuel passage.

1459825750-b49d6af4-1e63-4313-a458-98ebc5a9f60d

The radiography of a subject is improved by estimating the scattered radiation it transmits to the detectors. The electrode arrays may be concave and disposed in tissue so that their concave portions are opposed to each other. It uses an estimate of relative motion of an observer to project each frame onto a coordinate system of the three-dimensional scene model. The control section then specifies a detection device corresponding to the extracted element or a moving part corresponding to the detection device, and displays the element or the moving part in the displayed three-dimensional model in a distinguishable manner. The dimmer switch may also be operable to automatically change the dimmer switch between the incandescent operating mode and the screw-in compact fluorescent mode by detecting the occurrence of the multiple firings of the controllably conductive switching device. A floating body back gate opposes the floating body region on a second side of the vertical transistor.

1459825751-03790b19-409e-4c20-973a-39ee4bfadab8

A method for tuning the work function of a metal gate of the PMOS device is disclosed. The first hydraulic pressure urges a clutch disposed between the engine

and an impeller for a vehicle torque converter to an engaged position. The body can be oriented in a first orientation with respect to the fan housing and structural support or in a second orientation with respect to the fan housing and structural support to mount the fan housing at different distances from a mounting surface of the structural support. Air rises through the reactor by natural convection caused by heat from a transformer and/or from the ultraviolet light. The plug portion is configured for electrically connecting with a computer thereby connecting the digital camera with a computer.

1459825751-23ff9d47-c6aa-4d07-a9a7-4a5c6caf92dc

A policy agent of a network performs an out-of-band user authentication process to verify the identity of a user of a client computer and associates the network data received from the client computer with the user. The unique random number can be used to create digital cookies or digital tokens. A method of providing current information relating to preselected preferences to a user at a terminal is also described. If the first output port is abnormal, the first label value of the packet is rewritten with a second label value and the packet is switched to the second output port according to a second relationship between the second label value and the second output port. When an indicia letter on the flame cone is aligned with the marker, the flame cone is properly installed.

1459825752-887540c0-89a0-4e8a-9ac5-803635b7c663

Disclosed is a process for the production of esters. The ink contains water, a self-dispersing pigment, and resin particles. If the link upon which the cell was received was not the expected link in the round-robin order, a wait for arrival of a cell on the expected link for up to the value of a timer for the expected link is made. The orthogonal sub-carriers are received from the transmission medium at a receiver, while the random number information is received from the second medium at the receiver. The outer cup portion also has an outer layer hot embossed and connected with the second elastic layer.

1459825752-accafce6-dc85-4c7d-9957-82cf0e137dee

A tamper-resistant electronic system includes a destructible vinyl substrate having conductive wiring disposed on a first surface of the DV substrate. The bridge receives data written by the processor to the broadcast aperture and forwards it to multiple graphics devices, eliminating the need for the processor to perform duplicative write operations. A first fastener is held in tension and extends through the bearing bodies and the member. The zoom lens system satisfies an inequality condition  $\theta$ . Once such virtual devices and memory are saved, they can also be restored. A motor is connected to the axle for rotating the direction selectors.

1459825752-e7640c2c-6541-4084-acef-8235ae93b692

A throat support device comprising a main throat support section having one or more lifting mechanisms, each with a tip, each tip adapted to fit into a location immediately adjacent to and behind a basihyoid bone, a thyroid cartilage and/or a cricoid cartilage of an animal to control upper airway dysfunction. A communication session may be established with a second network that utilizes a second wireless standard based on data sent to the second network related to the first authentication, authorization and/or accounting management. Each of a plurality of location map databases includes data that represent facilities, such as businesses, stores, offices, or other places, that are physically located away from the public network and access to which requires travel on paths away from the public road network. Multicast proxy service nodes each store a group session key and a private key.

1459825753-e334fbee-f14f-425d-a733-8fc851319959

A method, arrangement and computer program is described for determining a set of standardized rod types for use in a nuclear reactor core. During device

manufacture, each of the stacked die is assigned a unique identifier or \u201cDie ID\u201d relative to the other stacked die in the package. The metadata is used to index and then retrieve encoded video. In embodiments, the non-planar nanowires and nanowire networks can be used for cantilever oscillation, switching and transistor actions. Consequently, intermediate non-lit sub-fields causing the dynamic false contour are distributed to display image suppressing the dynamic false contour. A luminance correlation determining circuit calculates a difference between the Y signals received from the subtractor and trap filter, and outputs the Y signal separated by the subtractor when the difference is larger than a predetermined value, and outputs the Y signal separated by the trap filter when the difference is smaller than the predetermined value.

1459825754-cc9fbaac-6fb9-456a-b131-5a0824364bcd

A system for disabling a vehicle carrying a substance in a storage tank includes a holster defining a cavity for receiving a nozzle in fluidic connection to the storage tank when not in use. The locking assembly has at least one hook for hooking over a frame member of the container. The load control device also includes a controller for adjusting the average magnitude of the load current to a target current. The two shorter sides are folded in a U shape so that a bow-tie-shaped frame results. In the tail-cord duct, a tail cord is suspended from the arm part.

1459825756-b7ba731b-ce72-42de-898a-dab8a8190dcb

Compounds of formula and are disclosed . The autotuning method using an integral of a relay feedback response comprises the first step for integrating a process data; and the second step for removing effects of harmonics after the first step and computing an ultimate gain, a frequency model and a parametric process model. A tilt angle that positions the PCB higher near the front end of the blade may enable media interface modules mounted in a belly-to-belly configuration on the PCB to be fitted within the front end of the blade. At both of the two ends, there is a glass window. The voice message component also informs the first handset that the second handset is not available and that the voice mail storage stores the voice communication. The method includes receiving photons at a detector array, counting the photons that are above a first energy threshold using a first counter, counting the photons that are above a different second energy threshold using a second counter, and calculating a pile-up estimate using the photon counts from the first and second counters.

1459825757-a18e9a9c-bc3a-4075-b4e7-17eaf8b6f418

The present invention provides a high-frequency power amplifying device capable of transmitting output power at high efficiency. The method calculates the coarse index and fetches plural look up table entries. As the material is consumed, the strain gauge may measure the reduction in deformation of the cantilevered support, thereby indicating to a control system and/or a user the quantity of material used. Then, the write circuit writes the data on the first and second pages into second memory cells adjoining the first memory cells in the bit line direction. The recloseable seal extends in a direction other than horizontal, and may extend the entire distance, or only a part of the distance, between the top horizontal seal and the bottom horizontal seal. The method can form a desired wiring structure and can prevent an increase of the percentage of defective devices in an effective wafer area.

1459825757-be6eeca-3ec4-4252-93d3-12dcaedbb121

An image forming apparatus includes a shield case in which a circuit board mounted with an electric circuit is contained. Newly acquired debtor information is used in a debt collection decision procedure which determines the appropriate debt collection strategy to use with a debtor based upon the most recently acquired information. The socket defines at least one hole extending at least partially therethrough. Consequently, the touch screen can have a thin cross section that is more suitable for devices such as mobile phones, PDAs, and other portable computing

devices for which minimal device thickness is a priority.

1459825758-970f1abe-beb8-4401-b141-02fc58af56aa

An apparatus for conveying information and a method of using said apparatus during a medical emergency. An order of vibration of the mass body is determined on the basis of an order of vibration to be damped generated by the drive device in consideration of at least a rotational angle of the mass body about the pendulum fulcrum and a rotational angle of the mass body about the center of gravity. The procedure involves strong oxidative treatment of the biological liquid sample. The reflective layer is located on the first type semiconductor layer. Accordingly, high-frequency signals can be transmitted to the semiconductor optical device.

1459825758-c2e177c0-8e55-474c-966a-76a0e338ee2f

A method and structure for implementing dense wiring, in printed circuit board or chip carrier applications, which provides superior electrical characteristics while preserving the system resistance and characteristic impedance requirements. The device prevents tampering with the coupling. When the OLT receives an ONU replacement instruction from an operation system, the PON-ID assigned to the ONU of the replacement object is assigned to an ONU newly connected during the ONU replacement.

1459825758-c8df91a4-2661-4a0e-9261-33f55937ad9d

A log periodic dipole array antenna including a first antenna element, a second antenna element and a pair of transmission line structures is provided herein. Thereby, a CPU core 2 can simultaneously transfer two data values from the built-in memory to a DSP engine 3. The battery pack may further include i) a protection circuit board mounted on the second surface of the battery cell and placed in the interior space of the lower case, ii) an upper case formed over the top of the lower case and iii) a separator case formed between the protection circuit board and the upper case.

1459825758-e2a09576-e2bc-4880-87f9-b3cc0b4d11b9

An embodiment of the present invention includes an apparatus for remotely testing a plurality of communication channel inputs to an automobile computer. In an embodiment, the first material comprises a different composition than the second material and one of the first layer and the second layer includes silicon. Based on the extracted features, one or more hallways may be identified in the electronic maps by using one or more line segments, which may extend between at least one entryway and one or more structural elements, and/or at least one entryway and one or more other entryways. The intracellular effect of a biomolecule can be tested in cell culture, or tested after introduction of the constructed cells into a host mammal in vivo, and methods for identifying compounds that compete with the biomolecules for sites on the target in competitive binding assays. During welding, at least one overlap tab and the folded wall portion or the second overlap tab are maintained bearing resiliently one against the other in a superposed disposition, welding is perfectly performed by means of a laser beam, in transparency, the structural element of the invention has numerous applications in a very wide variety of industries. If a variable resistor is used to set the DC potential of a VCOM potential, miniaturization of a liquid crystal display is precluded since the size of the variable resistor is large.

1459825759-1ab8a2e3-6eed-4fc8-8e71-e149e18f966b

The invention relates to an electric motorgear mechanism unit including a housing, an iron-free rotor winding rotatably arranged in the interior of the housing, a collector connected to the rotor winding, a rotor shaft extending through the collector, and a gear mechanism which is connected to the rotor shaft and which has an output shaft. The method comprising: providing a substrate; forming a masking image having a sidewall on the substrate; forming a blocking layer on the substrate and on the masking image; and performing a retrograde ion implant through the

blocking layer into the substrate, wherein the blocking layer substantially blocks ions scattered at the sidewall of the masking layer. The conductive material is polished with the polishing pad polishing surface. The transformation time difference between the preceding image and the following image of the display panel is coded as the low luminance cycles. Each rotor train comprises up to six rotors connected with twelve electrical generators.

1459825759-a83c14e1-bb44-4511-bbd3-f1682cff594f

A regulated amount measuring apparatus indicates a difference between two colors, for example, a discrepancy between a color of a printed matter in proof and a target color, to provide an index for a color regulation. The indoor unit has an improved airflow structure, for a rapid air conditioning of the room, a user's convenience, and an efficiency of the air conditioner. Message information is selected from a message using a transformation table generated with a convolution mask. The required SNR for each data stream is then compared against its effective SNR. The plating of magnetostrictive material to the magnetically inert substrate provides a less expensive torque element that exhibits desired levels of accuracy and reliability.

1459825759-b60969f7-79cd-406e-9901-c110b7b1cc14

A band of biocompatible and/or bioabsorbable material is provided including threads on one or both of its ends. To solve these problems, a plurality of cavities having a part or the entire side metallized is formed in a multi-layer dielectric substrate. A dependent variable and at least one independent variable are identified. Light such as ultraviolet light having a first pattern is radiated to the photosensitive material from the back side of the base member and light such as ultraviolet light having a second pattern is radiated to the photosensitive material from the back side of the base member so that the photosensitive material is exposed. The rotatable first carrier rotatably supports the planetary gears. The method further includes decomposing the carbon source in the presence of the catalyst under a sufficient gas pressure for a sufficient time to grow at least one multi-walled carbon nanotube.

1459825760-38b04617-4ab1-486a-8cb4-556c0a0ee06b

A cover for an anchor, particularly a fluke-type boat anchor is constructed of a cover material of a resilient rubber that includes an elongated section and side wings. The brake disc pot has recesses on its periphery. Other embodiments may be described and claimed.

1459825760-5d123264-407b-4ff3-951f-c07090e4375a

A system for dividing a series of products within a display case, such as a freezer. The rapid cooling step includes blowing chilled, compressed air over the package for about two minutes. The first capacitor is connected between a gate and source of the driving transistor.

1459825760-8c15830b-6429-44db-8895-5bb9fc4dc26b

A method, apparatus and program product for allocating resources in a logically partitioned multiprocessor environment. The first test point connector projection is movably attached to the body to allow motion therebetween. In conventional semiconductor wafer processing apparatus, the interior of the apparatus is sealed and pressurized in order to keep a high degree of cleanness in the wafer processing portion, and therefore airflow is generated due to a pressure difference between the interior and the exterior of the apparatus. Studs are provided in each radial aperture, initially recessed beneath the sleeve's outer surface.

1459825760-eb3e99cc-b727-4f6e-9a6e-b3f4d6d8e91d

A hot dog grill for cooking hot dogs or similar food products is disclosed. The bandpass filters are divided into a number of filter groups, each of which contains the same different bandpass filters within the filter group. The inner electrode

comprises a substantially flat material in a folded configuration and formed such that an outer extent of the inner electrode is generally conforming to a contour defined by the interior surface of the cell housing. Further, the granules are of sufficient size and weight to not get stuck in the footing of the animal.

1459825761-0eb31642-9333-4ee1-aece-75bdb3c22f2a

Disclosed herein are methods and compositions for enhancing the immunogenicity of a preselected protein or peptide antigen in a mammal. The managing apparatus successively acquires and monitors the operation status of each distributed power generation system. The selection of software is done on the user's function and may be supplemented by a user selection from a menu, based on a selection utility. In one aspect thereof, one may use a torque reduction rulebase configured to avoid high torque reduction, and inaccuracies in the motion-indication parameter due to high levels of creep, if any, in a wheel of the respective axle. The net holding portion includes a number of apertures and slots therein for receiving a spring loaded pin, a common feature of pool nets.

1459825761-2bb4b685-9d2e-4b1e-bb89-3809f9b1bfa1

This invention provides methods of identifying a connection between a first neuron and a second neuron or plurality of neurons in a neural tissue slice with a fluorescent indicator. An intermediate portion of the exhaust pipe can extend along a side of the engine from a rear portion connected to the rear side of the engine. A first polarizer is applied on a surface of the touch panel. Briefly, all cells in a biological sample are fluorescently labeled, but only the target cells are also magnetically labeled. Connections can electrically connect the posts with the bond pads. The guide lugs 50 of the first row are circumferentially offset from the guide lugs 50 of the second row.

1459825761-42294715-8468-494b-8082-6cbd150db888

A laser treatment apparatus for performing treatment by irradiating a skin of a patient with a laser beam for treatment is disclosed. The first sensor detects a first image corresponding to a working plane in response to at least a part of the light ray from the light source to generate a first sensing signal. A rendering unit accesses the first image and the depth image from the master pipeline and renders a second image based on the first image and the depth image.

1459825761-7b87c5b0-09d2-4a1d-8b16-dc35795969a1

An EMI testing scheme involves analyzing an analog input signal in frequency band segments. The call sensors generate and transmit for storage an interim call data record for each of the determined correlated call records. The present invention allows for the transformation of DMF into a versatile platform for lab-on-a-chip applications.

1459825762-4e0846de-6267-408e-902e-7f69357ef48e

A battery connector is generally assembled in a corner of a case and includes contacts of the battery connector each have a mating portion defining a rib in the center of the mating portion. A sensing optical fiber is wound upon the first mandrel. Negative feedback control sections between the power supply sections and the load supply electrical power from the corresponding power supply sections to the load and execute negative feedback control of a value of a voltage applied to the load for matching the voltage value and the target voltage waveform. Then, guard interval insertion section 105 inserts a guard interval into the IFFT-transformed signal waveform. Two supports are fixedly attached to a transmission casing and bear thrust load tending to tilt the third common output disc from a predetermined normal upright position, thereby to hold the third common output disc in the predetermined normal upright position.

1459825762-5ea883ea-56a6-4734-bd87-235efd005ff1

Methods for separating isotopes or chemical species of an element and causing

enrichment of a desired isotope or chemical species of an element utilizing laser ablation plasmas to modify or fabricate a material containing such isotopes or chemical species are provided. The conductive structure includes two interconnectable members, one securable to each of the corresponding contact pads. The inclined cover portion has a plurality of fastener holes for receiving a fastener. In addition, agricultural plant nutrients comprising the same are provided. The core portion 20 contains an alkali metal at an average concentration of 5 atomic ppm or more.

1459825763-16256586-f861-4ad8-8d03-3509485aa313

The present invention concerns a water-based drilling mud for utilization in the drilling of oil wells comprising an aqueous phase wherein the aqueous phase contains an oil soluble polymer in the form of a gel as a fluid loss reducer. Herein, the magnetization direction of the pinned layer of the magnetoresistive element forms a prescribed angle of  $45^\circ$  relative to the longitudinal direction of the magnetoresistive element or relative to the magnetization direction of the permanent magnet film. The multicolored pattern further comprising a collarette region that comprises at least some of the color elements and a collarette band at least substantially surrounding the pupil region that has generally jagged inner and outer peripheries.

1459825763-e064aae9-f0af-41bf-be85-4e9ba4676111

The present invention discloses a method and apparatus for driving a liquid crystal display device that prevents a deterioration of picture quality. The large nozzles are arranged on one side of an ink-supply opening and the medium and small nozzles are arranged on the other side of the ink-supply opening. placing player tokens at a selected location on surface indicia on the upper surface member; b.

1459825763-e83ed106-7b17-423a-b949-e78f64687769

A reconfigurable interior sidewall system includes one or more simply curved sidewall panels, each curved around the fuselage but longitudinally linear and providing a consistent mating surface for monuments. The electronic package includes a low-loss structure, a semiconductor die, clocking vias, and clock receivers on the die. The high-speed switch also includes a plurality of connectors, where each connector is partitioned into dual interfaces. Connection managers may optionally be interconnected hierarchically.

1459825763-f3a311f7-8d74-4034-aa26-82afe1972aec

The claimed matter provides systems and/or techniques that develop or use predictive models of human forgetting to effectuate automated reminding. Here  $S_{u2032}$  and  $S_{u2033}$  are adjacent colors in the set of colors to be made available for the quantized image, and  $\sqrt{u_{2225}^2 + v_{2225}^2}$  is a norm in a 70%-orthonormal linear color coordinate system, the norm being the square root of the sum of squares of the tristimulus values. Friction is produced with a piston 28,128 which is urged by resetting springs 30,32,130,132 into frictional contact with a friction pad 36,136 which is fixed in the housing. The force member includes a cylindrical portion having a bore and a plate portion, where the cylindrical portion is inserted into a bore in the strain gauge element. The method includes obtaining information regarding operation of the DSL service over a plurality of different time periods, comparing the information for a first of the plurality of time periods with the information for a second of the plurality of time periods, and determining the condition exists based on the comparison. To enable the radio path resources to be used efficiently, when there is no actual data, the base station transmits packets comprising the control data of the transmission but no actual data to the terminals.

1459825764-239c1b32-3a3b-43d1-b01c-eca628c7884a

The present invention relates to assays for the identification of compounds that inhibit assembly of NP, VP35, and VP24, or inhibit the glycosylation of NP,

required for nucleocapsid formation, for use as anti-viral agents. Each MPDU may be configured to reset a convolutional decoder state after each MPDU. In another embodiment the towel stowing means, when initiated by a user, automatically retracts the towel into the second position. The gearbox assembly is adapted to engage a jaw set assembly with the screw pusher operatively engaging a jaw set of the jaw set assembly. The separator includes a passage having a bottom wall, an end wall, and a side wall including a porous wall through which a majority of cold air entering the separator passes.

1459825764-aa6ee32c-6cb4-47ed-98a8-29b38d869efe

An electric motor for a small-scale electrical appliance, such as a toothbrush or shaver. The bonding pad comprises an inner portion arranged in the via-hole and an outer portion arranged above the via-hole. Each transaction data in the transaction database records a plurality of parameters corresponding to a failure category, wherein the parameters are the parameters whose parameter values are retrieved from the at least one machine tool, having the abnormality according to the failure category.

1459825764-e74e2e75-c2bc-46ce-9536-6c4464be2a1e

A plate and fin type heat exchanger has a heat exchanger core made from a plurality of stacked, alternating first and second heat exchange plates of a generally inverted, U-shaped cross-section. Chimeric molecules and antibodies to BAFF-R and methods of use thereof are also provided. The valve element may be rotated to one position in which it provides a straight path for sample to be injected, a second position in which it provides a path that connects a source of purge gas to the chromatographic system and a third position in which it provides a path that connects solvent to the column for preconditioning. On this account, connection failure can be prevented on a low resistance wiring substrate.

1459825764-e80dd6ed-2458-461b-b505-fced4221b6f0

A variable speed data processor includes a clock generator generating a plurality of clocks at different clock rates. These telemarketer-screening operations may use a telemarketer blacklist and an associated whitelist in processing the traditional telephony call. A plurality of previously stored calibration values each corresponding to different temperatures is adjusted based at least in part on the received temperature calibration data. The controlling device adjusts the position of the air guiding flap such that the force impinging on the actuator at any one time is at least essentially zero. The first sheath includes a key member configured to be selectively received in any one of the plurality of keyways.

1459825765-943a899e-f2da-4d50-a069-74dcb0e35e8a

An architecture for creating a single image for a stack of switches. The locking unit of the present invention locks the seat belt when the seat belt is rapidly unwound and prevents the seat belt from being locked when it is retracted. By using 12 detectors the range of neutron energies are covered. The controller is configured to estimate a frequency error of the crystal based on the temperature measurement and to provide a frequency error estimate to an external system.

1459825765-b0cd394c-95ef-441d-a01d-b87640b5bf34

Active devices on a network are identified by simultaneously issuing to a plurality of worker threads a request for information identifying the devices. The method can place a plurality of evaluation points around the design pattern and set an evaluation index for imaging properties of the design pattern on an imaging surface. The invention thereby provides an aid for the detection, diagnosis, monitoring, treatment, or evaluation of neoplastic disease. The feedback resistor also has a first node at a first voltage.

1459825765-d4d39c52-bac7-4729-aed5-2e30434810a2

A steering system for an articulated vehicle has a microprocessor connected to a

proportional solenoid valve which controls the direction, amount and rate of flow of hydraulic fluid to and from hydraulic articulation cylinders, which provide articulation between the frames of the articulated vehicle. Further, the battery storage is formed of the frame and a closing unit engaged via a second fixing means only employing a simple structure. The cold plate members are arranged in a stack, wherein respective plate portions of each cold plate member are in registration with perforate portions formed in its adjacent cold plate members in the stack. The relationship between the magnitude of the motor torque command and the magnitude of the phase error is nonlinear. These operators are a make edge operator, a splice operator, and a swap operator, and are selectively invoked to both add triangles to the triangular mesh and remove triangles from the triangular mesh.

1459825766-c9457ca7-0489-44d0-b131-3ba17db6a558

The invention generally relates to methods for detecting a target nucleic acid and a target protein in a single assay. In one embodiment, a memory device is provided. A connection position at which the radially outward section is connected to the radially inward section is adjusted to a position radially outward of a pitch circle position of the plurality of the balls that are held in the respective pockets.

1459825766-cddd0098-8de8-4d8e-8400-a49f2aaf4220

Hydrogels of polymerized and crosslinked macromers comprising hydrophilic oligomers having biodegradable monomeric or oligomeric extensions, which biodegradable extensions are terminated on free ends with end cap monomers or oligomers capable of polymerization and cross linking are described. The linked articles comprise a first link matrix and a second link matrix comprising a first portion of the article and a second portion of the article, respectively. After the storage device including the encrypted data has been detached from the information processing apparatus and connected to the printing apparatus, the printing apparatus decrypts the encrypted data stored in the storage device and executes a printing process according to the decrypted data. In a marketing aspect of the present invention, decisions regarding whether to sell agricultural products is based upon the expected profitability of the transaction and the producer's profitability goal. A hangar system allows a sub-base plate to be attached to a base using the locator-fastener disclosed herein.

1459825767-2178ffd9-ddcc-4052-9971-e064c9d58efe

A radiator element for an air heating device, and a corresponding heating device and manufacturing method are provided which reveal improved assembly properties. A request for information is received from a request-generating element coupled to a browser associated with a client through the network. The driving device includes a driver. Trusted nodes can send and receive all types. A value for each limit B1, B2, B3 and B4 is associated with each cell of the cube. Received signals are detected by preprocessing the signals detected at each antenna with signals detected by the antenna at the immediately previous frame, and then applied to a maximum likelihood detector circuit, followed by an inverse mapping circuit.

1459825767-851ad13a-aab9-43c4-ab77-68ec4e4b41b4

Automatically translating a building architecture file format to a simulation file, in one aspect, may extract data and metadata used by a target simulation tool from a building architecture file. The first communications protocol may comprise data over cable service interface specification or any protocol that provides a GTOD. A bubble detector is connected to the flow channel.

1459825767-928d9625-0c7c-4879-badd-c5c30c14d111

A system and method for third-party discovery of proximity-based services are provided. The motor control unit sends out a single motor driving command S. The first and second switch groups are connected to output terminals via output switches. A mask layer is located on the base. The lighting device may include at

least one additional light source for illuminating the front side of the aperture, and the front side of the aperture is covered at least in regions with at least one phosphor which is sensitive to light emitted by the at least one additional light source. with the channel length L1 being estimated as the boundary of occurrence of a short channel effect at the time of a write operation and the channel length L2 the time of a read operation, with the channel length L1 being different from the channel length L2.

1459825767-c3fd2a9f-8f29-4196-9c07-739441cee439

A transmitting system wherein a transmission signal composed of main data and a TMCC signal having a SYNC pattern indicating the header portion and a bit pattern indicating setting information of the main data is transmitted and received. In an anode 3, a dielectric material 4 is applied on the surface of a discharging portion 3a in order to inhibit the deterioration of the electrode. The locking arrangement comprises locking tips connected to a wall, which locking tips are located inside a cavity in an adjoining wall in the erected state of the package and arranged to lock the wall first mentioned by bearing upon an upper panel portion of the adjoining wall from the inside.

1459825768-0e7ede33-8acc-4f66-a46a-cdebacbaaa5f

Described herein are centering systems, including cartridge reels, reel drivers, and methods of using them. A natural gas containing a contaminant and a contaminant removing agent are combined and processed within a rotary screw compressor. The arrangement of the disclosed embodiment of the present invention includes a voltage regulator such, for example, as a pulse width modulation circuit for the alternator. The bottom face of this compressible block is comprised of a fabric material for sliding engagement on a hard floor surface. The plasticizer composition provides a polyvinyl chloride resin having excellent properties of heat loss, migration resistance and plasticization efficiency, and tensile strength, elongation, etc. Thereby, the metallurgical operations for forming the interconnection structures are completely independent of the operations required for processing silicon, so that there is no interference whatsoever between the two sets of operations.

1459825768-3e6d21dd-5fe5-4661-a37d-3fd20aa1e0f6

A system and method are described for verifying a user. The invention is a system which displays indications of sound intensity on a display large enough to be viewed by performers distant from the display. A passage extends through the transverse support member between the opposite sides. The handset generates a funds request message which includes the value and sends the funds request message to a funds issuer computer. The kit incorporates the exfoliating tool in combination with a skin exfoliating composition that is formulated with abrasive particles in a carrier vehicle.

1459825768-9fd69a76-bfc9-4622-934b-743a16aa0345

A system and method for increasing hydrocarbon production from a subsurface reservoir and/or sequestering waste material such as carbon dioxide by utilizing a connection between two well bores and a flexible linear cutting device, such as a segmented diamond wire saw, to form a fissure beginning at the connection of the well bores and extending along a specified length of the well bores. Each of the test images is grouped with one of the reference images. The first section forms the end of the male component. The trackable instruction is then decoded and a track instruction cache and a track variable cache are then updated with associated decoded trackable instruction and the one or more trackable variables, respectively. The method is repeated for a plurality of transactions.

1459825769-3b5bd4f4-b894-4ab8-a561-799afcd40535

A system and method for application server with self-tuned threading model. The expanding means are connected to both sides of the seat, and the protecting means

is coupled at its opposite ends to armrests, upper portions of frame elements or the expanding means. Corresponding electrophotographic apparatuses and imaging methods are also described.

1459825770-3aa5df21-3e5f-4a0c-a7b5-171c2a6ffaea

The present invention provides novel pyrazole derivatives of formula I which are potent inhibitors of spleen tyrosine kinase, and are useful in the treatment and prevention of diseases mediated by said enzyme, such as asthma, COPD, rheumatoid arthritis, and cancer. The biomedical return electrode comprises an electrode conductor for receiving electrical energy from tissue via a return path, and a thermochromic liquid crystal layer coupled to the conductor. Each cavity is fabricated to resonate at a different central wavelength, outputting a different frequency of light, each of which can be independently modulated. In one configuration, ribs protrude from the barrel sidewall and define channels with the same wall thickness as the sidewall segments disposed between the ribs. If the leakage exceeds the predetermined blockage threshold level, a blocked condition of the SODS is also declared. For a particular net, the method specifies widths for routing the particular net in different directions on the same layer.

1459825770-3ab8fc28-ab08-404d-ad4e-ac6a614ff698

Methods, software and devices for searching and indexing information are disclosed. The processor determines a temperature operatively associated with the battery and different voltage values corresponding to different combinations of the loads as a function of the determined temperature, and starts the flash device at a predetermined flash current value. An excess developer caused by an increase in bulk through carrier replenishment is discharged from a developer discharge port. A connector can include an optical transmitter for converting electrical signals into optical signals.

1459825771-0f751b88-0479-47f1-b196-230aee9be306

To protect tissue in the treatment of an eye with a focused pulsed laser beam generated by a laser system, e. A storage device stores historical data representing the AVs of the TPP at various times over a prior time period having a length of at least TPLAAV. The present invention also provides processes for preparing these compounds, methods of treating diseases and the pharmaceutical compositions comprising these compounds. Related methods of operation are also discussed. A method for mixing liquid reducing agent and compressed air to form a mixture and a motor vehicle having the device, are also provided.

1459825771-3c13393c-887a-4af3-bced-19051774460d

The present invention provides a resealable closure system that may be incorporated into a container for storing and dispensing moisture sensitive product, such as a dry wiping substrate and more preferably a dry wipe useful for facial cleansing or the application of make-up. The ridges include at least one end ridge and at least one internal ridge which are spaced apart by a predetermined distance, and formed with a desired geometry such as U-shaped, V-shaped, or various other shapes and with different sealing faces such as curved or flat. Heat is transferred from the hot gas to the airflow to generate a cool gas and hot airflow, and moisture condenses within the cool gas.

1459825771-6f48354f-91af-4021-a689-3e32e689e2ee

A steam valve 1 includes: a valve seat 9 being accommodated in a steam flow path of a casing 2 provided with a steam inlet pipe 14 and a steam outlet pipe 15; and a valve body 22, 27 capable of contacting the valve seat 9, the valve body 22, 27 being accommodated in the steam flow path of the casing 2. A lightness adjustment is employed for converting input image to  $K_0$  and initial values of  $C_0$ ,  $M_0$ ,  $Y_0$  are set equal to  $K_0$  and then converted to  $C_1$ ,  $M_1$ ,  $Y_1$ ,  $K_1$  by GCR strategy. The method may further include generating a transform model based on an analysis of the first frame and a second frame that occurs earlier in the video sequence and applying the

transform model to the first camera model to generate a second camera model for the second frame.

1459825771-8d51352d-80cb-4cb4-8c55-5e7779242f4c

A door lock which is conceived in particular for use in motor vehicle doors has a rotary latch and a closing aid which acts on the latter and, with the aid of a drive, carries along the door to be closed in to the closed position. Other magnetic reproducing elements and magnetic heads employing magnetic reproducing elements are described as well. An apparatus for playing the game includes a server and the electronic play station in operative communication with the server.

1459825771-a24df7b9-fe86-47bb-9ec3-ebaf823227a0

A power supplying apparatus having a power saving function and a method of supplying power with a power saving function. The meter housing has a seed delivery opening for delivering a supply of seed into a seed pool area, an air inlet provided above the seed pool area for receiving a supply of positive pressure air into the meter housing, and a seed exit area where seed can be dropped into a seed tube. Each holographic image or diffraction effect in a viewing direction is generated in whole or part by the holographic or diffraction effect generating structure associated with a respective set of interleaved lines. The signaling processor thereby selects the corresponding system on the connection. The link member includes first and second side portions and a connecting portion connecting the first and second side portions and forming a depressed portion in which the rotary shaft is received when the link member is in a predetermined leaning posture. Thus, the nozzle can rotate about the axial pillars for adjusting the outlet direction thereof.

1459825772-c7bbdaac-57f1-439b-849e-acb6707e3fe8

A method for driving a lamp comprises the steps of: generating a lamp current having a constant magnitude; defining a commutation period having a duration TCOMM; defining a time base of original commutation moments, having fixed mutual intervals of  $\theta$ . A voltage detector detects the states of first and second voltages and generates first and second detection signals. The invention further relates to hybrid cotton seeds and plants produced by crossing the cultivar Acala ULTIMA EF with itself or with another cotton cultivar. Also provided is a method for manufacturing an explosive composition comprised of Heavy ANFO and grain hulls, such as rice hulls. The prevention of movement of the openable member is released by moving the image reading member toward the first position from the second position in which the preventing means prevents the movement of the openable member. A first guide edge is disposed angularly from the first resilient arm, such that when the punch tool is secured in the clip between the first and second resilient arms and the sheet media is placed along the first guide edge, the punch tool is positioned to punch a design into the sheet media.

1459825772-e40564d5-a3e1-4e0f-af99-45381c1a9e52

An apparatus and method for transmitting signals in a wireless communication system are provided. An adaptive media distribution system includes at least one original source of a media channel, a plurality of content playback devices, and one or more stream controllers disposed between the original sources and the playback devices. A click post and clicking rib provide a single click in each direction of rotation. Thus, when one little pig's nose 210 is selected out of the twenty little pig's noses 210 displayed in the stick house stage, the payout amount of the benefit associated with the little pig's nose 210 is increased. Context administration can include setting up and maintaining subject data definitions, intervening in context manager operations, providing security functions to protect sensitive context information against tampering by unauthorized users, etc. The odd-numbered gear range group includes the direct-coupling gear range.

1459825772-e5981642-d656-4915-8e29-79d509ff765a

It is an object of the invention to provide a droplet ejection apparatus and a method of detecting an ejection failure in droplet ejection heads capable of detecting an ejection failure in the droplet ejection heads by counting the number of reference pulses generated for a predetermined time period after a droplet ejection operation. The symbols of a predefined symbol sequence are mapped according to a predefined mapping scheme on subcarriers of the OFDM systems by a mapping unit, wherein the symbols of the predefined symbol sequence represent subcarriers of the OFDM system with nonzero amplitudes. The fuel injector may also include a rich catalyst module circumferentially disposed about the pilot assembly. Upon identifying updated versions, the application downloads the updated versions and loads or reloads them into the runtime environment prior to initiating the main functionality of the application. The flexible covering member and the rigid covering member are bonded with an adhesive strength equal to or higher than atmospheric pressure and with a peel strength equal to or lower than a breaking strength of the flexible covering member. A radial dimension of the intermediate part is less than a radial distance between the exterior cylindrical surface of the first skirt part and the interior radial end of the abutment surface.

1459825772-fe1a68d9-58b8-4aaf-873b-a4057e82ba32

A multi-player game includes both individual and bonus game aspects. An end frame includes a post positioned to engage and support the bearing support assembly. One embodiment is a directional switch sensitive to the orientation of the switch and the motion of the switch due to outside forces. 3 ppm by volume of water is passed through a first packed bed to selectively remove at least a portion of the oxygen. The control section controls independently each of the plurality of loop forming rollers based on the detected result of the skew detection sensor. The access priority judging circuit takes a command fetch access in preference to an operand data access in the next bus access when data stored in the access register is a command fetch access, and the pre-fetch request signal, the operand data request signal, and the burst transfer signal are all transmitted.

1459825773-07176ab6-2613-4317-925d-ca0175baa673

A polymerization process is disclosed, including: providing a reactor component suspended in a hydrocarbon gel; introducing the reactor component to a polymerization reactor; and polymerizing an olefin in the polymerization reactor to form an olefin-based polymer. Hot oil is passed through a jacket surrounding the treatment chamber. The one or more hybrid instruments can be configured to receive image data from the telescope assembly and perform a fine guidance operation and a wavefront sensing operation, simultaneously, on the image data received from the telescope assembly. The pot for tea-leaf storage is connected to the tea making room of the tea making mechanism through the tea-leaf transmitting mechanism.

1459825773-078e4b3e-14ce-40f4-b44e-17d4121aad8e

The present invention provides a speech recognition method for achieving a high recognition rate even under an environment where plural types of noise exist. The system contains an electrochemical cell and at least one portion of the surface forms a functional component of the cell. Metallic nanoparticles are produced with size range of 1\to13100 nm. An opaque pattern is on the PES barrier for projecting an image of the pattern with light from the flame and a translucent wrap at the outer surface of the shell receives the projected image of the pattern. The method comprises controllably generating an actual value for at least one first process parameter by taking into account at least one previous value of the respective first process parameter, wherein each first process parameter is a process parameter of said at least two sets of process parameters.

1459825773-67943c09-21ec-4be6-952f-502b8c7ce551

Pulses from a mode-locked Yb-doped laser are spectrally broadened, and temporally compressed, then frequency-doubled and used to pump an optical parametric oscillator. A coating containing lithium fluoride and lithium hydroxide is provided

on the surface of an anode active material layer. An indicator is presented together with the audiovisual content to the user. As data is added to the database log, it is written specifying asynchronous mirroring to the primary log file. The synthesis balance is adjusted by the exposure time or the respective illumination intensities of the two light sources. A FID is obtained with the parent handle.

1459825773-8cbb82c-c01c-4f24-bb22-7ba78b150fce

A fluidization level sensor and controller for use in a fluidized patient support surface has a controller coupled to a sensor and a compressor. A circle is ground into the material using a cylindrical drill bit, which grinds a loose abrasive between the bit cylinder and the material. Two pressurized hollow members that are surrounded by a cover are arranged on both sides of a plane that extends through the tension-compression element such that the linear tensions generated in the cover preload the tension straps on the plane of the tension-compression element, secure the tension-compression bars against bending, and stabilize the joints.

1459825774-0cb98a46-dc8e-4a8b-8615-4149e89e4367

A captured image of an object is input twice using a white background and a black background, after which the opacity D and the color image X of the object are obtained to yield an object image. The signal processor may be arranged to generate a second signal at a frequency slightly different from that of the excitation signal, and to mix the second signal with the signal received from the sense coil to generate a third signal having a frequency component equal to the difference between the frequency of the excitation signal and that of the second signal. The input shaft may support chuck jaws. A fuel discharge valve is provided in said fuel discharge passage. The catheter tube comprises a feature that engages a corresponding feature on the biostimulation device whereby the stylet can be rotated relative to the catheter tube for disengagement of the stylet threaded end from the biostimulation device threaded end.

1459825774-0f856c30-dcb3-4502-a6b0-51c444304555

The bicycle carrier rack includes a main frame, a swaying frame and an adjustment device. At an initial reading of the optical disc, the main controller determines whether an address information detector succeeds in reading the address information. The system utilizes unique review and performance metrics, increases quality control, and enhances physical and data security mechanisms. % polylactic acid, wherein the modified olefin based polymer exhibits a seal initiation temperature that is at least 5°C.

1459825774-35788933-a082-4ef1-90d7-97f738031390

A method is provided for fabricating an ultra short gate length thin film transistor. If the connection is the first time connection, the wireless terminal obtains information of wireless terminal software on the wireless terminal. , fatigue levels by measuring a subject's body core temperature. In one application, the device function as a telescope but with negligible length.

1459825774-4ba7545b-8088-4886-a4ef-62f3cb692df0

Horizontal duct scrubbing systems for removing particulate matter from a gas are disclosed. The service system selects a service that a user can use from those and displays the selected service. The liquid-quantity determining unit repeats a pulse-counting operation for counting the predetermined number of pulses with different starting time points, and decides that a measurement is incorrect when differences between the time periods are greater than a predetermined allowable limit. Before the first station receives a signal from the second station it makes initial adjustments to its receiver circuitry depending on the stored information about previous signals received from that station. The display panel includes promotional indicia thereon.

1459825774-a4d2c3d2-7193-4ff8-8af9-99d2445db1bc

A method is provided for determining analyte concentrations, for example glucose concentrations, that utilizes a dynamic determination of the appropriate time for making a glucose measurement, for example when a current versus time curve substantially conforms to a Cottrell decay, or when the current is established in a plateau region. Ridges on the corrugated substrate can be created using high precision techniques that are not ordinarily suitable for device production. The manifold block is provided with a pressure gauge, an inport, and an outport. The solvent is evaporated to form organic semiconductor films at the locations on the surface of the substrate that correspond to the multiple contact faces.

1459825775-825f1279-0ed7-4739-9ffa-b618356b03d5

A high speed manufacturing system for processing articles of manufacture requiring processes to be performed on the articles at a pre-selected processing rate includes a trunk for simultaneously conveying a plurality of the articles of manufacture at the pre-selected processing rate in a first mode of motion from the beginning of the manufacturing system to the end of the system. Layers may be used individually or as a hybrid. A hole is drilled through the shingles and into the structural member. The frequencies of the two signals are measured and then the ratio of the two periods which is the reciprocal of the two frequencies is calculated. If a response to the GAS request frame is not received from the AP within the first time period, then the PED extends the dwell time to wait for the response for a second time period, wherein a duration of the second time period is determined based on a total allowable time to scan for APs. A photo-electric pulse conversion circuit is provided with a photodiode, an I-V conversion circuit, a first differential amplification circuit having a DC offset cancellation circuit, a second differential amplification circuit, a reference voltage generation circuit, and a comparison circuit.

1459825775-908894c6-284e-41ce-a521-50c5f3be46d0

The present invention relates to a process for preparing tetramethylglycolide by heating a composition which comprises at least 50% by weight of 2-hydroxy-isobutyric acid and/or tetramethylglycolide to a temperature of at least 100°C. The present invention relates to a method for preparing a highly homogeneous, amorphous silica-alumina cogel catalyst. When an incoming call is received by the call center and no service representative is currently available to service the call, the caller is prompted to elect to either wait on-line for a next available service representative or to disconnect the call and receive a call back at a later time. Error from torsion forces is minimized by having the dimple center of curvature coincide with a horizontal plane including the slider gap and having the dimple longitudinal axis extend through the slider center of mass, so that both sway and torsion force sources of track misregistration are addressed. The present invention also allows for the collection and modeling of accurate localized sea current data, which may assist with marine and coastal engineering works such as shoreline protection and port dredging.

1459825775-de9cc781-8e9b-4eb0-87ca-245dda198bf3

A cosmetic or dermatological film-forming composition comprising a liquid fatty phase, including at least one volatile hydrocarbon oil, and a film-forming polymer in said liquid fatty phase, characterized in that it comprises at least one polyolefin wax resulting from the polymerization of alpha-olefins having at least 10 carbon atoms, said wax having a melting point ranging from 50 to 80°C. The load zone is created by: creating a load zone marker on the disk, the load zone marker indicating a position of a load zone of the disk; reading the load zone marker for determining a position of the load zone on the disk; and storing the position of the load zone. The hexahydrotriazine and/or hemiaminal material may be made from a diamine and an aldehyde. The bottom section has a base surface adapted to at least partially rest on a top surface of the bumper. The marker character is stored in an input field that is accessed by a user to select a particular link reference phrase

and the reference phrase text is not defined as a user input field, so that the user cannot accidentally change the reference phrase. The cardiovascular imaging and functional analysis system of the present invention can be used as a dedicated nuclear cardiology small field of view imaging camera.

1459825775-eb208144-83bc-461f-b3e7-050d4cf89f10

The present invention provides a mechanical press with a low height. One or more databases, managed by a server, maintain metadata associated with DVDs. At this time, a pattern that is observable with the ion beam defect repairing apparatus is selected as a position alignment pattern. The method includes assigning a positive or negative value to each of a plurality of positive and negative zero crossings of the first signal. During a second portion of that transmission, e. An adjustable arch adapted to expand and contract to be molded to the palate is provided connecting the posterior pads together within the mouth and out of the way of the tongue to maintain the position of the occlusal posterior pads within the mouth during use and to prevent loss of the pads such as by swallowing.

1459825776-26de3827-b506-4cc7-ac15-e9346c7e7588

Systems and methods for converting a baseband OFDM signal to an IF signal while minimizing lengthening of the impulse response duration experienced by the OFDM signal. The formulation contains an inert non-reactive compound that lowers the heat of vaporization of the formulation, and the active compound. The piezoelectric actuator is stacked on and bonded to a surface formed with the pressure chambers of the cavity unit.

1459825776-9fc51d92-a43a-414c-a13d-6c9f496ac080

A security device includes a locking member, a ratchet mechanism, and a plurality of cables. It meets increasing consumer demand for more public services like watersewerelectricity generating electrical power using the resources that are already at hand, and must dispose of on a daily basis. A compressed fluid or gas, such as air, could be used to clean the surface of the laser-cut workpiece to remove slag formation which adheres to the surface of the cut workpiece.

1459825776-f2db95fc-5a2c-4940-9ef0-571d7369825c

A medical device lead includes a proximal connector configured to couple the lead to a pulse generator, an insulative lead body extending distally from the proximal connector, and a conductor assembly extending distally from the proximal connector within the lead body. A tow handle is pivotal vertically on a tow hitch on a front-end wall. The x-ray device is characterized in that the syringe cap is arranged in the beam path so that its longitudinal axis coincides with the main axis of the beam path. Movement of the distal end of the clamping member, which remains located outside the vessel, against the expanded region creates a seal at the target site. The ability to cannulate a retinal blood vessel should be efficacious in the treatment of vein and artery occlusion, ocular tumors and other retinal, vascular and optic nerve disorders that would benefit from diagnosis and/or treatment.

1459825777-97ad9300-a86c-4eee-91d4-7131aa1382f3

A method and system for fusing image data includes an electronic circuit for synchronizing image frames. An inversion layer channel is formed in a top interface of a microcrystalline active layer, and being separated from an incubation layer in a bottom interface of the microcrystalline active layer. A decoding method and apparatus is disclosed for decoding multi-view video content from a resultant bitstream and multi-view coding information for the multi-view content from at least one high level syntax element. The impact driver further includes an LED light unit disposed in the extending portion forward of the rotation stop mechanism so as to illuminate objects in front of the hammer case.

1459825777-9d131ef8-f221-4e80-b5c5-6b611a3875d3

This invention is a device and method for adjustably and reversibly reducing

nutrient absorption from food passing through a person's gastrointestinal tract using an Adjustable Gastrointestinal Bifurcation and a flow-control member. The multispectral coefficients of the linear spectral display is nonlinearly distorted in a coding system adapted to the human color distinction capacity, wherein the distortion is made dependent on all or individual dominant amplitudes of the multispectral coefficients and the distortion is again canceled in a decoding system. The second chip includes a second substrate having a recess, and a second film made of elastomer. The front and rear portions of the outer panty substantially comprise an elastically extensible material. A transmitter and a receiver are coupled to the microprocessor.

1459825778-7afb0eb6-76a2-4985-8f46-db4851961dcb

A method for forming an aqueous carbon black dispersion including providing a reaction mixture including carbon black having a DBP uptake of greater than 90 cc/100 g of the carbon black, a monovalent ion persulfate, an aqueous medium, and, in some embodiments, a strong acid; subjecting the reaction mixture to a first temperature of from 40°C. The system includes a base portion, an intermediate member and an upper member. The feedback provided to the originator is input by a screener using a portable screening room. Then, it is determined if a focusing error is within a range of an allowable error. The set of estimation circuits computes an estimate for the location of the leading zero or the leading one in the result from the K and S computed by each half-adder circuit.

1459825778-95709eed-94b9-4dc9-943b-13cda7b87fa6

An on-premises restaurant paging system and method for paging a customer in the restaurant. The fifth lens is formed in a shape so that a surface thereof on the object side and a surface thereof on the image plane side have negative curvature radii. The third region of the structure is disposed between the first and second regions. The time constants of the RC circuits control a signal slew rate at the third output node of the output circuit, and the value of R may be selected to provide a predetermined, controlled slew rate range at the third output node.

1459825778-c7963033-90ee-4893-ba1a-80c3b4531d0f

A thermoplastic molding composition, comprising the following amounts of components A, B, C, and D: a) from 3 to 91. The dryer filter and the detergent dispenser are substantially symmetrically disposed with respect to the control panel interposed therebetween. A user selected domain obtaining portion 203 obtains a domain, which has been selected by the user, from the portable terminal 101, and the task candidate determining portion 211 determines task candidates to be presented to the user from among tasks stored in the task model DB 102 based on the domain selected by the user.

1459825779-551e2c51-6991-4318-ab21-4d0dd25304e5

Methods and systems for handing off a wireless client between access points wherein the scanning for access points is decoupled from the handing off, thus reducing the delay in handing off. Said compounds are useful for the treatment of medical conditions mediated by inhibition of D4 receptor. Sintering is performed at a temperature providing good porosity of the upper sintered layer and an over-sintered condition of the lower sintered layer. The wick and the shroud can be coupled to a shaft that simulates a wax candle body.

1459825779-8d1c6f2b-8dbc-4e2b-9284-11663b560766

A payment request associated with a transfer of funds is received and a risk management assessment for both sides thereof is performed. The firing pin locking mechanism may include a stopping member which may be selectively moved by a user of the pistol between first and second positions, and a movable blocking member that may be engaged with a forwardly-movable firing pin. The reversing drive can include a gear train having a first gear operably engaged with the firing member and, in addition, a second gear operably engaged with the first gear, wherein the second

gear can be selectively operable with the trigger such that an actuation of the trigger can retract the firing member and/or cutting element via the first and second gears.

1459825779-d8ed716f-ff94-48c6-961b-1b077968904a

A universal aerial hanger for supporting an aerial telecommunications device used with telecommunication lines. The player makes a wager for each of two or more hands that the player wishes to play. The first and second pickup fields are parallel to each other and displaced from each other by  $\frac{d}{n}$  in the longitudinal direction thereof, where  $d$  denotes a longitudinal dimension of each pixel image in the first and second pick up fields and  $n$  denotes an integer equal to or larger than 0. The selected program segments may be recorded on a video recorder. A proper separation of sensitive circuits from the photodiode array on the sensor chip, coupled with precision registration of the sensor chips on the substrate, allows easy installation of the protective metal shield. The vent leads to the atmosphere.

1459825779-eee90a35-74fc-4ce3-b828-5913d29f6b04

Compositions containing a solution of a polyfunctional aziridine component in a non-reactive solvent, and methods of applying such compositions to proteinaceous substrates, such as fingernails and toenails, to provide primed substrates which may be further coated. A lower anchoring portion includes one or more anchors disposed in communication with a wellhead, or with the sea floor or below the sea floor mud line, or with a well casing portion. A control assembly can be extended through the small hole and one of the adjusting holes to change a pivotal interval between the lifting arm and the auxiliary wheel axle, and thereby adjust an inclination angle of the auxiliary wheel at each lateral side of the rear wheel. A primary correction section determines a first corrected PEB temperature for conforming the photoresist dimension of a post-lithography to the objective dimension, using the relation data stored in the first storage section. The light emitting device package has improved light emission efficiency since the light emitting device is placed on a small thickness portion of the metal base.

1459825780-4624513d-e8bc-4185-8911-4756ddf0cd3d

The present invention is directed to a disposable absorbent article. The base defines a plurality of assembly holes, and each assembly hole includes a blocking surface and a through hole. The invention reduces the power consumption of the electrode structures by use of a new type of in-cell type charge recycling. In this way, a total power of the set of  $M$  output optical signals may be significantly larger than that of the seed optical signal, thereby ensuring that a majority of a power efficiency of the optical source is associated with power efficiencies of the set of  $K$  optical amplifiers instead of power efficiencies of the set of  $N$  light sources. The invention provides a method of vapor phase catalytic oxidation of a substance to be oxidized with a gas containing molecular oxygen by means of a multitubular reactor, wherein the method comprises: performing a reaction of vapor phase catalytic oxidation under such conditions that a heat transfer coefficient of the heat medium is 1,000 W or higher. Fluorescent radiation is detected due to its coupling with the waveguide or its emission through the waveguide.

1459825780-884230f4-a911-4dbc-8dbd-312a5271af05

A wire bonding machine is provided. The finger units include a Scott Russell mechanism, a first parallel link mechanism, and a second parallel link mechanism. A memory for storing video data for the multiple display devices utilizes multiple channels for higher bandwidth. For example, in one game a Game Master selects any of the rods except the rod having unit length and places it upon a game playing surface. A stack of circuits is designed in the chip to fit in the pad based on the first dimension  $x$  and the second dimension  $y$ .

1459825780-ccdaef18-359d-4edd-b0e0-b0d650df9f76

The present technology provides an air pre-treatment and monitoring device that

includes an inlet port configured to receive an air flow and an outlet port configured to expel the air flow. The spatial prediction apparatus of image data includes: a spatial prediction unit performing a spatial prediction of pixel values of a current block using pixel values of blocks adjacent to an upper row of the current block. Each of said variants is identified by a respective pattern. In various embodiments, the threat level attribute is used as an environment attribute provided as input to an XACML-based access control system.

1459825780-eded2881-e86d-4269-9476-12f43a105e35

A video communication system comprising at least one video data transmission unit for sending or receiving video data over a data network is disclosed, as well as a corresponding video data transmission method. An electrode is provided juxtaposed a region of the inner surface of the lighting tube, the electrode energisable from an external source of energy via an electric lead supporting the electrode, and positioned adjacent the main ionisation region within the lighting enclosure. A node B of the asynchronous communication releases a connection to the mobile communication system and assigns a new mobile IP to the mobile communication terminal, thus providing continuous packet data service to the mobile communication terminal. A processor of the present invention generates a primary or secondary reference signal which is a combination, respectively, of only the primary or secondary signal portions. As a result, a lift amount of the valve can be restricted, and a flow rate of fuel passing through a passage can be maintained at a constant level. The first hook component engages with the first hooking portion and fixes a side of the display panel on the side of the first curved portion as the bezel combines with the cover.

1459825780-f4a7d71f-12fd-4ff8-80b0-11baf633ad0e

A fracturing fluid for a downhole environment is disclosed, comprising a water-sensitive gel; and a hydrated breaker. An air intake system includes a turbocharger compressor connected to intake valves of all the cylinders for supplying charge air to the cylinders. Preferably, the frangible applicator tip comprises a support element permanently connected to the fluid source, a relatively rigid tongue element extending outwardly of the support element, and a frangible region therebetween. The leading face of each of the fan-shaped vanes and the trailing face of an adjacent one of the fan-shaped vanes converge toward a center portion of the rotary shaft so as to define a respective one of the fan-shaped grooves, and cooperatively define an angle therebetween. The magnets may be removable to reverse the treatment.

1459825781-06c08a10-1476-4c1c-a3e2-c185e7dc094c

A surgical tool holder includes a flange comprising a body defining a first surface and a second surface, a first end and second end. One embodiment includes a method that determines that data is stored in multiple locations remote to a computer, estimates a latency to retrieve the data from the multiple locations, and requests the data from the plural locations. Further included are methods for identifying therapeutic compounds for preventing lentiviral infection and treating associated disease. The present system and method finds its uses in a wide array of applications such as, for example, occupancy detection in a transportation management system and in medical imaging and diagnosis for healthcare management.

1459825781-320a4640-0797-4a31-bfc4-8cd26159cd57

An embodiment of the present invention is a retirement administration and distribution system. In one embodiment, the polymer is combined with an optional crosslinker and an optional carrier to form a coating composition suitable for use in coating articles such as packaging articles. The light intensity is converted to a numerical value and transmitted electronically to a logic circuit, which determines the proper disposition of the sample. It further includes: a sidewall; a first flexion plate attached to a release tab extending outwards from the sidewall, where the release tab provides for quick attachment or release from a camera lens;

a second flexion plate attached to at least two locking teeth extending inwards from the sidewall.

1459825781-5b59fd4f-a4af-4be1-a7ba-0632fde445c1

A dual depth slider air bearing surface that enables the slider to achieve a ramp fly height profile near the textured landing zone of a disk. The bus has a plurality of fixed ports, where each of the ports is capable of connecting a router card to the system controller. An outer mandrel is attached to the lower connector. In one embodiment, a flow diagram is constructed for assigning nets to traces; and, maximum flow algorithms are used. The drive mechanism and the magnetic device are also designed such that the torque is retransmitted by the drive mechanism to the first pivot connection, such that the retransmitted torque cancels the moment of force caused by gravity exerted on the articulated mechanical arm, relative to the first pivot connection. The threads of braiding are composed of a shape memory polymer composite such that braiding deforms from a temporary shape to a permanent shape in consequence of an external stimulus, whereby the temporary shape is given in a first profile form of the braiding and the permanent shape is given in a second profile form of the braiding.

1459825781-6e92641e-2020-433b-9fb8-82dab91ff2a5

A ground engaging tip of a tooth assembly for a base edge of a ground engaging implement, is provided, wherein the tooth assembly includes an adapter configured for attachment to a base edge of the ground engaging implement and having a forwardly extending adapter nose. The method also comprises interpolating between a pair of adjacent video frames of the first stream of video frames to produce a first number of interpolated intermediate video frames in a particular sequence of the intermediate video frames. The rotational axis Y1 of the wheels is located in front of the center of gravity of the micro-drone. The UE terminal also includes a second power control module for controlling a second transmission power to be applied to signals used for D2D services. The context may include tooltechnique, hardware, condition, industry, current and/or past employer, and business rationale.

1459825782-56b71eaa-d2e4-4014-826b-3eb26a213bfa

Presented in one embodiment is a waist chain comprising a plurality of links; a plurality of coupling members which connect the plurality of links, thereby forming a chain with two ends; and at least one end connection member which is connectable to both ends of the chain such that the chain becomes continuous. Also provided is a computer readable storage device encoded with data for adapting a manufacturing facility to create the apparatus. Thereafter, it is determined whether the generated random numbers are predictable by comparing the output of all said exponential operations to their predetermined acceptance range. The generator and correlator transmit and receive the piggyback packet without substantially modifying the media access control layer subsystem. A second slot in the wall extends from an end of the first slot at an angle acute to the first slot.

1459825782-84efe678-4120-40e3-8b69-ce3cba9e1267

A mobile electric device includes a first body, a first touching element and a first sensing element. Methods for producing a maize plant that comprise crossing maize variety PH252P with another maize plant. An inserter instrument is removably positioned adjacent to one of the anchor extenders and is operable to position a connecting element engaged thereto to a location adjacent the number of bone anchors in a minimally invasive surgical procedure. This helps alleviate the burden on the CPU and thereby accordingly reduce the lowering of overall system performance. The decoding of individual packets from two separate MPEG transport streams supports the use of multiple tuner host terminals for such functions as picture-in-picture program viewing and the viewing of one program while recording a second program.

1459825783-2dfef693-3723-4e8c-a885-2520a6ee9d4c

Precursors for use in depositing tellurium-containing films on substrates such as wafers or other microelectronic device substrates, as well as associated processes of making and using such precursors, and source packages of such precursors. When the lift portion is pulled, the door stile is released from the latch base and the door is pushed away from the doorjamb by a tab portion of the handle, both actions occurring substantially simultaneously. The mask shift amount control circuit outputs a mask shift control signal in accordance with a mask shift amount.

1459825783-411380ca-7814-4337-90ef-ad5d506a1174

A transaction product for a retail display includes a transaction sticker and a transaction card. The method at an encoder comprises enhancement process of image boundary information, adaptive brightness transformation process, and adaptive enhancement process of chrominance information. An endrun stop halts the head tube while the sensor organs ascertain whether a frontally-situated head of the head tube is open or closed. As another example, location information may be used in an attribute arbitration. A plasmonic layer, including a plurality of discrete plasmonic particles, is interposed between the first and second set of electrodes and in contact with the dielectric layer.

1459825783-940a8060-cc64-4512-bc67-014a3a04f6a0

A distributed, web-services based storage system. The configuration cancels the effects of the inlet flow entering orthogonal to the axis of the nozzle and diffuser. ; a second copolymer of ethylene and at least a -olefin having a copolymer melting point of from 115 to 128 C. Shift operation of the shift mechanism is switched to the stronger operation force when the ratio of rotating speeds of input and output shafts is close to the rotating speed of the gear being selected. FETs are formed in one photodiode electrode, e.

1459825783-a646b8c0-3141-4e22-9be5-2001a50f9adf

A transition part between two optical waveguides with different index contrast is characterised in that the transition part includes a non-adiabatically up-tapered longitudinal section, and in that the transition between the two waveguides is arranged after the up-tapered longitudinal section as seen along the main direction of propagation of the light. The plurality of interdigitized conductive fingers includes a first set of fingers that are connected to an anode terminal, and a second set of fingers that are connected to a cathode terminal. As can be seen foregoing, the present invention relates to a novel use of GRS and CDH and provides a method of screening an agent for preventing or treating cancer.

1459825783-e1f6f71c-5c29-4143-957b-aa798a1b640b

A connection element able to be located between a part or neck of a rolling roll and a relative housing bushing as present in a chock for rolling stands, including a first external element and a second internal element, mating and coupled, wherein the second internal element has internally a seating at least partly truncated cone shaped for coupling with the neck of the rolling roll. A display element of the present invention has a photonic crystal, a light source unit, and a control unit. The flexible bag is operatively connected with a flexible tube to an applicator which is fed by gravity from the bag. The exemplary device uses a free running clock that generates a reference frequency from which a desired locked clock frequency is synthesized under control of a processing unit that compares the locked clock frequency to the time stamps. The current compensation circuit, responsive to a difference between the voltage levels of the input and output signals, varies an amount of the biasing current. A mode selector receives a signal external to the chip to determine whether the communication is to be with one of the other connected integrated circuit chips or in single chip mode, such as with the test interface circuits.

1459825783-e9fb3531-d0c1-4aa3-819a-8d128b29cda9

A system for the support and management of search for documents is presents. The

compressor includes a cylinder bore for compressing a refrigerant, a piston inserted into the cylinder bore, a swash plate having a controllable slope with respect to a drive shaft, and a control valve for controlling the slope of the swash plate. A controller is linked to the gantry and gimbal unit motors, the gripper unit actuator, and actuators associated with a series of work stations for carrying out processing operations such as lapping and grinding. Fluid passages at the outlets release fluid under pressure within the lower chamber around associated ionizing electrodes mounted at the outlets. The tiltswivel adjusting device permits the monitor to tilt forwardbackward, or swivel leftright when an external force is applied. The pneumatic tire includes a plurality of tire protrusions and/or a plurality of tire recesses of a tire side portion that constitutes a vehicle outer side, and the wheel includes a plurality of wheel recesses in a surface that constitutes the vehicle outer side.

1459825784-2fd75391-0e6f-46df-a68a-3e11ae31e771

A position sensor is disclosed having a transducer formed by a Hall-effect device and permanent magnet secured within a housing on either side of a low permeability gap. The integrated functions in the controller can be used to establish an AC motor's baseline electrical power and energy profile and to monitor continuously the power and energy reduction performance of the controller without requiring a separate meter and logger. A first contact is formed to penetrate through the first insulating interlayer to connect with the transistor. For each image element of the plurality of image elements, the method includes rendering at least one effect with respect to the shaded image element to generate a modified image element. Further, the transmission of the actual digital content is validated to a remote third party system, based on the determination.

1459825784-b1a58ada-fdbf-44dd-83f1-bb35e5c0f525

Cookware containers providing a support to rest a utensil during cooking. The electromagnetic clutch assembly includes a primary or pilot friction clutch pack and a secondary or main friction clutch pack. 3% by weight, and the weight ratio of the tungsten content to the rhenium content is at least 1. The external resources may be supported by different provisioning systems. Preferably, the top bone contacting surface has a more accentuated convex shape compared to the bottom surface so that the spacer is better able to sit in the naturally formed concavity present in the bottom surface of a spinous process.

1459825784-d44a0571-e206-4e08-a3e0-94435618e558

A device is provided for supplying gas into water, especially for aquaculture, including a water inlet arrangement with a pipe having a first plurality of openings and a Venturi type gas dissolver unit built in the pipe, and a surrounding second element having a second plurality of openings and/or a fixed or adjustable shield. At least one damping body, which is preferably viscoelastic and acts on the valve element, is provided for obtaining a large dynamic range of the device in order to control flow in a fine, precise, and oscillation-free manner across a broad range of flow volume. Participating spectators employ wireless interactive devices that present a promotional message and include user input and output interfaces. The invention further includes an irrigation system. A method of producing seaweed paste which requires a short treatment time, has good productivity and can reduce production costs, and seaweed paste obtained by such a method are provided.

1459825784-d7d083ed-fbee-43b0-97f2-9706888adecc

A ventilation system for an underground structure which can internally supply fresh outdoor air by individually sucking and discharging air through fans of underground shafts in the underground structure such as an underground parking lot, underground warehouse, subway space, underground sporting place and underground hangar. The digital television receiver includes an antenna having directivity according to a control signal for switching patterns of the antenna. Through this, it is possible

to reduce cost and ensure a small size.

1459825785-27e7b029-b456-4804-85f0-911a38d2e871

A tunable band pass filter is provided. A group of pixels is identified that correspond to an image of a face within the digital image. The chamber has a gas admission aperture for receiving an oxygen containing gas into the chamber. The example method still further includes receiving, at the online service provider, a selection from the user and, in the event the selection correctly corresponds with the request, allowing the user access to the one or more features.

1459825785-3885cf2a-a71b-49ac-abff-7bdf07d653ef

Techniques for parallel processing of events within multiple event contexts include dynamically binding an event context to an execution context in response to receiving an event by storing arriving events into a global event queue and storing events from the global event queue in per-execution context event queues are described. In particular, a reflector function is added in order to reflect data communications towards a pre-existing transceiver. A hydraulic actuator is provided in the housing for controlling the capacity changing device. The push dogs move the carrier into and across the transfer track.

1459825785-4a9c18be-fed6-4273-ac9e-abdeb0410420

An embodiment of the system and method for optimizing pattern query searches on a graph database uses a pattern query optimizer to optimize execution of the search plan for any sequence of SQL expressions by separating or breaking a pattern query into multiple subpattern queries before converting the subpattern queries into SQL expressions. Each gate of the set is disposed between a corresponding source and a corresponding drain. The shutter may be located before or after the movable lens group and before or after a fixed lens group that may also be included. The handle tab is designed to stay above the surface of the mat or rug when the pin-shaped element is holding the mat or rug in place. The adhesive exhibits a lower than expected adhesion to coated papers without sacrificing the adhesion to standard uncoated papers and preferably, the 90° peel adhesion, as measured on Kromkote paper is in the range of 20 to 250 grams/inch.

1459825785-d5d3b3bc-8668-478c-b113-9bd36cf79ca9

Methods, systems, and apparatus, including computer programs encoded on computer storage media, for name detection. According to the arithmetic performance of a solver for executing the design, a problem scale corresponding to one path accommodation designing operation is set. The adaptive YC separator includes a plurality of filters, each to separate chrominance data in a video signal, and a blending circuit to use fuzzy logic to blend the chrominance data.

1459825785-f94faa02-30f5-4b97-8465-2d65cd8f6043

The present invention provides an apparatus and method for use in processing semiconductor workpieces. Dynamic configuration and reconfiguration of a quick page message is provided. Also a method of controlling fuel recirculation in a gas turbine engine. A current density is determined for each of the polyhedral elements based on the calculated electric potentials. The control unit is further developed such that, when the desired clutch torque is determined, at least one defined high-speed range is taken into account and in that a speed-range-related clutch torque assigned to the high-speed range is defined as a maximally permissible limit torque. Logic signals produced in a first electronic module of the printer are transmitted to a second electronics module of the printer.

1459825786-6f9de921-3901-466f-abb2-f9fa356f39d9

An integrated circuit having an integrated circuit die and at least one height-sensing pad disposed on a top surface of the integrated circuit die and electrically isolated from the die circuitry. A QA user may request tokens, card types and other data associated with a payment device for quality assurance

purposes. Accordingly, even when a system reset occurs while the non-volatile readwrite memory is in write mode, a hang state can be avoided since the memory will be reset to read mode before attempting to read boot code for a reboot operation. The viscosity of said coating solution for the polarizable electrode layer is set to between 0. In various aspects, the methods, devices and systems may allow for a rapid procedure that requires a minimal amount of material and/or results in high purity nucleic acid isolated from complex fluids such as blood or environmental samples.

1459825786-71e78e7a-d15d-407f-9f9d-08a343346c4a

A vapor hydrated packaged catheter assembly and method of manufacturing and distributing same includes a gas impermeable package housing a catheter within a catheter-receiving cavity. A method of making a partial metal nanoshell preferably includes asymmetrically confining a substrate particle and selectively layering a metallic material over the substrate particle according to the asymmetry. A group of variables associated with the mobile node is monitored, the group containing at least one variable of which at least one is derived from said parameters. The potential difference between the first voltage and the first reference node is smaller than the potential difference between the first reference node and the second reference node. A method of manufacturing the vertical-gate transfer transistor, an APS including the vertical-gate transfer transistor, a method of manufacturing the APS, and an image sensor including a plurality of the APSs are also provided. A cable which can freely bend is integrally provided in a base portion of the hook.

1459825786-b23426e9-6913-4298-a98d-e623d4c334ad

A distinct cultivar of *Argyranthemum frutescens* plant named 'Argymonwi' characterized by its compact ball shaped plant habit, good field performance, white single flowers, dark green coloured leaves, freely flowering with numerous inflorescences per plant. At least one LED lighting element 40 is provided for emitting light. The compressed data packet is then sent to the common address.

1459825787-18eda958-4f3c-4505-8b4d-7da9fe165bf3

Techniques and systems whereby operation of and/or access to particular features of an electronic device may be controlled after the device has left the control of the manufacturer are provided. The light-reflective anisotropic conductive adhesive contains a thermosetting resin composite, conductive particles, and a light-reflective acicular insulating particles. The invention also relates to articles made from the composition, methods of making the composition.

1459825787-5151bb84-bbc4-447e-881c-33699d6736a8

A nonvolatile memory device having two or more resistors and methods of forming and using the same. The first step uses an initial boot using a fixed boot program and an authenticated and verified secondary environment to complete starting of only authenticated code. In one embodiment, the second cleaning roller deforms against the first cleaning roller such that the cross-sectional length of contact between the first and second cleaning rollers is in the range of 20% to 38% of the circumference of the first cleaning roller. The lip covers the electrical component when the cover plate is in the closed position to prevent accessing and removing the electrical component. Exemplary applications include image compression, where categories include image foreground and background layers. Electrical pathways extending away from adjacent pairs of the through vias can be tested for electrical impedance and other signal propagating characteristics by way of the signal sensing device.

1459825787-580766e0-ca7b-408d-9864-4c97c4091343

Embodiments of nozzle disable systems and methods are disclosed. A gas-reducing composition comprising soluble extractable material from a lignocellulosic source. The at least one finger member, by engaging a complementary sealing portion of a

complementary fastener strip, provides an additional degree of sealing, particularly when the fastener strips are in a partially engaged condition. The intermediate member has an opening between a top surface and a bottom surface, where the intermediate member fits within the opening of the outer member.

1459825787-c2e03eeb-d05e-4cbf-8d2f-f39ea4b18b3d

The invention provides a method and system for remotely inventorying electronic modules installed in a vehicle. In a particular embodiment, a method provides, for a wireless access node having a random access channel, determining a demand for contention based preambles of the random access channel and a demand for contention free preambles of the random access channel. The inwardly facing, cylindrical surface on the chuck body defines a circumferential groove for receiving the radially outwardly extending flange on the collet to thereby restrain the collet against axial movement relative to the chuck body. As a result, the speed of searches conducted in the management table is increased. To unplug a fluorescent tube, the slide rod is pushed over the higher end of the sliding track so that the base frame and the fluorescent tube are unlocked. The shaft is inserted through an aperture in the fan and the fan cap threadingly connected to it.

1459825787-d7f0e6de-86bd-40d5-af67-4043d2360f09

The present invention provides a method and a device for mapping a virtual user input interface to a physical user input interface. A first 3D image data record is provided to describe a subarea of the object. Each of the wedge-shaped vanes has a slot extending from the trailing edge toward the leading edge.

1459825788-077f906c-bd29-4c91-b569-ef5a909a530c

There is disclosed a guidance assisting apparatus for aiding in the guidance of an agricultural vehicle over arable land. The reception unit forwards the received data blocks to a check unit for checking the data integrity and promptly sends a transmission confirmation message to the transmission unit before or during the checking process, so that a second data block can be transmitted from the transmission unit into an intermediate memory of the reception unit during the checking process of the first data block. The described system may include a processor in communication with an actuator for providing the haptic effect. The first and second keel wing are configured with a first and second bottom portion, and the first and second bottom portions having a first and second cup for receiving a portion of the screw and the first and second bottom portions being adapted to lock the screws from backing out. The device has a built in, or auxiliary microphone, and audio outputs which are disabled in secure state of the device. The method also includes forming a mask from the first mask layer and the second mask layer.

1459825788-bed561c3-d55c-4044-bc36-8510eaeabf06

Disclosed herein is a portable panel having numerous favorable characteristics. The main feature of the invention is that the brush comprises moreover, associated with said tubular body, a plurality of channels for conveying a fluid therethrough, said channels having a plurality of nozzles, for spraying a fluid on the brush bristles, from the inside toward the outside of the brush. A digital circuit, which periodically interrogates the detected signals within a pixel and calculates an average therefrom, is placed after the detector unit. When flow is allowed to pass through the valve prosthesis device from the inlet to the outlet, the valve assembly is kept in an open position, whereas a reverse flow is prevented as the collapsible slack portions of the valve assembly collapse inwardly providing blockage to the reverse flow.

1459825788-c52b33bf-3164-4f91-ba97-ec02566072f2

A valve for a printing apparatus that uses liquid ink includes a valve seat, a valve stop and a valve member interposed between the valve seat and the valve stop. The system includes an inlet that draws water from a water supply line. The first

and second dielectric regions in the first and second trenches are then etched in a substantially isotropic manner to expose the first and second sidewalls.

1459825788-d0b1d453-3870-4006-996c-573ead776eb5

In an example embodiment a plug-light assembly includes an outlet assembly and a light assembly releasably engageable with the outlet assembly. The micrograined patterns are preferably in the form of projections that define between them a network of interconnected channels. In another embodiment, ketene used to form fuels and chemicals may be manufactured from acetic acid which in turn can be synthesized from synthesis gas which is produced from coal, biomass, natural gas, etc.

1459825788-d3125ad1-1e4d-4525-adcf-68fe0e9f2f09

Provided is an organic electroluminescence display device. The method and system may include a bulk configuration file having instructions for configuring the media units. By using this ferrite material, an inductor and transformer having small loss even in a state of being molded with resin can be obtained. The compositions can be used to treat various diseases, such as wound healing, inflammation and angiogenesis-related diseases. The media drives can also be organized as a plurality of sets of drives, and a power profile for each set of drives is used to manage and reduce peak power requirements.

1459825789-4cf1d222-d8b7-471d-837a-06b71d2e1bf4

A cardiac monitoring system and, more particularly, a wireless electrocardiograph system. The mechanical key includes a key body. By utilizing polysemous symbols, a relatively large number of sequences can be developed and associated with stored messages in the computer device.

1459825789-7fc691f5-b814-458a-a3b8-4135c2723a22

A method for automated provision of build images is disclosed. Pen input information is received on an electronic paper display that updates at a predetermined display update rate. In order to achieve the above-mentioned object, the composite powder of the present invention comprises flaky substrate powder and barium sulfate particles or zinc oxide particles that adhere to the surface, in protrusions, of the substrate powder. A hollow space is formed between the inner shell and outer shell.

1459825789-e11a8e97-0313-47dd-9324-f52051e50acf

Systems and methods for transmitting and receiving image data captured by an imager array including a plurality of focal planes are described. In a preferred embodiment, a series of processing steps enables one to detect, identify, and localize minute amounts of particular elements, e. Evaporate extra water content from slurry by a Thin Film Evaporator to form dope. The digital level shifter and the scaled driver device may be implemented on the same integrated circuit and fabricated using the same process as core circuitry so that the IC may directly interface external devices operating at elevated voltage levels without damaging the core circuitry or the scaled driver device.

1459825790-083949e8-8c42-4be7-bb86-f937a9573169

A radio frequency connector that protrudes through a printed circuit board is comprised of threaded leads. The module feeder system comprises a module feeder which has an unload bed, a feeder bed, a first side wall and a second side wall. An arrangement order of the clock domain circuit aggregations is determined to satisfy the timing constraint. The time period is based at least in part on the luminance difference between two adjacent color segments in the color wheel. The rebate may be provided at the Point of Sale.

1459825790-42e76433-cca4-4b24-b7c4-b2ead0f0bd05

The present invention relates to heteroaryl-substituted carboxamides of the formula

I, in which Het, A, X, R1, R2 and R3 have the meanings indicated in the claims, which modulate the transcription of endothelial nitric oxide synthase and are valuable pharmacologically active compounds. In a preferred embodiment, the bridge comprises sections separated by connecting members, with each of the connecting members being sufficiently flexible to accommodate for the needed spacing constraints on each section. The middle tier is a set of federated Java beans, which communicate with each other, with the management facades, and with the upper tier of the system. The rotatable disk includes receiving holes, and the second rotatable shaft engages with the rotatable disk and is configured for driving the rotatable disk to rotate to align the receiving holes with the respective ring-shaped receiving rooms to receive the parts ejected from the ring-shaped receiving rooms.

1459825790-aed06845-0942-4207-8784-d2e5e971253c

Certain aspects of the present disclosure relate to techniques for achieving adaptive channel state information feedback rate in multi-user communication systems. 60, and a low refractive index layer with a refractive index of not more than 1. A contact assembly is spaced from the anode within the reactor bowl. The heat exchanger is disposed at a position outside the housing and higher than the highest oil level.

1459825790-c75bd13c-099c-43e3-be91-e289244859ed

A coating system includes a conveyor system, a coating distribution assembly, and a coating adherence system. To establish an IP data session, it may be determined, prior to authenticating the device, whether the device is authorized to communicate via IPv4, IPv6, or both. The device responding to the packet with a handshake, and the handshake includes one of an ACK, a NACK, and an ALERT.

1459825791-0ed87424-34ad-4ccc-95b0-322f75cd8934

A system for detecting creation of a program instance includes an interceptor routine that obtains a parameter corresponding to a characteristic of a program instance and an interceptor module that can be injected into a native operating system process. However caches present difficulties since for testing purposes they are conventionally regarded as separate RAM and CAM arrays. A Fresnel lens is disposed proximate to the substrate for directing the output light toward a second lens. The blade also includes a first leg segment extending in a first plane across an aperture of the blade head, and a second leg segment extending across the aperture of the blade head in a second plane at an angle to the first leg segment.

1459825791-453b1a1a-7c84-4373-a3a3-560ca6c45fe0

Apparatuses and methods for indicating and performing interference measurements. The device is composed of at most two different components, the device having a diameter on the heddle side and/or on the harness cord side which decreases towards the end. The cap includes a surface with multiple sockets protruding from the surface in a direction opposite to the choke pipe whereby the sockets engage the exhaust pipes. In some embodiments, the LED is a III-nitride device with a p-contact containing silver, the dielectric stack layer adjacent to the mesa wall has a low refractive index compared to GaN, and the low refractive index layers are Al<sub>2</sub>O<sub>3</sub>.

1459825791-5baa9bc4-ee21-4f9e-a6ba-0c867c80d31c

A dry refractory composition having superior resistance to crack propagation. The microworkpiece orientation unit connects with the microworkpiece supplying unit and the microworkpiece separation unit. 0.1 THz and equal to or less than 100 THz by means of the Cherenkov phase matching.

1459825791-84fcf69c-c5e5-4bfe-911f-a002b33bf210

A buffer apparatus of a nailing gun, which controls the air flow in and out a chamber of a main body of the nailing gun, reduces the vibration of the nailing gun

when nailing. The material includes a first mat that is woven using metal strips forming a warp and a weft of the first mat. Moreover, this approach allows the correlation of cellular activities or properties. Ions having a mass to charge ratio below the cutoff of the mass filter 3 are identified as daughter ions, and candidate parent ions may then be discovered and their identity confirmed by obtaining corresponding daughter ion spectra. When the central server tracks a second quantity, the central server provides the active players with an opportunity to win a second award. The sleeve is provided with corresponding channels which extend proximally from a point adjacent the throughbore to form a complete bore for free sliding receipt of the suture within the suture screw.

1459825791-b58b29aa-c411-4283-8f41-617114f5989f

A system and method for at least one of skin tanning and phototherapy are provided. The apparatus and method effectively prevents the impact caused by regular change of the FHR to the baseline solution, and accurately reflects the FHR baseline and changes thereof of a fetus under different conditions. The volume dataset is picked up by a first imaging medical device and represents an image of at least a part of the subject on whose surface several marks disposed and images of the marks. A switchable current path that extends vertically between the anode region and the cathode region has a conducting state and a non-conducting state. The blank has a good transmittance to laser light, undergoes little deterioration when irradiated with laser light, and is particularly suitable for ArF excimer laser-related applications. The first and second magnetic layers include different Mn composition rates from each other, a magnetization direction of the first magnetic layer is changeable by a current flowing between the first magnetic layer and the second magnetic layer via the first nonmagnetic layer.

1459825792-2e3fd476-e64e-47c1-b58c-a60ea57cd652

Embodiments of the present invention apply wavelets to radio frequency signals to extract specific characteristics so that their timing, phase, and frequency components can be characterized. An exemplary method may comprise the steps of receiving search terms, determining from ontological calculations suggested search results related to the concept of the search terms and displaying the suggested search results. Dynamic adjustability of the support post is provided by internal compression springs. The voltage regulator determines whether a light-load condition exists. It also concerns certain copolymers particularly suitable for this application, particularly in high pressurehigh temperature conditions. The fluorosilicone products are suitable for application to substrates such as textiles, particularly fabrics, to impart oil repellent properties to the textile.

1459825792-370db2d5-f909-4eb2-90ca-330e72b4b71d

A musical instrument cable clip is provided which secures the musical instrument cable loop to the musical instrument. The power supply processing unit generates a composite PLC signal comprising a PLC signal and a DC power signal modulated with a zero cross signal. The present invention targets the optimization of congestion early in technology independent synthesis prior to physical design.

1459825792-4e3407fd-f8f5-4eb4-99e3-cd06a2ed159d

An electrical device in which an interface layer is disposed between and in contact with a metal and a Si-based semiconductor, the interface layer being of a thickness effective to depin of the Fermi level of the semiconductor while still permitting current to flow between the metal and the semiconductor. A master control module is coupled to the handling system and configured execution a wetting profile. De-registration of a buffer occurs only upon an explicit de-registration or free command or upon the receipt of a request to modify the properties of the buffer, or in some cases, following the use of garbage collection techniques. The stand-alone device is incorporated into or with product packaging, and may be configured with a resupply code at or after a point of sale. In this fashion, the plasma contains a plurality of radicals and dissociated inert-source gas atoms, defining a cleaning

mixture. The guidewire of the present invention is formed, at least in part, of a composite elongate core formed, at least in part, of precipitation hardened material.

1459825792-7890bcc2-ca96-4fd0-879f-cb79bac671ee

A mail server site and a method in a mail server site provide mobile e-mail services to mobile stations connected to a digital radio communication network. Moreover, the present invention forms walls for liquid chambers and liquid channels with polyimide. A pad covers the pad region, extends into the through electrode region, and delimits an opening in the through electrode region. If the status bit indicates that the computer system device configuration remains the same, the processor eliminates the scan for devices interfaced with the computer system. Moreover, by selecting an evaluation item having highest satisfaction based on a result of a series of test inspection, an optimal test condition can be automatically selected. An electronic control module may be utilized to dynamically vary the speed of the compressors to achieve maximum energy efficiency.

1459825792-d1e0dd44-dfde-4502-b588-7677cff1e787

The order in which panels 13 are to be quilted, the amount of quilting-induced shrinkage, and the amount of crop between adjacent panels 13 are stored in a machine readable file 13 for use in operating a print line 10. The video processor may generate composited video data by combining video data from a video source, and one or both of video data from additional video sources and graphics data from graphics source. The dynamization window insert is oval shaped and includes first and second protrusions that extend from respective surfaces of the dynamization window insert. A back connection bracket affixed to the back is slidably and removably received by a back bracket receiver affixed to the arm, whereby the back is detachably connected to the arm.

1459825792-db38c127-2040-4a68-a5f1-7e59cd3bfd16

Hemi-spherical structure and method for fabricating the same. A single electron sensitive electrometer is utilized to detect the charge movement. The clip includes a press portion, and a pair of palms on opposite sides of the press portion. The heat dissipation element has several carrying portions separated from each other and arranged in radial-shape, and several fins perpendicular to the carrying portions. The air box delivery system includes a passage that is substantially perpendicular to a longitudinal axis of the frame and in fluid flow communication with the air box, the passage directing the flow of air upwardly into the air box. The rectangular opening may be configured to receive display layers such as the light guide plate.

1459825793-62a9ff0e-1bc4-47f1-a948-64495cb82f90

Process for the industrial synthesis of the compound of formula :Application to the synthesis of bivalent salts of ranelic acid and more especially strontium ranelate and its hydrates. In some cases, the structure of the base clamp may be rotatable relative to the structure of the mounting clamp when the electrical connectors are engaged. A conductive pattern of the substrate includes: a first conductor electrically connected with the first terminal; and second conductors electrically connected with the second terminals, respectively. An interworking function is provided to allow mobility between the macro CS network and the PS network.

1459825793-a84a73e6-4cee-4acb-9b61-ff1659382e44

A broadcast receiving apparatus and a method for providing a multilateral video communication which makes it possible to communicate with a plurality of remotely opposite parties using a digital TV having a camera therein and which is capable of supporting the Internet. The method includes initializing a database in communication with a network device. The light-emitting diodes are arranged in a pattern corresponding to a luminous intensity distribution pattern determined according to the luminous intensity distribution characteristics. If a set of

characteristics of the contact list, such as number of records generated or cost, are approved by the user, the contact list is transmitted to a user-specified node on the computer network. The streamed real time data is analyzed according to the user criteria. The frame comprises at least two side portions comprising a plurality of longitudinally spaced sidewall posts and at least one transverse member connecting the two side frames for mounting various panels and accessories.

1459825793-b1034661-707f-4dec-8c6e-0f2e49c935d9

Disclosure of methods and compositions related to chemical conjugations to nanoparticles of polysaccharides cross-linked to poloxamers as well as nano-sized colloids comprised of polysaccharides and poloxamers. A block request database is checked to predict what block is likely to be requested next based upon prior block request data. An ink removal member removes leftover or excess ink from the ink removal member.

1459825793-f21c2434-24d6-412e-bf6d-6569a656c23f

Composite material with high resistance to temperature changes and a high density, and having an SiO<sub>2</sub>-containing matrix with quartz glass grains embedded therein is produced by preparing a suspension from a particle mixture of finely divided SiO<sub>2</sub> powder having at least two different particle fractions and of the quartz glass grains, forming a green compact and sintering the compact. The bond pad is deposited on a surface of the head that is perpendicular to the air bearing surface. The first and second barrier layers are composed of gallium arsenide, and the quantum well layer is composed of indium gallium arsenide nitride. Next, a first conductive layer is disposed on the surface of the dielectric layer, the bottom and sidewall of the capacitor opening, and the dual damascene opening. Mating formations on the operating lever and the actuating members allow the operating lever to be engaged selectively for rotation with one or the other of the actuating members in dependence upon the direction in which the operating lever is pivoted relative to the axle about the pivot pin.

1459825793-f909d043-44cd-468e-8b8a-62a2cc7905d0

A single hardware IO control block is used to efficiently abort a target IO command for a target IO device, e. The pressure side and suction side extend between the leading edge and trailing edge. Such a system offers a dynamic library with a significant number of titles from which a user may select and offers play back a desired title fairly instantly.

1459825793-fdbd4eef-7cb6-4b3d-95e2-83b1c13fc3ab

A semiconductor device having a thyristor-based memory device exhibits improved stability under adverse operating conditions related to temperature, noise, electrical disturbances and light. A first optical element is formed from a first material on the front face proximate the semiconductor light emitting device but not covering the semiconductor light emitting device and a second optical element is formed from a second material, different from the first material, over the semiconductor light emitting device and the first optical element. The energy absorber is secured to a body projecting from the riser towards the harness cables.

1459825794-2ed73192-39e6-4484-97ba-0645682b8f03

This actuated ski suspension provides a method of raising and lowering a vehicle to which it is attached by raising and lowering the ski assembly in a vertical plane. The methods involve injecting meat with a first set of ingredients, coating the meat with a second set of ingredients, spraying meat with a third set of ingredients, freezing the surface of the meat, freezing the meat throughout, and submerging the meat in a fourth set of ingredients. A dose of the composition provides a mean change in amantadine plasma concentration as a function of time that is less than 40% of the change in amantadine plasma concentration provided by a dose of the same quantity of an immediate release form of amantadine. Hybrid maize seed, plant or plant part produced by crossing the variety PHV6K or a trait

conversion of PHV6K with another maize variety.

1459825794-5786f1ba-8d43-449f-b9bf-1ec59fd0cd66

A marking device, designed to mark teeth, to position orthodontic brackets at an optimum level. Each submunition may be self-extracting, recoil-less extracting, self-spin initiating, and/or sensor fused. A collimator, diffraction gratings, and Fourier lens collectively collimate, disperse and focus the optical input channels onto the array of micromirrors. Additionally, \u201cad hoc\u201d messages can be incorporated into the schedule without significantly disrupting the other messages.

1459825794-6c5af700-a9ad-45f5-9dc2-9c35bd99b227

A sprayer includes: a sprayer body; a nozzle extending from the sprayer body; and an irradiation unit disposed on a leading end of the nozzle and emitting light that is oriented and diffuses in a leading end direction of the nozzle. A storage processor requests a key associated with a particular object ID associated with a particular device address range from a key server. A logical address in an instruction is mapped, during a predecode operation, to a physical address having a larger address space than the logical address. The indicator includes a short circuit indicator in electrical communication with the short circuit element, wherein the short circuit indicator provides visual indication of a short circuit condition. The source may incorporate a source of electrical power. The method of the invention involves the following steps: mixing a precursor solution for the polymer with a precursor for the nanostructures to form a mixture; forming nanostructures in the mixture from the precursor of the nanostructures; and forming a polymer from the precursor solution of the polymer so that the nanostructures are incorporated into the polymer matrix.

1459825794-ac83e2d3-e29c-4b93-bfbd-f13833f0b979

A prosthetic joint according to the present invention includes a first implant component for attachment to a first bone and a second implant component for attachment to a second bone. The apparatus includes a body, a case forming an external appearance of the body, and a card reader disposed at an inside the case. Data storage and retrieval capabilities to the database are provided to allow access to the information, in response to requests from one of a plurality of remotely disposed computer systems. Prior to simulating the simulation model within the simulation client, the instrumentation event disable list is retrieved from the instrumentation server, and instrumentation events are disabled as specified within the instrumentation event disable list. The controller is configured to provide information to the management system at a first time, and the failure circuit is configured to cause the information to be provided to the management system at a second time in response to an acknowledgement from the management system not being receiving. The porous layer may be imbibed with an ink retention coating for dye based inks.

1459825794-c0c3789f-0e8e-47a7-8d05-b08915f26b9b

Heuristics for resizing displayed objects within an electronic document are disclosed. This enables a user of a corresponding portable transceiver to try to reach someone else before having to resort to calling emergency services. The instant invention further includes articles comprising the crosslinked product of the crosslinkable polyethylene composition. When the differentiated signal exceeds the first threshold, the output bit is 1, when the differentiated signal is less than the second threshold value, the output bit is 0, and when the differentiated signal is between the first threshold value and the second threshold value, the output bit is the same as the previous output bit. Each of the gripping portions is located adjacent the outer shell in a non-deployed state and extend away from the outer shell in a deployed state whereby a rescuer can drag a wearer.

1459825795-00a17936-cd7c-4069-8e39-76f92e52d6f2

The object of the present invention is to provide PPAR activity regulators, which

can be widely used for improving insulin resistance and preventing/treating various diseases such as diabetes, metabolic syndromes, hyperlipemia, high-blood pressure, vascular disorders, inflammation, hepatitis, fatty liver, liver fibrosis, NASH and obesity. The display device provides received content to the display and provides image signals to the plurality of image projection devices. The signal processing system further includes a complementary demodulating unit coupled to the digital baseband processor for demodulating the first plurality of CA codes to recover a second series of the navigation bits.

1459825795-54e267d7-5164-49b5-9bf9-654eade55c8f

The present invention relates to the use of an antagonist of OSM such as an antibody or small molecule in the manufacture of a medicament for the treatment or prophylaxis of an inflammatory arthropathy or inflammatory disorder, and the use of OSM in screening for such antagonists. During operation, the system receives a description of the commodity from a customer at a server. A UV-sensitive object to be exposed is exposed in X direction in a number of pixel units that substantially corresponds to the number of the GLV elements.

1459825795-68d330c4-82bb-49d5-913b-e72fdb45eac2

Methods and system for transferring images between devices is disclosed. A mass air flow sensor is arranged in the air passage section. 60 and carrying out a coupling reaction at a temperature of at least 65 C. Additionally provided is a method for producing a high-purity tungsten powder having a phosphorus content of 0.

1459825795-8785b15a-738e-42ef-ba49-f7d52010576e

Various embodiments for hit testing of visual objects are described herein. The detected frequency is the maximum which can be represented by the vertical sampling rate of the video format. A combination is selected based at least in part on the associated error rate. Each segment is smaller than the next by a factor of 1a for a first or primary level, or 1b for a second level of segments. In addition, a ground voltage is applied to erase gates other than the first alternating gates. A comparison is made between each of the positional cursors and the vector.

1459825795-ade3ab8-1f2b-4b17-8330-cf43df06fbfe

A delay-locked-loop circuit having a DLL that operates when an external clock signal has a low frequency and a DLL that operates when an external clock signal has a high frequency is disclosed. The system includes an efficiency reduction apparatus located between the inner wheel outer circumferential surface and the outer wheel inner circumferential edge to reduce the efficiency of the inner wheel as it transfers motion to the outer wheel. When fueling the vehicle, the gases in the fuel tank displaced by entering fuel are introduced into the carbon canister where the fuel vapors are stored.

1459825795-d00ac356-d914-4750-b09a-6b1103a81a49

A method and device for determining whether an incorrect recording occurred on a recording device. The method comprises: selecting a point in a medical image, wherein the point is located in a GGN; defining a volume of interest around the point, wherein the VOI comprises the GGN; removing a chest wall from the VOI; obtaining an initial state for a Markov random field; and segmenting the VOI, wherein the VOI is segmented using the Markov random field. A set of control signals is generated which are applied to the half or more butterfly network so as to access the memory bank with an n-tuple parallelism in a linear order in a first instance, and a quadratic polynomial order in a second instance, where n=2, 4, 8, 16, 32,. Each play participant possesses a unique RFID band, card or the like, that electronically identifies the play participant and enables the play system to award and track points or other rewards to successful play participants individually or working with other play participants as a team.

1459825796-5b5c4444-e0ae-42f4-96f5-141f815c269c

A disposable ear cleaning appliance comprising an elongated stem having a hollow cavity which opens outwardly from one end thereof, and a plurality, preferably four, flexible lengths of thermoplastic monofilament. Because the second query does not include the single-table outer join predicate, the second query may be available for further transformations or optimization techniques, may produce a more efficient or otherwise different execution plan, or may be executed more efficiently or differently. The access terminal then responsively identifies a carrier-to-interference--key value based at least in part on one or more CI measurements taken by the access terminal, and then uses that identified CI-key value to select\u2014and then request service from a serving access node at\u2014a next-requested forward-link data rate that is less than the last-requested forward-link data rate. The filter housing defines a volume for containing checked fuel. Conformal on-off cooling channels provide both thermal insulation during the heating phase and rapidly cooling of the molded article during the cooling phase. The defect inspecting apparatus includes a sample mounting device for mounting a sample; lighting and detecting apparatus for illuminating a patterned sample mounted on a mount and detecting the optical image of the reflected light obtained therefrom.

1459825796-8bde2257-4c6c-42ec-9fd2-74f79f063af7

First dummy memory cells connected to a first dummy signal line have the same shape and characteristics as those of a real memory cell. The user unit has a memory for storing the recorded information. The auxiliary service facility can include, for example, air conditioning ducts or diffusers,, five alarm detectors, fire sprinklers with flexible pipe connections, speakers, security sensors, and secondary light fittings. In response, the reply e-mail is sent to a fourth e-mail address corresponding to said user and the second e-mail address but not the third e-mail address. The first logic is capable of establishing a communication channel with the transceiver in a low power mode. A connector is removably placed on the flow sensor and includes at least one light source for exciting the optochemical sensor element and at least one photodetector for receiving the measurement radiation of the optochemical sensor element.

1459825796-a732ffd5-048c-42c1-88a4-fde3b4735fdf

The present invention relates to a continuous shear deformation device, in particular, which is capable of mass-producing shear deformed materials by continuously supplying a sharply bent channel type mold with materials, particularly, which have a variety of thickness from thin sheet to thick plate. The adjustable height wafer box comprises a base plate, a cover plate, a plurality of ring insert plates and elastomer bumpers. An anode current collector having a length or height shorter than at least one of the length or height of the cathode current collector or alkali metal strips operatively associated with the anode current collector is also described. In operation, a practitioner engages the needle-less tip syringe to the valve which places the valve in an open position and permits fluid flow into the syringe as the practitioner draws back on the plunger of the syringe. In second exemplary embodiment, a number of tolerances are utilized to ensure the proper operation of the mobile device while maintaining an active link. Methods for increasing levels of NO<sub>2</sub> in an exhaust system to combust trapped particulate matter involve oxidising NO to NO<sub>2</sub> over an oxidation catalyst at an optimum temperature range and using a plasma generator to generate NO<sub>2</sub> from NO or N<sub>2</sub>.

1459825796-aeafa41d3-fee9-489c-b368-11d57848ec4f

A method of manufacturing an optical device, wherein the device body portion from which the device is to be made includes at least one Quantum Well, the method including the step of causing an impurity material including copper to intermix with the Quantum Well. Jigsaw puzzle layers are disposed within the cavity and have scenes related to the theme. The ceramic material comprises a main phase comprising magnesium-aluminum oxynitride phase exhibiting an XRD peak at least in 2\u00b3=47

to 50 taken by using CuK $\alpha$  ray. The base includes a base body and a plurality of wheel assemblies, each wheel assembly including a wheel support operatively mounted to the base body for pivotal movement relative thereto and at least one wheel operatively mounted to the wheel support. A voltage-isolating passageway for providing high voltage isolation between a component maintained at high DC voltage and a component maintained at a substantially lower voltage is described. The method also includes attaching a plurality of elements comprising a second material to each of the plurality of pedestals, providing a second substrate having one or more structures disposed thereon, and aligning the first substrate and the second substrate.

1459825797-055eee1b-1c72-45ce-b5db-ecd11c5495ac

An apparatus for urging an oil film bearing onto and off of a roll neck in a rolling mill comprises an annular hydraulically actuated pistoncylinder unit mounted on a cylindrical section of the roll neck. The breastpump assembly includes a substantially rigid plastic housing connected to the extending portion of the breast hood. Furthermore, neighboring data signal lines are short-circuited each time the polarity of the grayscale display voltage output to each data signal line is reversed. End locking is prevented from arising when a spool, which rotates in the take-up direction, stops. The screw mechanism comprises two axially aligned screws which have opposite lead angles and two corresponding nuts, said screws each engaging a respective nut, the drive means being connected to both screws or to both nuts.

1459825797-6c61ac89-0c2f-4fc8-b3f5-776e5139c200

A semiconductor light emitting device includes an n-type nitride semiconductor layer 3 formed on one surface side of a single-crystal substrate 1 for epitaxial growth through a first buffer layer 2, an emission layer 5 formed on a surface side of the n-type nitride semiconductor layer 3, and a p-type nitride semiconductor layer 6 formed on a surface side of the emission layer 5. When the temperature of the ambient air outside the vehicle is low enough, the air is moved through a duct system by a pair of fans and blown across a battery assembly. The pulser includes numerous switch-selectable output modes that allow users to generate complex, tightly-controlled diagnostic sequences, all activated upon a voice command and hands-free. A coating of extracellular matrix molecules may be on the matrix, or the matrix may be treated with plasma irradiation to enhance cell adhesion. A control unit may provide the tag information of each sound source file extracted by the extraction unit in the form of a list, receiving one element of the provided list, and create a playback list. From the geospatial database, the circuit also determines addresses for the receivers so that the circuit can individually forward the message to the receivers within the designated geographic region.

1459825797-795c0d28-3d99-47b3-af2e-85472f48fcac

A handle attachment for mounting to a standardized valve mounting cup of a spray can and operating a push-type dispenser valve. The method comprising determining whether a mobile device is in a dampening state and determining a wireless dampening factor if the mobile device is in the dampening state. The water is recycled and the power plant includes reserve pressurized air tanks to allow the plant to continue to operate when the wind levels are not sufficient to produce high pressure air. OS device driver, working in conjunction with the extension of the OS checks the requested drive to determine if an access code is required, and the drive responds with the security code or a default code. The co-extruded tubing is swaged to the required diameter and wall thickness.

1459825797-d6343204-dd3a-4533-ace2-08194f748d26

A set of metal line structures including a signal transmission metal line and a capacitively-grounded inductively-signal-coupled metal line is embedded in a dielectric material layer. The loudspeakers are arranged distant from each other and from the listening position. By using a higher power level than the other MSs

operating in the system, MS has a higher probability of gaining system access and a channel grant in an expeditious fashion. Each of the event vectors includes geo-location information and timing information of the corresponding mobile device. Using tabs with burr-free edges also mitigates against the risk of electrical shorting. A method includes operating the device to measure the torque, the direction of rotation, and the speed of rotation of the shaft.

1459825798-44795b3f-875f-4ad0-b16f-4fa120786570

The present invention relates to a device at mixing devices for mixing pulverulent and liquid substances with each other for the manufacture of medical products, wherein a displaceable piston means has at least one groove extending around said piston means and at least one sealing ring is located in said groove. In some implementations, the packaging boxes include one or more trays used to support product cups, such as k-cups. An illumination device is disposed within the cavity for emitting light rays.

1459825798-4a13a1b6-3abf-4608-b274-6bab19688e71

Programming a NVM memory cell such as an NROM cell by using hot hole injection, followed by channel hot electron injection. All telephone sets associated with the transceiver are connected to a wire loop which supports the VoDSL service in the event of a power interruption to the transceiver. In a magnetic recording medium in which a magnetic layer is formed on a substrate via an underlayer, the magnetic layer is formed of an alloy containing cobalt as the main constituents and containing boron, chromium and germanium or containing phosphorus, chromium and germanium as additives of the alloy. Additional cushion presenters may be used in the buttock region to relieve tail burn. An area within this non-photolithographically produced boot region defines an emitter contact window. Finally, the protection device is combined with a trampoline in order to ensure the safety of a person exercising on the trampoline.

1459825798-539ae214-b6ae-4de1-8a8d-59843a52678f

In a method of operating an electric motor which drives an auxiliary oil pump for supplying a hydraulic pressure of an ATF to a transmission, only at an idle stop of an engine via a rotation shaft pivotally supported by ball bearings, the electric motor is rotated at a very low speed or in an intermittent manner when an automobile is traveling and the auxiliary oil pump is not used. The support assembly is in the form of a polymeric base, and the liquid transfer article is formed by providing a liquid photopolymer on the surface of the base and then irradiating the polymer with a light source to form the image. In addition, the telescopic socket assembly has a two-stage or three-stage position adjustment function. The upper protruding portions and the lower protruding portions are substantially spaced apart and alternately arranged. The second set of derotated received information symbol samples are provided to a received sample processing unit.

1459825798-cdd8f31f-864a-46c4-bc21-2b000691ec9d

The invention relates to a driving apparatus for a CCFL capable of easily providing a high output required to start the lamp. The monofunctional or polyfunctional epoxide compound is stirred, preferably in the liquid state, into the aqueous polymer dispersion. The apparatus includes a plurality of intake air temperature sensors and an ECU. The intermediate segment includes a stop member arranged to contact a portion of the inner segment to limit vertical movement of the inner segment relative to the intermediate segment.

1459825798-dcb5ca31-009d-49ef-9e0f-7e80fa2336ec

The present invention relates to multi-coated lactic acid bacteria coated with a multi-coating layer forming bacterial clusters and including protein, polysaccharide, and edible oilfat component, and a preparing method thereof. In the input buffer circuit, a self bias voltage generated by a self biased differential

amplification circuit is used not only for tracking a common mode input voltage in the differential amplification circuit but also for controlling the current of a current source and/or sink that controls the current used in the differential amplification circuit. The spring retainer system can be positionable into an unlocked position wherein the header system is decoupled from the bracket system. The tunnel client may send a first message to the tunnel server. The crack-resistant seal according to the present invention can be formed by crosslinking the fluororubber composition, and the resultant crack-resistant seal has particularly high crack resistance. The first positioning section is attached to one side of the box body and the second positioning section is attached to one side the axial rod bearer that faces the first positioning section.

1459825798-e66b9ef5-cecc-4209-8949-2868c17819c2

A memory card that adapts its operation according to the application to which it applied or the conditions under which it is operated. The health condition judgment display device is adapted to store body information including the input individual body characteristic information and body measurement information in a data processing portion. The consolidation operation may be performed by hot isostatic pressing of the powders within a deformable container.

1459825798-f34e7497-fdfa-4456-af1c-cdae502b8a91

A database monitor tracks performance statistics and information about the execution of different SQL statements. Pairing conductors reduces attenuation and crosstalk and permits the signal to contain multiple frequency modulated carrier bands with individual channel bandwidths of up to 3 kHz or higher. In addition spring-biased winding core holders protrude from and are distributed over the outer ring surface in the form of clamping elements.

1459825799-011f25f2-f7c5-48d2-aec5-52dca6611297

A printing apparatus according to the present invention includes a feeding unit, a conveying unit, a printing unit, and a control unit. Relationship information that associates a collection of requirement objects with a set of configuration management objects is stored. The antenna of a hand-held version of the intra-oral microwave system is also advantageously designed to detect the presence of and to preferentially heat caries or cavities, thereby disinfecting and therapeutically treating the caries in a potentially non-invasive manner. The switching facility recognizes the start data and the end data of a train and switches port paths to a next-assigned connection state accordingly.

1459825799-3d3b4756-a95c-4db4-8d90-a3d55a8a4e18

An exemplary embodiment relates to a mask for integrated circuit fabrication equipment. In one embodiment, critical endpoint events detected at an endpoint computer system are selectively logged to an endpoint database. In a most preferred embodiment, the solution is used with a cleaning pad comprising an effective amount of a superabsorbent material, said pad preferably being part of cleaning implement comprising a handle and said cleaning pad preferably being removable. The conforming sub-flow collectively are the first stage conforming flow.

1459825799-55768b2b-eb8a-42ae-acbe-581fb2155f37

An enclosure of fabric with four vertical sides that is open at the top and bottom. A first antenna 2 constituting a GPS circularly polarized loop antenna is formed on a dielectric substrate 10. The semiconductor device further includes a second semiconductor layer having a second lattice constant formed directly over the first semiconductor layer, wherein the second lattice constant is different from the first lattice constant.

1459825799-9fde94ec-9d77-4329-acd6-4505902cd9c9

Methods and apparatus are presented for scheduling asynchronous neighboring cells within a wireless communication system. The first and second motor generators

include first and second 3-phase coils, respectively. A recovery key associated with the device is also identified. In a first evaluation stage, only the intensity of the red pixels in the image is analyzed in order to select relevant points of light in the image. The second side of the lead frame is with at least one conductive lead, including a first end and a second end that is connected with the second side of the lead frame so that the semiconductor device is secured on the interior conductive surface of the conductive mounting platform for establishing electrical connection. A sensor is provided to sense the position of the rows of bins.

1459825799-b1443c8c-ad47-4919-b012-a633a1fcb7dc

A nondestructive inspection method of testing insulators using frequency resonance function that can inspect an anomaly of an insulator by vibrating the insulator with a force having the characteristic of white noise, measuring the change in motion of the insulator according to the vibration and calculating the frequency resonance function of the insulator is disclosed. A merchandising system includes a base having a first set of interfaces and a second set of interfaces, a first divider having a first engagement portion, and a second divider having a second engagement portion. chinensis selection \u2018RY,\u2019 and a female A. The measured responses are compared to the recorded responses to determine an appropriate compensation control voltage, which is applied to an equalizer system. A third portion of the granules supports phosphoric acid. The electrical switch assembly includes at least one push button electrical switch for connecting to an electrical circuit.

1459825800-aa0b23ca-c53a-4488-97f6-d9c45da2a8e3

The invention provides methods for amplification of polynucleotide sequences using primers containing single-stranded RNA. The lower electrode is fabricated by forming a texturizing underlayer and then depositing a conductive material thereover. Also disclosed is a method of cooling an axle assembly of a work vehicle. The light emitting set is installed with a light emitting body and a battery set. As a result, the user's personal information is protected while at the same time allowing the remote computer and the mobile communication terminal to communicate data effectively. Remedial measures are suggested or taken by the event management system.

1459825800-c9ec70ec-5d03-4ab0-9df2-489adf2b2a72

Methods are provided for re-ranking documents based on user-specific features. Initially, a flat field gray image is captured for one or more reference illuminations. Messaging settings selected to control message characteristics of the outgoing message are displayed in the messaging settings portion of the compose screen. When the size of the air chamber is increased, the transducer becomes more sensitive to sound in lower frequency ranges. The semiconductor zone separates a first part of the second region from a second part of the second region. These impediments may also take the form of communication problems along and between the various network segments.

1459825800-cbefbad6-26ce-4acb-8a99-5e1b7e3df8eb

An ethylene polymerization system is provided with a quench system and that cools the product mixture entering the separation system with a reduced load on the first compressor of the system. The integrated optical adddrop device has an optical filter having first and second input ports connected to first portions of the first and second interferometric arms and first and second output ports connected to second portions of the first and second interferometric arms. An RF armature is anchored to the substrate and is electrically connected with the RF-output transmission line. In some embodiments, systems and methods are provided for determining a rate of change for analyte concentration based on a continuous sensor signal. When the spout is in the extended position, however, the spout extends outward from the neck and the fluid is free to flow out of the container through

the spout.

1459825801-010dd467-73c7-4c21-b549-ef48cc964662

Electrical component for low-voltage switching devices having an electrode comprised of a substantially rigid body with one or more slots and at least one flexible conductor with an end portion inserted into and joined to an associated slot by means of cold plastic deformation. Exemplary embodiments identify a section of code for evaluation and insert at least one command for generating a report document into the section of code. The guide assemblies allow the storage unit to move on guide rails from a retracted to an extended position for easy access to items within the storage unit. The device orients and positions a plurality of fasteners within the post in a configuration wherein the fasteners are disposed angularly about, and offset from, a central, vertical axis in a preferably non-intersecting arrangement. The ability of the test body to change the shape thereof is likewise calculated by a method based on the finite element method.

1459825801-1587f9dc-c6be-4067-92ea-095241b398a1

Advanced techniques for programmable photolithography provide enhanced resolution and other aspects of a photolithography system. Compared to conventional continuous, high rate pulse trains having regular inter-pulse intervals, the non-regular pulse patterns or trains that embody features of the invention provide a lower average frequency. If the \u2018V3\_I terminal\u2019 signal is below the \u2018V2\_I terminal\u2019 signal, an AGC amplifier is controlled by the \u2018V3\_I terminal\u2019 signal. Then, the substrate stage is moved to a position Z2, at which the position of reticle-fiducial-mark images are detected at two lateral positions of the corresponding reticle fiducial mark. Each of the first cylinders is concentrically fitted over a rotating shaft such that the first cylinders are linearly movable along the rotating shafts in opposite directions.

1459825801-295a4d44-fb42-4982-803b-e9b632d2e006

A charge pump method and apparatus is described having various aspects. The petrol-tank flap is assigned a driving device which enables the petrol-tank flap to automatically swing open into its refuelling position after the locking device is released. The RDBs form a 3-D multi-tetrahedron lattice whereby said modular structure behaves under load as a multi-tetrahedron structure.

1459825801-6ea312b5-34a9-4b04-ad5f-f3c50487936c

A pumping arrangement employs a compensating type hydraulic pump, a directional valving arrangement and a proportioning valving arrangement. The executable module is generated by generating, with decryption of an encrypted protective object, a protective object containing a procedure for terminating a process operation due to invalid relationship between a first protect code and a second protect code contained in the executable module, linking the resultant decrypted protective object with other object, and writing a protect code. The tube being tested prior to and during sealing. An EMC gasket is also provided around the housing.

1459825801-dfb9540d-548a-41d1-a1e4-73127570f72a

A vascular graft comprised of a tubular polytetrafluoroethylene sheet is provided. Methods for producing a maize plant that comprise crossing maize variety PH1V92 with another maize plant. The embedded non-volatile memory has a program code block for storing program codes to be executed by the MCU, and a data block for storing the parameters. A plurality of second TV signals are received from a second source, and one or more respective second fingerprints are generated for each of the second TV signals.

1459825802-6731c567-8c13-4222-94e4-e72b510a04fb

A number of variations may include a casting having a raised integrated cast grounding block with tunable surfaces for routing an electrical grounding wirestrap via an eyelet and an anti-rotational tab attachment. Each image data record may be

generated by applying a distinct image processing function to the frame of image data. The shaft defines a longitudinal axis, has an end operatively attached to and proximate the head and extends upwardly, rearwardly therefrom to an upper end. An upper \u03bb4 retardation film is disposed between the upper substrate and the upper \u03bb2 retardation film, and includes \u0394 of 140\xb110 nm and a slow axis forming at an angle of 111\xb110 degree in the clockwise direction with respect to the absorption axis.

1459825802-f42dbb13-9cf0-4b74-8728-43704297b785

The invention comprises a laying, semi-vertical, or seated patient positioning, alignment, and/or control method and apparatus used in conjunction with multi-axis charged particle or proton beam radiation therapy of cancerous tumors. A first hook having a first eye, is provided, wherein the loop passes through the first eye. The powder can be in the form of unagglomerated particles or a powder coating with a degree of agglomeration or hard fusing ranging from none to significant amounts as long as the primary particles are visible in a micrograph.

1459825802-f5202107-a630-49b1-a635-20698f5a9805

A system that incorporates teachings of the present disclosure can include, for example, determining from nodal voltages sampled at an input port of a matching network an impedance of a variable load coupled to an output port of the matching network, generating at least one control signal according to the nodal voltage, and tuning the matching network with the at least one control signal. Each carrier is connected to an associated servo motor, which in turn are connected to a controller for rotating the carriers with respect to each other to grip and release glassware between the fingers, and to rotate the carriers conjointly to index the glassware between apparatus stations. Next, a first set of identification information for the device is extracted from the general identification information. The methods are useful as an aid in the selection of treatment for a patient with renal cell carcinoma, alone or in combination with conventional tumor stage and/or grade information. A high speed airflow can be generated within the fan housing. The front surface includes a pocket for the receipt of components, the components including at least one LEDs and electrical circuitry therefor.

1459825803-0271b8ba-c1b2-4778-b90c-138f41b8517e

Machine for orienting containers of the type comprising a cylindrical structure, a support ring integral with said cylindrical structure and provided with at least an interruption for offloading the containers themselves, a rotating cylinder and a fixed conical structure, internal and coaxial to said cylindrical structure. The invention also provides novel cytotoxic agents of formula, linker compounds represented by formula, and drug-linker compounds represented by formula. In various embodiments, the elements may select a first input during a first phase of a clock signal and select a second input during a second phase of a clock signal to provide a double data rate output.

1459825803-2e7ecf31-0a18-4603-992d-2d312c643d6c

An image forming apparatus is featured with excellent operability of storage at the time of non-use, as well as excellent operability of charging the battery, in addition to such advantages as thin and battery-driven, and preferably suitable for portable use. The packaging cartridge includes a container holding coffee beans and a transportation component for transporting coffee beans towards an exit opening of the cartridge. A starting current path is provided between the first and second electrode, and comprises a magnetic switch.

1459825803-6f99825f-e26c-4c56-9a08-b9f537731841

A printer apparatus includes a drive circuit and a flexible board on which the drive circuit is mounted. The complex selectively binds biogenic amines which are released by food spoilage microorganisms and undergo a detectable color change upon exposure thereto. A glass enclosed wick extends from above the glass enclosure into

the oil within the container. The correction algorithm and results can be applied in the digital domain or in the analog domain.

1459825803-7d2d8541-7837-4be4-bf61-635d02339945

A biodegradable hyaluronic acid derivative comprising a modified hyaluronic acid repeating unit represented by the formula -ONH-Mp, wherein HA is a unit including N-acetyl-D-glucosamine and D-glucuronic acid, M is a modifying moiety containing a C2-16 hydrocarbyl group or a prepolymer, and p is an integer of 1 to 4. The scan engine comprises dedicated logic where a state of the dedicated logic is adapted to control processing of the scan request on the system-under-test. A fused portion is provided by welding only a side of an outer end portion of the rod-like body while a non-fused portion is formed without welding a side of an inner end portion, so the end stop as a top or bottom end stop is produced. The first support layer has a leading shield, and the leading shield has a low-level flat part, a slope part and a high-level flat part continuously arranged at one side in the recited order toward the air bearing surface.

1459825803-9df6d545-4fa2-4d1c-bd37-7174b3410b98

Provided is a semiconductor device using a p-type oxide semiconductor layer and a method of manufacturing the same. In one illustrative embodiment, an audio phrase produced by a first user is identified in the voice communication between the first user and a second user. The apparatus can be reconfigured to support different or modified communication protocols over time. A case incorporating a retractable sound reflector is also disclosed. The invention further relates to a set containing at least one such storage unit and at least one carrier for at least one surgical item, in particular for at least one bone screw.

1459825803-a5fc73e7-2ddc-4405-a4db-80e3049cb97b

The present invention discloses an atomization structure comprising a carrier, a cover plate, a piezoelectric driving device and an atomization piece. The video providing apparatus comprises a parallel light source or a parallel light type LED as a light source. Remaining water is delivered by gravity flow to a second supply tank wherein the ozone is allowed to largely if not entirely dissipate from the water. By only allowing execution of authorized boot loaders, security related breaches are substantially reduced or eliminated; thereby, enhancing device integrity.

1459825804-4d027a95-53e1-4727-8f7d-da12b114d7b3

An air cleaner arrangement or assembly is provided. The thus-obtained carbon fiber sliver is drawn and twisted to produce a pitch-based carbon fiber spun yarn containing at least 3 wt. The correlation/integration block is configured to substantially eliminate mismatches between the in-phase and quadrature components of portions of the spectrum having associated IQ mismatches that are relatively frequency-dependent in accordance with a pair of signals generated by the static IC calibration block. Aspects of the present invention are practicable with different types of pick and place machines, and are able to advantageously use sensors and/or technician supplied information to generate automatic indications of feeder exchange validity. The fascia may include replaceable bezels with apertures therein for providing access to hardware devices.

1459825804-9cf10c27-9ad7-4c58-b184-2a57cbea3c1c

A method for increasing the directional stability of a motor vehicle is provided, as well as a corresponding device, and a corresponding computer program product. The system and method may further select one or more alternate trunks using a constraint-based trunk-selection algorithm. Next, the embodiments can generate the set of non-default routing rules for routing the net based on one or more metrics. The rotary flow control member is rotatable about an axis of rotation co-axial with the syringe port and the drug dispensing port. An inactive mutant of PHEX is also an object of this invention.

1459825805-29812368-689b-4da2-8d7c-e17d2024c94a

A high performance bipolar transistor device is realized from a series of layers formed on a substrate, the series of layers including a first set of one or more layers each comprising n-type dopant material, a second set of layers forming a p-type modulation doped quantum well structure, and a third set of one or more layers each comprising n-type dopant material. First, identification of a tag and real-time circumstance information both related to a detection area are acquired. The method comprises the actions of detecting a loss of coverage and transmitting coverage information, to be received by the base station.

1459825805-40897a2a-3c7c-4506-857b-03656fcb9754

Liquid-crystalline compounds of the formula I in which R<sub>1</sub>, A<sub>1</sub>, A<sub>2</sub>, Z<sub>1</sub>, Z<sub>2</sub>, X, a, b, L<sub>1</sub>, L<sub>2</sub> and L<sub>3</sub> are as defined herein, and to liquid-crystalline media comprising at least one compound of the formula I and to electro-optical displays containing a liquid-crystalline medium of this type. The circuit detects voltage levels ranging above and below a nominal voltage level and assigns binary values to the detected states, the values used as instruction to a device coupled to the circuit. The base member is configured to be positioned between the fluid pump and the transfer case when the fluid pump is assembled to the transfer case with the support members being adapted to be received within an indent portion of the pump cavity to at least partially inhibit the fluid pump from contacting the transfer case proximate the indent portion of the pump cavity.

1459825805-4cdd82de-fb11-42f1-9ec7-7b6a60b41685

A control system that employs closed-loop control for providing active vehicle rear-wheel steering, where the control system receives longitudinal wheel slip inputs to improve the vehicle directional stability. The data acquired from the data source is encapsulated into a data object. In some aspects, the support system may also interconnect the downcomer of the lower cross flow tray to an upper tray of an underlying pair, providing additional support for the assembly. Look hook 323 locks the cylinder flange by rotation of a syringe received in flange lock member 320 about its axis.

1459825805-63cbac26-28fc-46b7-9692-265a8ed31973

A package for an integrated circuit includes a circuit board 122 for mounting the integrated circuit 114 having a first surface and a second surface, a connection device positioned on the first surface of the circuit board 122 for electrically connecting the integrated circuit 114 and the integrated circuit 114 being positioned on the second surface of the integrated circuit 114. The spatial data provided from the spatial database to the controller can be any kind of data or information that has some relationship or association with \u201creal world\u201d geographical location, or if it is stored somehow with reference to geographical location. Embodiments of the method can include a flotation separation and a hydrophobic agglomeration separation. The method also includes associating the query with the node. Power to a transceiver of a device is terminated if the particular telemetry system remains dormant or inactive for a programmable period of time and power to the transceiver is turned on if a particular signal is received by the implantable device.

1459825805-69a277bc-3529-4062-82f9-9f3dbb72c786

A forward link design is provided employing CDMA technologies in which time division multiplexing is employed between data and control information on the forward link to service multiple users per slot. The cleaning compositions of the invention include acidic light duty liquid cleaning compositions with low toxicity and antibacterial efficacy on surfaces, for example, hard surfaces. The first panel is subjected to compression stress and is heated to a temperature higher than a softening point of the glass material so that the stretched conductive wires are buried in the glass material.

1459825805-6a0ea4b9-c06e-4b14-bbf8-f9f314c8b6ba

The invention relates to a method and system of physician economic performance evaluation in which the relative medical difficulty associated with patients admitted by a particular physician is determined and, given that measurement, judgments made concerning the relative amount of inpatient resources that the physician required. In one embodiment, the method includes providing a material stack including at least an etch mask located on a blanker layer of metal or metal alloy. The intermediate layer includes at least one surface. The multilayer panel may include at least one recess portion configured to strengthen the multilayer panel.

1459825805-fbd2d8aa-305d-4231-a0d5-ef73d54a78f6

Vehicle steering head for a trike includes a hollow support. The method includes positioning a mirror perpendicular to an optical axis of a focal plane array in both an open-face position and a mirror-reading position. The present invention also relates to a method for determining a syndrome, as well as a coding and decoding circuit.

1459825806-01191f2d-9609-4fbb-b416-5a2790966c43

A Visual Knowledge Publisher system provides a graphical user interface environment that acts as a development platform for authoring predetermined dialog text for servicing various customer products and services and a Customer Interaction Platform for managing the interactions between the customer and the system. A liquid supply unit supplies liquid to the gap. The nominal 120 Vac circuit is designed to withstand a 6 kilovolt surge without damage.

1459825806-5790c751-c28c-47be-b866-56dc6232dc7c

A drive device for a vehicle configured between an internal combustion engine and a wheel. Two passivation layers are used to form bond pads of a semiconductor device. The flow detection device comprises a processor associated with a flow sensor. Attached to the other end of the cable is a light holder. The buyer may be an investor, speculator, market maker, or arbitrageur, who purchases the license contract to achieve appreciation. 01 to 100 vol % into contact with a carbon material under conditions at 150 to 600° C.

1459825806-736e2039-4844-42a4-90cc-8f23ad42a8ac

A method embodiment includes receiving data indicative of a person accessing at least one of a first network-available electronic content or a second network-available electronic content. A variety of other features and arrangements are also detailed. One or more signal decoders decode the highly compressed data. In order to update the resource descriptor, a logical processor must first obtain exclusive access to the resource descriptor by updating a semaphore. On an upper face of the operating deck, there are formed a mounting portion for the driver's seat, a mounting portion for the first operating device, and a mounting portion for the second operating device; the driver's seat, the first operating device and the second operating devices being mounted on the respective mounting portions independently of each other.

1459825806-8774283e-07b5-4428-87f6-470d1c7dedee

Novel proteins of microorganism E-396 and the DNA sequences which encode these proteins have been discovered to provide an improved biosynthetic pathway from farnesyl pyrophosphate and isopentenyl pyrophosphate to various carotenoids, especially zeaxanthin, astaxanthin, adonixanthin and canthaxanthin. The system includes at least one attachment plate provided with at least one fastening component. According to the method, the decision for inter-RAT handover may be taken by the serving network entity in a hierarchical manner beginning with a radio access network entity and proceeding towards a core network entity. This invention also relates to a continuous steel product coated with a layer of metallic bismuth.

1459825806-98e44441-e270-4680-9a9f-f028c0a1cd05

A hot-plugging capability for video devices is achieved by shifting the responsibility for recognizing changes in the configuration of a display environment from a computer's operating system to a device manager. As the lateral acceleration increases, an increase in a basic drive torque is suppressed by a larger amount. The method also includes a step of knitting an integrated tubular fabric continuously from the joined tubular fabric. For example, where the text appears to be the beginning of an item name, then those items matching the input text will dynamically appear as the user types. The first underground heat sink absorbs heat from the fluid in order to heat the first underground heat sink.

1459825807-2847bdff-8546-439b-be8f-26727eb3b444

Calibrating a posture detector for a patient's body involves measuring outputs of one or more sensors disposed in relation to the patient's body while the patient assumes a plurality of positions. The system includes a default or universal classifier that is pre-trained with features that have relatively universal discriminatory relationships for multiple people and that is operable to produce a measure that a message is classified as having one of several characteristics. Such packaging material can be effectively utilized for many kinds of packaging bags or containers with the sealant layer being disposed to the inner content side of the bag or container. A control mechanism is disposed within the handle and extends through the shaft for selectively controlling the direction and degree of deflection at the distal end.

1459825807-6858baa2-c19c-4154-baf7-d1958e115098

An operation apparatus is responsive to a physical action for inputting a control parameter of a musical sound into an electronic musical instrument. Aspects of an exemplary container include an extended hollow body, a standing bottom, collapsible side walls and a tapered shoulder region which transforms into a neck. The dispenser has a feature named a shaker. With this arrangement, noise produced when the blades 19 rotate along the web leg sections 28A to 28C is reduced. In order to improve the cooling, raised areas composed of insulating material are fitted at a distance from one another on at least one side of the winding conductor, over its entire length.

1459825807-9653b97c-f9c2-4b4a-ae47-b1ad0ddfb91a

A heavy duty vehicle recovery system employs a cranetow boom assembly which is pivotally mounted to an upright assembly and is transformable between various positions. The interconnect structures may contain an interconnect line, an electrolessly deposited metal layer formed over the interconnect line, a via formed over the metal layer, and a second interconnect line formed over the via. The pneumatic servo valve further comprises a spool holding means including a ball nut 60 which is engaged, via a ball, with a helical groove formed on a connection rod of the spool connected to the torque motor and rotates when the spool moves linearly, and an electronic brake for holding the ball nut not to rotate when the spool is stopped. 005 and a sieving coefficient of cytochrome c that satisfies the equation  $SC_{ccc} \geq 22675 \times b710 \times b7UFRAlb3 \times b7120$ . Rejection reason data is generated based on selecting one of the rejection options. The RF coil array includes a rigid cup-shaped element and a flexible, substantially flat portion.

1459825807-f380e4e0-5a14-4e37-bbd1-33f3b1aece90

A storage container for a disc-shaped item of recorded media includes a base and a lid that is hingedly connected to the base and moveable between open and closed positions. Markedly less adhesive than has to be applied during lamination and the good mechanical properties of the ROHACELL\xae foams are retained. The cover plate is mounted over the receptacle and has apertures for plug blades or thin, puncturable films over the apertures for the plug blades.

1459825808-060b2992-e7c0-4e83-a332-31a9167d9530

A method and system of coordination between CAD drawings for collision checking purposes. The first computing device determines that a volume level associated with the video feed reaches a threshold. Radio frequency propagation models and user demand and distribution models can be used to determine the offline solution. Each group of devices has the name of the group associated with the certificate and signed by the CA. A threshold value at a side of a peak value thereof is also renewed by a value calculated by multiplying a minimum value of a deviation between the peak value and the reference value from the predetermined period of time by a ratio when the minimum value of the deviation is equal to or smaller than the threshold value.

1459825808-53af5849-518d-4b14-9f5e-e864b21d399b

Substituted isothiazole compounds and compositions are provided, wherein particularly preferred compositions and methods are directed towards inhibition of various protein kinases. The semiconductor package includes at least two semiconductor chips stacked upon each other. The present invention embodies a waveguide crossing that includes tapering the width of the waveguides as they approach the intersecting region, forcing the propagating light to contract, thereby reducing asymmetric field distortions, and thus reducing transmission loss and effectively minimizing crosstalk. The clipping circuit is provided at an input side of the sampling part, and clips an electric potential of the vertical signal line to a first clip level before the pixel signal is input from the pixels to the vertical signal line when the shutter control part performs the global shutter operation.

1459825808-82ce1653-627d-4361-8a9f-9060d94a66de

An ethylene polymer excellent in molding processability represented by uniform extensibility, drawdown resistance, swell and extrudability, and mechanical properties represented by rigidity, impact resistance and ESCR, is provided. The method includes transmitting different types of information packets from an initiator to a receiver. Compounds of the present invention are described by formula I: in which the R-groups are herein defined, together with their pharmaceutically acceptable salts, therapeutic methods for their use and processes for their preparation. The intensified structure is embedded in the foam body. Further, there are formed multiple filmy layers, on which an LSI where a driver IC LSI of optical elements, and an amplifier LSI of the optical elements are integrated. The implanting body is separated from the main body and connected detachably to the detachment groove of the main body when seaweed is attached and inhabiting the outer periphery.

1459825808-ba89cede-5113-484b-8841-91e646da4b90

A method for making a support impregnated Ziegler-Natta-type catalyst precursor including at least two transition metals and a support material wherein the resulting catalyst precursor is free-flowing is provided. The computer may send image data in a multi-resolution format from the computer to one of several rendering devices. At least one of the units is configured to wirelessly send data transmissions to the other unit which is configured to receive such transmissions. The barrier includes a gate that also includes upper and lower sections and paired vertically extending support members that slide relative to each other. The back portion, seat portion and leg portion are arranged so that they are in different planes and when the main frame is in a second position, the back portion, seat portion and leg portion are arranged so that they are in a gurney position. The damper module performs a switch operation to control the valve state of the plurality of digital valves to a given desired state when the target damping state is different from a present damping state.

1459825809-0f3689bd-b95a-4a79-b016-07a8418c557d

A vacuum cleaning apparatus includes a cleaning attachment. The improved apparatus

and method are used to apply pressure to a welded seam created between two metal plates during the welding process. The test routines can also perform power-up tests in systems or end products containing the ASIC. The resultant waveforms are compared and if the two waveforms have a phase relationship corresponding to a critical phase angle that is based on the pitch of the monitored volumes and the offset between the tiers of monitored volumes, an animal-immune motion indication is generated.

1459825809-1d06b33c-6512-4446-9745-52c75f2b499b

Data files are distributed across a plurality of computers. At least a part of the first layer may be transformed to an alloy material comprising the first and second metals. The tapered roller bearing is used in an idler portion of an automobile transmission, which is interchanged between an idle state in which the outer race idles with respect to the inner race and a shift state in which the outer race and the inner race are rotated synchronously with each other. Only one of the first and the second transmitter chains is active when a first carrier and a second carrier have a frequency offset that is less than an associated half duplex frequency within a same split-band duplex band, thus preventing third order inter-modulation products from falling within an associated receive channel. The invention is applicable to detecting and locating leakage from hydraulic works. This is accomplished by tempering the downward transient in power demand seen by the fuel cell stack.

1459825809-1d94879c-3781-4ce4-9413-49df0278d7e6

In a nuclear magnetic resonance spectrometer, the shape of a detection coil is changed from a conventional cage type to a solenoid type of higher sensitivity. The nonvolatile memory has a secure area configured to store a user password and a serial number in encrypted form. According to the above technical solutions, the content synchronization of the MCCH RRC message TBs may be achieved. The background portion can be continually broadcasted by the head-end. The second medium layer is formed on the micro structure. The first pick-off component is coupled to the reference member while the second pick-off component is coupled to the conduit proximate the first pick-off component.

1459825809-4da98e84-3b0a-4e63-862a-3cb57228c994

A development environment in which unit tests are prepared. The connection between the entraining member and the guide slide is with the interposition of an abutment unit attached to the guide slide, such abutment unit furthermore serving to limit the path of movement of the guide slide. When operated, the upper guide roller and the lower guide roller are moved diagonally upward and downward, respectively, in the direction of the radial inner edge of the curved belt so that the thick part of the belt is released from the upper and lower guide rollers.

1459825809-7ab7dc77-63c7-47fd-820c-61dc802c3e7e

Concepts and technologies are described herein for a software builder. The tabletop has an upper utilizing portion which has a top resting edge peripherally encircling therearound, and a bottom bottom supporting surface for the table supporting frame to be mounted thereon. Finally a mechanism for sealing the pump chamber from the interior of the canister that surrounds the inner magnet assembly is disclosed which permits a separate supply of coolant to be used for cooling the inner magnet assembly and the proximal end of the rotor shaft wherein such a coolant is not the fluid being pumped in the pump chamber.

1459825809-869c28ad-987f-4ec1-90a0-cbf47c4121ed

The present invention is in the field of soybean variety CL1013675 breeding and development. The fixture includes upper and lower horizontal support bars. Light 14 is incident on the grating 12 and light 16 is reflected from the grating 12 at a reflection wavelength 1. The assumed equation input section is used to input an assumed equation of the figure according to user operation. Accordingly, when the

mating beams are engaged with electrodes of the LGA chip, the mating beams are long enough to provide excellent resilient deflection characteristics, thereby ensuring good mechanical and electrical connection between the mating beams and the electrodes. The driving post inserts in the guiding slot and resists against the driven edge of the locking piece.

1459825810-0e154d79-c664-4080-903e-349e99078328

A film comprising a polylactic acid and polypropylene blend having a haze of from about 10% to about 95% and a gloss 45\xb0 of from about 50 to about 125. Stink bug traps comprising murgantiol and methods of using murgantiol in traps indoors are provided. The first and second members are formed from a semi-rigid material. The fold lines may transition from non-reinforced to reinforced portions of the blank and a special transition zone is contemplated to accommodate the transition. The server may also execute one or more plugins that customize the configuration files as desired. The encapsulant extends into a channel in the pillar, thereby interlocking the pillar to the assembly.

1459825810-194a3fa0-f9f1-4158-a4ad-648f99d8c4e7

This invention pertains to the art of methods and apparatuses associated with measuring and profile tools utilized in crafts, particularly in the design of quilts. Further disclosed is a tactile sensor array comprising a plurality of sensor elements. This baselining procedure generates storage information like the number of rows in the table, the average length of a row, the number of chainedmigrated rows, and the average free space per page in the table.

1459825810-9467f15c-8dd1-4569-9309-7fd58f988911

In accordance with an embodiment of the present invention there is provided a dispenser apparatus for dispensing fluids. The output of the seed source is processed in the modulator so the modulator outputs a polarized optical output to the PM amplifier. For nodes with more than a small number of nodes there are a large number of possible optical amplifier configurations.

1459825810-96a5c8ba-c1d6-4ae6-b0ec-f94a03685048

Replay attacks in an encrypted file system are prevented by generating a session key and providing the session key to one or more drive managers and an encrypted file system process. The nanowire cores include semiconductor nanowires epitaxially extending from portions of a semiconductor surface of the support exposed through openings in the insulating mask layer. A solution of a film-forming material is then deposited on the layer of the first organic semiconducting polymer. After the print interruption the printing substrate is accelerated again to the print speed according to an acceleration ramp. The controller detects a drive output of the actuator when the actuator changes the position of the top dead center of the piston, and estimates the load of the engine based on the detected drive output of the actuator. Two-way communication is maintained between the user and an external source, such as a cellular telephone which has a multi-task processor with memory and applications stored therein for receiving and transmitting user voice commands and text messages.

1459825810-adf8d140-76d6-489e-bd94-279460e121ff

Various embodiments of systems and methods for performing backup operation in In-memory database systems are described herein. Machining a hollow outer part of the pair of thread split inserts with an opening therethrough and outer portions of two cooling conduits extending from the opening therethrough to respective inlets and outlets. The excitation signal that results in a minimum error between the target signal and the synthetic signal is selected. Glass containers may be formed from the black-strikable glass composition, and these glass containers may be heated to a temperature greater than 600 degrees Celsius to strike black therein.

1459825810-fba92f31-adf7-4039-90b8-f63f306a8583

A lighted umbrella comprises a solar power device mounted on the top end of the shaft of the umbrella. The entry within the tag read cache can include an identifier corresponding to the RFID tag and a timestamp indicating when the RFID tag was detected in the first area. Upon reflection of the radiation from the reflector elements, a distinct beam shape for the reflected microwave energy is generated.

1459825811-05513ac4-4bbe-4a4c-a747-cee704a80a5f

A method for dynamically decoding protocol data on a computer system is provided using a protocol decoder, which inspects and analyzes protocol data received by the computer system. One embodiment of the system comprises a wireless data processing device; a messaging service to maintain messages and other information on behalf of a user; and synchronization logic for maintaining synchronization of the messages and other information between the wireless device and the messaging service. The plurality of user plane radio bearers all support a common service. It is discharged from the tool electrode directly against the workpiece surface or surfaces which are undergoing material removal. In one aspect, a data acquisition system includes an accumulator that has two or more parallel accumulation paths and is configured to accumulate corresponding data samples across a transient sequence through different accumulation paths. The assembly also has a second rail having a channel defined therein, with the channel having a wavy upper wall and a wavy lower wall.

1459825811-11cd9a14-6e63-4177-abed-72d1626e0950

In the multiple-layered semiconductor device and the method for manufacturing thereof according to the present invention, the resin is formed on the substrate around the semiconductor device, on which the semiconductor device is installed in the first semiconductor package. The supplying section supplies airflow between a recording medium and the fusing section. The transaction is identified as a peer-to-peer transaction by a command or an attribute data in the transaction.

1459825811-5fdd3cc6-1de6-483b-8411-950c96d7aae6

A method and apparatus for reliably detecting MPEG-2 packet sync-byte positions received via a digital transmission system in the event of a packet stream containing a plurality of null packets of a plurality of packets containing a fixed repeating bit pattern and for reliably synchronizing and delivering the MPEG-2 stream broadcast to the receiver transport layer. Specifically, the present invention provides for a headliner speaker system that is configured to digitally process an audio signal in a manner such that studio-quality sound that can be reproduced. First conductive vias form electrical connections between the first underlying conductive layer and the first overlying conductive layer. The watermark is compressed as an object and the watermarked object is then associated with the compressed video object.

1459825811-cf6402ed-a7b1-4585-bd81-389e93f87fda

An oxygen sensor pressure compensation system includes a static pressure compensation module to receive an oxygen sensor signal from an oxygen sensor and a pressure signal from a pressure sensor and to perform static pressure compensation. The package substrate includes a plurality of first land pads disposed in the first surface, second land pads disposed in the second surface and a second testing-dedicated pad disposed in the second surface. A maximum offset current is calculated from the difference between the currents at the lower actual PI threshold and the lower estimated PI threshold. A drug mixing kit comprising a multi-container housing with a plurality of flow conduits and a plurality of compartments for receiving containers and a transfer device is also described. Polling may respond to a \u201cpoll-me bit,\u201d and/or it may be adaptively periodic at a rate based on communication status parameters, such as recent communication activity and connection QoS levels.

1459825812-1fc0d13c-3c0a-4d73-accd-ac1ce760a13a

The present invention relates to a system and a method for cooling extruded and molded materials. Oxygen and a silicon etchant are introduced into a plasma etching chamber containing a silicon substrate. To conserve battery power, each tire pressure signal transmitted by the transmitters includes a wake-up signal only when the vehicle has been stationary for a predetermined time period. The customized formulation can be directed to a manufacturing facility for on-demand production.

1459825812-5310f41b-db26-4c3a-a197-b05e53aa6a8f

A television mount assembly suitable for mounting a television to a wall, especially over fireplaces and other obstacles. The assembly includes a hub, a wheel rotatably mounted on the hub, and a planetary speed-reducing unit mounted on the hub and drivingly connected with the wheel. The clock signal supply circuit provides edge clock and data clock signals offset in phase from one another to the respective clock inputs of the edge sampler and the data sampler.

1459825812-fbbb5d7b-99ea-4c17-94c6-514facddb908

A semiconductor element heat dissipating member is provided which has excellent heat dissipation characteristics and adhesion characteristics and enables production of a semiconductor device at a low cost. As an alternative thereto, the auxiliary grid electrode may also be positively biased so as to enhance electron emission from a thermoionic electron emitter. The select valves are individually controllable such that each select valve is selectively operated via a pneumatic actuator. As a result of proper application of the apparatus breathing at night is normalized, while snoring, grinding of the teeth, and apnea are prevented. The edge light type backlight unit includes a light guide panel which guides light; light emitting elements which are arranged on the insides of opposite first and second surfaces of the light guide panel; and heat sinks which are provided on the outsides of the first and second surfaces and emit heat generated by the light emitting elements. A first angle between a direction, in which the first collecting hole is oriented, and a vertical direction is larger than a second angle between a direction, in which the first feeding hole is oriented, and the vertical direction.

1459825813-fcf51406-2063-4752-9b48-3d6928671735

Method and apparatus are provided for a synchronizing execution of a plurality of threads on a multi-threaded processor. The method includes: forming a first fold of wire; bonding the first fold of wire to a first bonding location to form a first bond; extending a length of wire, continuous with the first bond, between the first bond and a second bonding location; and bonding a portion of the wire to the second bonding location to form a second bond. The processing unit is coupled to the demodulator, and is utilized for determining the target string or subframe according to the plurality of strings or subframes.

1459825814-3752cf9b-b660-4d11-824e-9d2ba743bb2e

A system is provided for allowing mobile stations to exchange identification information using a predetermined communication path for the purpose of obtaining identification information to use in establishing a different communication path for communicating. The conjugates of the invention, when administered by any of a number of administration routes, exhibits advantages over previously administered compounds. The opening has an area that is smaller than that of the second electrode, and is provided at a position opposite the second electrode to form a detection portion constituted by the portion of the first electrode exposed through the opening, the second electrode and the solid electrolyte layer. In one embodiment, the electronic device determines the time-varying noise prior to adjusting the digital signal values. One extension member is mounted a spaced distance from the other extension member, with each pallet extension member having an outer edge configured to engage the retaining rails. A detail gain control procedure is performed and then a detail gain adjustment is performed on the detail gain adjustment layer and the detail image layer, for generating a gain correction

layer.

1459825814-f71636bc-c595-4a9d-81fd-2b67c9d76995

Disclosed is the method for creating a reinforced hollow fiber membrane by applying reinforcing filaments to a core, casting a dope over the filaments and core, forming a membrane from the dope, and removing the core. The patient is initially taught to make a certain sound when an associated indicator light is turned on, and then allowed to practice with the device at home. One of the semi-cylindrical bearings being incorporated in at least one of the pair of housing halves, which one housing half has a relatively higher stiffness, is provided with a number of circumferential grooves on an inner surface of the semi-cylindrical bearing so as to extend circumferentially along the inner surface of the semi-cylindrical bearing. In the course of play, a player is enabled to select from among the player selectable objects to reveal prize progression affecting elements. , as a biomedical adhesive for application to the skin or other body surface, and as such finds utility in the areas of drug delivery systems, medical skin coverings and wound healing products and biomedical electrodes. Methods for making such materials and using such coatings to minimize transition metal deposition in electrochemical cells are likewise provided.

1459825815-695a7fc7-058a-4149-a58b-e0437abd690d

A piston rod assembly for coupling between a power end and a fluid end of a high pressure reciprocating pump. Accordingly, it is possible to reduce the resistance of power supply lines and ground lines, to minimize a power dip of a block located far away from the main power pads and main ground pads, and to prevent a failure in power application, which may occur due to a decrease of adhesive strength at a specific position, by dispersing the adhesion positions of the power pads and ground pads. The conductive trace includes a pad and a terminal. The forming panels may be used as cap forms whereby after the concrete is cured, forming panels below the cap form may be replaced and reattached above the cap form.

1459825815-f777b208-08e5-4c61-8fb9-2feb6ffff43b

An optical fiber ribbon holding member capable of readjusting a position of an optical fiber ribbon without requiring a heating operation is provided. The interactive tray system enables a single, transferable interactive unit to be fastened to a communication medium, turning into a fully interactive medium. The AMR receiver reads AMR data, which is not compatible with the ZigBee SE protocol, from the AMR meter. Furthermore, the method includes removing the sacrificial layer through the opening. In the priority mode, the adapter is relieved of the need to read the descriptor from the memory, and can thus begin execution as soon as it has resources available to do so. The erase verification is followed by soft programming any memory cells having a threshold voltage below a predetermined minimum level and applying a positive gate stress to the plurality of memory cells.

1459825816-05bd3b4f-8d32-4ffe-9e62-5eaf6b47cfe3

Systems and methods for multi-process browser architecture are described herein. The transformed main image and updated metadata are stored together in a file using the EXIF format so that the transformed main image may be viewed using a digital camera or viewer software compatible with a properly formatted EXIF file. A laminated TMR layer, having a plurality of laminates, is deposited over the bottom lead.

1459825816-7593b657-274e-46cb-8340-df24f0e6cdf8

A tubular bagging machine includes an innovative indentation-forming device and a modified cross-sealing device. Accordingly, waste of resources consumed for the CQIs can be reduced. The complexes may further comprise a lipophilic moiety, optionally a lipophilic moiety comprising a contacting group and/or a targeting ligand, and/or a saccharide moiety. This guarantees type safety, and further guarantees initialization safety if the program is well-behaved. The handlebar is

pivotally coupled with the frame and is configured to facilitate steering of the front wheel. The method comprises the steps of enabling access to the picture file displayed on a cellular telephone from a location remote from the cellular telephone; entering information related to the picture file from the remote location; and providing the information to the cellular telephone.

1459825816-909ca01c-4aa0-40b0-ba11-18e480a7a54f

A simple and practical image restoring device capable of improving the performance of image restoration. In particular, the present invention provides vectors for expressing proteins useful for treating autoimmune diseases and cancer, in part by regulation of tumor necrosis factor-alpha expression. A dispenser outlet fluidly is connected to the tank by a dispenser fluid line.

1459825817-1399eaad-3346-45bb-a417-2b81979bcfae

A recycling method comprises classifying products to be recycled on the basis of classifier unit information, decomposing and fractionating some of the products on the basis of fractionator unit information. A PacketTDM cross connect switch, having both a TDM switch and a packet switch, is used in these embodiments. The extension handle includes a handle attached to the bracket or brackets. The third car, using the hydraulic actuator takes the new tie and uses it to push the old tie out from under the railroad track and simultaneously place the new tie in proper position. The substrates may advantageously be used for mounting semiconductor chips used in flexible microelectronic assemblies. As a result, the substrates need not be precisely mechanically aligned.

1459825818-18b2411c-3d0d-4605-b60c-3371ddec1829

An API call filtering system filters responses to API call requests received, via a network, from user devices. An example image sensor includes a first pixel, a second pixel, and an isolation structure. The memory blocks are coupled to the pipeline logic units with a meshed crossbar and form a set of virtual memory banks, where memory blocks within any given physical memory bank may be allocated to a virtual memory bank for any particular pipeline logic unit. The method also includes receiving a transaction, generating an index log of changes to the index in response to the received transaction, and modifying the first index in response to the generated index log. In a third embodiment, a feed-back block concatenated coding process is designed for an Ethernet.

1459825818-1933412e-e4af-4b40-8690-63075a86506b

A method of preparing oil-absorbing fibers by: a) fully dissolving a dispersant and a deionized water in a reaction vessel, adding a methacrylate monomer and an initiator to a reactor and stirring to form a homogenous solution, transferring the homogenous solution into the reaction vessel, charging nitrogen gas, stirring, raising temperature to 70-80°C. Also provided are methods of making such compounds and pharmaceutical compositions. Entitlements may be determined, where the entitlements define whether the content is permitted to be viewed by the portable device, where the entitlements are determined based at least on the indication of the location of the portable device and based on blackout restrictions applicable to the content.

1459825818-d2f405ae-940c-48bf-b5bb-ef2063137580

A connecting device with a low height comprises a connector part, and a set of metal terminals. The fastener is configured for use with an associated threaded opening. Each rail has at least one wall with a first end and a second end. The inorganic or organic hydrogenous scintillating layer is further configured to emit at least one capture photon in response to the at least one gamma ray from the neutron capture layer.

1459825818-de88925d-4d54-44a0-bc50-0b70b791fe6d

Progress monitoring of lesions is done automatically by segmentation and

registration of lesions in multi-phase medical images. The sucking jet pump has a driving nozzle. The conductive plug is disposed in the hole, and the conductive plug having an upper part protruding from the side, wherein the upper part has a top part and a bottom part, and the top part is finer than the bottom part. In some embodiments, the reagentconjugate zone is also located upstream of the sample application zone. It is configured in such a manner that, in case that a document cover 6 was opened to an apparatus main body 1 in the vertically placed condition,&lt; d of a step 58a)is realized.

1459825818-f56ea189-7519-4621-aac2-0cb78a8fc200

A remote controller for use with cable or satellite provided TV program signals in which an original over the air TV stations real channel assignment may be instead translated to a virtual channel by the cable or satellite service provider. The method includes creating a template of presence parameters for an application, storing the template, a presence access layer retrieving the template, the presence access layer using the template to create a profile of at least one presence parameter for the application, and the presence access layer using the profile to specify a presence-related action for the application. The adjustment algorithm is recursively executed until parameter convergence effects a minimal error measurement, at which time the updated parameters are identified as accurate within the selected parametric model. Pieces of appearance information of the individual words contained in the query are counted. The two reflection mirrors are arranged further beyond the non-gain sections.

1459825819-8123b137-f883-4e46-9e68-47197b5aacb2

A cap lamp system features a battery pack, a cap lamp housing containing a cap lamp bulb and a power cord connected between the battery pack and the cap lamp housing. Firstly, a plurality of isolation layers, which are spaced and parallel to each other are formed in the substrate. One end of the second pivoting member is fixed with a base and the other end crosses through the second hole and is then fastened with the second fastening member. The trace layer includes a plurality of conductive traces, each conductive trace having a curved section that terminates in a trace termination pad.

1459825819-97f51f4b-f72e-4f33-ba1b-58f97a81a053

A gated nanoscale switch operates as a resonant tunneling device. The locating slot is in communication with the receiving slot which is in turn in communication with the faucet connector via a water channel of the rotary member. For example, an operating system within an appropriate computing environment is permitted to determine if an application is authorized to access protected content.

1459825819-be7bd9db-a798-4393-90e4-3974f11bffa7

The invention relates to an electrically driven device for the angular adjustment of a shaft relative to its drive, said device comprising an eccentric gearing that comprises at least one internally geared wheel and one spur gear that meshes with the internally geared wheel and can be driven by an electrically rotatable eccentric shaft. In an embodiment, the weighted reflectors are variable while in another embodiment the reflector gratings are apodized. The electrode group is formed by rolling up a positive electrode, a negative electrode, and a separator. A coin cell battery is arranged between the battery clip and the second battery contact. The silicide layers contain a silicidation-suppressive metal, and have a concentration profile of the silicidation-suppressive metal over a region of the silicide layers ranging from the surface to a predetermined depth, such as increasing the concentration from the surface of each silicide layer in the depth-wise direction of the semiconductor substrate. Generating the family of symmetric encryption keys can involve cryptographically hashing the original symmetric encryption key and resulting hashed encryption keys.

1459825819-c8aaafc8d-f522-4688-b9e8-a167cb3462aa

Sliding-type bearings are locally welded along only edge regions of the backing to the components in which they are installed. In a preferred embodiment, the composition comprises trans-1,2-dichloroethylene, methylal, methyl nonafluorobutyl ether, ethyl nonafluoroisobutyl ether and carbon dioxide. The one or more selected vector terms are displayed to the one or more users participating in the instant messaging conversation.

1459825819-e11bd386-9f6b-4add-898e-8d8b54aa3076

Methods are provided for automatic setting of parameters for contrast agent quantification. The method also includes accessing an ingress packet belonging to the flow, performing a lookup of the at least one queue associated with the flow, and enqueueing data of the ingress packet to the at least one queue associated with the flow. The tip may be machined from stock as a unitary piece, to increase its lifetime, and may be formed with a bore of a relatively large diameter that is tapered down to a smaller diameter near the tip opening, to allow for delivery of fluid through the tip body at a decreased pressure. It resolves the difficulties of the first steps of placement of bags end reduces the time spent on carrying out maintenance, bringing benefits both due to its lower cost and the less time of exposure to an uncomfortable body position for its users. The fastening element fastens the circuit board and the non-metal conductive cushion to the housing. The yoga towel has an edge made of sailcloth.

1459825820-38569922-a21d-409f-b312-31285cb6e5e5

Disclosed is a natural sunscreen composition comprising extracts of Hedychium spicatum and/or Alpinia galanga containing active sunscreen agents, the sunscreen composition devised to protect the skin from the harmful effects of short wavelength UV B rays and long wavelength UV A rays. The optical waveguide device includes: a thin substrate which has an electro-optical effect and thickness of 10  $\mu\text{m}$  or less, and in which an optical waveguide is formed; and a supporting substrate that is adhered to the thin substrate through an adhesion layer. A fixed voltage conversion and the variable conversion can be balanced according to the actual battery voltage.

1459825820-47dcf716-a417-4fc5-90a5-09f00172dc3d

The utilization amount of steam generated by heat recovery tends to decrease in a production process of an organic acid when the concentration of an organic acid solution obtained in a step of collecting an organic acid with a solvent such as water becomes high. Owing to enhanced bonding between the dielectric layer and the circuit board, electrical performance of the circuit board structure is improved, and the demand for fine circuits is met. A file format profile editor allows a user to formally describe the formatting actions to be performed for a given file format profile. Fluid pressure in a chamber behind the lap wall is used to move the lap wall and the polishing fabric against the lens surface. The cache blocks are indexed by their physical disk identifier to improve the cache hit ratio and cache utilization. In another configuration, the locating system may send a sequence of audible tones to activate the audible tone generator, thereby enabling a set of keys on a key ring to be located.

1459825820-76e949c8-7cfc-4810-b192-ebd719af9442

An apparatus is provided for concurrently detecting a plurality of physical quantities to be detected. The stage assembly includes one or more features that can isolate the device holder 24 and the device from deformation. A flexible rack gear is then used to rapidly rotate the flywheel. The patterned structure layer is disposed on the substrate in the non-light-emitting region.

1459825820-91f3e3b1-3f82-4809-a4ec-3bf787f72d8c

A communication system has a communication infrastructure including at least two devices from the group including a cell tower, a first satellite constellation and a second satellite constellation, a stratospheric platform, that are coupled to

user terminals through a plurality of dynamic links. An emitter and a detector are disposed on the frame. A pair of opposing jaws are positioned within the housing and on opposite sides of the pipe passage and have a generally symmetrical configuration with respect to one another. The volume of the accumulator can vary according to the pressurized air requirement of the particular manifold, or the overall pneumatic system. The present invention furthermore relates to a garment, preferably for use when nursing, produced by the aforementioned method. The transmission directivity controller directs, based on the feedback information and control information, the directional beam toward the first radio terminal and the foregoing null points toward the second radio terminal.

1459825821-5e57d9d6-071c-4134-9f09-5c5c42527669

A method of generating a data block for performing a polling procedure in a wireless communication system, a method of transmitting data and a method of performing a polling procedure are disclosed. under a standard pressure of 101. An indicia of a second time based stream of information is displayed at the source media. The present invention also pertains to processes for the preparation of certain of the photopolymerizable colorant compounds. Fresh etchant is poured into the etch bath chamber prior to a subsequent etch cycle.

1459825821-640116cb-2bc6-46c7-bb2c-1241b88749df

A therapeutic composition comprising at least one antigen or at least one in vivo generator of a compound comprising an amino acid sequence and at least one adjuvant comprising at least one pharmaceutically acceptable and water-soluble salt of an organic anion and a metal cation. The system and process of the present invention can produce very high purity argon, i. The machine provides torsional resistance with precise positional control throughout the swing motion and does so equally for right and left handed swings. The control player selects players that reproduce respective channels using information of the channels forming the multi-sound channel contents. The shaft is threaded and rotated by motor, opposing ends of the threaded shaft being supported for rotation in first and second journals fixed within the support tube and the rod, respectively. The overvoltage preventer is arranged in the proximal part of the insulator so as to be positioned outside the metal shell and farther than the metal shell from the spark gap.

1459825821-7f2db9c8-1d07-4482-88da-775720170f46

A disposable cellulosic wiper includes a percentage by weight of pulp-derived papermaking fibers, and a percentage by weight of regenerated independent cellulosic microfibers having a number average diameter of less than about 2 microns and a characteristic Canadian Standard Freeness value of less than 175 ml. The first and second diodes are adapted to selectively switch on and off to provide a differential output signal at first and second differential output nodes in response to the differential input signal. A flexible distributed computer system of high expansibility while guaranteeing application of the maintenance data to the correct directory is thereby provided. In another example, the carrier deferral signal is used when a PHY is switching link rates.

1459825822-1c591920-4f0e-4ebd-914c-25988b7606bf

Recovery of ethanol from a crude ethanol product obtained from the hydrogenation of acetic acid by hydrolyzing a portion of the crude ethanol product or one or more derivative streams obtained therefrom. In the method of generating spin waves, strong spin waves are generated by supplying various shapes of energies to a magnetic material in which a magnetic vortex and magnetic antivortex spin structures exist separately or together. Embodiments determine that the first switch module is not a destination of the packet, based on the ordered listing of Ethernet link identifiers. The movement of the hard surface across the surface of the retention tab produces a textured surface on the retention tab. Each adjustable portion includes a pivotable portion and a connecting body. To simplify the production method and make it cheaper, the upper piston part is forged using the

method of semi-hot forming, to finish it to such an extent that further processing of the combustion bowl and of the upper cooling channel regions can be eliminated.

1459825822-6fa612ba-5b64-444c-8d57-dc03773c67a3

The invention features polymeric biomaterials formed by nucleophilic addition reactions to conjugated unsaturated groups. Optional additional components include extension headband strips for further size enlargement, a crown, side flaps and a chin strap, all of which can be detachably secured to the front and rear portions by VELCRO fasteners. When the valve arrangement fails, the first pressure control arrangement operates to control a pressure of heated air supplied into the first temperature area such that the first specified temperature for the first temperature zone is achieved. After entries are looked up from the look up table according to the image along a first line in the first direction on a first point of the points, the entries are combined to generate one of the first signals for the first point.

1459825822-93445843-4b3c-4383-b71a-542f52f7a3b0

A rotary control valve is provided. The first server may generate the first schedule and the second server may generate the second schedule based on information stored by the shared list of timeslots. The supporting body is composed of a first part comprising the pump connection piece and of at least a second part, both parts being movably linked to each other through a hinge section so that the at least second part can be positioned angularly in relation to the first part, along with the filtration material, and the first and the at least second parts being initially aligned in a same plane. Magnetic tunnel junction patterns are connected to the bottom electrodes, respectively, and are spaced apart from one another in the one direction as much as a second distance. The CPU corrects the detected detection patterns based on the detected quantity of reflection light.

1459825822-c9b57185-6bc8-43c1-9a4d-467ba4ef8d03

Systems and methods for allocating resources, such as contact center agents, computer servers and recorders, among geographically distributed sites are provided. The high molecular weight ion conductor comprises an ion conducting compound and an electrolytic salt, and the ion conducting compound is a non-crystalline fluorine-containing polyether compound having a fluorine-containing group in its side chain and a unit dissolving an electrolyte, or a crosslinked product thereof. The composition combines the advantages of an antimicrobial agent and an alcohol, and has a viscosity of from 100 cp to 1,000.

1459825823-3064e6d2-d20c-48d1-b2b9-03adc898d036

A system and method is provided for conserving electrical power in a telecommunications facility containing a plurality of like electrically powered hardware resources for transporting call traffic through the facility. The liquid droplet can be distilled water and the first surface can be a ribbon of translucent material. The transmittance of the dielectric translector can vary from approximately 5% to approximately 95% by simply adjusting the individual dielectric layer thickness and the arrangement of layers.

1459825823-33cb1dac-52ae-4f1e-a6fa-159f4c0ba6cc

A method and apparatus for forming a stack of composite layers into a desired shape is present. The method also includes receiving an indication of approval to change the level of access to the functionality of the platform to a second level of access, and setting the platform to the second level of access to the functionality of the platform in response to receipt of the indication of approval. An output power connector on the rotatable member can couple to an electrical cord at least partially wound about the rotatable member. The effective molecular sieves have an intermediate range of Si/Al ratios between about 2 and 20 and preferably between 3 and 10.

1459825823-6ad993dd-e19c-4ae0-aaad-3cd1a013c917

The bumper system for a vehicle body includes a vehicle body bumper beam of a hollow construction with an impact buffer member arranged in the front side. Sliced bread is conveyed in a standing state by a sliced bread feed-in conveyor to be fed in a first supply path conveying the sliced bread of one pound in the standing state, or in a second supply path conveying the sliced bread of a half pound in the standing state. The plurality of data segments include multiplexed data fragments from at least one of a plurality of virtual channels. Methods and apparatus for forming nitrogen doped silicon carbide films, for example, for use as etch stop layers are described. The recording information management area may further include a recording condition information area storing information representing a condition of the test recording the portion of the first test recording area has undergone and information representing a condition of the test recording the portion of the second test recording area has undergone.

1459825823-7c6eefaa-b6e4-4e6c-8c43-3ace47a72455

An actuator includes a piston within a cylinder, the cylinder having a first fluid port in communication with an open side of the piston, and a second fluid port in communication with a shaft side of the piston. An address book containing a receiver and a plurality of transmission methods for transmitting document data to the receiver is generated. The method, system, and computer program product may determine whether a first processing element has additional processing capacity.

1459825823-b5e2d8b7-2234-4563-8ac8-ba52cafcf878

A device for controlling fuel pressure and delivery as necessary for the operation of the servovalves of an aircraft engine is disposed downstream of a fuel injector feed unit of the engine. The signal processing circuit outputs the image recorded to the image recording section to a monitor when the magnification converting lens is inserted onto an optical axis L. Upon insertion of a refueling nozzle, a cam surface on sliding element causes the element to move to a position aligning the opening with the bulkhead aperture permitting the nozzle to be further inserted through the bulkhead.

1459825823-c2ec4117-bd73-4399-9076-636309d1610f

A hybrid reactive power compensation device comprises a passive type reactive power compensator and an active type reactive power compensator serially connected thereto. The entire array of package sites is covered by an encapsulant. Further, the fingerprint information and the like temporarily stored for this collation is deleted on completion of the use of the scanner, so that fingerprint information regarded as important personal information is stored only for a limited duration.

1459825823-d5c65842-527e-459d-83db-1e1c3a5eb7d6

A closure for a container includes a base having a first end configured for mounting on a container and a second end enclosed by a top portion. The instructions include normal instructions, which are executed if the guard indicator is true and branch instructions, which are executed if the guard indicator is false. If a load current value is lower than a threshold value then a capacitor current of a phase terminal capacitor is utilized to determine redundant states else a load current direction is utilized to determine the redundant states.

1459825824-5c253cae-0f3d-4998-8edd-e2fcea7733d5

A delivery device for a catheter-sheath assembly includes an outer shaft having proximal and distal ends, an inner shaft having proximal and distal ends, and a rigid inner member disposed within the inner shaft. The switch-equipped buckle device has, inside a buckle body, a slide switch that detects a state of attachment of the tongue plate according to the sliding position of an ejector. The fuel supplied to a negative electrode can be instantaneously changed over according to the temperature of the power generation cell. A first communications device determines trustworthiness of a received message from a second device, which is not

a member of the first set of devices, based on information received from a third device which is a member of the first set of devices. When the top cover is closed relatively to the frame, the set of driving gears interferes with the power unit, and the power unit provides a power to enable the set of driving gears to rotate, so as to drive the set of gear chains. In the preferred embodiment, an audio producing circuit is automatically activated simultaneously with the automatic movement of the display member from its two-dimensional configuration into its three-dimensional configuration.

1459825824-71f56e37-2d3a-4da2-b9c5-71d9a341da51

In the method of recognizing fraudulent emergency calls from a mobile station, a mobile station originating an emergency call is identified based on a mobile equipment identity received from the mobile station. A circumferential bead with holes, into which a closing plug on the gas mask can be inserted, is provided on the feed tube. A caller places a call to telephone number associated with the media gateway, and a real-time packet media session is established between the media gateway and the distributed service node. Each of the lamps is composed of a light emitting element. The media player can have an associated download manager that selects an appropriate one of the pointers to retrieve the content depending on which of one or more download by applications resides on a computer system.

1459825824-f8ec43a2-971a-41c1-9dc5-21a1029f395f

Stream data is structured including data tuples as a query process target and a recovery point tuple for indicating a position of the data tuples in the stream data. Further provided are pesticidal *Bacillus megaterium* strains. This high-purity hafnium has a purity 6N or higher except Zr and gas components, wherein Fe, Cr and Ni are respectively 0. The other LDQM pin and the UDQM pin are enabled. This invention further provides a method for the high throughput screening of compounds that inhibit cytochrome c synthesis.

1459825825-539efe0a-ab02-4ce6-b0b0-1664c7bd773b

An air filter unit for a carburetor of a portable handheld work apparatus includes a filter element and at least one clean air channel arranged between the filter element and the carburetor. The plug-in sensor has a plug part that is able to be mounted in the flowing fluid medium, in a specified alignment to the main flow direction. A cylindrical chamber in the rotatable cylinder receives a cartridge. A first divided electrode and a first external electrode are connected together by a plurality of side electrodes. As a result, a current flows between the first and second contact regions in the electrically conducting region.

1459825825-a156ba13-14ac-4517-9c8f-466dff053fc3

A system according to the invention for mounting multiple media drives includes a housing and multiple modules that are insertable into and removable from the housing. difficile toxin-neutralizing polyclonal immune globulin, C. The diffusion weighted signals are sampled to obtain at least one set of resampled diffusion weighted signals. The vessels are respectively mounted in the seats of the driving assembly. In one embodiment, accuracy may be increased by utilizing a center reference point marked by a center marking piece. The gate includes a doped metal nitride film, formed from a nitride of a first metal and doped with a second metal which is different from the first metal, and a conductive polysilicon layer formed on the doped metal nitride film.

1459825825-ff40dd0f-9c54-48ac-b405-8271928e72b4

A radio-frequency receiver includes a receiver analog circuitry and a receiver digital circuitry. Accordingly, there are provided a non-volatile semiconductor memory device which suffers almost no deterioration in the properties and can perform the operation of recording of 2 bits per unit memory device even when the size of the semiconductor memory device in the semiconductor substrate is scaled down, and a process for fabricating the non-volatile semiconductor memory device.

However, when an equilibrium position of one of the two resilient members is adjusted for a given mechanism, a different output force will result. One embodiment includes a fragmented arrangement of multiple partial image carriers where the partial image carriers may be constructed from two-dimensional flat plates or three-dimensional solid objects or a combination of both. The foundation can then be finished in a conventional fashion. At least one clamp disposed within the interior cavity including a body portion and a jaw portion.

1459825826-2d08d843-8e4a-4d0f-b5fe-9645585bf7b1

The invention provides a method and apparatus for micro array fabrication exclusive from the impact of a gas. Secure codes can be utilized to regulate reception of, and/or acceptance or rejection of, the movement authority. The amplitude path contains a compensation circuit for matching the amplitude of the second output signal to the amplitude of the first output signal. The systems for analysis may involve the assignment of well-ordered values to some events in a fault tree, and then the combination those values through the application of specialized, defined gates.

1459825826-54915c0d-f8a9-4766-a693-9ee95108a252

A method of manufacturing metal nanoparticles by mixing a metal precursor with a solvent to prepare a mixed solution, and radiating the mixed solution with an ion beam to reduce the metal precursor and produce the metal nanoparticles. The class is exemplified by HG peptides such as HG-1, which is isolated from the venom-producing cells of the tarantula *Hysteroecrates gigas*. The electrical insulating layer is formed on the strain generating part.

1459825826-bda140cf-01be-4f30-8963-8ef73736c56e

Apparatus for localizing production errors in a photovoltaic element which is formed substantially by a semiconductor substrate in the form of a wafer, on opposite main surfaces of which are arranged electrical conductors for transporting electrical charge carriers. The water receiver is detachable from the body case. A partition divides the upper portion of the housing from the lower portion and flow interrupters are disposed in the upper portion for interrupting thermal boundary layer to enhance thermal heat transfer to the flow of liquid coolant through the coolant passage of the upper portion in response to heat transferred by an electronic device to the lower portion of the housing. Electrically activated actuators apply a force onto pressures plates. The capping layer may be formed by reactive sputtering in an oxygen environment, by non-reactive sputtering wherein the materials are sputtered directly from the respective oxide targets, by non-reactive sputtering of the metallic layer followed by full or partial oxidation, or the like), by atomic level deposition, or the like. In addition, the apparatus may also include a pivoting pressure application member handle to assist the user in applying or removing pressure to the workpiece.

1459825826-d8f410bf-3105-4777-a18a-db73a8152e13

An apparatus for driving a lens in a camera includes a lens module installed in a reciprocating and sliding manner in an inside of a lens barrel, a lead screw installed on the lens barrel, for being rotated by a driving motor, and a power transferring member assembled on the lens module and equipped with a tooth-shaped part that corresponds to a tooth shape of the lead screw. The apparatus further comprises a developer supplying roller, and a developer accommodating portion accommodating the developer. The method also includes providing a wind velocity, a ground velocity, and a geometric altitude to the data processing device. The gusset reinforces the junction of the shank with the head, supports the toe of the head, and distributes the force of a load on the head through a longitudinal axis of the shank, preventing the toe from bending or yielding and prevents the shank from yielding to the stresses of the load applied. The isolation layer pattern is formed in the trench.

1459825826-da623982-f237-4946-9ff0-aebd575f9bac

A BiCMOS electrostatic discharge protecting circuit is triggered by a bipolar junction transistor for achieving ESD protection. A snoop filter device is associated with each processing unit and includes at least one snoop filter primitive implementing filtering method based on usage of stream registers sets and associated stream register comparison logic. Instead of storing the segment in the communication device, the offset selector application typically stores only offsets in respect to the media file, and the offsets are used in combination with the media file to provide the alert notification. The pivotal doors are spaced apart the distance of a vertical chain-link in the static position and are pivotally spread apart to permit movement of the chain in one direction in the dynamic position. Additionally, the metal protective section includes a plurality of substantially aligned elongated bars horizontally segmenting the metal protective section.

1459825827-0c44aa40-0cfc-408e-87bf-fa8b50d16ac3

A liquid crystal composition is provided that has a wide temperature range of a nematic phase, has a suitable optical anisotropy, has a large negative dielectric anisotropy and has a large specific resistance, and a liquid crystal composition is provided that can increase an optical anisotropy and has a low minimum temperature of a nematic phase, preferably  $\geq 220^{\circ}\text{C}$ . The cladding portions written by the high-energy pulses circumscribe unexposed core portions for defining light-guiding pathways in the bulk glass. A rotary-arm actuator mounted to the body includes an oscillating motor and shaft.

1459825827-27a3874b-bc06-4c65-a38e-73773cd405c6

Apparatus and method of making an ink-jet-ink-derived material image on a receiver. The separation increases tolerance to misalignment and simplifies the fabrication of the MUXes. Because the programmable memory elements are non-volatile, the desired replacement configuration is not lost during shipping, or if power is lost in a system. Sequences of characters are mapped to substitution indexes, and the sequences of characters in the words are replaced with the substitution indexes.

1459825827-513f89dc-d2c5-4f81-8d81-f8e3c45ca28a

A system and method for modeling of complete tooth, including root and crown, of a patient to facilitate orthodontic treatment are provided, wherein a generic tooth modeling is combined with a tooth crown modeling for a patient to yield a complete tooth modeling. According to the present invention, a fumigant in an ampule or container is inserted into the wooden structure. The intermediate transfer members may hold one image, or they may be 2-up or greater rollers that hold multiple images. The dosage forms and methods provided are useful in administering Methylphenidate and pharmaceutically acceptable salts thereof, which generally require one or more doses throughout the day. The steps include determining a value for the tape thickness, determining a value for the tape length, and logically linking the value for the tape thickness and the value for the tape length to one another, to ascertain the cassette type.

1459825827-8cde1b8e-b6cb-4af9-a50e-a702ce4dd098

A seed carrier includes a main hopper coupled with a frame via leg members. The present invention provides a cleansing cosmetic composition comprising 1 to 15% by mass of silicone oil, 1 to 15% by mass of volatile hydrocarbon oil, 5 to 20% by mass of dihydric glycol, 5 to 40% by mass of polyoxyethylene glyceryl fatty acid ester, and 15 to 88% by mass of water, wherein the weight ratio between the silicone oil and the volatile hydrocarbon oil ) falls within the range of 0. Upper and lower cross-connections are crossly and respectively connected to the corresponding second ends of the first and second semi-circular conductive traces.

1459825827-c43fb7b3-711c-49f5-ac47-4458473ff68f

A battery mounting structure for a vehicle includes a battery frame upper

fabricated of fiber-reinforced resin, a battery frame lower fabricated of fiber-reinforced resin, and an intermediate member fabricated of fiber-reinforced resin. The images are transformed into a series of space-time representations of the image data. At such time, if working ICC profile is set which is different from ICC profile previously embedded in such photo image file, color perceptual matching is carried out on the photo image data thereof based on such embedded ICC profile and working ICC profile when such photo image file is opened. The service information associated with at least one network service is obtained using the at least one base protocol message.

1459825827-e01fe732-18dc-4238-8d47-711250d18e79

An approach for managing licenses for software installations on virtual machine instances in a networked computing environment is provided. The method includes providing the plurality of wizards organized into groups; providing a launch button on a launch pad, wherein the launch button is associated with at least one wizard, wherein selection of the launch button executes the at least one wizard; providing information pertaining to the at least one wizard when a pointer is positioned over the launch button. In some embodiments, search terms can be distinctly, visually highlighted on a page, such as a web page, to allow the user to easily identify words that have been found through the search.

1459825828-2594b1ce-1c10-45fc-9b4c-a917fddf95ea

The invention relates to a plug-in battery pack for an electric tool, comprising a mechanical coding of a coding system, which co-operates with a mechanical counter-coding of the coding system that is assigned to the electric tool, the coding extending in the plug-in direction of the battery pack. The techniques of the present invention commence when the bar code scanner is placed in a position such that the scanner's object detection mechanism repeatedly detects a background object such as a counter top or conveyer belt. The distance between circumferentially adjacent curved members may decrease in a radially outward flow direction. The latch and hinge beams may further comprise slider tracks configured to slidably attach to a translating sleeve of the thrust reverser. Eight embodiments of the transmission having different arrangements of the planetary gear sets, clutches and brakes are disclosed.

1459825828-26aa78c6-3384-42ec-bc2d-4d970e91e9d1

An exhaust gas purification catalyst is provided with a catalyst coating layer formed on the surface of a substrate. The ferroelectric liquid crystal display supplies red, green and blue data signals to each of the liquid crystal cells and is in a stand-by state during a responding period of liquid crystal, and then sequentially generates red, green and blue lights corresponding to each of the red, green and blue data signals. While the series power supply supplies power, operation of the DCDC converter is stopped. The tool can be used with existing RFbi-polar cautery generators.

1459825828-89459a11-77a7-4173-8887-7a92eb98ea21

The present invention provides flip-chip packaging for optically interactive devices such as image sensors and methods of assembly. Electronic and hydraulic components are provided, including trim valve systems that are multiplexed by a shift valve and a manual valve. The movable table carries thereon a rotary positioner for rotating and positioning a stacked head assembly, which is formed of a large number of magnetic heads stacked in layers, and a plurality of ramps for loading into and unloading the magnetic heads from the magnetic disks. This allows a user to view and assign searchable metadata and to retrieve computer information that matches selected metadata. Gain control is used to limit incoming signal magnitude to a specified range of magnitudes. Other important monitors may be included for one or more of the following: hardness; turbidity; alkalinity; conductivity and nitrates.

1459825828-e4f8bc5e-795c-4059-bcb3-847b0207ebad

A structure of universal coffee maker comprising a water tank, a water pump, a heating element and an extractor, which is provided with at least one one-way water way communicating with the above components in turn, wherein said water pump is connected to a controller which can set the pumping power of the water pump. Objects retrieved from the network by a server are stored within a cache associated with the server and selected objects are designated as temporarily exempt from replacement based upon a preselected criterion, such as size or mandated quality of service for the client which requested the object. In particular, the actuation can be changed due to the variable stiffness nature of the materials.

1459825829-123c7ee1-9fb1-4660-a1e7-8424ebc1becd

The present invention is directed to use of -\u03b1--1-2-ethyl-4-piperidinemethanol or its prodrug depicted as Formula II, wherein R is C1-20alkyl, in treating patients for behavioral or psychological symptoms associated with Alzheimer's disease, Lewy body dementia or Parkinson's disease. The aileron pivots on an axle disposed horizontally through the central axis of the aileron. Other aspects of the invention rely on promoterreporter constructs using RANK responsive promoters derived from the MMP-9 and TRAP genes. The routers may encapsulate the packets into raw datagrams for transport across intervening subnets. Upon selection, such local magnification may provide pixel loss and color corrections in addition to local magnification.

1459825829-27cc5af9-9d99-48dd-b773-caab029acb57

A liquid jet head includes a passage-forming substrate composed of a crystal substrate provided with pressure-generating chambers communicating with nozzle orifices and piezoelectric elements disposed on the passage-forming substrate and each composed of a lower electrode, a piezoelectric material layer, and an upper electrode to cause a change of pressure in the pressure-generating chamber. Preferred electrolytes are acid electrolytes, and most preferably comprise methane sulfonic acid, and it is further contemplated that suitable electrolytes may include at least two lanthanides. A ground side controller calculates a position of the stacker crane and a position of the lift table based on distance data derived by the travel distance-measuring unit and the lift distance-measuring unit. An activated nitrogen source introduces activated nitrogen into the growth chamber and directs the activated nitrogen towards the substrate.

1459825829-b8d04226-e746-43e8-ab36-521de02c331f

An organometallic luminescent material including the compound of formula emits pure green light and has a high thermal stability: . The universal hosel can include multiple steps or ledges, and various inner diameters to accommodate different sized shafts. The overall wireless data communication network results in reduced power consumption and signal interference in asset-tracking applications. While operating in a second \u201cnon-instant on\u201d mode, the dual form computing device operates substantially like a laptop computer. If the command data is a command for updating the settings data, the corresponding settings data in the nonvolatile memory 109 is updated and at an appropriate backup time the updated settings data is copied to a nonvolatile memory 135 in the interface device 131.

1459825830-54b4cbf7-014d-41c9-b62f-3e5af532ca00

A generic mechanism and model are provided to capture and store configuration profiles for resource monitors such that monitors can be flexibly deployed, configured, modified, and removed using appropriate sets of parameters and values. The machine has a slicing blade, and advancing apparatus operable to engage one end of a food product to be sliced and, on an advancing stroke, push the food product towards the slicing blade for slicing of the other end of the product. Addresses of data can be passed from the network driver to the filter graph driver, which allows the filter graph driver to communicate with a filter graph manager as necessary to configure the filter graph space to obtain data from the requested address. Such an

electron emitter is advantageously used in gas discharge devices to increase the energy efficiency thereof. The drive force transmission mechanism includes a worm shaft coupled to the drive shaft of the clutch actuator, a first solid of revolution including a worm wheel portion which engages the worm shaft, a second solid of revolution which engages a gear portion of the first solid of revolution, and a ball cam.

1459825830-704bcaac-fbde-4626-906c-64f68b808857

A hybrid QoS access method for a wireless station, such as a power-save VoIP station, where a first method, such as reverse polling is used on a lightly loaded channel and a second method, e. The method includes obtaining raw fish material and verifying the quality of the fish material. The injected signal is extracted at the output of the switching fabric via an N:1 switch and analyzed by a signal analyzer to verify input to output connections. The second cover includes a first connecting member. When the plate is moved to drive the adjusting rod to move backwards, a space is formed for receiving falling seeds.

1459825830-ae42c76c-f2cd-4f2b-bb6d-87fa08bcfb99

Energy output from a laser-produced plasma extreme ultraviolet light system varies based on how well the laser beam is focused on droplets of target material to generate plasma at a primary focal spot. The method includes receiving criteria, such as at least one predefined attribute. The first portion is associated with the processor and randomly generates a first bonus. The code phase signaling module is arranged to provide code phase time signaling representing the offset time of the synchronisation code from a reference time. As such, the volume of the administered dose is controlled by the stroke length, which, in turn, is a function of the dimensioning of the constant-diameter stroke portion and the dimensioning of the sealing member. An outbound call is generated from the call bridging system and the inbound and the outbound calls are bridged.

1459825831-521ed1d2-cd3f-412b-906d-446e1e5a6ef4

Semiconductor devices having three-dimensional bodies with modulated heights and methods to form such devices are described. In a next border zone coating stage, a border zone coating is formed by means of a rotary atomizing head type sprayer unit which is tilted with respect to a coating surface of the vehicle body and adapted to spray color B paint toward the vehicle body solely by centrifugal force. This reaction provides a route to many substituted hexafluoroisobutylenes, which copolymerize easily with other fluoro- and hydrocarbon monomers such as vinylidene fluoride and ethylene. Much more closely spaced LEDs operating at higher power levels and brightness are possible because the thermal energy is transported in an axial direction down the heat pipe and away from the light-emitting direction rather than a radial direction in nearly the same plane as the junction. A retaining means is provided to hold the sensor to the frame such that a connecting cable affixed to the sensor is secured and positioned by the void area for a subsequent imaging procedure. The case body is rotatable along an axis which is in alignment with the hinges.

1459825831-f14f8e6c-42b6-4bd8-82d4-cd9611ac717e

A conveyor assembly is described and which includes a reciprocally moveable and elongated conveyor bed; a drive assembly which imparts reciprocal motion to the elongated conveyor bed; and a controller for selectively energizing the drive assembly and which is operable to move a product deposited on the conveyor bed along a selectively adjustable path of travel. The mounting adaptor may be mounted with an embroidery frame. The subtraction remainder is multiplied by that output signal from the microphone system which also generates the denominator signal for the division. Relatively small bubbles contained in the opaque vitreous silica layer contribute to the thermal conductivity of a crucible at an initial pulling stage, and relatively large bubbles contained in the opaque vitreous silica layer are expanded through a long-term pulling process to thereby largely contribute to

the warmth retaining property of the crucible at a later pulling stage. The upper basket is separated from the lower basket so that cutlery in the upper basket is easily separated from the upper basket.

1459825832-d595692f-4864-4510-8955-10371986cb85

A gaming dice for a game, such as a board game or a card game, said gaming dice comprising a body part comprising a number of sides, wherein at least one or more of those sides isare provided with coupling studs. The annealing is performed by continuous annealing. Accordingly, when audit operations are performed for RIB budget increases, relevant transaction data is readily available in the RIB ledger. The pin housing bottom defines at least one pin stop aperture and a radially directed pin bore.

1459825832-e1ae5fd0-db36-454c-9e6e-199593300541

The example embodiment of the present invention provides an acoustic model adaptation method for enhancing recognition performance for a non-native speaker's speech. Also provided are compositions useful for these purposes. The rear window and the outer roof frame profiles, which are associated with the tail endroof segment, are placed in a folded position when the hood is open or unfolded from said position as a result of a movement in the same direction. Further, the banknotes are transferred onto an authentic check transfer path and an authentic cash transfer path to be separately stored in storage cassettes. A proxy uniform resource locator address may be provided by the local web app server that enables the device to access an out of security URL to perform a function associated with the application. The de-icer module is adjustable arranged on the bracket such that a position of the de-icer module is adjustable in relation to the bracket.

1459825833-4dd3abef-d020-448f-aa66-cd463b38d588

The present invention provides a communication system of a backscatter type, the communication system including: a reflector for transmitting data by a reflected wave formed by subjecting a non-modulated wave to a modulation process; and a reflected wave reader for reading the data from the modulated reflected wave signal from the reflector. The authentication circuit transmits a transmission key externally at the time of activation, and authenticates based on a reception signal and the transmission key, and enables access to the debug IF. The acquisition control portion causes the data acquisition portion to stop acquisition of the streaming data in response to the halt playback request, and causes the data acquisition portion to restart acquisition of the streaming data in response to a resume playback request. The elastic component has a securing end disposed on the mounting seat, and a restoring end opposite to the securing end and in sleeving engagement with the toggle button. Enhanced inverters are controllable either locally or remotely, wherein system status is readily determined, and operation of one or more sections of the system are readily controlled. For example, embodiments of the invention integrate SQL query builders across multiple application development interfaces, significantly improving developer productivity, reducing development cost and time.

1459825833-b04335bc-0039-4dcf-ac83-df67986d09d6

Video data exploitation by alteration of data is prevented. In this apparatus, a row determination block is coupled to receive input samples and configuration information and is configured to provide a row output for each of the input samples. The housing components are sealed, and the illumination source can be controlled by manipulation of the housing components or optionally by pressure on the exterior of the device. In some embodiments, the application communication protocol can be different from the accessory communication protocol. Validation circuitry is provided between the logic circuitry and the semiconductor switch that inhibits any uncontrolled switching of the semiconductor switch TR1 due to noise, such as lightning strike, appearing at the load. The compounds of formula are CX3CR1 receptor antagonists and are thereby particularly useful in the treatment or

prophylaxis of neurodegenerative disorders, demyelinating disease, cardio- and cerebrovascular atherosclerotic disorders, peripheral artery disease, rheumatoid arthritis, pulmonary diseases such as COPD, asthma or pain.

1459825833-d1100cd2-b434-4689-9b82-f00b2a140548

A cassette transfer apparatus includes a shuttle having four transfer openings through which cassettes are moved. Electromagnetic radiative energy including visible, and optionally, thermal, RF and/or microwave wavelengths, is topically applied to internal surfaces of the upper respiratory tract to destroy or incapacitate superficial microorganisms without the use of antibiotics. The second party may also designate the parties to whom the first party may submit purchase requests. The piezoelectric assembly in response to the control signal translates the second conductive surface to set a trip point of the switch. The clear barrier layer can include a layer of glass.

1459825834-03ea1b7b-0a28-440e-81c1-189c48284920

This invention provides a method of assembling a modular internal combustion engine. Additional washing steps, coupled with an elevated temperature, are used in the process to extensively wash the pulps and remove substantially all COD components remaining in the pulps. The disclosed apparatus can overcome these shortcomings. In these computers with an optional unit 14, the optional unit is detachably attached to the top of the display, or the optional unit is detachably attached to a portion of the display, the portion being at a side of the display when the lid is closed and being at a top of the display when the lid is opened. These supported PtO-nanoparticles show efficient catalytic activity for the selective reduction of chloronitrobenzenes. A given bobbin creel arm is provided with at least one intake or suction channel that is directed radially inwardly from the periphery of the centering plate and that opens into a hollow shaft guided outwardly through an associated arm.

1459825834-65853f89-2c12-428f-bbf3-f8116f8045e2

A navigational control system for an autonomous robot includes a transmitter subsystem having a stationary emitter for emitting at least one signal. A jogger system incorporates the structure for accomplishing the method. A difference frequency component is extracted by attenuating the fundamental frequency component of the echo signal.

1459825834-91016958-c87d-47c0-b770-326515339ba5

A data switch is proposed which can be operated such that it generates a MA table of MAC addresses of devices associated with some of its ports, but not the MAC addresses associated with one of the ports. The air supply organizer comprises a vertical tube that runs from the top of the aquarium, along the side of the aquarium to the bottom of the aquarium. The waveguide sections offer high polarization purity so that signal components remain separated to avoid mutual interference and low insertion loss to maintain system efficiency. The non-locking handle moves the plunger from the inactive position to the firing position to compress the spring, and is unable to lock the spring at the firing position.

1459825834-940344fc-6c40-4a45-92d6-0d1b1fdadce6

A system for orthogonal alignment of a specimen disclosed. It employs a combination of electronically controlled process steps and specific systems configurations to duplicate the effects of moving resin beds from one operating position to another as is required in moving bed ion exchange water purification systems. The natural cooling results from providing flow passages for air and water vapor pressure differentials between the parts of the hand, inside the protective glove and the cooler outside ambient conditions.

1459825834-bfdf79b1-e5e1-46f0-a4eb-abdd8f107c88

An ion implantation is disclosed that includes an ionization chamber having a

restricted outlet aperture and configured so that the gas or vapor in the ionization chamber is at a pressure substantially higher than the pressure within an extraction region into which the ions are to be extracted external to the ionization chamber. One system includes an interface, a dynamic grammar builder, and a speech processing engine. The GPS application calls for GPS aiding information from an Internet server via a TCPIP socket provided by a GPRS link supported by the wireless CPU. The electrical contact includes a common body section and first, second, and third contact beams that are arranged along the mating side and have respective contact bases coupled to the body section. The high density memory cell benefits from the simple standard processes common to logic processes, and in one embodiment requiring only one additional masking step. Hence, the network switch can perform layer 3 switching operations for connected subnetworks, enabling the router to be bypassed; moreover, the disabling of the learning bit for the router interface port ensures that the router traffic does not overwhelm the layer 2 and layer 3 address table within the network switch.

1459825835-064294db-61ae-4e82-8f76-b07442d04761

Laminates comprising at least two glass plies surrounding at least one interlayer having at least one bore extending through the laminate are produced by excluding the interlayer from the area surrounding the bore and positioning a load bearing insert around the bore. The method employs a phase angle compensation factor and sequentially samples a plurality of values of each of the waveforms. The weight body 12 has an engaging part 32. An objective measure of system performance is defined prior to implementation of the present methods.

1459825835-1e34e957-4018-4d2e-b47c-b809cd287d4a

A signal protocol assembly is adapted to bridge electronic communications across a plurality of communications platforms allowing a plurality of electronic devices to transfer data therebetween. The process may include directing the residual fluid flushed from the intermediate transfer line to a recycle stream to introduce the residual fluid into the adsorptive separation chamber. A virtual torque efficiency of the actuator is calculated based on the VALV and the VOFV. Then, the remaining buried oxide film except that immediately under the active-layer-side substrate is selectively etched. Segmentation is improved accordingly. The housing wall section has an inlet opening for admitting air into an inlet channel, an outlet opening for discharging a mixture of fragrance and air from an outlet channel, and a recess.

1459825835-6c913ea9-53b8-41e7-89f1-ef18f4a893bd

This invention obtains information required to quantitatively evaluate block distortion of an image on the basis of encoded data that utilizes the compression encoding technique for respective blocks. In one aspect, a method includes receiving a file to be stored across a plurality of storage nodes each including a cache. The filtered ratios including an air ratio and a copper ratio are modeled as nonlinear functions of the DC and AC voltages.

1459825835-a8b76913-48dd-4af5-a64b-64071036d295

A method and arrangement is provided to form a gas-tight joint between an end flange and a tubular rod. The contacts can be spaced apart from the wafer and the tips of the contacts closest to the wafer may have sharp points to aid in the establishment of corona at lower drive voltages. The housing is assembled by mechanically linking the circumferential edge portions of the upper and lower shells together. The antenna summer stores transmission signals received on the output bus.

1459825836-95340440-1ffe-4c92-b9bc-61060627f94a

This invention relates to novel non-motorized water sports devices which facilitate and improve the usage of tow-behind water sports devices. Femto nodes also enable Remote IP Access service, which allows the terminals to access the local area network from the Internet as if they were present in the local area networks.

Outputs of the first and second transfer circuits are sequentially output from a multiplex circuit. Multiple management ports may be provided, allowing patch panels to be connected to one another in a daisy-chain configuration.

1459825836-9c592916-a610-4905-bc97-3401b1677162

A crosslinked olefin elastomer foam has a specific gravity of 0. The automated image generation, delivery, and management system and method serves processed images over a network. The method includes a computing device issuing read requests and initiate delete requests to storage units regarding an unassigned task, wherein the initiate delete requests instruct the storage units to flag for deletion, but not execute deletion, of a set of encoded task slices corresponding to the unassigned task. A water reservoir is attached to the wrist portion. The seal assembly may extend between the first scroll member and the shell and may form a sealed discharge path between the first and second discharge passages.

1459825836-d682c590-fc70-4022-b5dc-90b7e8414be8

An immersion sensor for use with a cushion or mattress for determining the relative immersion of a person within the cushion or mattress including a sensor, a ground and a circuit for measuring capacitance. The glare shielding device includes a microprocessor for controlling an activation time and a driving time of a liquid crystal panel. A dopant is diffused through the opening so as to form a PN junction that extends into the first layer of intrinsic material.

1459825836-df1daad6-2aeb-4f80-98fe-fdbf62025dcf

An automated simulation method for determining the enhanced generation-recombination rate due to trap-to-band tunnelling in a semiconductor device using the Dirac coulombic tunnelling integral and to a simulator for carrying out the method are disclosed. Resonance-enhanced multiphoton ionization is used to generate volume ionization within an air-fuel flow and induce an ignition arc. A source code corresponding to the second tree-structured data is acquired from the storing unit. The modified measurement is used to determine a combined reach for the multiple resources. The bond pad-wiring pattern is formed substantially in a center region of the semiconductor substrate.

1459825837-138cb77f-6fd6-4886-af1c-8bb4ad73b1a6

A method and system for performing inserts and lookups in fully associative sections of memory is provided. Also described are methods of therapy for Alzheimer's disease using peptides that bind to the neurotrophin receptor and competitively inhibit the binding of -amyloid to the p75NTR. The first effective output torque constraint is bounded by both of the first long-term and short-term output torque constraints.

1459825837-313e6486-acae-479f-a5b7-754d96a04761

Exhaust outlet equipment provided at a downstream end portion of an exhaust passage of a propulsion engine in a flow of an exhaust gas, wherein the engine is mounted in a small watercraft propelled by a water jet pump. One or more solar panels is supported by a rack having an end pivotally attachable to the forward leg. The steering assembly which includes an elongated force transmitter operatively coupled to a steering device.

1459825837-9b053a54-c903-4330-b6bc-624706afb762

A portable computerized device useful within a network and adapted to provide communication security. The front end of the controller contains a sense amplifier, having an input coupled via a current feedback resistor to a common output node of the converter. The terminal schedules an uplink resource including selecting frequency bands for an uplink signal by referring to the uplink control information. The convex members of the surface fasteners are sheets provided with many engaging members of convex shape such as hooked or mushroom shaped, or the like. Additionally, a computer system utilizing a connector hold-down and a method

utilizing a connector hold-down are disclosed. The shape of a streamline cross section may have an obtuse-angle or acute-angle upstream part.

1459825837-a7d779ec-5457-4b1e-a5c9-43301f93d80f

Asymmetric finite impulse response filters are used to estimate gradients for re-sampling models used in image resizing. The webbing tack is configured to be temporarily tacked. Interlayers can be located between the core and the skin layers, wherein the interlayers include a residual compressive stress, and produce a reduced residual tensile stress in the core. These approaches do not require an over-the-air signaling and the COUNT value handling in the network is transparent to the mobile station.

1459825837-d90318a5-61f8-4788-81e7-42be398e0147

A novel soybean cultivar designated SJ743473 with high yield potential, tolerance to Roundup herbicide, late Group 3 maturity, and resistance to races 3 and 14 of Soybean Cyst Nematode, further including the plants and seeds of the cultivar SJ743473, and methods for producing a soybean plant by crossing the cultivar SJ743473 with itself or another soybean plant. proprietary inbred maize varieties. The encoderdecoder processes the motion vector based at least in part on the motion vector predictor computed for the motion vector. Responsive to the third signal, the exemplary system moves a relative position of the film with respect to the video camera, to generate a video signal.

1459825838-37020d48-2b37-4ef5-829b-49455bbc1acf

A container for holding cosmetics which has a base assembly, a cover member configured to engage the base assembly, and a receptacle retained by the base assembly. The cycle includes a frame having front and rear portions; a seat ; a front wheel rotatable about a primary axis and attached to a steering member ; a steering mechanism coupled to the steering member ; a rear wheel, rotatably attached to the rear frame portion ; a drive mechanism operatively coupled to the front and/or rear wheel; at least one footrest on the front wheel. Also described are many novel nickel compounds and their precursors, as well a novel ligands. In the simulation program structuring process, the sources are subjected to isolation of the hardware and software, while an evaluation function is created to count bus traffic of the bus interconnecting the hardware and software. The threshold value can be based on the mean and/or variance of features.

1459825838-763d67c3-3d15-4277-90fc-8a9dfd146f18

A potential sensor, includes a field effect transistor, a power supply and a switching device. The HBT includes an extrinsic base with one or more buried interstitial barrier layer. The network processing node switches back to outputting unsolicited grants when the endpoint resumes generation of audio packets. A dielectric layer is applied to the modules to form a workpiece. A second mark signal is detected by scanning the mark with a beam.

1459825838-ce670024-7996-46e9-bbc1-b12443bada3a

Systems and methods for providing a power signal to one or more implantable devices include a number of dynamic range amplifiers each having a multiplicity of output drivers. The forming step is preferably accomplished using one of a stamping process, a punching process, a roll-forming process and an embossing process. The method includes forming the conductive plug recessed in an insulative layer. A method of network topology verification in a link state protocol controlled Ethernet network checks the link state protocol database at a node to ascertain the control plane topology view of at least part of the network.

1459825839-03ebbc11-08b8-4bcc-bf3e-228b6b84a0c3

An electronic component storing package which generates a large quantity of heat during operation and an electronic apparatus storing such an electronic component are provided. ; and a cured product which is obtained by curing the composition. 8

to 8 mm, grinding the feed material in the grinding mill and removing a product from the grinding mill, the product having a particle size range such that D80 of the product is at least about 20 microns. The third switch can be operated to either of two positions to operate either one of two independent circuits or can be left in the center-off position not engaging either circuit. Particles in the adhesive can prevent the adhesive from squeezing out from between the cover and the standoff during attachment.

1459825839-58045225-79f0-40d6-bc65-2a2d5444868e

A multi-energy radiation detector may include an array substrate including a plurality of unit circuits, and/or a photoelectric conversion layer on the array substrate. The elevator system includes a number of elevators wherein first sensor members, second sensor members and additional sensor members are arranged in a waiting area of each elevator on each floor. To reduce variation in critical dimension width, an Anti-Reflective Layer is used. The mixing elements on the screw and the sleeve create multiple regions of reorientation in the material to be mixed which produce improved dispersive mixing. Also, the web server could be executed as a background task in the execution environment, the execution environment could represent a deterministic execution environment, and the application could represent a real-time application.

1459825839-5daa2683-33ce-47e0-95d1-22d07dfaeb2b

The present invention is directed to novel cyclopropanecarboxaldehyde compounds of the general formula wherein R is a straight, branched, or cyclic hydrocarbon moiety consisting of 1 to 30 carbon atoms and containing single and/or double bonds. The method comprises providing at least one communication path of the node with a capability by which lasing can occur in the communication path, and detecting whether lasing has been established in the communication path to determine whether the optical node is operational. The system further includes first program instructions to identify lines of text within the document that have equivalent length. The pole layer is disposed in a groove of a pole-layer-encasing layer made of a nonmagnetic insulating material, with a nonmagnetic conductive film provided between the encasing layer and the pole layer. After it is computed and composited, the buffer containing the result of the fragment program may be discarded. In addition, a process for coating surgical suture material is described which is characterized by the fact that the thread material is wetted with a homogeneous methanolic solution of octenidine dichloride and/or dequalinium chloride and subsequently the methanol is evaporated, a coating forming on the thread surface.

1459825840-01408941-d052-4cfc-9503-9d1619449c5f

An X-ray convergence element and an X-ray irradiation device including the X-ray convergence element are provided. The connectors incorporate electrically lossy material, selectively positioned to reduce crosstalk without undesirably attenuating signals. The plug member is provided with a slant outer surface which narrows upwards.

1459825840-1b9db6b5-c11b-43ce-becb-b1ee766d5218

A rotary piston machine 10 includes an enclosure 12 having a cavity 14 therein with arcuate side walls 16a,b,c defining a plurality of arcuate recesses 18a,b,c and a piston member 20 rotationally disposed in the cavity 14. The top plate includes an orifice. Additionally, telemetry features enable improved diagnostics and/or repair of communication systems, for example satellite communication systems. The method then calculates a score of the first power supply design and determines whether the score is better than the score of any power supply design included in a set of power supply designs.

1459825840-600a0006-f662-4669-aa3c-f5ba226bb52f

An electromagnetic switch includes an electromagnetic coil, a fixed core, a movable core, and a diode. The module may include an optical transmitter/receiver part, a

signal processing unit, a flexible PCB, and a rigid PCB. If the predetermined focused position and an image surface to be read are aligned with each other, then the scattered light from the light scattering pattern falls fully on the image surface without being wasted, so that a spatial light intensity distribution in an auxiliary scanning direction is uniformized. Players are allowed to bet tokens on an open betting line until it is closed by the administrator.

1459825840-797603ce-4417-4834-8394-2e8f0265bdca

A method and computer-readable medium are provided for storing files in an official file repository. A first barrier layer comprising sputtered titanium nitride is formed over a topographical structure situated upon a field oxide region within a semiconductor substrate. In response to the request, example embodiments may include fetching the first data and generating further data based on the first data. During a subsequent fine gain control period, the gain of a programmable gain amplifier is adjusted separately for each frequency band used by the OFDM symbols based on a histogram bin that counts the number of output samples of an analog to digital converter whose magnitude falls within certain ranges.

1459825841-0108765f-dccd-4483-9fd5-4dc51eca71b0

A method of hydroprocessing a heavy hydrocarbon feedstock using a hydroprocessing catalyst having specific properties making it effective in the hydroconversion of at least a portion of the heavy hydrocarbon feedstock to lighter hydrocarbons. The power supply switch circuit is comprised of two PMOS transistors whose gate terminals connect with two pull-up circuits. Using a processor within a smart card the received user authorization information is compared with user authorization information stored in memory of the smart card to produce a comparison result. The self-aligning bearing assembly includes a bearing member having a recess extending substantially parallel to the first axis, and a journal sleeve received in the recess and interposed between the shaft and the bearing member. Consequently, the device facilitates the debugging at early stages of system development, configures a prototype system, and contributes to the time reduction throughout the system development, prototype fabrication and large-scale production.

1459825841-0971c456-ceb2-490c-beb5-ad41de6d2663

A reformer exercise apparatus is disclosed that has a generally rectangular frame. An embodiment of the present invention comprises defining, in response to an AT command directed to the definition of a secondary Packet Data Protocol context, an EPS Service Data Flow on the basis of the secondary PDP context. The second side of the semiconductor components is in each case mounted on the metallic layer of the baseplate. A movable target or pendulum may provide an ability to sense the near space along a direction that the reflection detector is sensitive to. The system includes a subscription gateway configured for near real time transfer of the transcribed data over the communication network to the one or more mobile devices.

1459825841-3b311368-299f-4d17-84bd-d234dee54375

A system receives input data frames that are configured according to a SONET or an SDH standard. The first code group has a first symbol and an error detection code for the first symbol. A measuring wheel and electric eye for detecting the presence of the material are located on the table top. The interface may also represent the effectiveness of a user based on the actual or predicted sleep data in conjunction with an actual or predicted work schedule or pattern. The determination that a radio uplink channel power fade exists can be made in either the radio access network or the mobile station.

1459825841-5ffbbde5-ee0a-41e6-8daa-6d913d6ac054

The present invention is a vehicle traffic measurement system designed to accurately count and record the number of vehicles passing through a selected location, to more accurately determine and record the velocity at which the individual vehicles travel through that location, and to accurately determine and

record in which relative direction the vehicles are traveling as they pass that location. The apparatus also includes a controller that is connected to the reading mechanism. An authoring tool compares the buffered payload to an allowed payload for each window and selectively scales the losslessly encoded audio data, suitably the LSB portion, in the non-conforming windows to reduce the encoded payload, hence buffered payload. The access point is further capable of monitoring wireless network traffic to ascertain whether wireless network traffic has exceeded a threshold, and if so, releasing some client devices so that wireless network traffic no longer exceeds the threshold. The annular wheel space is formed between the first inner ring and a rotor wheel adjacent to the first inner ring. The comparison is then used to control a mix between the outputs of the two processes to produce an output signal.

1459825841-87b916ab-2f34-4391-9d9e-78aadd34f984

A dental impression tray is provided having a wall including at least one retaining element. The ball cord may be wound several turns around the pulley, in that oblong axial tracks have been provided in the pulley. The portion of the light internally reflected from the applanation surface provides a signal indicating the size of the applanated area, from which intraocular pressure is determined.

1459825841-d86c0c63-9b72-43ca-bbae-0466eb3fee8e

A vehicle travel control device can accurately determine a driver's intention to adjust the vehicle speed. In some embodiments, a method may include decomposing a plurality of data packets into a plurality of component data types associated with a candidate alert representing a potential security threat in a network. The reflection surface is formed with plural marks or guide grooves usable in a tracking operation or a focusing operation by irradiation of the second beam.

1459825842-1767f88d-533c-4f79-ab72-41854c167a4c

Embodiments are concerned with method and a system for event processing in a communications network, and are suited to coordinating the provision of services in response to service initiation triggers. ;c) hydrothermal treatment of the dried reaction mixture derived from step b) in an autoclave, said dried reaction mixture not being in contact with a liquid phase at the bottom of the autoclave. The invention further relates to methods for the creation of databases comprising the survey information and the databases created by these methods. Then, the voltage of the tilt signal in the predetermined range is amplified by a predetermined multiple. Accordingly, a user can easily select and watch an external AV signal of the desired external AV apparatus through the label of the external AV apparatus.

1459825842-a4013481-94ef-4569-a19d-66cbe79f2b13

A visual sensor capable of expanding a dynamic range with a little load of processing for arithmetic operations and performing a stable detection not affected by change of conditions such as ONOFF state of projection of reference light. In embodiments, these techniques eliminate or reduce rms noise in a recovered signal peak location by enforcing correlation peak symmetry. Additionally, a method of monitoring the success of lung cancer treatment is described comprising detecting levels of a CTAP III-related biomarker in a biological sample from a subject undergoing treatment for lung cancer for comparison with a previous level obtained from the subject. Alignment of the candidate image is determined relative to at least one previously known training image by inputting the candidate image into a trained alignment classifier and outputting one or more alignment variables therefrom associated with the candidate image. The rack has a mating screw gear formed in the inner surface thereof to correspond to a screw gear of the stabilizer link. In addition, the deposition chamber is provided with a vacuum pump, an external gas supply with atomizer and radical generator, a gas generator for producing a flow of molecules on the substrate, and a substrate cleaning device, such as an ion gun.

1459825842-ddfb8523-8609-498d-bdf7-c80ce7aa6a2c

A circuit for sensing an open-circuit lamp is provided. In the apparatus for noise depreciating for hermetic compressors of this invention, a diaphragm is mounted to the interior surface of a chamber cover through a welding process, thus dividing the interior of a muffling unit into two chambers. A line substrate, which is arranged on the contacting unit and electrically connected with it, is constructed as a shielded triplate line by which the high-frequency signals can be conducted to the testing device. The composition can be applied to the making up and care of keratin materials. The application of heat may optionally be limited to locations where pinhole defects are found. Virtual memory blocks that have been mapped to a corresponding physical memory block over virtual memory blocks that are unmapped when fulfilling an allocation request can be reallocated preferentially.

1459825843-2486f56a-a41e-4390-ad47-ad3ad9ad8f88

Disclosed herein are methods and related tools for assisting users in analyzing and identifying various constraints that limit the impact of business growth strategies, and for helping those users identify, research, and/or implement strategies in light of identified constraints. The cart includes a tray that has a generally rectangular bottom wall and a peripheral wall. The landmark account stores information and applications associated to the landmark client. The file tree has for each storage apparatus a hierarchy of directories and files based on relationships among the data volumes, the pages, and the segments. Each neighboring node communicates its respective need to the first node.

1459825843-3d5686ef-3a0e-424b-98e4-9915642b65da

A resin for use in toner is provided. An outer arm has an inner end pivoted at the outer axis on the outer axis of the main link and an outer end carrying a footrest. The test body further includes electrodes, which are embedded in the laminated structure. The interior volume can have any of a variety of shapes, such as cylindrical, frusto-conical, and curved frusto-conical.

1459825843-d9a16460-97b8-4a9e-b54c-7c6da61425e9

A mold apparatus and method for manufacturing panels having, as desired, one or more areas of reduced material comprising a facing sheet and integrally attached cell forming walls extending in roughly perpendicular fashion from the facing sheet. The bitmap may be generated by drawing the plurality of objects. The extension shelf unit may be oriented in a sliding manner with respect to the central shelf unit to permit the adjustment of the width or depth of the shelf by extending or retracting the extension shelf unit with respect to the central shelf unit. The annular shaped tool includes a forming surface of a select cross-sectional geometry. Each cabinet is formed with an exhaust pathway such that the moving air enters the cabinet from the duct, flows across the electronic equipment to remove thermal energy therefrom, and exits the cabinet.

1459825844-85e95b14-b100-4209-ab84-18def0e17849

A drag reducing fluid pumped through a heat exchanger. The microprocessor receives a plurality of position error signal values during track following and sums PES values for a plurality of different sets of servo wedges of the track to generate a plurality of shifted summed position error signal values. The rib includes a brow portion, the brow portion having side portions extending above the lens receptacles and the rib having extensions coupled to the brow portion and extending downwardly along both sides of a wearer's nose and the rib having a pliable coating on at least some of its surface. Advantageously, flexure of the RV walls around the slide out opening is reduced. Adjacent memory cells on the same word line share bitline diffusion as well as a third poly control gate. Relatively low voltage differences may be present between relatively close boards, and relatively high voltage differences may be present between boards that are relatively far away from each other.

1459825844-b49f46f4-ddd2-4628-8788-75b5b9c70df3

Treatment of spinal irregularities, including, in one or more embodiments, derotation apparatus and systems that can be used to reduce the rotation of vertebral bodies. In some embodiments, multiple groups of page buffers may be activated simultaneously to access multiple sectors, while page buffer groups for unselected sectors are deactivated. A suction source pulls air and entrained dirt, dust, and other contaminants through a main suction opening formed in the underside of the nozzle and into the cyclonic airflow chamber.

1459825844-eb6df75e-1703-428c-bff9-56db488b33ce

An interposer card used during qualification tests on integrated circuit packages is disclosed that eliminates the need for sockets and custom boards. The method includes adding one or more particular silane based small molecules to the liquor fluid circuit. Suction is applied between the inner surface of the mould and the first fibre mat. This prevents entanglement of the suspended toys. A pair of connectors attached to the inner ends of the lenses releasably connect the lenses together.

1459825844-efda184b-65c7-4219-8bb4-7f4aa63c289f

A low inductance via arrangement for multilayer ceramic substrates is provided. And the broad-band dual-polarized microstrip array antenna according to the present invention arranges transmission paths for two separate linear polarization on a different layer each other in order to minimize an interference effect and a proximity feeding method and an aperture coupled method are used in order to get two separate polarization. It allows the realization of final curved parts of almost unlimited dimension, dimension whereas dimensions are usually limited by the width of the sawing, or, in other words, by the thickness of the trees.

1459825845-24127e4c-fa56-42fc-88e0-896664a36884

A method, apparatus and computer program product are provided to schedule the uplink grant in a manner that efficiently utilizes uplink resources. The apparatus includes a housing capable of moving on the loose surface with an opening configured at a bottom surface of the housing. The component features are independently shaped and formed into a composite pulse selected to optimize a signature response pulse received from the material. Conductive material may then be formed in contact with both the sidewalls and a top surface of the through silicon via. In another aspect, presented herein are methods for identifying receptor-ligand interactions.

1459825845-5d2c2918-71c5-475b-abf2-1d206bd10c31

The present invention is directed to a Sphingomonas bacteria and a method of producing exopolysaccharides by culturing a Shingomonas bacteria in a fermentation broth for a time and temperature effective for providing a sphingan exopolysaccharide in a slime form. During both insertion and extraction of a circuit board from a system, two inputs signals are generated from staggered pins located on the circuit board's connector. The at least one transfer gear is contained within a gear housing.

1459825845-63e9f179-812a-441a-917d-5e7098072cd3

A computer-implemented method of pre-permissioning a computer application is disclosed. A multibit digital input sample is received and an error detecting code, corresponding to that input sample is calculated. The codes are assembled into a code book. In NLDP antenna hardware is simple, easy to implement, and readily available. Optionally, a guide is attached to one of the arms for guiding the two arms relative to each other during operation. The first laser module positioned on a separate track from the conveyor moves at a faster rate than the conveyor to drill the top surface.

1459825845-a0eb6472-da89-4bb8-8313-32cda6579bc6

A baby bottle feeding apparatus and method for assisting the feeding of a nursing infant by a bottle attached to an elongated feeding tube with pacifier end. Preferably the salt and calcium ingredients are essentially characterized by having a mean particle size of less than 25 m. The client device can determine whether files, which were included in the previous full backup image, have or have not changed using the track log. When selection of a function is accepted, a screen for operating the selected function is displayed on the display unit of the portable terminal. 0 and a linseed oil absorption value exceeding 250 cc/100 g, and a production methodology therefor. The secondary electrons ionize the excited atoms, thereby creating the strongly-ionized plasma.

1459825846-16d7c53c-48a3-4f88-a1bb-5350586553f9

A digital PLL may be combined with an analog PLL so that the output of the digital PLL is at a frequency high enough to maintain stability in the analog PLL when an initial reference clock signal is too low to maintain stability in the analog PLL. The invention relates in particular to compounds containing hydroxyamidine or hydroxyguanidine groups. A guide screw 41 is screwed on the peripheral face of the connection pipe 40A to penetrate through a peripheral wall of the connection pipe 40A. The first stage is preferably a stepper motor or servo motor and the second stage is a piezoelectric actuator. The flexure can be a unitary member that includes flex joints allowing a portion of the flexure to be linearly moved. The device also includes an apparatus mounted to the base to interrupt current through the conductor when a signal from the current sensor indicates a predetermined condition.

1459825846-9d758cd5-6aba-4eaf-acb2-39e7e8947f61

A nanopore sensor comprises second electrophoresis electrode or micropump, second fluidic reservoir, second micro-nanometer separation channel, substrate, sub-nanometer-thick functional layer, first micro-nanometer separation channel, first electrophoresis electrode or micropump, and first electrophoresis electrode or micropump that are sequentially assembled. The first hashed XML document is compared to the second hashed XML document and a difference report is output. The collector comprises a thin layer of pliable and water-permeable material through which leaked or voided urine passes and that is underlain by a layer of water-wicking material which may also contain one or more open channels for directing and conveying the flow of urine to a fitting connection with the conveyance tube. The key is used by the mobile station to establish a session between the mobile station and the encountered wireless local area network. The invention also includes a method of removing dirt or contamination from a surface, or flattening surface irregularities, which includes rubbing the flexible sanding composite against the surface repeatedly until the dirt or contamination is diminished. The method comprises the steps of: a) shifting a preamble window by delaying a transmission signal in order to catch a first call access signal from a mobile station at a remote distance; and b) delaying a second call access signal from a mobile station at a short distance in order to catch the second call access signal.

1459825847-60d30724-3581-43d0-b3a6-28b301a8c8b0

An ink-jet printer for printing on cards includes a printing station having an ink-jet printhead. The surface of the solid bottom of the heat exchanger includes at least one central point disposed substantially on the axis of the heat exchanger at a highest level relative to the set of points constituting the inside surface of the bottom of the heat exchanger. The rail has two outwardly-positioned rows of upwardly directed teeth and two upwardly-projecting guides running parallel to and between the rows of teeth. One portion of the interior load bearing shaft is connected against one interior wall of the exterior shell with the remaining portions of the interior shaft being independent of the other interior walls of the interior shell. Also disclosed are a unique catalyst, a method for controlling the content of the syngas formed in the feedstock reformer, and a feedstock handling system. The profile has an angle  $\alpha$  formed by a line tangent to the profile

relative to the horizontal at least equal to ten degrees at the radially outermost and radially innermost extent of said profile.

1459825847-a7108194-bc0b-4c1d-b58d-74bfa824fdf5

In one embodiment, first optical signal can be generated at a first end of an optical fiber segment at a first time. An axle is mounted to a frame of the mechanical control mixer, and a barrel is configured to rotate about the axle. An image forming apparatus capable of totaling the pixel value by a respective kind of the image and calculating the toner consumption by a respective kind of the image is realized. Each of the sub cell arrays includes a ferroelectric capacitor, and a serial PN diode switch having a PNP diode and a PN diode, to decrease a cell size and improve operational characteristics of the circuit. The bristles also serve to clear the hub of any detritus produced during dicing.

1459825848-4fd68aca-7a42-42a0-b79a-0bfa6e1cb5e4

A method and apparatus for connecting the processor array of an MPP array to a memory such that data conversion by software is not necessary, and the data can be directly stored in either a normal mode or vertical mode in the memory is disclosed. The top portion includes a partition board on which an LED is seated with two terminals on opposite sides of the partition board. The ONO includes at least a first region and a second region, where the first region is higher than the second region. The invented device can be packaged to a Travel Size such that it takes very little space for transportation. The method includes a first plate extending from a trench and isolated from a wafer body, and forming a second plate extending from the trench and isolated from the wafer body and the first plate.

1459825848-fe6c62d0-f468-4282-b201-959fb25818ac

An electrical connector includes a housing and a contact module mounted in the housing. In addition, at least one of the segments is provided with a mechanism for moving the segment in the radial direction. If a data element arrives after the predetermined playout deadline, the data element is provided to the decoder state machine to update the decoder state.

1459825849-9f42aa71-b1d4-4aa5-af39-01942e40e9f9

A pump priming apparatus including a housing through which fluid object material may be urged to flow, the housing including an intake portion and a pumping portion downstream from the intake portion. The second image which is a continuous image is printed on the second surface by the second printer in synchronization with recording synchronization pulses. An RF shield surrounds and isolates the microphone from the RF circuitry, power amplifier and antenna and shields the microphone from radiated energy generated from the RF circuitry, antenna or power amplifier. Fasteners extend through the slots in the plates and connect the plates of the connector to two building members such as a horizontal building member and a vertical building member.

1459825849-c399721d-8b59-45fa-a0ca-c869e5604b75

A connection element consists of a longitudinally oriented support structure that is at least partially hollow and a sensor unit that is arranged in the inside of the support structure, is connected to a signal transmission device, and is non-positively connected to the support structure. More specifically, the present invention relates to liquid pigment dispersions possessing viscosities of at most 5,000 centipoise at standard temperature and pressure. This may allow the fabrication of components with substantially hollow interior areas to reduce weight, reduce part count while maintaining high strength and ductility. A B1616 tile in the middle level of hierarchy is a sixteen by sixteen array of B1 blocks. Extending outwardly from the bottom of one half is a shaft and a clamping means for securing the apparatus to a tubular member or handlebar of a bike. The system has a cooling loop in heat transfer communication with the battery, for removing heat therefrom with a coolant, a first cooling device selectively coupleable to the

cooling loop, using a refrigerant fluid to transfer heat with the coolant, and a second cooling device selectively coupleable to the cooling loop, using ambient air to transfer heat with the coolant.

1459825849-d676fde9-1135-4611-a0a4-51530e4571c1

The present invention relates to a method for opening a tray door of an optical device. In some embodiments, during operations, the first processor core receives, from the second processor core, an indication of a memory location and a flag. The indexes may be built with metrics other than market capitalization weighting, price weighting or equal weighting.

1459825850-2e511db9-28d0-4801-9186-e0a9ad7f8c77

Vertical and horizontal drainwater heat exchangers have built-in heat storage for continuous heat recovery. The base part comprises a soft magnetic layer and at least a primary coil. The lower portion may be plug locked onto a printed circuit board. Media blasting is then used to restore the pads to their original condition as on prime parts. A cable is used to operate the movement of the boom member, and has one end attached to the winch and a second end attached to a rigid component on the boom member after engaging pulley means on the boom member or control post member as chosen to provide suitable angular orientation of the boom member and telescopic extension of the boom member.

1459825850-4080d625-cf2f-486e-bcec-2c9f288a543e

A wheel assembly for a vehicle such as a tractor is disclosed. The body has inner and outer surfaces that are substantially complementary to one another to allow a plurality of chairs to be stacked together. For at least one element of the secondary-air circuit a principal component of flow and at least one auxiliary component of flow are calculated. The image density detector detects an image density of the reference image pattern.

1459825851-026e412f-5584-465d-a7f1-066724fb5ef8

A frequency plan is provided for particular use in a transceiver. The method of resynchronization is based on the use of a resynchronization word. A head cover made of the same fabric provides concealment for the user's head.

1459825851-1a1dc762-dd93-46e8-8211-ec7f792cd2f2

A method for improving the appearance of a hard-surfaced floor. In some embodiments, this includes recovering a backup data to a remote location, using an IO intercept to access the recovered data, modifying the recovered data a first time, completing the modification of the recovered data, preserving the IO intercept, and storing the modified data in the remote location. The substrings within an attribute are analyzed to provide a state model that assumes a beginning, a middle and an ending token topology for that attribute. The interface material is solidified with the first layer in the relaxed state to obtain a first wafer. Further, it provides use of a compound selected from the group consisting of -tocopherol, -tocotrienol, -tocopherol and -tocotrienol for generation in vivo of any of the above compounds and to treat a disease caused by oxidated low density lipoprotein. Receiving and processing a Fiber Optic Communication network provided signal and processing a UNB processed signal into a processed spread spectrum signal in a mobile unit.

1459825851-33efa8bb-1031-4c37-94a2-bfca02d7d91b

A through-silicon via fabrication method comprises forming a substrate by bonding the front surface of a silicon plate to a carrier using an adhesive layer therebetween to expose the back surface of the silicon plate. Owing to the ocular properties, this knockout mouse is useful as a model for normal tension glaucoma. The second lens group from the object side has positive refractive power and is formed of two lens components. The signal is launched from the launch point in the first layer. The method further includes receiving an authentication package from

the authentication application without contacting the authentication application. One embodiment of the invention comprises a fibre optic splice comprising: a flexible central tensile member; a flexible helical wrapping positioned about the flexible central tensile member; and an outer protective jacket positioned about the flexible helical wrapping.

1459825852-12d0619d-ca51-488e-aa96-c58515d4f76d

A variable impedance sense circuit can detect a drift in the impedance of variable impedance circuits due to changes in operating conditions. A constant current based on a reference voltage corresponding to a ground potential point is generated, and passed to a first resistive element whose one end is connected to a power supply voltage terminal. The mobile terminal stores the status information in the form of a table, and detects and transmits the information in response to the status information request signal sent from the user computer.

1459825852-2e50eee6-ca00-4d71-958b-9d333ef5f41a

A fluid filled cartridge having a fixed needle and a piston assembly for expression of its contents is mounted inside an applicator. These compounds are useful as sweet flavor modifiers. The handle member includes a hollow interior containing the cutter while the cutter is not in use.

1459825852-8af227e6-8e9b-4651-a9dd-02ea499686f2

The patent or application file contains at least one drawing executed in color. The circuit device includes a casing, a semiconductor element, and a cover portion. The PBC-based implementation method for cyclic codes herein can correct more burst errors than the conventional cyclic code decoding method.

1459825852-e3f07004-0491-4234-8850-91d407b075ed

Landing gear mechanism for aircraft are provided which include first and second connecting arms and front and rear wheels operatively associated with the first and second connecting arms, respectively. Weights, one of which decreases monotonously and the other of which increases monotonously, are applied to first and second resultant image signals under the condition that the sum of the weights is 1. The shared account information identifies shared telecommunications units used in connection with a first subscriber service and a second subscriber service. In some of these embodiments, the wireless device is further provided with a workload monitor to cooperate with the at least one time sharing machine to facilitate the coordinated control be adaptively performed, based at least in part on transmit and receive workloads of the two protocols. The one or more processors classify one or more images resulting from the stimulation of the first software application. Several alternatives are provided for determining particular resources to use for performing the RRM measurements, wherein the particular resources are based on cooperative resource partitioning between cells of the HetNet, wherein the cells may be of different types.

1459825853-2d5cc35d-1caf-4952-b638-87bfc13fb823

A digital-camera processor receives mono-color digital pixels from an image sensor. The cathode ray tube comprises a shadow mask having an effective area where lines of apertures for passing electron beams are arranged and a dead space formed on both outer sides of the effective area. An elastically deformable latch portion of the slap yoke clip extends from the slap yoke clip side portion, at an angle thereto, for elastically deforming when a steering shaft is laterally inserted into the slap yoke and for returning to a relatively undeformed condition after insertion of the steering shaft into the slap yoke to prevent exit of the steering shaft from the slap yoke. With the jumper in place, the fuse element can be opened, removed and/or replaced without interrupting the transmission line circuit through the cut-off box, since the jumper now provides a bypass around the fuse.

1459825853-7ea64dc5-6be3-4705-ad9b-d5c039146fbe

A testing apparatus is provided to securely detect a mounting error of a fittable member on a connector. The control circuitry may comprise an oscillator for generating a clock signal. The source device transmits at least a portion of the predetermined data over at least a first channel selected from the channel selection profile. The tunnel dressing also has a wound contact surface adapted to minimize tissue entanglement to facilitate removal. The trace capture process can periodically query the event trace routine with a frequency determined by an adaptive timing algorithm in order to detect the addition of trace data to the trace buffer. The scent ring can be directed with accuracy to a localized target as small as the nose of a single user, such that the entire dosage can be delivered to only the user's direct vicinity.

1459825853-9f3d6a17-5619-456f-b208-2615597cddc5

A PDP and driving method improve the contrast of an AC PDP by maintaining stable discharge and preventing over-discharging in a low gray state by enhancing voltage control of the scan electrodes and sustain electrodes during initialization control. 1 to 30% by weight of carbon black filler and from about 0. When the first and second faces of the first pulley are located in a first position, a belt located on the first pulley remains motionless.

1459825853-ea32eee6-3c09-47fa-ad24-06eb2f0240ab

The present invention provides a spread illuminating apparatus for improving the machinability and durability of a molding die for a transparent substrate and obtaining an excellent light reflection. In one embodiment, the apparatus can include a fixed abrasive polishing pad having metal abrasive elements selected to be a compound of metal in the substrate. The shield member can be adjusted by an adjusting device in each working stroke in order to vary the effective depth of the tuft picking notch from one working stroke to the next to change the size of a tuft engaged in the notch. Various methods are also provided for the counter units as well as counter waves. The call includes the uniform resource identifier of the content provider system. The method comprises processing a workpiece using a processing tool, receiving trace data associated with the processing of the workpiece from the processing tool and determining at least one value associated with a health of a portion of the processing tool based on at least a portion of the received trace data.

1459825854-0a224a77-8f27-421c-8f6d-654ec2ef252b

The present invention relates to a novel composition comprising a mixture of potassium 1-4-chlorophenyl-1,4 dihydro-6-methyl-4-oxopyridazine-3-carboxylate is in the range of from 1 ppm to 300 ppm and potassium 1-4-fluoro-3-chlorophenyl-1,4 dihydro-6-methyl-4-oxopyridazine-3-carboxylate and a non-ionic surfactant for hybrid seed production. A static route is created in the subscriber's computer to establish a continuous logical connection between the subscriber's computer and a continuous service provider to provide the subscriber with continuous services. Once the target has been aligned with the target positions, image data of the target is captured and used to compute calibration parameters. In response, the translation output may be encoded with the previously separated visual component. The 3-D UCT system also includes a processor coupled to the imaging chamber. The apparatus further comprises control means activated by said regulator means to actuate a fuel metering system of the engine.

1459825854-0b32a4f7-4e9a-4085-9cbf-e8b6c7c45427

A method and system for creating bulk filters are described. The transmission table includes a list of frames from various link control entities in the order in which they were multiplexed together to form a stream of frames. Further provided are methods of treating fibrotic conditions and other cytokine-mediated disorders by administering pirfenidone capsules of such formulation to a patient in need.

1459825854-269eb78d-fd29-4e7d-bca6-bb2acbd4e039

A method is provided for receiving a wireless message in a mobile telecommunication system. The electrospinning element includes a passage by which a substance from which the fibers are to be electrospun is provided to a tip of the extrusion electrospinning element. When the SIM card is plugged, the power supply terminal connects with a power supply contact of the SIM card earlier than the first terminal, and the first terminal connects with the power supply contact earlier than the second terminal. A method of controlling the powertrain is also provided.

1459825854-bcd4c58e-99d7-4080-83e8-6b0e3d625e75

An automobile device transmits automobile data to a server in a communication network. Inside said mantle there is a movable septum between a lowered position close to said base and a raised position close to said roof, said two lowered and raised positions defining, with the mantle, roof and bottom, peripheral passages for the air sucked through the duct. Additionally, a single-piece electrode assembly can be used instead of a separate electrode assembly and electrode. The elements of the first and second patterns partly overlap and combined form a set of repetitive large-sized alignment marks, such that the edges of the alignment marks in the direction of repetition are formed by small-sized elements.

1459825855-7f5d91f6-2902-463a-9b9b-4ab8a2ad8020

It is disclosed a wireless power supplying system and an self adaptive adjustment method thereof. An intervention device 3 receives from a front monitor 4 and a rear monitor 5 acquisition requests which request various kinds of screens from a navigation main unit 2. By this surface modification the resistance to high temperature corrosion of the FeCrAl alloy and its lifetime are significantly increased. By contrast, liquid infiltration of silicon into diamond powder at 5 GPa1673K produces a composite with higher hardness but lower fracture toughness.

1459825855-a2996516-7843-4e87-a8fc-84ae25a20326

An illuminated angular display system is provided. Not being able to easily remove the rotator plate on the board, the security device acts as a deterrent to someone wanting to steal the board. At the time of starting the engine, the control apparatus supplies the vaporized fuel stored in the vaporized fuel tank into the intake passageway by opening the vaporized fuel supply valve. On determining that the one or more recipients are members of the social network; at least a portion of the electronic message may be provided as a message post to a message stream associated with the one or more recipients. Use of credentials in this manner enables a wide variety of relatively complex and flexible control arrangements to be put in place and enforced with relatively simple rights management technology.

1459825855-eba849d3-c0f8-4333-a1cc-c6cec7220d9e

Microparticles with adsorbent surfaces, methods of making such microparticles, and uses thereof, are disclosed. The sorbent composition is derived by sulfidation of red mud, which contains hydrated ferric oxides derived from the Bayer processing of bauxite ores. The doors form part of the side seal system in the deployed position, and protect the flexible components of the seal in the retracted position. The method continues by removing the dummy gate and etching a recess in the silicon substrate.

1459825855-fb556db0-09a9-498c-af39-0bf1e1de94cc

A wind turbine electrical generator may include a monopole tower extending upwardly from ground level. Also provided are pharmaceutical compositions and methods of treating obesity, diabetes and inflammatory or immune associated diseases comprising said compounds. The test zones are disposed within a channel of a microfluidic device. The main idea of the present invention involves combining K-trellis steps as a pipeline structure and then combining the resulting look-ahead branch metrics as a tree structure in a layered manner to decrease the ACS precomputation latency of look-ahead Viterbi decoder circuits. The positioning and retaining structure position an earpiece associated with the earpiece in a user's

ear and retains the earpiece in its position.

1459825856-6b1017da-7877-4b7e-bd4b-78d8f415512f

A cutting unit includes a detachable head assembly with a cutting insert and holder. The mobile station is equipped for receiving a signal in the downlink direction and for sending a signal in the uplink direction. If the marker is located, content from the relevant aspect is woven into the generic process plan at that point. Both the first and second loads are symmetrical with reference to the axis. A first storage unit stores a first voltage corresponding to a threshold voltage of the transistor. The window is formed through the insulating layer at a position corresponding to the window of the first external layer.

1459825856-c7fbba25-0051-46ac-9e81-01681ca4a0f8

A multi-layered polishing pad for modifying a surface of a workpiece, such as a semiconductor wafer, that reduces the effort, time and cost involved with pad replacement. A readout portion reads out a plurality of photographic images, which are recorded on a memory card. The pharmaceutically active agent is preferably selected from the group consisting of agents that stimulate chondrogenic differentiation and/or cartilage matrix synthesis; agents that inhibit osteogenesis and/or hypertrophy, anti-inflammatory agents, agents that inhibit apoptosis of chondrocytes, agents that inhibit senescence of chondrocytes and agents that enhance lubrication of a joint. Data transmission commences via the first and second lines after the second period of time has elapsed. The sensor is responsible for detecting the image generated by the light source so that a sense image is created. A chained homography is computed by chaining the first and second homographies.

1459825857-0b599d2a-da41-4cfc-a43f-61b9c375a946

The present invention is directed to a bracket for holding a printed circuit board in relation to a connector for wave solder application comprising a mounting element for attaching the bracket to the connector, a shelf for supporting at least a portion of the printed circuit board at a predetermined height above the connector and a latch for retaining the printed circuit board on the shelf. The sheath system includes a hub having a body portion defining a lumen therethrough and a sheath having a body portion defining a lumen therethrough. A hose cleaning subassembly washes and/or brushes the hose exterior with a low-pressure spray. The mount is positioned between the mouthpiece and the earpiece.

1459825857-1048e376-6f76-4f76-b78c-aa82c7ffe654

A structure having an optical slit therein. A system of the invention generally includes at least one containing means, at least one coordination means, at least one chemical application means, at least one mobile suction means, and at least one filtration means. A driving unit is configured to generate a rotational driving force. A suction device, arranged adjacent to the test compartment, remove moisture and any other volatiles given off by the sample during the measurement process providing a more stable flow pattern in the test compartment. The spam score may be compared to the spam threshold to determine if the e-mail is spam or legitimate.

1459825857-4f18f909-e912-44fe-a167-037f0362536a

A method for calculating the yield of a reaction product comprises providing a solid support with a first link, a reference material, and a second link having an attachment site. The invention is characterized in that the subscriber data are stored in at least one telecommunication network and made available to the other telecommunication networks on request. The tuning elements are designed to be identical, such that a single design may be used to a signal mismatch that is produced in either direction, using a single design.

1459825857-889cf3a3-4394-4ca7-9511-0a452782865b

A riding simulation system includes a steering handle mechanism capable of being

gripped by an operator for steering a front wheel of a motorcycle displayed on a display of a personal computer or the like. Especially the invention relates to the controlling of the micromechanical switches. Each sample includes a workload level, a throughput level, and one or more performance metrics having values used in detection of a bottleneck condition. The modular fluid control system further comprises a frame which surrounds the module blocks and has connector through ports therein aligned with selected ones of the port openings.

1459825857-bf8ff9a5-cd0a-4ec2-9f61-b5b4de6f62cd

A valve control system includes a valve connected to regulate flow of a medium provided to an output and a sensor connected to monitor a feedback value associated with the medium. Each one of the two Ethernet switches is connected to a corresponding one of the primary and secondary network interface cards in the file server PC. The received input value combination is converted into an output value combination that includes a plurality of output values for a plurality of components for printing, the plurality of components for printing including black, the output value for black being smaller than or equal to a value of an allowable black maximum. Complicated manufacturing and processing procedures are simplified by connecting the power-supplying part and a PCB.

1459825857-ec8b5d88-d2eb-4dc5-b511-f370cb29ce1d

An incorrect-circuit deactivation device of a magnetic GFCI outlet includes an electromagnetic coil seat, a magneto-conductive core driven by the electromagnetic coil seat to displace, and two magnetic elements located on both sides of the magneto-conductive core. Deposition is conducted at low temperature to provide good composition control and efficient use of metals. In some embodiments, the methods of the present invention find practical lower and upper limits to the rate of stimulation to increase the speech-recognition scores while implementing safety limits to preventing overheating. A call set-up component processes requests from OSP compliant and non-OSP compliant networks. A device is secured to the tubes prior to the implantation and delivery of the device by securing one end of the device to the outside of the inner tube and by securing the other end of the device to the outside of the outer tube.

1459825858-bf0f1e63-b68f-4176-9dba-b7a23b572201

A light emitting device includes a substrate and an adhesive layer on the substrate. With the probe docked in the docking station the device is in the \u2018off\u2019 position and with the probe removed therefrom the device is in the \u2018standby\u2019 mode. A transition portion is between the two cylindrical portions, the vessel mouth is in the larger-diameter portion, and a cylindrical retaining sleeve surrounds the vessel. The composite magnetic article comprises a plurality of coated ferromagnetic articles. The frame length corresponding to each communication rate may then be obtained by dividing the barrier clock rate by the \u003a\u0039 rate.

1459825859-4f879a1b-4e2a-488c-91a7-dbe9848dea67

A filter device and method for diaphragm type flush valves includes positioning the filter device in a cavity of the valve, between an inlet and an outlet pipe, and between an inlet and a bleed hole of a diaphragm of the valve. In one example, a region of interest of an image is identified. A paging and location server is used to reduce the number of session signaling register messages transmitted between domains. A valve member is positioned within the cage. The global bit line circuitry drives a global bit line responsive to the group select signal and the data driven on the local bit line associated with the selected cellinput, thus providing a data output. 05 Torr while applying a negative bias voltage of less than \u22122400 V but greater than \u22121000 V to a magnetic head, a protective thin film on at least the surface of the head facing a recording medium, the protective film containing Si, C and H in amounts of 3-9 at %, 61-81 at % and 16-30 at %, respectively, having a thickness of 1-3 nm and having a refractive index of

2.

1459825859-eb66b0ff-4975-4883-bd46-42fd14f532be

A staple cartridge assembly includes a cartridge body. A metering pump with integrated injection nozzle are contained in a common housing mounted directly to the exhaust pipe, thereby eliminating the separate electric motor driven pump, line between pump, and injector in conventional systems. Each MN is associated with a home Router. based on an empirically determined relationship between the measurements performed is step a and b and the conductivity of pure water, the conductivity of the water contained in the multi-component mixture is determined.

1459825860-3089af9e-23be-4ac1-8bb8-6a238448ce77

Methods and apparatus for providing information useful to a particular user of a computerized apparatus. The system includes a self archiving log structured volume for copying blocks from an active volume while the application is running without contending with the application for access to data blocks. Such applanation effectively mitigates transfer and other losses created by the tissue proximate to the blood vessel, thereby facilitating accurate and robust tonometric measurement. In this inkjet printing apparatus, a pattern for adjusting the relative printing positions of the nozzle rows in the first printing mode is printed.

1459825860-4e69340a-9a95-498d-9990-95ed2cb72846

In a casing, a printed circuit board is arranged such that a first side of the printed circuit board has a first angle of  $\theta$  with respect to a first side surface plate. It has a tapering extension on one flange that maximizes its interface with a bridging member, and a matching central portion on the other flange that minimizes material waste when the connectors are cut from a roll of sheet metal on a progressive die machine. The first and second sealing sections located on the vertical lines of the first and second triangles are used as an unsealing guide for tearing. The heater includes an over molded polymeric layer disposed in the channel such that the resistance heating element is substantially encapsulated in the channel and such that an exterior surface of the over molded layer is substantially flush with the exterior surface of the carrier. The cerumen guard may also have any of a number of customizable cerumen-trapping accessories that may be placed into the chamber. Another hardware processing component is provided to receive user input to update images and to select a deformation region for area calculation.

1459825860-9499bd46-a375-4869-84bb-c0e1613b99db

The lead-free, arsenic-free, preferably gadolinium-free and fluorine-free, optical glass has a refractive index of 1. The method is conducted in the absence of mechanical disruption of the cells and isolation and washing of refractile bodies. Harvesting is delayed a pre-selected time based upon the position of the feeler arm to avoid premature harvesting. , a bar graph is made more useful. In one aspect, the present disclosure provides an optimization process executed by spreadsheet functions of a spreadsheet application, and arranged in a functional paradigm for computing optimal parameters for a parameterized system modelled by variables, parameters, and dependent formulas. In this absorbent article, the front waist region and/or the rear waist region is or are divided into an elasticized intermediate zone provided with the elastic members and inelasticized transversely opposite side edge zones contiguous to transversely opposite side edges of the intermediate zone.

1459825860-ee1c7022-a75d-458a-b329-e36c227f01b1

A processing capability for data communication with a packet terminal is secured while packet loss is prevented, and a load to a mobile station in a handover is reduced. A basic idea is to store a calculated new path metric at the memory location used by the old path metric, which old metric was employed to calculate the new metric. The circulating freshwater used for washing is warmer than the

seawater used for cooling in the first scrubber section. The ions experience a Lorenz force once every turn when they pass through the deflecting magnetic field B1.

1459825861-3ea804cd-933e-4430-b9dc-bce1ed599cd5

A power control system may use power semiconductor devices such as insulated gate bipolar transistors in a switching unit to provide motor control. Other schemes include a rear-addressing scheme which uses a retroreflecting surface to enable greater viewing angle and contrast. The buffer block is designed as an essentially horizontal bumper bar, and includes an inflatable gasket, the ends of which are height-adjustably supported on two spaced, fixed mounting frames, preferably in the form of pillars.

1459825861-7d8eaba4-ded3-40b5-b2f0-21f48d9d87a4

Methods, systems, and computer program products for implementing remote participation in events are provided. Adhesive film is formed in a contact hole, which exposes an upper electrode of the ferroelectric capacitor after conducting heat treatment in an oxidizing atmosphere, and a W layer is deposited by the CVD method using such TiN adhesive film as a hydrogen barrier and the contact hole is filled. Further, the apparatus eliminates the necessity of opening the vessel during the dispensing process, thereby maintaining the vessel's seal while emptying the vessel's contents. The processor in the digital label can process, display, and transmit information.

1459825861-c4d185af-e013-4cc2-9339-72853505cb02

A camera module which can switch a photographing mode of the camera module includes a housing, a holder having a lens unit and displaceable between a first position and a second position, a magnetic member and a coil, a first magnet having an N pole, and a second magnet having an S pole. The metal layer is transferred onto a surface of an insulation layer. The overlay tolerance is determined by varying the misalignment the features of the pattern. The person moves her pelvis off the support surface subject to resistance from the resistance devices.

1459825861-c7c936d4-339f-43da-a3f0-a393c6c7e9cc

A switch fabric for routing data has a switching stage configured between an input stage and an output stage. Monitors are placed within the treatment zone and annual or other required inspections are thereafter made to determine insect activity and to evaluate termiticide effectiveness. The first is an engine system capable of operating seamlessly on two or more fuels without regard to the ignition characteristics of the fuels. The OLED pixels are connected to the same first signal line and respectively connected to a first portion and a second portion of the second signal lines. It also obtains status information including the location of the vehicle, the current time, and the moving direction of the vehicle, from information provided by a vehicle location measuring apparatus. The present invention includes receiving a city selection and an alarm time, and outputting an alarm signal if the received alarm time corresponds with a current time of the received city.

1459825862-21241e1c-1e5e-474f-afa3-10360e04c5d4

An improved railway car truck is provided that includes two sideframes and a bolster. At least one embodiment of this invention relates to a flashless cushioned dust control mat article wherein the mat comprises at least two distinct layers of rubber, one comprising foam rubber, the other comprising solid rubber. A method for enabling synchronization in a rich media stream wherein the synchronization is based on a global timeline is also provided. During the deagglomeration step, the mineral matter is dispersed, and when the pressure is released, the coal portion of the deagglomerated gas-saturated water mixture reagglomerates, with the small bubbles now coming out of the solution. Each access hole connects the groove in fluid communication with the respective interior space.

1459825862-449763b5-6fea-4cfb-9809-e8aace3dbfb4

A self-balancing remote sensing device, and a system comprised of the remote sensing devices and one or more base stations, is provided for remotely monitoring both terrestrial and maritime environments. When the customer calls into the VRU, the customer is prompted to enter identification information. The drive mechanism is configured to translate the first needle together with the second needle, and to individually translate only one of the first needle or the second needle.

1459825862-75d4fd0f-d1cb-49cc-b71a-b2d534ae6e35

An image communicating apparatus determines whether or not the amount of compressed image data is a predetermined amount or greater when transmitting a scanned color image as attached data in an e-mail message. The solution provided consist of two steps temporarily attached to a vehicle tire and supported with webbing material and pressure activated hangers. Thus, the compounds of the present invention are useful in treating a patient having a tumor characterized by proliferation of neoplastic cells. A second V-notch allows a subsequent bead to be removed and cooled at a location spaced apart from the first one. The first and second sections are partitioned from each other such that communication between the first and second sections is controlled by the second section. First, the top bar rotates circumferentially within the rotating member.

1459825862-cc511401-6d87-4344-9b6e-08827464d9c4

The invention provides an optical modulator module by which a dip appearing in a frequency characteristic of a microwave from a DC component to a high-frequency component can be reduced while maintaining the mechanical strength and facilitating handling of a substrate and besides securing the long-term reliability without processing the substrate itself. During the normal operation, the information as to a word line associated with a row address accessed during the normal operation is stored in a RAM. The analysis module extracts, for each elementary requirement, the pertinent terms it comprises and builds a semantic description based on its extracted pertinent terms and representing the semantics of this elementary requirement.

1459825863-1fa1715e-778a-4720-8683-8b1a984c26fd

A method of synchronizing a plurality of generators connected together in parallel to a supply network. The samples can include, for example, urine, faeces, plasma or blood. A locating channel section is formed on outer face of a side wall of the slide body. Using this mechanism it is possible to determine the time before IDLE, the time immediately following CPU wakeup, and then run the wakeup ISR. The data driver operates in synchronization with the clock.

1459825863-aa1ca08d-cc1b-46ff-afeb-02c77f72eaae

A program having a plurality of concurrently executing versions is debugged. Systems and devices include a pushing assembly having a track, a pusher, and a stop for restricting forward movement of the pusher when the stop is engaged. The infrared beam projecting unit has a projecting power adjuster for, on the basis of the received beam level display signal, adjusting a projecting power so that the amount of the received beam attains the predetermined value.

1459825863-c1e98ee1-1983-4747-ba8f-ba3e193b94d5

An electric power steering device to control a motor based on steering torque generated in a steering shaft and supply an auxiliary steering force conforming to the steering torque to the steering system. One or more microscope slides are positioned in an image acquisition device that scans the specimens on the slides and makes two dimensional images at a medium or high resolution. A relatively thick layer of gate oxide is created over the surface of the substrate. The fast response time allows individual radiation photon interactions with each detector to be counted.

1459825863-df81d778-5546-4d01-a67c-475c4b84a7df

A video de-interlacer forms a first new-pixel value from motion compensation of a pixel of a previous field with a first motion vector and forms a second new-pixel value from motion compensation of a pixel of a next field with a second motion vector. The system measures power after digitizing and filtering, and subtracts off any variable gain used in the analog front end to determine differentially the size of the signal at the antenna. An acquiring portion acquires second user-limiting information which defines access permission or access no-permission to each information processing apparatus for each user, from each information processing apparatus. A problem that the terminal is turned off due to power shortage during data transmission and reception can therefore be prevented. The material of construction may be tungsten carbide with a cobalt binder.

1459825864-0729aa9f-d19d-4382-8696-4385465224f3

A setting tool having an engagement structure for setting a fastening anchor comprising a receptacle structure implemented in a shaft, the engagement structure engaging with the receptacle structure during a setting procedure. A community including multiple mobile web servers providing a shared web service is designated. The actuating forces transmitted by the U-turn mechanism are used to move distal components of the instrument, such as an end effector and a wrist mechanism. Accordingly, a contact face pressure and a bending stress occurring to inner and outer gear teeth can be reduced, the limitation of the durability of the gear mechanism due to the large difference of durability between the inner and outer gear teeth can be improved, and the necessity of increasing hardness of the inner gear teeth can be lessened. The hydraulic and pneumatic flows stream past all around the cylindrical containment shell from the turbine on their way to the drillbit motor. The retaining system has a pair of elongated members fixedly connected to the inner surface of the tank body.

1459825864-81b1f04f-7317-4f31-b2d4-5a1fe3e921c6

A mobile communication apparatus comprises an anti-theft control circuit and a transmission control circuit. The invention relates to the seeds of cotton cultivar 01W34, to the plants of cotton 01W34 and to methods for producing a cotton plant produced by crossing the cultivar 01W34 with itself or another cotton variety. The method for determining dechucking parameters comprises generating a correlation between ESC resistance and dechucking parameters, performing a single experimental test on a new ESC and generating a fitting parameter, and using the correlation and the fitting parameter to determine the dechucking parameters. The EPG information can be displayed in a window within a television screen while a program is being shown on the remainder of the screen. The pixel defining layer is formed on the planarization layer and has an opening that exposes the pixel electrode. The 2 digital sample signals are interleaved, creating an interleaved signal.

1459825864-ab137621-4b99-4ebb-b255-699f94ce0eae

A protruding nozzle assembly, mounted in a side wall of a swimming pool in communication with a source of water, will eject through a nozzle of a nozzle housing a stream of water at a predetermined angle relative to the adjacent side wall surface. The second nozzle holes have an opening area smaller than that of the first nozzle holes. An article can be provided, which is equipped with an adhesive patch on its surface.

1459825864-d3b582b2-c81e-4b57-ab06-6e2a616ee01d

A developing roll which may reduce stress imparted on toner and have uniform transportability of toner. The system comprises a medical solution container; an infusion line through which the medical solution is drawn out of the medical solution container; an infusion pump configured to discharge the medical solution via the infusion line. Another test resistor is selected based on the output of the sense amplifier and both the measuring the output step and the selecting another

test resistor step are repeated until the output of the sense amplifier changes. Each of the robots may be mounted to one of a floor, a ceiling or a wall of the room.

1459825865-9974674e-d3aa-4b5d-99d5-fadf33107293

A self-authenticating article comprising a substrate having an image receiving surface and a lenticular lens is provided. The insulative housing defines a mating face, a mounting face opposite to the mating face and a plurality of receiving passageways running through the mating face and the mounting face. However, a unified user interface on the client permits a network administrator to access, update, configure and otherwise manipulate the network elements of a new or existing network, using a single tool which abstracts the hardware and software interfaces, for instance using object oriented code. When it experiences an axial force that would normally relatively displace the two ends causing a leak, being engaged to each other this movement is resisted ensuring that the seal is maintained. The lighting system further includes a magnetic switch including an electrical cable or harness.

1459825865-a7f328ba-044a-4f16-a506-4c131c7d5751

A journal write unit writes journal data into a third storage device. The data structure includes a two dimensional array of data blocks. An epitaxial semiconductor layer is conformally formed on the porous semiconductor layer.

1459825865-cdde6855-fbff-45cf-a71a-73e52bc2aee7

A cam assembly for a click-type torque wrench includes an elongated plunger body having opposed ends and having a deep cavity formed axially in one end and terminating at an end face disposed with intermediate the ends, the end face having a cam seat formed therein and extending laterally theracross and having opposed sloping side cam surfaces. The text is then inserted into or used by an application of the client device to send a text message, instant message, email, or to insert a request into a web-based application or service. The catalyst for a partial oxidation reforming reaction of fuel according to the invention makes it possible to progress the partial oxidation reforming reaction of fuel smoothly, to improve the efficiency when reforming the fuel and to simplify the fuel reforming reactor. The beam has one or more openings adjacent to the adjustment portions of the flexible element to provide access to the adjustment portions through the beam. The mask includes an elongate aperture to substantially confine the excitation radiation directed to the sample area, and the emissions from the sample area, to the planar radiation path when arranged parallel to a first axis of the two-dimensional sample area. The temperature sensing unit and method of detecting temperature may include obtaining reflectance of a photomask using a multi-wavelength interferometer and determining a temperature on the photomask based on the reflectance.

1459825866-3bbbcad6-b5e5-4c3d-b71f-0eec078fb89a

A sample rack handling unit comprising an onload section for loading sample racks holding a sample container is presented. The magnet is slidably disposed in the chamber. The reinforcing part is divided at least into two mutually displaceable sections. A reflection mirror is obliquely arranged so that a scanning line directed to the exposed surface may be inclined with respect to a segment perpendicular to a transferring direction of the exposed surface to direct the scanning line to the exposed surface of the photosensitive medium by reflecting the scanning line provided from the beam deflector. The scraping tool has a blade which conforms to the curved sidewall of a bucket and is substantially flat so it can be inexpensively manufactured and efficiently stacked for shipping and storage.

1459825866-5514eba4-a402-4253-a595-f7677d7f21fe

A method for optimizing measurement and control of the flatness of a strip of rolled material. The channel plate is produced by 1) forming a plurality of channel

plate layers in ceramic green sheet, 2) forming at least one channel plate feature in at least one of the channel plate layers, and 3) laminating the channel plate layers to form the channel plate. One or more detectors in a vicinity of the object are also utilized to detect the energy emitted by the transducer and generate signals in response thereto. The cross members extend generally perpendicular to the side rails and may be formed having any conventional structure. Some of fungi and bacteria in a spore state are strong to ultraviolet rays, and some of them are strong to heat.

1459825866-ec394f94-dceb-4620-b37e-215413d2323d

Provided is a VECSEL capable of achieving an excellent efficiency of a SHG crystal and being manufactured in a compact size. The unit dose is contained in a cylinder which is moved relative to a piston to expel the contents thereof through a passage in the piston and out of a nozzle opening. According to the method for after service of the mobile terminal, the inconvenience of the user to visit the AS center can be reduced.

1459825867-2a2a7409-3974-4261-af7c-af511861145a

A higher value of an anisotropic magnetic field can be acquired by using a magnetic material where Cr is not added as a material of a magnetic layer on which magnetic data is recorded. The adhesive composition has a stringing length of 9 cm or less and a sag distance of 10 mm or less. A nozzle body comprises dispensing nozzles.

1459825867-31702eae-421f-41c9-be87-92d9acae580d

A mosquito misting system is described having a liquid reservoir that is operably associated with a fluid pump and motor and fluid conduits to transmit a fluid insecticide to one or more dispersal nozzles. For each input value, an appropriate sub-table provides an output value that is the result of a non-linear transformation applied to the input value. This operative unit is directly or indirectly connected to external control apparatus. The cushion is placed over the edge of the swimming pool so that the support member completely encompasses the swimming pool edge. Moreover, the method includes applying road wheel angles and angular rates as feedback signals to construct a servo control system with the multivariable controlled plant and the multivariable road wheel controller to implement the left and right road wheel angles tracking for left and right road wheel reference angles. Preferably, the transistor layer has a plurality of MOS devices therein.

1459825867-e5ea0a09-43ef-4067-82e4-e9663bdce5a3

The present invention relates to a method, computer program product and system for a general purpose dynamic memory allocator that is completely lock-free, and immune to deadlock, even when presented with the possibility of arbitrary thread failures and regardless of thread scheduling. A serial-to-parallel converter circuit in each receiver circuit converts a serial data signal into parallel data signals in response to one of the synchronous clock signals. The result may be analyzed, determining a location for the macro based on the location of the corresponding synthesized circuitry. The first substantially horizontal member is supported or attached to first and second collars positioned on the first and second elongated substantially vertical members such that movement of the first and second collars adjusts a vertical position of the first substantially horizontal member.

1459825867-fc29b962-1c75-4f44-a962-9609c3daeb4f

The invention provides a method and device for auto-generating GOOSE signal connection topology from substation level based on IEC61850 standard. When the maximum charge amount injected to each pixel by the switching of a switching element, the area of each pixel electrode and the magnitude of the spontaneous polarization of the ferroelectric liquid crystal per unit area are denoted as  $Q$ ,  $A$ , and  $PS$ , respectively, the relation  $2PSAQ$  is established. Only when the detection unit detects that the opening and closing member is open, the stage is moved by the

stage driving unit to the outside of the cover through an opening covered by the opening and closing member. Other embodiments of the invention include closure systems that permit sealing the pouch opening when product is not being dispensed and substantially sealing the pouch around the product during dispensing. The signals received in the additional receive antennas may be multiplied by a rotation waveform to achieve channel orthogonality. The wrap can be easily applied with minimal handling and with limited radiation exposure to operating personnel.

1459825868-1c048e16-fb6e-4c76-8d0f-3a82ae4237f5

A process and installation for automatic optimal location of a servicing operation on an integrated circuit. The metrology station is provided with a first imaging camera with a first field of view containing the measurement region. The control block determines a traffic amount based on an amount of used resources.

1459825868-328bb30b-d770-42a8-845c-181f84f39666

An apparatus and method for the transport and/or storage of developing agent in an image forming apparatus. The measuring device measures a consumption amount of liquid in the sub tank when the displacement member displaces from a first position in a direction in which the consumption amount of liquid in the sub tank decreases. Each middle spacer can have a tapered width and can be wedged between two columns of the conductor strands. This charging forces etching ions to impinge upon part of the second silicon layer located laterally to the trench bottom.

1459825868-72889ac2-7a88-46e2-8a27-931b0e9dbd5d

An insert-indexable tool includes a holder and a head member having an insert mount seat by which an insert is to be held. By preconfiguring compensation parameters for the various paths in the network, an all-optical network can be implemented wherein optical signals can be switched, added or dropped without having to match dispersion maps or perform optical-electrical-optical regeneration. The number of needles would be directly proportional to the length of the base of the device. In addition, an output buffer unit amplifies a signal outputted from the intermediate amplifying unit to produce a full swing signal. However, by adding EMI capacitors on this side of the diode bridge, a high voltage signal path to earth ground is created that may have deleterious effects on the line side circuitry.

1459825868-c5eb273e-6c4d-4073-af59-27534c31f349

Polymer compositions, while providing suitable wrinkle control, also tend to dispense poorly when sprayed. The female part has a head portion, a leg portion, an inner space formed in the leg portion side and opened at the head portion, and an engaging projection formed on the leg portion for engaging the attaching hole. 1 mm; the central disk being of one diopter power and at least one annular ring is of a second diopter power; and at least one anchor attached to said optical portion for anchoring said optical portion anteriorly to the natural lens of the eye. In another embodiment, a method for calibrating an analog-to-digital converter including a fixed gain amplifier, an input buffer and a modulator generates an offset correction value using normal and polarity inversed input samples.

1459825869-4afaab77-c347-4837-80fe-33aced5368fc

An isolation layer for suppressing a leakage current is provided at least between a channel layer and a buffer layer formed under the channel layer in the buffer layer. The pressurization of the gas specimen virtually produces the same effect as increasing the concentration of carbon dioxide in the gas specimen, thereby improving an SN ratio for the analysis and hence data reproducibility. The inlet duct is configured to extend from the auxiliary power unit to the aircraft housing and has a sidewall that defines a flow passage through which APU noise propagates. A gridwork including one or more grid dividers may be used in the rectangular inlet frame to provide 2 or more openings for receipt of filters. The heelpiece includes a manually-operated command device structured to displace the latch element forwards and backwards on the turret to stably lock the latch element in an

advanced position and in a retracted position. In this case, a threshold variation of the first and second transistors is corrected.

1459825869-64202ee1-08e7-4fb8-9d8f-01e865b16206

A method and apparatus for dynamically controlling variation in an attribute of a light beam employing materials with unusually high electrooptical coefficients that are subject to optical damage from the light beam being controlled. A port tester is provided that is used to quantitatively measure the optical quality of ports. The model calculates the measure of relevance that a document from a given database is relevant to a given query. A method of making and installing and various parts, such as the starter rail and block are also disclosed. Guardrail assemblies including a support member and methods are further provided. According to the semiconductor device, leakage current at the isolation edge can be suppressed and thus reliability can be improved.

1459825869-84727926-1e9d-4175-8735-ad82bbe0f21c

A display apparatus and a control method thereof, wherein output of a backlight is reduced depending on the remaining amount of a battery or a pixel of an input image, and a brightness value of an output image is increased to compensate for the reduced output of the backlight. A housing member connected to the framework has two pairs of parallel walls having laterally aligned elongate first slots and laterally aligned elongate second slots, respectively. The foregoing technical solution shortens the time spent by the pending node in monitoring the beacon, and reduces the time spent by the pending node in requesting to join the network.

1459825869-c4373b53-5699-464e-908d-8cff41efae2e

A method according to one embodiment includes receiving a tape cartridge at an apparatus having a plurality of modules configured to at least read data stored on a magnetic recording tape of the tape cartridge, each of the modules having an array of readers. Security tools are described that provide different security policies to be enforced based on a location associated with a network environment in which a mobile device is operating. In one embodiment, the single crystalline semiconductor plug seals the trench to form a sealed core.

1459825869-efdfdbb31-2d46-419a-96b7-16de9d254539

A baffled roll vent for covering the ridge slot of a roof for allowing ventilation from the space of a building below the ridge slot, the baffled roll vent comprising a unitary panel defined by a length and a width, said width terminating at discrete louver portions. Each of the opposed longitudinal edges of the sunscreen near to the second one of the transversal edges is provided with a wing folded inwards around a positioning member having a stationary position relative to said second transversal edge and extending into a corresponding one of said opposed longitudinal guides. 4 sccm or above per a substantial volume of one liter of the reaction chamber. The base includes a withstanding portion and a second hitching portion corresponding to the first spring portion and the first hitching portion respectively.

1459825870-1ed2eeb1-2ca7-4105-b324-a7117bb5217a

In a process for the combinatorial production of a library of materials in the form of a two-dimensional matrix in the surface region of a planar substrate by sputtering, the planar target used for the sputtering is arranged in parallel to the planar substrate and has surface regions of different chemical composition. An access program module, connected to at least one file system, intercepts a data request for accessing a plaintext file with information stored physically and consecutively on a hard disk and having a pre-determined order and length expected by a program that sends the data request, wherein the plaintext file includes a plaintext record having a key field and a plaintext data field. A membrane is disposed between the object plane and the detection surface of the semiconductor detector, wherein different semiconductor detectors have different membranes

located in front, the different membranes differing with respect to a secondary electron transmittance. A hydraulic pump is rotatably mounted on each end cap, and each hydraulic pump is driven by a pump input shaft. A storage medium storing a computer program for causing a processor based system to execute these steps and an apparatus for use with content are also disclosed. The application displays and refreshes images that are intended to represent users or members of a social network or other web-based service.

1459825870-99a65e6d-c3df-4b2e-8bfc-b9bc5b7918aa

A radiator grille mounting structure for facilitating the mounting of a radiator grille. This object is met in the liquid line of the above-type by providing the insulating tape as an adhesive tape whose adhesive can be glued to the plastic layer. The support ring protrudes below the lip cavity and above the shoulder. One end of the ground line is connected to the ground of the circuit, and the other end of the ground line is disconnected. When the charging voltage exceeds the maintained voltage, a reset signal is generated by the logic circuit.

1459825870-a80d453b-042e-4984-b9d9-af4f717da36f

A process for preparing an aqueous aminoplastic urea-formaldehyde resin suitable for use in bonding lignocellulosic materials, which provides products of very low formaldehyde emission while maintaining superior performance. The power detector detects for total received power of a received OFDM signal, e. A metal decorative silhouette is placed on one of the major surfaces of the stained glass panel and is joined thereto by applying a joining material to an aperture formed in the silhouette.

1459825871-0498ae3d-9661-43d9-8129-6ec18578c9c3

The office gym exercise kit is a portable exercise kit that provides for a number of exercises to be performed by a user, including arm, leg and back exercises. The weight distribution surface is only attached at the apex of the arch of the arching pressure surface. In particular the method relates to the softening of water after the main wash of a ware-washing machine, in particular in the rinse cycle of a ware-washing machine. If the present state information is different from the previous state information, the state information processing module releases the present state information on the social network interface.

1459825871-34a62163-3b86-4128-932f-8a6af118edf2

A method and apparatus for repairing isolated chondral defects using synthetic implants. The filter accepts visible spectrum light. The beat time template generator determines all the harmonics of the fundamental key and the secondary key.

1459825871-423df545-639c-4aca-8a3c-ad4bab31f8fb

Semiconductor processing methods of forming integrated circuitry, and in particular, dynamic random access memory circuitry are described. The first and the second driving unit are respectively disposed at a first driving channel and a second driving channel and respectively output a first driving signal and a second driving signal for driving a first load and a second load during a channel output period. From the lower side of the silicon substrate, an opening is etched in which ends at the lower side of the silicon nitride layer. Each of the columns comprises at least one node. A semantic similarity is calculated between pairs of concepts of the search expression and one of the corpus expressions.

1459825871-965e81e6-b3be-43a3-bcc8-4b4c70479147

A wireless guitar synthesizer for creating theremin like sounds on an unmodified electric guitar. This actuator has an inner needle hub fixed at the front end thereof and is formed with an actuating member projected outside the holder sleeve. The second electronic device includes a second output unit, a second communication unit, and a second controller outputting supplementary contents, related to the

multimedia contents, through the second output unit on the basis of the supplementary information received from the first electronic device. A dispensing nozzle is affixed to the other free end of the elongated tube.

1459825871-9869d630-80e7-457a-9bb9-62dfc8e8e9a4

An ultrasonic welding device for welding two components has a rod-shaped first sonotrode for the generation of longitudinal waves and is coupled on its first end to a first converter and on its second end opposite the first end to a second converter. The rotation features include two pairs of wheels, wherein one of the pairs of wheels is attached to one side of the support structure and another one of the pairs of wheels is attached to another side of the support structure, each pair of wheels comprising a front wheel and a rear wheel. , for munitions providing an increased kill and casualty area and a fire \u201cin defilade\u201d capability.

1459825872-3ce33c06-c7bc-4a3d-aef8-efd5f98d85cd

A highly sensitive, non-contact tank probe to measure surface conductance of thin film structures, and a method for using the same, are described. This interference is caused by the non-shooting hand unnecessarily providing force for the shot as well as the fingers on the non-shooting hand dragging on the side of the ball. At least two second doped regions having a second conductive type are formed in the substrate, wherein the second doped regions are located adjacent to both sides of the first doped region respectively, and the first doped region is separated from the second doped regions with an isolation region. The tensioning mechanism includes a cinch track engageable with one of the pair of sutures. Further, the step of determining a restricted distribution includes calculating the test statistic for each of n plurality of restricted random allocations of the n plurality of physical events over the n plurality of sample locations. As a result, a specific proportion for the color lights emitted from all the LED chips and from the fluorescent material in every direction of a space can be maintained, and that a better spatial color uniformity can be achieved.

1459825872-993122db-28d5-4d23-ac1d-d1ffa41b5acc

A hoisting device can be small-sized and energy can be saved. The compounds of formula are useful intermediates for the preparation of angiotensin II antagonists. Weakened lines of the substrate define an integrated removable portion capable of being held in the form and easily removed manually when desired.

1459825872-9fa4d896-129f-41ec-b3e0-cdc5766d50a

A method and structure for a primary device adapted to communicate with secondary devices. A switching contact is axially movably mounted to the actuator to rotate with the actuator. Plastic discs, when mounted on the rods, can be used to position construction articles such as clay pots or aid in locking two rods together. The first and second capacitors comprise a first conductor layer overlying a second conductor layer with a dielectric layer therebetween. Antisense-based reagents, such as tbdn-1 antisense construct or biologically stabilized oligonucleotides, or any compound which would elicit the downregulation of tbdn-1 level or activity and the same biological effects as tbdn-1 antisense construct on bone tumor growth in vivo provide valuable alternative or supplemental therapies for bone cancer. Instead of the standard mutation operator in evolution strategies this mutation operator works on the representation of the problem design.

1459825873-159f277f-1068-4ae7-bfd0-ff93f1737f0d

A device may identify signal channels for connecting circuit blocks, where each circuit block is associated with a block implementation area corresponding to a substrate. The device comprises a housing a ratchet member, a check member, a pivot control device comprising a fixed cam, a rotational com and a torsion coil spring. The optical processing circuit is arranged to change the state of each digital optical output signal corresponding to a respective different value of the analogue optical input signal, and an optical combining circuit for combining the optical

output signals in order to generate one bit of the N-bit digital optical signal.

1459825873-31399ba0-4bd3-4996-a7cf-ae2218a13171

A method of modulating and/or demodulating a signal in a communication system and a terminal for demodulating a signal received from a base station are provided. Further, an apparatus and method for switching between a permanent connection port and a transient connection port are provided. Next, the system compresses the data-word into a compressed-word.

1459825873-54c12916-5370-4800-906c-bb4eb5529b52

A method of updating a content detection module includes obtaining content detection data, and transmitting the content detection data to a content detection module, wherein the transmitting is performed not in response to a request from the content detection module. The inter-frequency handover can be an inter-frequency handover within a same system, or an inter-system handover. A cross-coupling algorithm may be used to cross couple different sensed inertial motions. By such a processing method, exposure and sublimation of a chalcogenide film used in the resistive storage element can be avoided. The method involves embossing opposite surfaces of a green silicone rubber sheet, arranging a transparent panel, silicone rubber sheet, solar cell matrix, silicone rubber sheet, and backsheet to form a multilayer assembly, and heating and compressing the assembly for vacuum lamination for establishing a seal around the solar cell matrix. The aggregated database includes information regarding the value of each device attribute and also information regarding the probability that this value is correct.

1459825873-dcf82fa8-e301-4d35-81c5-aceabfd2e5f3

The present invention relates to three dimension scene representations and in particular to a method and a processor for providing improved 3D scene representations. In one aspect, the method includes the step of heating organic-rich rock, in situ, within a subsurface formation at a first depth. Each pair of terminals includes a first terminal and a second terminal. The tag axle assembly is mounted to the chassis rails of an agricultural vehicle and positioned to fit between the chassis rails when stowed and minimizes the load per axle of the vehicle when deployed. In one exemplary implementation, the different user selectable operating modes of the chuck may be used to actuate a motor direction switch of the drill. , the compressor is then operated at 100% capacity.

1459825873-df530eaa-1812-4857-9874-6a1078a6f4a9

A multi-spindle machine system includes a pick-off attachment. Respective failure counts are preloaded with the respective values of redundant rows and columns available for repairing the device. The electric motor drives the compressor. The lugs on each conveyor may be closely spaced or overlapping to allow for selective actuation at a desired instant in time without the need for timing the corresponding chain or the carton feed.

1459825874-a169100f-2d50-42e3-a8b8-8eb77e4fccaf

A SYN packet bandwidth Distributed Denial-of-Service attack is defended against by intercepting and identifying SYN packets in a \u201cDDoS gateway\u201d advantageously positioned at the edge of the network to be protected, and by queuing these intercepted SYN packets in a separate queue from other TCP packet queues. The memory system includes a controller and a non-volatile memory circuit, where the non-volatile memory circuit has a first section, where data is stored in a binary format, and a second section, where data is stored in a multi-state format. The washing device is arranged to be used by means of a driving device, such as a running motor and gear or a like. The first end portion includes a first tubular extension having a first through passage in communication with the interior area. The covering substrate includes a non-metallic covering with a tab defined within the perimeter of the substrate. The present technology can be applied to a semiconductor device and a method for manufacturing the semiconductor device.

1459825874-b5be8124-8d1b-4c38-83d1-a1a81314d9b6

The present invention relates to a method of building instrument variation tolerance into calibration algorithms for spectroscopic devices for chemical composition analysis with spectroscopic methods. Each cluster includes one or more data type, such as images, web pages, local information, news, advertisements, and the like. A clip made of spring steel is also provided. within 1-30 seconds; continuing heating to a holding temperature of 750\xb0 C. One such method, among others, includes receiving control data related to a communication and routing the received control data to at least one recorder via a layer 3 protocol.

1459825874-e63280f3-39d8-4a03-8787-b199cc032bdd

Portable force feedback controllers designed to be worn on a user's limb, track the movement of the user's limb, and provide force feedback capability. A bipolar transistor has a base terminal B connected to an output terminal c1 of an operational amplifier, a collector terminal C connected to a low power potential, and an emitter terminal E connected to a resistor R2. The rear conductive layer defines a continuous void, where the void separates the rear conductive layer into a first area to be energized to electroluminate and a second area that is not energized. An inlet for developer is provided at the first end of the developer chamber and an overflow is provided at the second end. Further, the computer server synchronizes the GPS data file with the video file based on the timestamp of the synchronization video frame and the synchronization portion of the geographic data.

1459825875-252eee4a-144c-4aab-9273-2b3aa59a4fe2

In an arrangement where the device that is known to an ISP is communicating with the ISP through an interposed device that is not known to the ISP, the interposed device captures the known device's MAC address upon startup and clones the captured MAC address in all standard packets that it sends to the ISP. The system analyzes the information inputted or selected by a user, creates an animation movement by using the analyzed information, and selects an object and a background by using the analyzed information. The first connector and the second connector are electrically joined each other. The method comprises: forming a PCMO thin film with a first crystalline structure; and, changing the resistance state of the PCMO film using pulse polarities responsive to the first crystalline structure. The hull further includes an outer side surface extending from the rimless proximal end of the hull to the seat surface of the hull.

1459825875-7dc5b8fc-2002-4253-b764-0f7a0c5b85d3

An image forming apparatus includes a vibration applying member for vibrating a developer containing unit in a state where a conveying member for conveying a developer is stopped in a developer cartridge. The pressure gage includes a housing having a first fluid pressure chamber, a second fluid pressure chamber, and flexible diaphragm separating the first fluid pressure chamber from the second fluid pressure chamber. , made of aluminium or an aluminium alloy, or even stainless steel, which is capable of delivering high outputs, in particular with a surfaceoutput ratio possibly going as high as values on the order of 40 Wcm<sup>2</sup>, while at the same time maintaining good dielectric performance levels andor being capable of delivering an even degree of heat over an entire surface.

1459825875-db9ffdd4-eb42-4853-8326-52ceb6a47569

Devices and methods for removing an obstruction from a blood vessel are described. The manual large game carrying device can be turned by a handlebar configuration which engages a front fork axle assembly at the framefront forkhandlebar junction. A microprocessor in a Fibre Channel Adapter of the first storage control system determines whether to form a logical path with the second storage control system on the basis of the key information and the control system information that is received from the second storage control system.

1459825875-e78be109-51f5-4413-a112-3c44671db04e

A system and method for testing at least one joint in a linkage includes a platform system, a torque system, an articulation assembly and a fault detection system. The satellite communication device includes an acquiring section, a storing section, and a control section. The circuit can remove such distortion from the input signal without substantially delaying the input signal. Furthermore, the rekey distribution process transmits, from the key server, a unicast rekey data message to each group member device from which the key server did not receive an acknowledgment message. The support member can be at least partially transmissive to the at least one energy. The patch panel rack may be mounted to a cable management pathway substantially above a telecommunications cabinet to allow cables passing therebetween to maintain a desired bend radius.

1459825875-ee5c6feb-cf19-4318-8e34-59c9c4152293

A method and apparatus for patterning a substrate are provided. The aim of the method is to eliminate the disturbances caused by the mesh being overturned during the motion estimation process. A load adjustment module adjusts an impedance of the electronic load to equal current passing through the electronic load to the target output current of the voltage regulator. A second interface is disposed over at least the second end of the conductive material, which serves as a bonding and/or electrical interface between the first conductive member defined on the first structure and a second structure of the multi-layer semiconductor device structure.

1459825876-46a32b7f-4eb2-46d3-afba-202e63dec3d5

Described herein are methods for the production of monoclonal antibodies in filamentous fungi host cells. Degradation of the humidity sensor may be determined based on a change in intake air relative humidity as compared to a change in intake air temperature or pressure, under selected conditions. A second partition element separates the transition flow region into a first transition flow chamber and a second transition flow chamber. are disposed so as to be deviated from the track center towards the innerouter region of the optical disk 2, thereby recording such subdata as key information KY, etc.

1459825876-4dd7b11f-fd71-4eec-86c6-3ef74f71a56d

A computer-implemented method includes receiving at a computer server system, from a computing device that is remote from the server system, a string of text that comprises a search query. The friction wheels are arranged to exert a friction force on sections of a paper. The piston is operable to translate axially relative to the cylinder between an open position and a closed position, and includes a first extremity positioned outside the cylinder and a second extremity positioned within the chamber.

1459825876-53df8f61-cf60-4006-b6fe-351626f76619

The present invention relates to a cosmetic cotton-like material having excellent air permeability that is prepared from the paper mulberry by removing fiber-binding substances such as pectin and lignin from the paper mulberry fiber, a preparation method thereof and a mask pack comprising the cotton-like material. Each individual bit of a first operand is multiplied by every bit of a second operand to generate partial multiplication results. The flexible dielectric layer flexes in response to voltages applied to the at least one electrode to move the reflective element in a direction generally perpendicular to the first reflective layer.

1459825876-7cd0b338-a388-49eb-89d0-50530a7886c4

Apparatus for controlling the excitation current of a variable frequency generator including means to create a voltage-regulated DC link using PMG power and frequency information, the latter being the image of the VFG mechanical input speed. The press lever has one end pivotally combined with a connecting member, and the piston rod has its lower end fitted with a piston. Here, the hole-injection layer is a metal oxide layer formed by oxidizing an upper surface portion of the anode

composed of the metal layer. The vanes include different cooling configurations to bias more of the coolant to the inboard sidewalls than to the outboard sidewalls. A switch switches the output packet to the routing process of the destination. The transmitter converts the video created by the video processor into video in which one of the color signal and the frame rate takes precedence over the other one in accordance with the specific information, and transmit the video thus converted to the video receiver.

1459825876-a6a85e7c-903b-4fb7-880d-65184882851a

An inlet flow of heat exchange fluid flows from an inflow housing inlet section, and through an inflow housing main section. The ceramic boron-containing dopant paste further comprising a set of solvents, a set of ceramic particles dispersed in the set of solvents, a set of boron compound particles dispersed in the set of solvents, a set of binder molecules dissolved in the set of solvents. First and second interlocking features, which may include a plurality of circumferentially arranged tabs received in the slots of circumferentially arranged flanges, secure the housing portions together. can be aspirated from the larynx area of the throat by suction pump. Each of the N bits of the second value whose corresponding queue is enabled is false.

1459825877-1310eb33-fc59-4add-96b4-4e8b7e794b42

A tubular endoprosthesis including a polymeric material is disclosed. The repair material is inflated to press the repair material against the inside wall surface of the pipe; and heated air is conveyed through the inflated repair material from the bottom opening to the top opening to cure or mold a thermal responsive component of the repair material to the pipe. Accordingly, the phase changeable material layer may be formed at a low temperature and power to have desirable electrical characteristics. Preferably, the liquid is blood and the capacitance is used to determine the clotting time of the blood.

1459825877-356b09c1-59c0-4a5e-ab8a-984ab44f4c73

An apparatus and method may be used for welding a first panel to a second panel, the first panel having an inboard side partially contacting the second panel and an opposite outboard side. The invention is particularly suitable for use in connection with thermal power plants fired by fossil fuels, and is also well-suited for retrofitting in existing thermal power plants. The cage bar has radially outside projections on an outside periphery thereof while radially inside projections on an inside periphery thereof to keep the rollers against escape out of the cage.

1459825877-4d9aa1dc-b31e-4205-b6f5-af9fa6169953

A foam play article comprises: an elastic tube for forming an elastic rubber layer; a foam formed by foaming polyurethane materials in the elastic tube ; and a coating layer coated on the elastic rubber layer. It exhibits upright and uniform growth with abundant flowers. Each bistable cell comprises at least two elongated members that are connected to each other at their ends.

1459825877-99f455d8-aa91-4d67-aec9-beac9caf508e

The present invention provides a system and method for transmitting information between a device within a housing to a second device, preferably a test or monitoring unit, outside of the housing. The quartz crystal tuning fork resonator has a tuning fork base, a pair of tuning fork tines connected to the tuning fork base, a series of grooves each formed on opposite main surfaces of each of the tuning fork tines, and a series of electrodes each disposed in a respective one of the grooves. The method comprises collecting network traffic statistic data of multiple items, wherein each of the items corresponds to a state change of multiple mobile units within cells of the network; determining whether a plurality of criteria are met according to the network traffic statistic data; and detecting the ping-pong effect between the cells according to the result of the determining step.

Methods for producing a maize plant containing in its genetic material one or more traits introgressed into 10028290 through backcross conversion and/or transformation, and to the maize seed, plant and plant part produced thereby. The walls have a photolithographically patterned polymer.

1459825878-19131011-ce64-4ae2-9273-dfdbbfa8a31e

An image display apparatus which displays an image as a transmitted projection image includes: a tread-board of a step which has a first projection surface and transmits a projection image projected on the first projection surface; and a cross-board of the step which has a second projection surface and transmits a projection image projected on the second projection surface. The system includes a power routing subsystem coupled to the source and grid, and adapted to operate in a bypass mode, in which energy is transferred from the source to the grid. The computing system further includes a floor tile supporting the enclosure.

1459825878-343088fd-3fa4-4014-b29a-fa0a1827d161

Human proIslet Peptides and HIP analogs and derivatives thereof, derived from or homologous in sequence to the human REG3A protein, chromosome 2p12, are able to induce islet neogenesis from endogenous pancreatic progenitor cells. The method also includes modifying at least one role in response to determining the user information related to the access to sensitive data. A mode selector in a button shape sets a selected one of an AE mode and a night scene mode. The periphery contains a plurality of openings. Specifically, methods of the present invention are effective in tumors that have initially been unresponsive to taxane therapy, or have developed resistance during the course of treatment. The magnetic clamp preferably includes a magnet having a strength that is selected based on the clamping force required between the first member and the second member.

1459825878-4c9338dc-eb17-4bd8-8c4f-74abcbaea223

Angle of incidence measurements along an axis of ion implantation are obtained by employing positive and negative slot structures. The mask pattern generator is disposed over a substrate and electrically connected to the microcomputer system. The corresponding transformation matrix is decomposed into a plurality of individual transformation operation matrices and a discrete transformation operation value, from a corresponding individual transformation operation matrix, is generated for each transformation operation to be performed upon the rasterized data. An energy-saving operation can be achieved in a simple manner by continuously measuring the fuel gas pressure at the outlet of the at least one control valve.

1459825878-c3ec3d36-d76e-4c61-9d02-765add913854

An internal voltage generating circuit includes a first detector that compares an internal voltage and a first reference voltage to output a first detection signal. In one aspect, the tread component may be comprised of a sulfur curable polyurethane or blend of sulfur curable polyurethane and sulfur curable elastomer. Thus whenever an opportunity to enter a low power mode comes up one has to just check this feasibility variable to determine whether the low power mode entry is viable or not.

1459825878-dcfa6b35-39e2-4165-9e6a-c751a4938e80

An environmental condition detector emits only safe, validated verbal messages recorded in a user's voice to help occupants of a building respond safely to sensed environmental conditions. This is achieved by the novel control of the position of the staple heads and the saddle-shaped supports in the region of the interaction during stapling. Working fluid of the turbine enters the channel at the inlet and is directed along the channel where kinetic energy of the working fluid is transferred to the rotor by way of blades positioned within the channel. Effective processing parameters for separating, drying, cleaning, flaking, obtaining the oil from seeds, stabilizing through refining and bleaching and deodorizing the oil are described.

1459825879-20d87fab-b550-4e93-a5c7-f6f7195994ce

An improvement in manual bar code readers to improve the reliability and eliminate read errors. The cartridge selectively controls flow in-line in the same direction as opposed to directing flow at a 90 degree angle like other cartridges. A hydraulic circuit supplies a fluid at a constant pressure to one of the two chambers and supplies the fluid at a controlled flow rate to the other of the chambers via a servo valve.

1459825879-3c76d59c-e111-48d7-989b-91c201bf1a12

A method to distribute policies may include transmitting one of an identification assigned to a policy template or the policy template associated with each policy to an enforcement point or selected enforcement points for enforcement. Thereafter, tracking balance adjustment of adjusting the servo mechanism is executed so that a tracking balance deviation is cancelled which is an amplitude difference between the upper side and lower side relative to a reference level of a waveform generated in a tracking error signal when the focal point of a light beam applied to the disk crosses a track of the disk. Moreover, the apparatus of the present invention faithfully reproduces tonality and has a high developing ability. Preferable the integration method is a Midpoint method.

1459825879-6091568d-0e00-4758-96b7-4d9d187bbe95

Molecules according to Formula One:wherein R10 is selected from the followingare provided. In at least one embodiment, the reinforcement assembly comprises a carrier member having a front side and a back side, a plurality of mass support sections, and at least one bendable portion disposed between adjacent mass support sections. One end of the optical multiplexer is connected to the second Mach-Zehnder interferometer and the third Mach-Zehnder interferometer via the first phase change unit.

1459825879-609da39f-3d2f-472f-b5a3-68af28a7bd16

A method and apparatus are disclosed for an optical fiber cross-connect switch incorporating an absolute position encoder and a magnetic actuation system into its alignment system. A corresponding dust protection device defines a channel extending from a radiation inlet opening, facing the laser unit, to a radiation outlet opening, facing the target. The second opening in the plug is connected to the first opening and the second opening has a first diameter and a second diameter and the first diameter is larger than the second diameter and the second diameter is the same as the single uniform diameter of the first opening.

1459825879-c90eabc9-82d3-46d3-a577-02100ca51a5f

A method of fabricating integrated circuitry includes forming a conductive line having opposing sidewalls over a semiconductor substrate, and having an outer etch stop cap. Embodiments of the disclosed sensor utilize state-of-the-art microprocessors and digital processing techniques to reduce power consumption and integrate functions into a small device. The solution may be anhydrous or aqueous. Advantageously, such self-regulation can be provided without an external power source and can be varied to meet the requirements of different commercial applications.

1459825880-0596bd27-4b2b-4417-a891-80e03319bb3d

An oscillatory wave motor, a lens barrel, and a camera system are provided, which have long service lives and which are stable. It consists of a tank suspended upon a base and moved by a vibrating device, having a treatment channel designed to receive a drying material and the articles for treatment. The catalyst provides an enhanced life and activity for carrying out the transalkylation reactions at relatively low temperatures. The SAE-CD serves to aid in dissolution and stabilization of the clopidogrel in aqueous media. An article which can be tested by this method, and which is useful in the manufacture of electro-optic displays,

comprises a layer of a solid electro-optic medium and a release sheet comprising an electrically conductive layer.

1459825880-0cf6d95c-37bf-46a9-81a3-db57cc2f9656

Wireless communication method and system for improving optimal antenna weight derivation in transmit diversity mode during soft handover. The electrical connector either has first and second electrically conducting pins extending from the base and stepped mating surfaces, respectively, or has first and second electrically conducting sockets extending from an interior portion of the electrically insulating body to the base and stepped mating surfaces, respectively. In a preferred embodiment, gas pressure is measured at a plurality of selected locations within the refuse portion of a landfill, and in the case of an unlined landfill in the supporting soil below the landfill, and the measured pressures are used to estimate LFG generation rate and gas permeability of the landfill. The similarity probability corresponds to the similarity measure. The present invention allows the knuckle or other machine component to remain on the machine, thus greatly reducing the time required for bearing service.

1459825880-1b59233c-ab3f-4036-a7b7-53e2a8c42ee8

TruCast is a method for management, by way of gathering, storing, analyzing, tracking, sorting, determining the relevance of, visualizing, and responding to all available consumer generated media. It was selected from the progeny obtained following a controlled pollination of \u2018Imperial\u2019 mandarin\u2019\u2018Ellendale\u2019 tangor in 1984. The one or more ports are aggregated to a logical port in a logical communication channel.

1459825880-53c73412-dd15-49dd-8738-c0e6f6d7a053

A phantom is provided with: a reference marker at a predetermined position thereof; a positioning reference surface, to be placed into contact with a chest wall abutting surface of a support table of a mammography apparatus; and a pattern region for measuring distances from the reference surface, perpendicular to the reference surface. The power source includes a fluorescent ballast electrically connected to the connectors of a light fixture for receiving an input voltage and for converting the input voltage to a lamp voltage suitable for powering a fluorescent lamp. A preferred embodiment of the hearing aid/portable module combination utilizes Miller-coded direct sequence spread-spectrum radio signal transmitters and receivers for transmitting and receiving data between the hearing aid and the portable module.

1459825880-a805678f-8760-45be-80fe-34b57d0466ca

A waste fluorescent lamp dismantling method and apparatus is set up to clamp two ends of a waste fluorescent lamp adjacent to its aluminum caps, and to maintain an airtight seal between the clamp sections and the aluminum caps, so that when the aluminum caps at two ends are separated from the waste fluorescent lamp, the gas and vapor in the lamp tube will be prevented from escaping. A content mapping platform receives an access address of content, the content including location information. The shielding parts can be fastened to the supporting substrate by means of fastening attachments which engage into first recesses of the supporting substrate. The casing-sheath is retractably housed inside the housing space, formed in the stern platform. In the extended position, the antenna is electrically connected with the personal computer card and can receive and transmit signals. The connections include conductors to allow reference clock signals from the PLD logic core, or from outside the PLL, to be used by the PLLS, as well as conductors that allow the PLD core to control the phases of the PLLs.

1459825881-2dfffb18f-cc4d-4cfe-a303-4475da9df0b9

A method of reducing the size of a lung by collapsing a target section of the lung includes delivering within a lung air passageway leading to the target section an intra-bronchial device. The system generally comprising a circuit and a

programmable portion used for diagnostics and finding bugs. Also, a circuit that equalizes a wiring higher in the capacity component is driven by a higher voltage level according to the wiring capacity component of the sense amplification power supply line and the bit lines. The method further includes communicating the second periodic data signal over the voice channel of the wireless communication system. The fiberboard can include two or more compressed fibers; less than 10 wt % of resin and wax, based on total weight of the fibers; and a coating comprising at least one colorant, wherein the colorant covers at least 70% of the fiberboard surface. The drive control system includes at least one cabling transition cabinet housing cabling between the at least one motor control cabinet, the power supply line, and the variable frequency drive.

1459825882-cfc061fb-deef-440d-8a08-d63b506929c4

A portable electronic device includes a housing, a display module received in the housing, and a light source device received in the housing. The handheld device includes a keyboard, a display, and a processor. Generally, a screw conveyor augmented with a jet port is used to move the material where the jet port provides a gas to provide a make-up volume of the solid material.

1459825882-fb65d051-49e5-4d2e-8b08-8011dd5f6649

A high pressure phase spinel type sialon represented by the chemical formula  $\text{Si}_6\text{Al}_x\text{O}_x\text{N}_{8-x}$ , and a high pressure phase spinel type silicon oxynitride represented by the chemical formula  $\text{Si}_3\text{O}_2\text{N}_4$ . The prosthesis has first and second side portions with a connecting central portion, and is designed to span an imperfection with opposite ends positioned on opposite sides of the imperfection. Each of the loops has a substantially equal diameter. Demultiplexed IHS video signal information is received by a video interface receiver, where it is used to generate an image on a digital display. Once all the recipient partitions have read the data, the global memory is reverted to a read and write memory.

1459825883-1684b758-4f58-4467-a2ba-86a507760c50

An inkjet printer ink cartridge, which improves upon the ink cartridge of a conventional inkjet ink cartridge, whereby need for sponge within the ink cartridge is eliminated, and a siphon device is configured within the ink cartridge. The invention proposes a pharmaceutical composition containing 1) a non-cationic amphiphilic molecule or macromolecule and its use for delivery of nucleic acids or 2) a cationic amphiphilic molecule or macromolecule that transforms from a cationic entity to an anionic, neutral, or zwitterionic entity by a chemical, photochemical, or biological reaction and its use for delivery of nucleic acids. The station module includes at least one switching device for selectively providing a first power signal that energizes the corresponding solenoid actuated valve. A strengthening ring may be shaped, sized and configured to substantially mate with the geometry of the second end of the body and be placed thereover.

1459825883-f6cb463a-69fa-4cb2-98cf-e80ed042c881

The present invention relates to a semiconductor device with a plurality of mark through substrate vias, including a semiconductor substrate, a plurality of original through substrate vias and a plurality of mark through substrate vias. The trench has a lower trench region, in which the capacitor is disposed, and an upper trench region, in which an electrically conductive connection from an electrode of the capacitor to a diffusion zone of the selection transistor is disposed. The contents of the first and second vessels are emptied into a dialysate preparation tank and mixed with water to form a batch quantity of dialysate solution. If it is likely that a collision will occur between the detected objects and the local vehicle, a warning is automatically generated to notify the vehicle operator of the impending collision. The templates may also be associated with various system states such that messages corresponding to a particular template cause a state transition along a particular edge to a next state node at which another set of templates are defined. It is characterized in that it includes a main burning block

having a fuel and air cell connected to the solid fuel supply chamber and air outlet vents formed on the external wall surface.

1459825884-653e585d-87d4-4bb0-96e3-03a0ad163ac9

This invention relates to compounds which are alpha-1 receptor agonists, preferably alpha-1AL receptor agonists, and which are represented by Formula I: wherein m, A, X, Y, R1, R2, R3, R4 and R5 are as defined in the specification; or individual isomers, racemic or non-racemic mixtures of isomers, or pharmaceutically acceptable salts or solvates thereof. The promoter region is useful to screen a compound that regulates the promoter of the human p27Kip1 gene or regulates the activity of the promoter. If so, the data is forwarded to the two storage systems. Furthermore, short term cut length variation is further reduced by minimizing the tension of the web just prior to the material being cut.

1459825884-86412629-c422-4ea4-8d84-7f45d39ee233

A single wireless system that implements both baseband and non-baseband applications can be provided in a way that securely prevents inadvertent or deliberate alteration of protected code. Based on the monitored performance, if an estimate of future performance of the telecommunication feature for the telecommunication customer is determined to be unfavorable, the telecommunication customer is informed of same. This results in a considerable increase in the collector-emitter breakdown voltage up to 30 V or more being possible without having to except limitations with regard to dielectric strength and on resistivity.

1459825885-017d9e86-0483-45e5-a303-c64561b4c0c5

A magnetic resonance imaging method includes acquiring a baseline magnetic resonance image of a region of interest in the absence of a contrast agent and simulating an increase in image intensity of a subregion of interest within the region of interest which is subject to increased image intensity in the presence of a contrast agent. The process comprises the steps of: applying an aqueous based sealing composition comprising a polymeric resin to said porous substrate, evaporating the water and forming a water repellent coating of said polymeric resin on said porous substrate. In intermittent periods it is controlled ON and OFF by a battery powered alarm clock circuit built into a toothbrush.

1459825885-6e704432-a2c1-4bec-92ea-27abb03b2e26

A metal cutting tool having an insert holder and a cutting insert releasably secured therein. Each optimization mode may define processing element selection criteria and/or host selection criteria. 7% with respect to an orbital frequency at the charged-particles' extraction portion, during a time of injection to extraction of the particles.

1459825885-7f097252-0e14-4a88-b452-a8efa662ff98

A novel polytetrafluoroethylene material includes a plurality of aggregates connected together by a plurality of relatively long fibrils. The implant is expandable to establish and maintain desired intervertebral spacing during fusion. Protruding from the center of an upper side of the rotating casing, there is a rotating shaft.

1459825885-96d3ad7c-9f27-48ff-a122-eb8a2d8f0131

A method for smoothing input current to a power delivery system having regeneration capability. The display-card electronic comprises an external device and card-type device receiving the external device. The sanitizing agent including ozone in the package is transferred to the product or object while in the package. The hard mask layer is then removed.

1459825885-9dae7db0-e860-423b-8f40-1e8f441a0b7f

Data access time in content delivery networks is improved by storing files in cache servers as file bundles. The hierarchical scanning system collects information from

distributed and repeated screening throughout a container journey and enables pattern analysis over groups of containers. The adaptor has an inlet opening at a first part of the adaptor, the inlet opening being connectable to the central passage way of the arbor.

1459825886-0130bd7d-439c-41f0-952b-fec20729aaa2

Embodiments relate generally to a method of generating a post-installation configuration for a software application offering. Regenerated filaments may have a denier of from about 0. The first auxiliary electrode is electrically insulated from the active device. Hybrid maize seed, plant or plant part produced by crossing the variety PH18DS or a locus conversion of PH18DS with another maize variety. This reaction layer operates to recess the inner sidewall of the electrically insulating layer.

1459825886-0a613443-ca7a-4990-90fb-c38e0b430bb6

A set of physical unclonable function cells is configured with a set of capacitive devices in an integrated circuit. The nuclear reactor module further includes a heat exchanger proximately located about the riser, and a reactor core located in the shroud. The regulator includes a multipath control circuit for controlling the switch state and for controlling Vpp. The ink set is used for an ink jet recording method. In still further aspects, methods and systems implementing a variable delay of pressure decay in a medical infusion pump are disclosed. Since the subcache memory serves as a buffer for data to be transferred from the main cache memory to the main memory, the main cache memory withdraws data to the subcache memory even if the main memory is in a busy state.

1459825886-35acc40e-05d4-4599-8fde-4e1062960169

The invention relates to an apparatus and method for data transmittingreceiving between a microwave oven and an information appliance PDA. The semiconductor memory device can be an SRAM or DRAM, for example, and includes a memory array and peripheral circuit on a substrate. The movement member is capable of moving between a housing position where the movement member is substantially housed inside the developer case and a protruding position where the movement member protrudes beyond the developer case.

1459825886-37b6b8dc-d951-4ed5-9c06-4bbe40d40fc1

An apparatus and method that provides current location information services in a network are described. The modulator includes an N-type layer, a P-type layer and an intrinsic layer acting as the waveguide. The baseline trace includes a baseline segment within the ischemia detection window; where the ischemia detection window and the fiducial point may constitute ischemia detection parameters. The fruit has acceptable rind thickness, acid-sugar ratios and color.

1459825886-e83c71a7-bbb9-4fe1-a644-8cc0c10fb679

In a safety vent part and an electric energy storage device having the same, the safety vent part includes a plate coupled to the device, a metal sheet and a metal cap. Upon manufacture, a lens may be placed within the system assembly in the shipping configuration. Accordingly, sufficient design precision can be attained. The storage subsystem reboots a CPU for the IO module to load the new firmware and determines after reboot that the reboot was for loading the new firmware based on the stored state data.

1459825887-26bc0949-9176-4c71-ab6b-ae3dd606f090

A high throughput high performance chromatography system operating at a high mixing pressure including a plurality of pressurized solvent reservoirs, e. The filter paper cups have similar depth and diameter. Such devices may be, but are not limited to, wirelessly operated cameras, audio transmitters, recorders and infrared illuminators. The superabsorbent polymer improves moisture retention, improves viscosity, reduces friction, and improves coverage of the hydroseed mixture and

germination of the seed. A cargo handling control section 50 executes automatic positioning control of the forks in such a way that the deviation amount becomes zero.

1459825887-492aef19-6641-4899-8ffd-eb2d52660214

The invention relates to a container for a multi-component reaction, having at least two chemical chambers and at least one mixing space, the container being formed from a base film provided with recesses and an upper film, which is optionally structured, the upper film being joined, especially sealed, to the base film, at least over sections. The methods of the invention are useful in the segmentation of a sequence of colposcopic images of tissue, for example. In addition, when the input signal rises from the \u201cL\u201d level to the \u201cH\u201d level, a P channel MOS transistor connected to a drain of the other P channel MOS transistor is brought into conduction to fix a potential of a node of the drain of the other P channel MOS transistor to the \u201cH\u201d level, which prevents the potential of the node from becoming unstable. The system is distinguished by a high numerical aperture, low chromatic aberrations and compact, material-saving design. 0 \u03bcm, a first insulating layer formed on the metal supporting board to cover the metal foil, and a conductive pattern formed on the first insulating layer. State information transferred using a browser page identifier in this manner may include multiple values for multiple data elements.

1459825887-97e86e97-abf8-4103-b3b0-933a4fdc8390

The present invention relates to the production of ternesite clinkers containing 20 to 95% by weight C5S2\$ and less than 15% by weight C4A3\$, and to the use of ternesite as an additive to hydraulic and/or latent hydraulic and/or pozzolanic materials. The system may be implemented with a network-connected device containing or having connected to it a user interface, a coordination server, and a plurality of message services. The CCFLs are coupled respectively to the terminals of the secondary winding.

1459825888-70263c8b-0003-454b-b67b-e05077724068

Methods for manufacturing microelectronic imaging units and microelectronic imaging units that are formed using such methods are disclosed herein. In the configuration of the power-supply section, a main power-supply circuit and an inverter circuit are connected to an input-voltage generation unit in parallel to each other, which is used for rectifying and smoothing the commercial alternative current power. The variable-gain preamplifier receives an input signal, a preamplifier control signal, and produces the preamplifier output signal. A predetermined amount of liquid crystal is contained between the first electric plate and the second electric plate.

1459825888-8dfcea85-d566-4d77-9cdb-8c105e41bce5

In one aspect of the invention, a system for removing aggregate from a natural or man-made surface includes a vehicle with a frame and a conveyor. In the illustrative embodiment, the light source includes first and second linear arrays of light emitting elements and a mirror is mounted there between. A method of fabricating the sensor is provided using microtechnology techniques. Once the PCI packet traverses the switch and arrives at the downstream port, the downstream port changes routing logic which logically disconnects the host from the specified virtual hierarchy. One or more processors process the command based on the identified type of the command, the application protocol of the command, and the meta-data. The guide groove includes a pair of strip-shaped inner side faces formed with a pair of guide projections having a substantially half arc shape in cross section whose diameter is smaller than a height of the inner side face of the guide groove.

1459825888-d3581d63-4d8e-4c8b-be2a-af37d9773e23

A semiconductor device with improved sourcedrain junctions and methods for

fabricating the device are disclosed. The transparent glass section and the metal section have a ratio in thermal expansion coefficient to the light emitting element in a range of 150% to 500%. Of the natural oxide layer 2, parts other than parts onto which the energy beam 4a, 4b has been irradiated is removed by heating.

1459825888-ed05dbaa-d224-4383-939a-0de617de282f

Without letting a user execute a cumbersome judgment of a version, an application program of the most suitable version is installed for data file automatically, thus an automatic activation of the application becomes possible. Hence, a computer system in which water produced from the fuel cell assembly is prevented from entering the computer can be provided. By this arrangement, a signal current flowing to or from the receiving IC via the signaling conductor is conducted to the reference plane, thereby enabling a signal-return current to flow back to or back from the transmitting IC along a single path that is substantially parallel to the signal conductor. The display device can be manufactured using a TFT array substrate in which electric characteristic of plural TFTs arranged in a line in the minor axis direction of a linear shaped laser beam periodically fluctuates depending on the place in which each TFT is formed. The decoding operation incorporates an operating mode called skip mode. The improved cleaning composition and method includes the use of a cationic biocide that includes biguanide compounds and/or quats.

1459825889-0c37ecc8-b216-4d52-a2be-e402cda11e3e

A method for imaging objects through turbid media includes generating a repetitive pulsed light beam under control of a pulse shaper, propagating the light beam through turbid media, and receiving and imaging the light beam at a sensor. In step 1, a first light pervious substrate and a second light pervious substrate are provided. This makes it possible to produce light-emitting diodes which radiate polychromatic light, in particular white light, with only a single light-emitting semiconductor body. An LED mounting structure, such as a PCB, may be attached to the reinforcing members, or alternatively a separate bottom wall may be secured to the reinforcing members.

1459825889-48d9995c-ff65-49bc-ada6-79666310b398

A method for making polyester nanocomposite materials by polymerization in the presence of exfoliated fibrous clay nanoparticles includes dispersing the nanoparticles in a mixture of diol, water, and sodium salt before polymerization, thereby improving the dispersion of the nanoparticles in the final nanocomposite. Upon successful completion of the test by the consumer, the identification number is validated so that the consumer may withdraw a cash reward from a temporary bank account funded when the identification number is validated via an ATM. A single display can be used, for example in portrait mode while terminal functions are being used and in landscape mode while imaging functions are being used. Operations which can be executed in parallel are identified based on the information describing memory accesses.

1459825889-71d78269-09d1-4ec8-a3f7-0711709dfeef

There is provided an internal combustion engine having a housing and a rotor arrangement which is mounted for oscillating rotary movement within the housing. The system employs different read and write modes to enable auto-tracking of material, some assembly, assembly and component items through various stages of the manufacturing process. A processor is then used to calculate the position of the remaining vertices. There is formed a mask which includes the second mask layer and the mask material having therein opening including the cavity. There are times, however, when instruction packets cannot be split without violating the semantics of the instruction packet assembled by the compiler. One advantage of this invention is that bulky memory is not situated in the mobile phone handset itself, which is thus more compact.

1459825889-b586cfef-b6d6-41f3-a35e-016a4dc05148

When a manufacturer or a user desires to adjust a Braun tube, it is required to display a test pattern satisfying setting conditions of display modes on the Braun tube. The device can include a pad unit having at least one pad, at least one hand grip, a press-on mechanism, a hand lever, at least one support, and a housing. Boundary latches are designated using a depth-first search to identify the first latches along interconnection paths with the PIPO, and filtering out ineligible latches according to designer rules. the diaper changer, and to maintain the device on the changer's leg.

1459825890-455a6c84-ed2e-4ead-a1db-d7a82cff0382

A wire guide for an electric discharge machine is designed with three elongated, cylindrical ceramic rods which close around the electrode wire to maintain its center orientation. A surface mountable antenna clip is mounted on the PCB for retaining the antenna. A portable code reader is connected to the on-board computer.

1459825890-5f865d30-40c7-4479-8873-a65e1fb98e75

The present invention relates to an improved process for online measurement of monomer concentration, specifically bisphenol A, in an interfacial polycarbonate manufacturing process. The controller also includes a servo controller interface with a speed matching module and a pipeline control module such that at least two processors share memory mapped registers without conflicts. Inputs from the electrodes cause the program to calculate the heart chamber volume, and then to determine the position of the electrodes within the heart chamber. A plurality of working fluid containing units respectively surround the molten salt containing units and are disposed in the ground at predetermined intervals from each other. And this invention also relates to a drug for treating arrhythmia having the prolongation effect on the functional refractory period comprising said compound or a pharmaceutically acceptable salt thereof as an active ingredient. A pattern may be synthesized according to the procedural model along the curve from a start point to an end point; the synthesis of the pattern by the procedural model may be constrained to a region defined by a specified distance from the curve.

1459825890-94cae288-99a4-4fab-9b06-4b029ce9c32d

In a vehicular air conditioning apparatus, a connection duct connects a first blower unit having a first blower fan to a side of a casing forming air passages, whereas a second blower unit having a second blower fan, different from the first blower unit, is connected to a lower portion of the casing. A client directs a message to a server. It is possible to prevent the sides of the air mattress from being abnormally expanded by the side raw material bonded to the upper raw material member and the lower raw material member. As such, the package stress is managed to suitable levels for incorporation of a low-K Si die and/or a thin package substrate. The select devices may have vertical channels directly against the semiconductor material pillars and directly against upper regions of the first and second conductivity type regions. For example, if a media guidance application determines that, based on a particular disability, a user cannot see a portion of a screen displaying a media asset, the media guidance application alters the arrangement of media objects in the media asset to compensate for the disability.

1459825891-98e8a16a-cc0e-474b-8f6d-571f10aa938a

The present invention relates to a massage device. The enzyme-containing composition comprises an enzyme embedded in a matrix. The therapeutic effect of a compound against neuropathic pain can also be evaluated. An insertion hole, a fixing wire and a protruding portion are provided on the left side bolster and the right side bolster, and on the striker and the supporting bracket to determine positions of the left side bolster and the right side bolster and positions of the striker and the supporting bracket.

1459825891-aa2708b6-2517-430d-b1a8-6f041cc6dbf4

Given a set of network nodes B that are sought to be monitored, and a set of potential monitoring nodes, a subset M of the monitoring nodes is chosen that insures monitoring each node b in B with a pair of nodes mi and mj such that no node except b is on both any shortest path from b to mi and on any shortest path from b to mj. The filter control portion switches the cutoff frequency in a situation wherein a plurality of pressure signals respectively obtained from the plurality of pressure sensors are successively switched and output by the sensor signal selection portion to specify the pressure sensor for pulse wave detection, and in a situation wherein the pulse wave is detected from the specified pressure sensor. Each memory cell has coupling circuitry connected between the associated read bit line and a second voltage level different to the first voltage level.

1459825891-ab51fd26-2121-420f-b472-792a1def8cee

This is an implantable medical device assembly for use in surgical procedures. The elevator travel routes are encoded into alternative chromosomes. The update is fully controlled by the user to be released to only certain users or a group of users.

1459825891-cc82cb29-0e09-4553-9a7e-a45ea1965b02

An API called AdminRPC written in managed code allows background applications written in managed code to access backend data stores. Adhesion-inhibiting surfaces reduce or eliminate internal elastomer stress due to curing of cast-in-place elastomeric seals. The equivalent lens thus calculated is the ophthalmic lens that is the object of the invention.

1459825891-cd871eaa-3085-4569-b0b8-e63995adef30

The present invention provides phosphotetrahydropyran compounds and the use thereof in treating diseases or conditions that are dependent on T-lymphocyte migration, as well as compositions containing said compounds. The master stage is responsive to a first clock signal and has a first pair of differential inputs and a first pair of differential outputs. A controlled amount of motion blur is imparted selectively to certain scenes, sequences, frames or components of images. One end of an elongated cylindrical hollow light tube is connected to the opening for channeling and focusing the emitted and reflected light from the light box toward the opposite open end of the tube. The method further involves determining a target metaslab selected from the multiple metaslabs by comparing multiple allocation priorities, where each of the allocation priorities is associated with one of the metaslabs, allocating a block to the target metaslab, and writing the block to the target metaslab, where the block includes a portion of the data item.

1459825892-206413f1-4818-4a40-af33-817c8a063e88

A gimbaled weapon system is disclosed having a sighting system, a control unit, a weapon cradle and an operator interface for the GWS located remotely from the weapon cradle and the sighting system. An outer bowl surface defines a large radius of curvature adjacent an inner bowl surface, and a medium radius of curvature adjacent a cylindrical wall surface. The catheter further includes an electrically insulative sheath surrounding at least a portion of the flexible electrode and a linear displacement mechanism capable of adjusting at least one of the electrically insulative sheath and the flexible electrode to vary a length of the flexible electrode exposed at the distal end of the shaft.

1459825892-2a31a838-c26a-4017-832d-719dc0b80db3

A method for charging an intake manifold of an engine comprises adjusting an LP EGR flow rate and an uncooled HP EGR flow rate within first limits to maintain a target dilution level in the intake manifold at steady state. The receptacle and/or handle also are convertible to respective disassembled conditions in which at least some receptacle parts are taken apart from one another and/or at least some handle parts are taken apart from one another such that the device occupies a reduced volume of

space so as to enable packaging and shipping of the device. A housing assembly includes a radially extending wall on one side of the outer race and a deformable axially extending wall. These signals with different frequencies can be selected through use of multiple selectors. The light-emitting device is attached to the device mounting area of the device turning mount with the light-emitting surface oriented in a plane that is substantially parallel to the mounting area of the electrical sub-mount. The data call between the mobile communication terminal and the asynchronous mobile communication network is released.

1459825892-94765cf8-4150-4936-a0ab-2f835379a6b8

A separator, a pair of polarized electrodes, gaskets holding the separator and the polarized electrodes from their sides, and a pair of the collectors provided in contact with the outer surfaces of polarized electrodes and gaskets are provided in an electric double layer capacitor. Disclosed archery releases include a bearing ring that rotates relative to a release body. The low discrepancy sequences ensure that the sample points are evenly distributed over a respective region or time interval, thereby reducing error in the image which can result from clumping of such sample points which can occur in the Monte Carlo technique. The metal surface of the composite part may be subject to further treatment such as polishing, coating and painting, or a combination of these. A bounding box is then placed around the head of the local user in the near-infrared image.

1459825892-96368f85-aa3d-46fd-88b1-bac346c99f97

A system and method provides optimization of the strength and orientation of the inductive field of a hearing aid compatible device, relative to a telecoil in a user's hearing aid. The power-on reset circuit is incorporated into the electronic device and the comparator circuit is configured to compare values in the at least one reset register with at least one predetermined value when a power-on reset state is determined and generate a reset signal when the values do not match the at least one predetermined value. The improved multi-pass cell may be constructed with a concave front mirror centered along an axis of the cell, and a concave back mirror centered along the axis and facing the front mirror. The handle pivots to a first position attached to the case and a second position opposite to the first position. At least one screen is arranged within the gap, for adjusting an average incidence angle of the ceramic particles relative to a plane normal of the substrate surface, such that the ceramic particles are deposited on the substrate surface at a preferred direction and a relative position of the substrate surface and the screen is altered while the gap remains essentially the same. The catalyst systems of the invention provide high activity, high bulk density, moderate hydrogen response, moderate donor response and high polydispersity.

1459825893-0057d245-68ae-4b74-b06b-a7462e49c2af

A system is provided that allows users to communicate securely. The photovoltaic power generation system comprises generator unit groups formed by arrangement of multiple photovoltaic power generator units and unit group power collection control sections, which are connected with the photovoltaic power generator units through unit cables, and collect and control the electric power generated by the photovoltaic power generator units. Accordingly, even when the amount of phase difference is large, a DLL circuit can be locked at a high speed.

1459825893-139dfc9b-1e35-4095-bed4-c84081547e27

The present invention relates to compounds of formula wherein R1, R2, R3, R4, R5, R6 and R7 are as defined in the description and claims, and pharmaceutically acceptable salts thereof. One or more wireless sensors are attached to the animal, for example, to measure motion-related parameter associated with one or more parts of the animal. The tubular housing is made from a biocompatible and bioabsorbable polymeric material, and is sealed by means such as heat welding or solvent fixing. Especially when the organic electrolytic solution is used in lithium sulfur batteries, the oxalate compound forms a chelate with lithium ions and improves the

ionic conductivity and the charging/discharging efficiency of the battery.

1459825893-4d14cd30-467f-46cf-a002-ffffafa0756f1

A gaming system and methods for conducting a wagering game allowing player selection of a base game and a game feature. In addition, the cargo floor has at least one ramp surface integrated into the base of the cargo floor, and a track that is integrated into the ramp surface so that a gear assembly contacts the track and moves the cargo floor to and from a deployed position and a stowed position. The block wall has an inner surface, an outer surface, and a breakable section. In that protocol, a first layer may define transmission line, transmitters, and receivers for transmission, the second layer may define encoding and decoding, and the third layer may define a frame format of the data packet.

1459825893-96f2140c-d5c8-4ee0-aa19-7915455c8364

An electronically steerable passive array antenna and method for using the array antenna to steer the radiation beams and nulls of a radio signal are described herein. The circumferential wide major groove is provided in a center region in a tire width direction of a tread. A source of the second MOS transistor is connected with a source of the first MOS transistor and a threshold voltage of the second MOS transistor is lower than that of the first MOS transistor. Because a plurality of features may be identified in a calibration image, an image system, such as a projector-camera system, can reduce the number of display images needed to calibrate the system.

1459825893-e9b33ecd-8c71-497d-ba0b-ca13685619dc

A system and technique for displaying a document's workflow history are disclosed. During use, one or more software test cases of a feature of a software target are identified for execution. one-time programmable memory device is presented. The effective channel width is shorter than that for a rectangular cross section. A plurality of probe molecules may be arrayed and immobilized on the lacquered membrane.

1459825894-b2254c1d-f4bb-4ca2-8a46-9651255f3e6e

Construction and use of an inner shell for a multi-shelled gamut boundary descriptor for a source device based on a predesignated outer shell for the source device, for use in gamut-mapping from the gamut of the source device to a gamut of a destination device. The means are directly arranged on and/or directly act upon the moving element. In one aspect, the thermal spraying includes melting the coating material, propelling the molten coating material toward the article to be coated, and coating the article with the molten coating material. Stabilizer struts, which also preferably have adjustable length, extend between the opposing base struts and/or between the opposing leg struts to help maintain them in spaced relation. It performs a grouping process by arranging network nodes, including the relay nodes, in groups, each with a cluster head, on different hierarchical levels. The code reader may be associated with the imager.

1459825894-ca17e600-0be7-411a-b939-e98df8c99e00

A method and information processing system are provided for creating a virtual part and for composing and deploying a virtual solution with one or more virtual parts. The method changes the switching frequency of a switching power supply based on the first signal, transmitting the second signal to a plurality of semiconductor apparatuses via an output line of the switching power supply. A pressure in the chamber which varies due to a collision of an obstacle with a bumper of the vehicle is detected by the pressure detection unit. In accordance with the invention, a solution to the problem of classifying information by enforcing explicit data classification as well as inference and association constraints is provided. 02,6-decanedimethanol with a diester or phosgene, and a weight-averaged molecular weight of the polycarbonate resin being equal to or more than 25,000, and a polycarbonate resin prepared by reacting 2,2-bispropane and phosgene, and weight-

averaged molecular weight of the polycarbonate resin being equal to or more than 30,000, wherein a ratio thereof,  $100 \times d_7$ ), is from 1 to 99% by weight.

1459825894-fa9248ea-85e7-48d9-abbd-b341afdfbf55

A multipurpose folding hand tool including a tool holder permitting exchanges of blades. The deep trench includes a storage node in a lower portion of the deep trench, and a gate conductor formed in an upper portion of the deep trench. This increases the data rate of a wireless communication.

1459825895-0a28b660-f2bc-40ca-afad-977f7fc3c2df

Systems and methods for performing sparse backups are disclosed. An ultrasound emitter or transducer is delivered to a location within the body associated with the joint and heats the target region of tissue associated with the joint from the location. This configuration makes it possible to suppress simultaneously both of low-frequency-side and high-frequency-side distortion voltages of a distortion generated by a wide-band class-AB power amplifier even if they are different in amplitude and phase. Additionally, both the plug housing and the socket housing define a D-configuration in order to properly align the housings and conductors disposed therein, among other novel features of the present invention. Two cam surfaces are formed on an outer peripheral surface of a rotary body and micro-switches are brought into contact with respective cam surfaces and a logic can be established based on signals from two switches.

1459825895-a2efa741-605c-4300-83f8-da6a9bb12a81

A faucet handle and control module includes: a control handle and three joints. The circuit board has bosses which extend through apertures in the flange and contact the springs which are connected to L-shaped members in the base. The buffering power-accumulating means is enabled, during the driving process, to accumulate the power supplied through the driving process while alleviating impact to the driven member.

1459825895-d22132eb-448f-4d48-9370-b8d831d61d75

An air cushion game table is provided with a storage compartment useful for stowing game pieces during periods when the game table is not being utilized. The plurality of reels includes a plurality of symbols moving through the symbol array. The first program file may be associated with a set of attributes as stored in an annotation, header, or the like. Advantageously, compression across markets provides a larger pool of eligible trade records for compression, increasing the number of compressible trades, and thus reducing fees paid by the trading firm and the amount of data transmitted.

1459825896-9b61c85e-75f2-4552-a38e-3f57c7e13b6b

A contact structure having silicide layers, a semiconductor device employing the same, and methods of fabricating the contact structure and semiconductor device are provided. An energy level determination circuit determines the energy levels of the detected gamma rays, and timing circuits determine whether the gamma rays have been detected by the scintillation detectors within a predetermined time interval. The method passes a received UWB signal through a band pass filter, wherein the BPF is located at a UWB receiver and the UWB signal is a Hanning modulated pulse centered at 4 GHz frequency. The dynamic context of the communication flow expression may be established using one or more labels or a context function. Each zone of the plurality of zones may be associated with a memory array region within a die or memory plane. The methods may include delivering a guidewire to a lesion in the femoro-popliteal artery stem over the guidewire.

1459825896-c1326567-6073-42e9-bfdf-0a2ed15e7e92

Chars may be produced by carbonization or pyrolysis of poultry manure. Accordingly, in at least one embodiment, a semiconductor device comprises a substrate and a switching element with a control input coupled to the substrate. A metric for each

hypothesized path delay is determined, and a current path delay estimate is adapted based on the computed metrics for the hypothesized path delays. In response to configuration information, the interconnection network is operative in real-time to configure and reconfigure the plurality of heterogeneous computational elements for a plurality of different functional modes, including linear algorithmic operations, non-linear algorithmic operations, finite state machine operations, memory operations, and bit-level manipulations.

1459825897-03efb324-1b78-4dbb-93e5-1046c8e7ef78

The invention provides toner cartridges that deliver toner in a metered fashion to an image forming apparatus. Boundary layer manipulation techniques are applied to the airflow in the HDD, such as boundary layer suction with slots or holes, and wall damping techniques, such as an open honeycomb seal and Helmholtz resonators. An electrophotographic apparatus having a photoreceptor drum that includes this photoreceptor has a reduced surface frictional resistance throughout the printing period from the beginning to after printing, thus reducing the amount of surface wear while producing satisfactory images. A shear force member may have a first part configured to contact the first recess and a second part opposite the first part configured to contact the second recess, the second part may have an inclined surface. A terminal is provided with home system tag, group tags, and specific tags.

1459825897-1a43679c-5963-4bad-8a34-bcd48c4c421d

A method of inserting a tensiometer into a sample, comprises providing a drive probe configured to be engaged by direct push equipment; supporting a porous member from the drive probe; and driving the drive probe into the sample using a cone penetrometer. A processor of the image processing apparatus may calculate a color value of the first pixel by performing an anti-aliasing process with respect to each of the selected at least one sub-pixel. Furthermore, the invention also relates to a basic body of a cutting tool, as well as a cutting insert as such.

1459825897-711fc9e6-0ba1-473e-b53d-da53fb21342c

A security analyzer tests the security of a device by attacking the device and observing the device's response. Substantially axially aligned inlet and outlet cannulas extend from the housing and communicate with the chamber. A gear is pivotally coupled to a second end of the locking lever such that rotation of the gear causes movement of the locking lever. The outward run and the return run extend in a laterally offset manner with respect to each other, and the trough portion guiding the entrainment plates in the outward run is open on the working face side.

1459825897-7d4a799b-ba99-4dbe-a9c0-5345639e3b39

Presented is a low-power retro-reflective communication system that reflects modulated light back in substantially the same direction as the light source using a retro-reflector. An engine is connected for unitary rotation with the first member. The oxide layer forms a passivation layer in the imaging structure. The at least one actuating and deactuating devices are located, seen in the axial direction, on the same side of the annular piston. A stop control unit stops rotation of the rotary head drum and disables the tape unloading operation using the tape loading mechanism.

1459825897-c1b655ee-f111-4941-b0d9-1a2deda05382

A system and method are disclosed for mobile information management using a code injection approach. If an Ethernet link aggregation sublayer is present on an Ethernet connection path, a link aggregation sublayer Management Entity Group end point is assigned to the Ethernet link aggregation sublayer to generate a link aggregation message for Ethernet connection management and protection switching. Stand off ribs are provided to improve assembly into a control manifold. On the other hand, the capability of programming presence detect data after fabrication of

the memory chip provides additional flexibility, allowing the foregoing techniques to be used with a wide variety of memory chips and modules. The vehicle surveillance system further includes at least one portable surveillance remote for relaying transmission of the sensor information from the vehicle-installed sensor apparatus to the communication adapter.

1459825897-dd41ca43-5339-446a-9904-2bf4d83c3276

With this invention, at least one of a video file containing video information, a still picture file containing still picture information, and an audio file containing audio information and a management file having management information on a control method of reproducing the information in the file are recorded on an information storage medium. A base plate can kinematically mount on the receiving portion and have a hole positioned such that the probe passes through the hole. The packing structure includes a frame having a package area where an electronic device is disposed, an insulating block disposed on one side of the package area and connected to the frame, and a plurality of frame leads aligned in parallel and connected to the insulating block and the electronic device. The opening is positioned between the aft and bow portions.

1459825898-77d530ca-f685-4f92-b690-aadc23639e61

Described embodiments provide a network processor that includes a security protocol processor to prevent replay attacks on the network processor. A first lens assembly, a second lens assembly, and a prism assembly are moved in relationship to a camera housing controlled by a cam tube. The nucleic acid sequence is typically recombinant DNA including gene encoding for one or more biofunctional proteins. The minimal infrequent tokens or minimal infrequent tokensets are processed in a fixed order, and then a collection of signatures for each minimal infrequent token or token set is determined. The load is therefore evenly counterbalanced throughout its range of motion, and its position is maintained.

1459825898-efc01c23-9f85-470d-b6d5-14373ce56fb9

A high speed material processing and stacking apparatus and method for overlapping and slowing the linear progression of material pieces in a continuous stream. An electron beam is directed through a low pressure environment toward a surface of the sample. The tool optionally provides audio and/or visual feedback regarding the material. The nozzle allows liquid fuels to be injected into a swirling annular airstream and then atomized, dispersed and vaporized inside a lean premixing dual fuel nozzle for a gas turbine combustor. For advancing the current density and magnitude of CNT emitters, the method of casting surface treatment on the CNT emitters includes the steps of coating an adhesive material on the surface of the device; heating the adhesive material for adhibitting the surface; and lifting the adhesive material off the surface. The delay line determines a delay amount of the delayed clock signal with respect to the clock signal based on the control signals.

1459825899-43d0e682-1996-4e20-adce-6bc286058d6b

A system for, and method of, pixel data compression and a smartphone incorporating the system or the method. In a fully PTP aware path there is the notion of on-path support mechanisms such as boundary clocks and transparent clocks at every switching or routing node. The spot-size converter waveguide device includes at least one of a bottom mirror and top mirror, which provide highly-reflective lower and upper cladding, respectively, for vertical confinement of light propagating through the waveguide device. For atomic layer deposition, the metastable specie can be purged from the containment reservoir and the metastable specie can be compressed into the reaction chamber from the reservoir.

1459825899-55fce13b-ef4b-4e31-99cb-e321559ca1a2

The present disclosure provides a method of fabricating a semiconductor device. The light sources and/or the member for conducting current to the light sources are at least in part surrounded with the casing part. The memory cell 1 comprises a

storage transistor 2 with a storage gate 6 and a selecting transistor 3 with a select gate 7. When the determined result represents that the first portion is not accessed, the gap length is calculated and the start address of the second session is generated based upon the end address of the first portion and the known gap length. Power inputted to the switch is cut off for preventing the output end from outputting the power when the current is higher than a second predetermined value. The at least two equally-spaced actuators are able to produce a force on the specimen when electricity supplied to the at least two equally-spaced actuators is in phase, and a moment on the specimen when the electricity supplied to the at least two equally-spaced actuators is out of phase.

1459825899-7fc98de1-6896-4429-beb5-cc7b1ee1746a

A novel football field grille is disclosed. Predetermined functions are performed in response to respective sequences of actuations of the plurality of keys. The non real-time master and a real-time master compete for access to the address space by presenting address access requests to the shared bus. A window is mounted to the frame to close the upper portion of the opening.

1459825899-dde17455-947b-47c0-bf3b-732f348c30cd

Methods, systems, and products for navigating a UAV having an on-board digital camera are provided. The method comprising modifying digital data defining the pixel content of the image so as to replace the spatial frequency characteristics of the digital image due to the digital imaging system with spatial frequency characteristics of an image produced by a microscope. The hoop stringers extend radially outward at various points, including the crossing of the hoop stringers, to increase a cross sectional area of the hoop stringers. The nanomatrix carbon composites are uniquely lightweight, high-strength, high thermal conductivity materials that also provide uniquely selectable and controllable corrosion properties, including very rapid corrosion rates, useful for making a wide variety of degradable or disposable articles, including various downhole tools and components.

1459825900-4f796638-a6c9-4bab-953a-c39db308d03d

A method and system are disclosed for determining the geographic location of a user communicating on a communications network such as the Internet. The sintered bodies in all the aforementioned cases may be resin impregnated. The motor scrolls the film in front of the first aperture.

1459825900-594345a6-ebd3-4f1a-ab00-9d00717cc733

A novel maize variety designated PH1M04 and seed, plants and plant parts thereof. The frame includes vertical access for the rear cables. Therefore, even when cross-sectional areas between the front side of the side rail and the part of the side rail forming the upper edge of the opening differ, both of which are connected to each other via a step part deviated to the largest degree, the stiffness of the step part is increased, and the number of parts and man-hours required for welding are reduced. Enhancement of the portability and function quality of mobile terminals that support various functions is achieved by coupling a sub-module for performing a function to the main terminal having a display unit that allows user interactivity with the mobile terminal.

1459825900-bad09342-63f3-4ee0-86c5-a24e8b7a0318

The file storage system of the present invention comprises a first server including a first file system, and a second server including a second FS. A handle with a power cord and a control switch that accepts round heating elements of various diameters. The first electronic device sends to the second electronic device a subset of the plural component documents of the modular document, where the subset of the plural component documents is other than the one or more component documents already available at the second electronic device. The top plate is slanted relative to the sidewall. The multimedia file as pointed to by the playlist is

retrieved or accessed in the central location using the access parameter to play the multimedia file according to the play parameter. The inventive device has a plurality of holding elements, each having a swivel axis associated thereto.

1459825901-1bef6453-fe18-43aa-b148-f6c4d6e999db

An artificial foliage structure with wire cores embedded in its leafy parts causing these parts to spring back upon removal of compressive loading acting thereupon. In one example, among others, a system includes an approximate structural equivalence analyzer. The rear divider has a fan inlet.

1459825901-24b679cc-8ef1-4b57-98b5-07f1048854be

An electrical connector assembly comprises a receptacle connector having a receptacle housing and a plurality of receptacle contacts, and a plug connector engaging with the receptacle connector. The computer system creates the template. In order to computationally determine the oil temperature in the clutch unit, a thermal input power to the clutch unit is determined as a function of at least a speed of the input element and/or of the output element. If the bit density is supported, the data is sent to a demodulator object to be demodulated and converted to a data stream of ASCII characters. The signal processor is connected to the second pair of input-output terminals of the transformer.

1459825901-29f999a7-87d0-4687-ac27-3e857308a6bc

The invention relates to a method and a system for controlling the production of a mixture of constituents, especially a mixture with premix dead volumes. The ramp and/or the lip are contoured to match the curvature of the rings being formed by the laying head. Each printhead integrated circuit incorporates nozzle arrangements each having a nozzle, an ink chamber, an ink inlet, an actuator, and a drive circuit to achieve the ejection of ink from the nozzle arrangement.

1459825901-53bbe059-56a6-464a-aa00-d611c52d94a8

A text input device for attachment to a game controller includes a small-sized housing, upper and lower faces, a plurality of text entry keys disposed on the upper face, and an attachment interface disposed on the lower face. The support member includes a base portion and two arched plates extending from an end of the base portion. Another embodiment includes allowing placement of a marker about a circuit element to indicate an area in which dummy shapes are to be substantially identical, and then using the marker to place the circuit element. Devices and systems in accordance with the present invention have a variety of telephony and non-telephony applications.

1459825901-852cf813-5f73-4340-9bf5-2d0e3f2eab20

A printhead alignment sensor for an ink jet printer includes two terminals defining a substantially linear gap therebetween. The tension biases the second tag end into the open position. The connector element coupling region may be configured to be coupled to a connector element and the electrode coupling region may be configured to be coupled to an electrode.

1459825901-9ed95fc0-b915-4d16-9386-6ab62f2c223f

A method of operating a directory assistance system is provided. The control unit sets, as a first value, a magnitude of a transmission power of the first frame, and sets, as a second value smaller than the first value, a magnitude of a transmission power of the second frame. The outlet of the nozzle body can be closed using a sealing element which has at least one flow channel, preferably a sealing cone. A shorting wall includes a plurality of through holes extending through the substrate and interconnecting the antenna with the ground plane. The fastener legs each may protrude from an enclosure half. The capacitor is fixed on the bottom plate with the potting surface oriented perpendicular to a normal direction of the bottom plate.

1459825901-a7d38787-68e8-48cb-9abc-99174a0a8b97

The invention relates to the use of calixarenes for preventing or limiting the transfer of an actinide in the body from a site of skin contamination. The assembly includes a flap having a first edge for joining to the user-accessible area of the garment to form a generally horizontal hinge line, and a second, opposite, edge which may be free. The first capacitor is connected to the first switching unit and configured to smooth voltage that is supplied from the electrical storage device to the first switching unit. 0 lcm2min or under at 20 kPa air pressure, and its weight is 230 gm2 or under.

1459825902-45a7fb57-d8e6-448d-88be-59b7ee2b7492

A social networking website system with automatic registration based on a current location information. In one embodiment, an apparatus comprises a structure, a flange, and a retaining feature. The input unit includes a current-starved inverter configured to generate a control signal in response to an input signal and a bias voltage. Notably, the closure includes a discontinuous pressure block in the form of a plurality of circumferentially spaced, seal reinforcement elements on the inside surface of the skirt portion, adjacent the top wall portion. The system analyzes one of the structure of precursor ion at each stage of dissociation and the structure of parent ion based on the characteristics and spectrometric data.

1459825902-6d3a8eb6-29c5-43e4-92bf-4478459cd8e0

The present invention relates to the field of plant breeding. Further, a light emitting device has a plurality of LED elements disposed on a same plane, and a wavelength conversion portion that comprises a flat transparent base member that is disposed opposite to the plurality of LED elements and a phosphor layer that is of a phosphor to be excited by light emitted from the LED element and is formed like a film on the base member. The conditioning portion of the drive link may contact the sharpening element in a third contact region that includes at least a portion of the gap between the first and second contact regions. The outer covering may be closed to contain the pliable filler. The first and second interlock mechanisms prevent the first and second recliner mechanisms from rotating to a usable position if either the first floor latch mechanism or second kneel mechanism is not securely latched. The display apparatus and method used to visualize the application landscape provides a way to input the applications' assignments and filter preferences, and generate the visualization.

1459825902-7702c134-96f4-481e-9412-9e14b26ae234

A flexographic printing plate cleaner comprises a linear actuator operably mounted relative to a plate cylinder carrying a flexographic printing plate; a frame carried by the linear actuator for movement along a path parallel to an axis of rotation of the plate cylinder; and a double-acting three-position cylinder carried by the frame. The second part may further contain a compound capable of causing the organoboron compound to form free radical generating species upon contacting the two parts. The storage device stores its data by means of a file system. When a signal at the regulator circuit feedback input is above a threshold level the regulator circuit ceasing operation and when the signal at the regulator circuit feedback input is below the threshold level the regulator circuit is enabled. The prediction frame is divided into a plurality of blocks. or higher when measured by a scanning differential calorimeter.

1459825903-242e87c8-23bc-437f-a32a-ae15fd7232e1

An example information processing device calculates a specified position Ps2 in a three-dimensional virtual space displayed on a screen of a display device. At least two recording devices record the output of the cameras. A lock button has a part cylindrical socket that receives the pivot pin to mount the lock button pivotally on the door handle. The removable section retains the optical element with the optical element positioned in the housing cavity.

1459825903-3011e2de-88b0-4caa-ab6a-8e11603ba1ad

This invention discloses a spectacle edging assist device including a flexible layout chart, chart holding portion, and spectacle frame holding portion. The wires protrude vertically from the walls, serving as pins for electrical connection of the leads inside the package. Additional variables, such as arterial blood pressure, may be used in combination with a first variable input relating to one or more properties of a cranial blood vessel, such as flow velocity of the middle cerebral artery to derive ICP using a non-linear relationship. The thermal damper manages temperature rise of the electromagnetic coil and the thermal structural plate provides cooling to the coil stack. A long-term predictor detects backlogs of work items where excessive delays in queue are likely to put work items at risk of failing to meet their commitments.

1459825903-34e9d1a4-174c-49f2-afc2-db1592628f10

Managing application performance on a network. Also, phosphate and polyphosphate molecular fidelity altering agents are disclosed. The local advertisements may be displayed when a user selects a related global advertisement.

1459825903-60824612-11dd-4358-87d8-8ba1613c2397

Embodiments of the invention use silicon on porous silicon wafers to produce a reduced-thickness IC device wafers. The techniques apply zonal harmonics which approximate spherical functions as sums of circularly symmetric functions around different axes. A computer then serves to substantively interpret this insurance product model to facilitate obtaining supplemental policy-specific data. The recessed channel is within the media support region and extends from the spindle motor region to the enclosure sidewall.

1459825904-6e4614b7-a3b0-47e9-afd7-75cb35c00268

In a ballast circuit for supplying a high pressure discharge lamp and comprising an up-converter and a bridge circuit, the output voltage of the up-converter is controlled at a higher level immediately after the ignition of the lamp and at a lower level during stationary operation. A control pod receives the control signals, the control pod controlling the external device. The switching assembly further comprises a first anchoring member mounting the torsion member to the stable structure, and a second anchoring member mounting the leaf spring to the stable structure. The invention then counts the number of clock cycles during which the selected character was in the transmit data path.

1459825904-8146d7e2-32c0-4b89-97b0-d3b235219f2d

A CT scanner acquires CT images at different energy levels and registers those images to provide a composite image that is substantially free of beam hardening artifacts and conspicuously provides atomic information of that imaged. The present invention further provides for an ablation catheter tip, for use with an irrigated catheter device, comprising an inner cavity and at least one curved passageway that leads to an orifice, wherein a line drawn tangent to the arc of the curve forms an acute angle measured with respect to a line drawn tangent to surface of the ablation electrode at the orifice of the passageway. Relatively long mirror torsion components are used to reduce forces required to pivot the mirrors. Spaces between the rods are filled up to a first surface region with a viscoelastic material. A positioning disk is pivotable relative to the pad and has two pairs of notches to alternately receive the extensions such that the frame which is adapted to support an LCD screen is able to be supported at an upright position or in parallel relative to the base.

1459825904-9daa1cfe-a411-4232-8599-72ce49682e4d

Higher layer packet framing information is transmitted across an air interface only as necessary, utilizing the Radio Link Protocol. Thus since a sensor portion is fixed to a main-body base with two kinds of adhesive agents including the soft adhesive agent and the hard adhesive agent, it is possible to suppress the

positional offset of the sensor portion at the time of its attachment, and it is possible to sufficiently ensure reliability with respect to the temperature change as well. Finally the estimation engine correlates and combines all received target data to derive a final target solution. The device includes a signal processor connected to the electrodes for acquiring electrical signals from the electrodes and generating a twelve-lead ECG from the electrical signals.

1459825904-b1a7a3c0-9cb1-4d4b-8668-d418dc7d6b44

Apparatus for allowing the photoactivation of photosensitive composites used especially in the dental field: A case containing a power supply unit electrically controlled by a central electronic processing unit. The power supply has an ACDC converter for producing converter DC, and also a rechargeable battery. A processor coupled to the interface and programmed to select a plurality of participants from the customer data to receive a plurality of signals representative of at least one demand response event. The single image includes a plurality of display areas, with each input device having a corresponding display area wherein data simultaneously and separately input via each input device is simultaneously displayed in the corresponding display area. By means of the triggering device, the horn system of the motor vehicle can be put into operation when the first triggering signal is emitted by the first triggering unit and the second triggering signal is emitted by the second triggering unit.

1459825904-b21c666b-0a33-41bf-b2f3-dbf4e9d81cad

A complex divider utilized for dividing a first complex number by a second complex number to generate a computing result includes a computing unit and a dividing unit. A need still exists in the art of design and manufacturing of optical coupler devices to provide superior performance, improved reliability and reduced cost simultaneously while addressing issues such as walk-off. Bus B becomes the owner of the RAM. Optionally, a security mechanism can be utilized to determine the scope of access to the control system entity and/or instructions, applications, and services therein. The sorting method includes identifying an object for eviction that is cached in the region of cache and that has been used less frequently than other objects that are cached in the region of cache. An ozone generator may be included for introducing ozone gas into the collected fouled water in the spin chamber.

1459825905-6d727886-dec7-47c5-9755-2460dac3f359

Acronym and synonym pairs can be identified and retrieved automatically in a corpus and/or across an enterprise based on customer settings globally or for a single instance. And, a pressure reducing means for the reduction in pressure of refrigerant flowing towards the oil separator from the oil return compression mechanism is disposed in place between the oil return compressor and the oil separator in a discharge pipe of a lower stage compression mechanism. Moreover, through the coordination of the front wheel, stand rod and handle, the operator will be able to practice different car-driving actions of turning the body, hips and hands around, and different strength-exerting ways, such as by twisting one foot or two feet synchronously. By virtue of its structure, the need for particular rotational positioning of filter components in relation to one another is significantly reduced.

1459825905-fa1e75fc-2bc7-4b8f-92d0-46beee2f6010

A system for automated operation of a blood separation system controlling the input of blood samples, the separation of blood components, and the discharge of the components. The invention forms the marking for the throttle lines with a separate component that can be applied to the throttle line positively and/or nonpositively. The bottom and top walls expand into an opposing double domed shape as the food product is being popped, puffed, or expanded in the microwave oven. A long water drainpipe is removed from a starter for a recreational vehicle. In the electronic camera, the data attached to the image indicates whether or not the image file previously has been transferred from a storing area where the image is stored at

present to another storing area. Steps of the sequence can include ceasing operation of augers of compactor apparatus located in the cotton receiver are turned off, and moving the compactor apparatus downwardly within a cotton receiver of the machine and against cotton accumulated in the lower region of the receiver, one or more times, for further and better compacting the cotton.

1459825906-01f2ef4e-9eb9-4188-b09a-7d15ac940042

System and methodology for performing Bayesian-based distributed query processing is provided that solves the problem of how to get each server participating in a Bayesian distributed search system to return the same accurate relevance score for different documents. A method in accordance with one embodiment of the invention includes disposing a polishing liquid on a polishing surface of a microfeature workpiece polishing pad. The application virtualization system receives notification of an application preparation session and monitors the session to collect configuration information that the application uses to run on a client. The non-display area is exposed to light to adjust a pre-tilt angle of a liquid crystal included in each of the non-display area and the display area. This Abstract is not intended to define the invention disclosed in the specification, nor intended to limit the scope of the invention in any way.

1459825906-9dcb7c61-c3cf-4e8b-ba57-5819e3e5516c

A first set of pixels of a short exposure image and a second set of pixels of a long exposure image may be obtained. The present invention measures near normal incidence and grazing angle of incidence reflection from a small region on a sample. In some embodiments, the reservoir includes a relatively large-diameter fill port. The pieces of data may be structured according to a markup language such as the Extensible Markup Language, and XML schemas may be associated with each piece of data for allowing the data store to validate the structure applied to the data based on an XML schema associated with a given piece of data.

1459825906-f62b26d6-a8cb-4fe9-ae4c-903a3dfae655

A semiconductor defect type determination method and structure. The device comprises a fixed bar compensator at an adjustable oblique angle with respect to the winding line of the thread which varies the length of the free path of the traversing thread. The USB data storage device can also be held in sliding engagement by the sleeve, so that it can slide between a retracted position and an extended position. A detection device of the clocks may detect the hyperfine transitions of the particles. The fan means are fixedly mounted on the handle and positioned above the pump head, the fan means bounded by an upper end and a lower end, the lower end being accurately formed over the pump head in order to allow the user to position his finger on the pump head to manipulate the pump in order to eject a fluid from the fluid reservoir incident to the fanning procedure. The method displays the first sub-report and the second sub-report with the report.

1459825907-2e4577b3-6faa-4294-8773-4d691a1e1fca

The present invention is a photoresist remover composition used in order to remove photoresist during the manufacturing process of semiconductor devices, such as large-scale integrated circuits and very large-scale integrated circuits. The plug has at least one aperture adapted to engage at least one latch in the connector receptacle. Some may use the NFS protocol, whereas others may use the CIFS protocol. The skinhair conditioner includes an audio signal generator and a vibration mechanism to alert a user of a change in status of the conditioner. The markup document includes device-aspect-ratio information which is referred to for displaying of the markup document. The passageway may include at least one efflux hole to permit coolant fluid to flow from the passageway, or may define a closed loop.

1459825907-400725b7-552d-40f9-ae82-53f455a35734

It is an object of the present invention to provide an ink composition using a

metal phthalocyanine type cyan dye, according to which the indoor storability of images created using the ink composition can be improved. As a result of the application of the malloc-combining optimization results in improved cache locality allows for prefetching array pointers and data elements of the dynamic arrays as if the dynamic arrays were static. A second pre-charge circuit of the present invention integrates within the normal drive circuitry a method of connecting the anode of a given OLED device to a positive voltage while concurrently connecting the cathode to ground just prior to the desired on time, thereby overcoming COLED rapidly. At the end of a CRC error detection division operation, each circuit element corresponds to a bit in a bit error pattern syndrome and the logic gates determine if the contents of the circuit elements match specific bit error patterns. A dataset is searched using a structured search query that includes all boosted terms, as well as any remaining query terms that do not correspond to one of the boosted terms.

1459825907-576800ce-aa26-4977-b6cc-f9dcf322c904

A method and system for forming service compositions to provide service components to business processes. The grinding bowl has a filling of grinding bodies and is provided with frontal grinding bowl bases. An actuator rod passageway is formed in the pit lid and extends between the latch operating lever storage recess and the undersurface of the pit lid.

1459825907-6ac518e8-b9f9-4a68-82f1-0a1c2bcbb29a

The invention provides a method of obtaining a population of antigen-specific T cells from peripheral blood of a host. The thermal sensing arrangement detects a prescribed temperature condition. An ordinary garden hose is attached to a hose bib outside the screened enclosure and to the hose bib to garden hose adapter providing the water supply. The method further includes forming a gate dielectric over the condensed germanium-containing fin, and forming a gate electrode over the gate dielectric.

1459825908-5a6fb98a-a83b-407b-b996-5670b15655b1

A coating containing pigment particles and a polymer matrix is provided. These compounds include inhibitors of the beta-secretase enzyme that are useful in the treatment of Alzheimer's disease and other diseases characterized by deposition of A beta peptide in a mammal. A method of providing recovery and rehabilitation from states of reduced consciousness by neuromodulating a target site of interhemispheric fibers is also provided. The scraper blade is configured to push or sweep away excess adhesive from one end of the sheet bundle to the other end thereof across the backside, removing excess adhesive while forming a smoothly finished surface of adequately softened and flow-able adhesive. Accordingly, the inventors devised an exemplary antifuse structure that includes three normally disconnected conductive elements and a programming mechanism for selectively moving one of the elements to electrically connect the other two. Calculating a Fourier transformed function by Fourier transforming the product of the obtained function and a diffracted light distribution from a pattern on an object plane of the projection optical system.

1459825908-8e865b13-35d2-481b-82e0-de03b187a162

A delivery system comprises a frame, and a plurality of hoppers attachable to the frame in a vertically spaced apart arrangement. This new and distinct variety has shown to be uniform and stable in the resulting generations from asexual propagation. the diameter of a crankpin orbitally rotating during grinding operations, includes a casing, a V-shaped reference device and a rod that can move within the casing with respect to the reference device, an end of the rod projecting from the casing and carrying a feeler for touching the surface of the workpiece to be checked and transmitting the movements of the feeler to a transducer. A second steering control arm is pivotally connected to the lower part at an opposite side of the vehicle. The overall thickness of the laminate typically

is less than 100 microns, permitting it to be easily cut and manipulated at the job site while providing an effective, long lasting weather seal. The cutting member can be flanked by two flanges configured to direct ice that has been disrupted by the cutting member outwardly through the clearing ports.

1459825908-a11f8581-a918-486b-bc5b-35e904cd0d14

One embodiment of the present invention sets for a mechanism for determining an optimized investment strategy across a portfolio of media channels for a given product or service. Information from one of the non-human users can be automatically received at the site and evaluated. The frequency converter further includes a trap circuit, which resonates at a frequency of a harmonic of the local oscillator signal to substantially eliminate the harmonic. The pattern of the light is configured to cause sound waves in the test object when the pattern of the light encounters the surface of the test object.

1459825908-f2c558d9-80b1-43a6-ac9a-d31d23715a30

This invention relates generally to formulations and methods for improving level of moisture absorption and retention by the skin and for improving the appearance, feel, or comfort of the skin, wherein the formulations comprise pure rainwater. During operation, the system finds a partition of events into clusters such that each cluster includes a set of events. When the user has pushed the push knob while the push knob and the four-way knob are in a tilted position, the push knob in conjunction with the four-way knob linearly move backward in the pushed direction, whereby an internal switch and an external switch are operated. The at least one first baffle plate and at least one second baffle plate are arranged along an extension direction of the supporting bracket and extending between the bracket and the motherboard. In the receiving process the framework finds the name and data in the context and passes the data to a service registered with the same name. Gray discoloration of the substrate body and yellow discoloration in the vicinities of the metal wiring conductors can be prevented.

1459825909-58b98924-b790-4617-9d22-727ba1c595fa

An architecture integrates spreadsheet functionality into tables commonly used in word processing programs and HTML documents. A rotatable output shaft extends through a wall of the housing and is rotatably driven by the motor via a gear train. Instead of an ion implant step to selectively reduce the resistance of this layer away from the base, a layer of polysilicon is selectively deposited onto only that part. Power to the motor can be turned off to provide for motor speed sensing through monitoring the frequency of a generated voltage when the power is turned off. The origin server examines the non-quantized location information to determine whether to respond to the client request with content. Other aspects are described and claimed.

1459825909-a26da877-cdfb-4c2f-ba38-429b03ec08b7

An integrated device comprising a MOS transistor and a Schottky diode which are formed on a semiconductor substrate of a first conductivity type is shown. The first rinsing bath and the second rinsing bath are selectively employed for the purpose of use. More than half of the capillaries are closed and preferably shorter than the capillaries with apertures, and provide the resilient three dimensional web with an increased resistance crush and to collapse the capillaries under compression. For the frequency divider,  $M$  equals  $N$  plus  $D$  minus  $D \setminus N$  for each edge of the multi-modulus prescaler output clock  $CK_{pr}$  wherein the counter samples the digital representation of  $D$  and  $D \setminus N$  denotes an integer part of  $D$  divided by  $N$ , and  $M$  equals  $N$  for each subsequent edge of the prescaler output clock  $CK_{pr}$  wherein the counter does not sample the digital representation of  $D$ . The conveyor has various regions formed in part of ridges, troughs and apertures which reduce the weight of the produce stream, as well as reduces the vertical and horizontal components of motion of the produce stream, as the produce stream progresses from one end to the other.

1459825909-bba492fa-02c1-405b-9e6d-0e2d82321a49

A filter is annularly attached around a peripheral wall of a housing. The web supply section includes a pair of web supply stations for each web, and a supply roll is located at each web supply station. A display section 15 is controlled by a result of comparison between the voltage value of the battery pack 20 and the reference voltage value, and a warning is displayed when the voltage value of the battery pack becomes equal to or lower than the reference voltage value. A control unit controls the gain of the transmitter unit in response to the determined signal power.

1459825909-bbea8322-34a7-4b64-bb36-61cfb3f7b7fe

A process is disclosed for manufacturing a lubricant composition comprising combining a superabsorbent polymer with a material for decreasing friction between moving surfaces. Text and graphics are printed on a front surface of the labels and a patterned adhesive is printed on a back surface of the labels. The transceiver includes a diversity receiver configured to process the wireless signals from the wireless nodes. The detected position information is output to a personal computer, image projector, printer, etc.

1459825910-22e644a3-e6ca-4c87-9b5d-25a13b194556

The invention provides consumers with the services of multiple cards or accounts while allowing consumers to carry a single card, transponder, code and/or other access device. At least one door protection element of the door is formed on one sliding door, the sliding door being disposed on a casement of the door such that it can be displaced in a direction V, and the casement of the door can be pivoted about the axis S relative to the main frame. Tongue members extend for the sides and are receivable within cooperative wall cavities for a snug mechanical engagement.

1459825910-45e44f52-fab9-4fdf-a041-8947e9c8bb62

A clamp assembly for facilitating attachment and removal of a first component to or from a second component includes plural clamp bodies, each having at least two mutually perpendicular surfaces arranged about the first component. The apparatus has a frame, a needle block slidably mounted to the frame, a shuttle member slidably mounted to the frame, and a pick-up head. A drive assembly is operable to move the substrate holder. Further described are methods for preparing and using these vascular valve devices. The invention provides a spectrophotometer attached to a flow cell to monitor the color of a platy effect pigment to monitor pigment color and ascertain completion of the coating reaction process involved in interference pigment production.

1459825910-efa3687d-64a3-4b0d-95ef-65d600838a9a

System and method for reducing power consumption in integrated circuits with fuse controlled redundant circuits. Other embodiments are disclosed. The outer cover panel is clamped relative to the inner cover panel with an essentially radial force component such that a clamping point is formed in order to fix its axial distance relative to the inner cover panel. The block is mounted to the bottom support to provide resonance balance. The O-ring gives way to forceful patient exhalation to release the disk endpiece from the tubular valve body. The present invention attains the object by providing an ambient temperature molten salt including a first imidazolium salt having a cationic segment represented by the general formula and an anionic segment represented by MX<sub>4</sub> ; and a second salt having a cationic segment as a monovalent cation and an anionic segment as a halogen.

1459825911-40a54350-e973-41e9-bfae-ab7f3ad7c4a7

A method of creating a foam pattern comprises mixing a polyol component and an isocyanate component to form a liquid mixture. yHz, wherein R<sub>1</sub> is a trihydric or tetrahydric alcohol residue, z is an integer of 3 or 4 corresponding to the number

of hydroxyl groups in R1, and x and y are integers of 1 or greater attaining a weight ratio of oxyethylene group and oxypropylene group from 90:10 to 60:40 and a molecular weight of the resultant compound from 1000 to 4000; and Component B having a structure of R20a. The guide roller is almost in the shape of a barrel of which a coefficient of curvature T expressed by the expression 1 representing the extent of curvature of the circumferential surface is in the range between 0. The housing can be mounted behind an knee bolster or steering wheel of a vehicle and has a cover that can be flush with the cabin side of the mounted position.

1459825911-72088a27-ae44-41e9-b6fc-e4511abbe972

A method for fabricating a blue phase liquid crystal display is provided. Moreover, the carbon and oxygen stoichiometric ratio can be within a range of 1:0. Further, an annular biasing member is disposed about the sealing member outer surface and configured to exert a radially-inwardly directed force on the sealing member so as to generate contact pressure within the seal interface. The comparator is configured to compare the differential signal common-mode voltage level with a reference signal common-mode voltage level and produce an adjusting signal based upon the comparison.

1459825911-a6dc56ea-8fd3-4846-86bb-27c51c83875b

An insulating substrate includes a metal base as a base member, an insulating layer which is a room temperature, aerosol deposited shock solidification film formed on the metal base, and a circuit pattern which is a cold sprayed thermal spray coating formed on the insulating layer. Each of the message component candidate has a relative likelihood of selection predicted according to language usage in general and specifically of the user and according to the context of any portion of the message already composed. The HMI apparatus displays warnings on visual warning devices within the driver's view, can signal an active portable device to output a warning. A gap is formed between an end of the stator core and a lower surface of the distribution unit by mounting the distribution unit on an upper part of the coil end section.

1459825912-0297d961-fd61-458b-81b1-77da8e7b9b16

An input channel for the flow of waste water into a grit removal unit. The described embodiments enable an MS to handoff between different RANs without causing routing ambiguity, and without substantial loss of network data. In one embodiment, the invention comprises a bracelet having two or more tracks disposed on the surface thereof and a mounted jewel having a base shaped to travel within one or more of the tracks. A second detecting unit detects presence or absence of the shopping cart stopped along one side of the counter base. The kit further includes a flag having indicia printed thereon and including an edge portion selectively engageable with the receiving portion. The use of supplemental computer readable media on existing cards reduces the bulk that must be carried by the customer, and provides the customer with a computer readable medium in a convenient format.

1459825912-46a94fd8-96a0-4a16-8acb-77f8e90af4a1

A method and apparatus for computing metadata fields that are valuable or informative based on a particular operation, such as a sort field employed in sorting the content items, dynamically displays the informative metadata fields as a display set with the respective content items in response to the sorting field. The retention patch may be generally square and flat in shape and sized appropriately for use with a cap, such as a baseball cap. A second switching time is calculated using a carrier and the calculated first switching time.

1459825912-63a14384-7370-47f0-bbfb-6af5563878a0

High-bit depth sensors often capture more information than can be displayed on a commercially available display. Specifically, the present invention relates to a blend of waxes that produces container candles with surprising properties and

eliminates or minimize the use of costly microwax, polymers or additives. A virtual IT structure for the IT system is generated from the abstract IT structure by a translator. The conversion time calibration apparatus is configured to detect a conversion time condition and adjust the conversion time of the conversion circuit according to the conversion time condition. By replacing the original operations with more complex but logically equivalent expressions containing variables that also involve more operations, the true nature of the original operations is disguised.

1459825912-7fc6b89c-0ed0-454d-a4b1-fd0fa858ce44

A Pumped Distributed Wave Oscillator that provides a high purity accurate signal source with multiple oscillation phases. A plurality of subpacket ring networks are connected to the first packet ring network through an interlink used for client packet transport therebetween. A bridge is positioned proximate the distal end and transformable between a delivery configuration and a deployed configuration. 5 cm under a load with the passage of time ; exhibiting a free swelling capacity of not less than 23 gg, a ball burst strength of not less than 80 gf, and a deterioration of ball burst strength of not more than 40% ; or exhibiting a free swelling capacity of not less than 23 gg, an absorption capacity of not less than 20 gg under a load of 4. The first adder sums together a split signal of the primary input signal and an output of the phase shifter, thereby to produce an output. The one-way transmission of an isochronous packet and an asynchronous stream packet is performed between transmission and reception portals of the first full-duplex 3-port bridge and reception and transmission portals of the second full-duplex 3-port bridge.

1459825913-1e99bb58-1f7a-47e8-8685-cb7b6b956924

It is determined whether an attribute of the sheet of a printing target job is different from the attribute of a sheet in a sheet storage unit designated by the attribute of the sheet of the job. The optical connector can be terminated by a suitable cam activation tool. The body of the spinal implant may be formed of a ceramic material. A paper storage unit which stores an envelope to be used in printing is selected from the plurality of paper storage units based on a standard size of an envelope that is designated by a user. High speed downstream information transfer passes through a cable TV headend or a TV transmitter or a cell station.

1459825913-5d9ae279-7603-4ec6-a9c9-91a1908ed27d

An apparatus and method are provided for contacting at least two chemical species, comprising a support plate having a channel for receiving a mobile chemical species and a fiber, having a second chemical species immobilized thereon, disposed on the support plate. The preferred embodiment includes an inner washer, an adjustment nut, an intermediate washer, and an outer nut completing an interlock assembly. The error signal generated by a component causes the component to electronically switch off its data connection via the multi-wired cable with the other component, and may cause the component to reset itself.

1459825913-70a4b865-9755-4de4-9dfb-22dac0daedb6

A surveying system comprising a station and rover is used to make field measurements of a job site. The system includes a component in fluid communication between a high pressure side and an intermediate pressure side of the compressor. A demodulator is configured to demodulate a second signal, received from the communication channel, into estimates of the code words. The clamping device defines a space between the clamping panels for receiving the edge of the FPC. Each side wall is internally provided with a series of projecting support elements extending along the wall, each support element forming, jointly with a support element of the other side wall, a support for at least one rack of storage batteries. Additionally, leaf color varies with temperature.

1459825913-e56d752d-52f8-4b0d-a89f-ed72fedb2173

A new *Osteospermum* plant particularly distinguished by its mounding plant habit, early flowering with deep purple colored ray florets and large inflorescences. Rotatable armatures supporting permanent magnets are arranged to swing or revolve relative to the air gaps such that the magnetic flux thereof is intersected by the wire coils to generate electrical voltage and current therein. A first header containing the copied priority information and a new label is added to the first packet, and the first packet is outputted to a second output line. Reinforcement bars may be radial across the top surface or nonradial, and may be linear or curvilinear. Upright plant form with a cream heart. The component waveguides are then placed in physical contact with each other to form a composite waveguide thereby producing a waveguide sandwich.

1459825914-0fb99c62-8fd7-46f1-8bc9-7f91159edfe1

By controlling the hold up times and temperatures for mixing the components of aluminum, titanium and magnesium based catalyst for solution polymerization it is possible to prepare a catalyst having a high activity, which prepares high molecular weight polyolefins. This can improve the rigidity of a part of the inlet tube connected to the fixed core and suppress the generation of operating noise effectively, particularly in a high frequency region. A tunnel current is flowed between the first ferromagnetic layer and the third ferromagnetic layer. A plurality of channels or recesses is formed in the first encapsulant. These compounds have a high affinity and selectivity for GABA A  $\alpha$ 5 receptor binding sites and might be useful as cognitive enhancer or for the treatment of cognitive disorders like Alzheimer's disease.

1459825914-1636f5f2-ccbb-471e-aa1f-bafd6abe4d21

A semiconductor device mountable to a substrate includes a semiconductor die and an electrically conductive attachment region having a first attachment surface and a second attachment surface. The first body component is then fixed with respect to the second body component at the relative position, such as by laser welding. In one embodiment, the audial detector is a plurality of detectors arranged on a circle. In consequence, the combination may be used as an effective and safe therapy to control blood glucose in patients with type 2 diabetes, using different proportions of the active substances in combinations suitable for the needs of different patients.

1459825914-18c41a18-ff27-4210-a40c-05677c5f8dce

In a directly-illuminated liquid crystal display, for example an LCD monitor or an LCD-TV, a number of light management layers lie between the light source and the LCD panel to provide bright, uniform illumination. The assembly includes a load bin having a cross section conforming to an open end of a container and a drive mechanism configured to urge the load bin into and out of the container. In certain embodiments, the present invention can also be used to increase the efficiency of handing off wireless clients between access elements. The core can be formed of a compressed foam.

1459825914-5c686ab4-f0f4-4da2-b57e-e57607e7f4fa

A method and apparatus for treatment of heart failure, hypertension and renal failure by stimulating the renal nerve. Grease guns conventionally have a pumping head with a barrel and lever joined thereto for cycling through pumping and restoring strokes between restored and depressed extremes. A laminated TMR layer, having a plurality of laminates, is deposited over the bottom lead. The allocation of processing elements to the multiple contexts may be determined dynamically in order to improve graphics processing throughput.

1459825914-d5e81378-034c-4344-b40a-54083c08a572

The invention provides a renewable composite filter media for removal of particles from a fluid stream. The arch is extendable from a stored to a deployed condition. The invention further provides treatment modes for other localized diseases by

controlling CD4+ cell trafficking and infiltration. The attaching step is carried out such that the stack is disposed between the substrate and the carrier window, which is transparent to the second wavelength \u03bb2. Firstly a solder ball is disposed on a bottom surface of the bend portion and soldered to the printed circuit board to mount the contact to the printed circuit board.

1459825915-3beb3a6d-2557-41f4-9d4f-74526a6fcaa1

One embodiment relates to a programmable output buffer which includes first and second programmable variable-impedance single-ended driver circuits and first and second termination circuits. In such circuits, an ultrasonic transducer is typically used as both transmitter and receiver. A gate is also provided that is slidably mounted therewith the rotor and movable axially about and between a first position, in which a distal end of the gate is positioned at a first distance from the peripheral surface of the rotor, and a second position, in which the distal end of the gate is positioned at a second distance from the peripheral surface of the rotor. Each retaining device includes a supporting member and a latching member corresponding to the supporting member. The antenna is attached to the holder.

1459825915-b201b024-8299-4970-96e0-256f0cd67e0d

The invention is directed to a method for sequencing multiple target polynucleotide segments in parallel, and to compositions and kits therefor. At least a part of the second image transferred to the sheet is formed on the first image transferred to the sheet. By providing a shared separation system, the number of separation units in an integrated methanolMTO reaction system may be advantageously reduced. Then, a charging layer is formed at a bottom of each of the trenches to form undercut trenches. Once resources are assigned, system conditions are evaluated to determine whether optimizations may be made to a current resource allocation.

1459825916-084de864-2e79-4493-ac94-e8cef7908427

A method for operating a vehicle having variable-speed left-side and right-side propulsion units. In an implementation, textual directions for traversing a path are generated based on positional information associated with the path. Subsequent deenergization of the path causes the resiliently flexible member to return to its initial position, the rate of return being measured to derive a signal representative of the viscosity. The control levers each having one end rotatably connected to the rear roof part and another end rotatably connected to the support plate. The vehicle may be a robot capable of participating in a game.

1459825917-050fb53c-d8c8-491c-ad10-b89053575d8a

A process for preparing ethyl tert-butyl ether using low-water ethanol obtained by membrane dewatering at least two streams of relatively water-rich ethanol that have a different water content. Via holes are positioned on the faces of the mid-plane board according to one of two schemes. The filtered signal is then processed to obtain measures of certain frequency components in the filtered signal, and a power estimate for at least one of the FDMA channels is calculated based on at least one of frequency component measures. The signals may be combined using the weights and the scores associated with the signals to obtain a risk probability for the developer account. The article of manufacture includes, but is not limited to, waxes, lubricants, additives, etc. An opening portion is formed in the bracket and configured to pass a part of the reflected light from the reflector along the optical axis.

1459825917-2612888c-169b-469b-a776-20448fc1532c

Efficient switched network multicasting techniques are provided. The antenna comprises series-fed antenna array columns tuned to a respective transmit and receive frequency. Elimination of angle of arrival errors arising from imprecise knowledge of platform electronic warfare antenna characteristics is a focal point of the invention and is accomplished through precision use of global position system information received via the same electronic warfare antennas. If a

correlation threshold is exceeded, then the correlation value is examined to determine it is a peak value. This method is suitable for producing channel waveguides for planar lightwave circuits, where the refractive index profile of such a waveguide is more uniform than the prior art refractive index profile produced by a TEM<sub>00</sub> laser beam, and has a reduced bend loss.

1459825917-4f84710d-4077-4328-84c1-dbf6f3caf595

A transporting device and method for depositing sheet material on a tray, the transporting device including at least two rollers which can be displaced with respect to each other, with a belt extending between the rollers above the tray, the belt being connected at its ends to the two rollers, whereby the belt can be rolled up onto and unrolled from at least one of said rollers. In particular, the present invention relates to such a therapy wherein the interferon is peginterferon alfa-2a and the disorder is melanoma containing the V600E b-Raf mutation. In a further aspect, the chamber may be enclosed by a dummy cap. Finally, a clock of the sync pattern signal and the detection window signal are compared, and the clock signal is corrected. The other portion of the split beam enters the viewfinder optical system. The second wall abuts an end of the second substrate for retaining the second substrate between the second end and the second wall for preventing movement.

1459825918-285bf14f-15f5-4de9-ac77-0541dbc680f6

A touch pad includes transducers for receiving acoustic signals resulting from touch events, such as the continuous movement of a fingertip across the surface of the touch pad. In the angled portion, an opening portion of gap and an inner portion extending from the opening portion to at least an intermediate location of the gap are oriented along an extended straight line that bisects an angle between the first front surface of the first member and the second front surface of the second member. A flexible plate is fixed to the piezoelectric element with an electrode plate in between. The method further includes the steps of third, forming a first sidewall-forming layer in a fixed relationship to the sidewalls and forming a second sidewall-forming layer in a fixed relationship to the sidewalls. Signals collected from sensors are compared with training sets to recognize specified motional commands or gestures.

1459825918-6871bb9b-0724-45af-abc4-528687d17a65

Photoacid generators generate sulfonic acids of formula upon exposure to high-energy radiation. The multipurpose bus functional model utilizes a configurable data structure to interact with a device being tested by providing high-level test generation routines defined by the bus interface specified. The methodology determines how many items to check for a given shopper as well as which particular items to check for that shopper.

1459825918-7a757b83-51b2-432b-b6d6-1febcd73c106

An end member is mounted on an end of a cylindrical rotary body. The XRO film can be capable of absorbing at least a portion of X-ray energy thereby creating an interference pattern when the XRO film is coupled with an electronic circuit and placed between an X-ray source and an X-ray detector and subjected to radiographic inspection. Specifically, a watch that embodies the present invention is uses addressable reflective display technology such as electronic ink or gyricons. The direction of any desired number of the interface buffer circuits can be reversed based on the needs of a desired dedicated device by re-routing the conductors in the interface buffer circuits in a single metal layer of the integrated circuit. The BS further determines the transmit symbol vector of the MS or per bit Log Likelihood Ratios using the power difference values. The adhesion promoter comprises an aromatic polyimide-based UV-cured acrylate.

1459825918-c0e157b5-0d5e-402b-901f-cb25b6bb6407

A recording apparatus including an ink tank and a recording head having a flow path

forming portion that has an ejection orifice plate having plural ink ejection orifices and a liquid chamber provided for each orifice to supply ink to the orifices, and an energy generating element for ejecting ink in the chamber. The valve includes a body that has an inlet for connection to an injector, an outlet for connection to a catheter and a secondary connection for connection to a pressure transducer. A request, made by an application on the client device to a SaaS service provider identified by a Universal Resource Locator provided during configuration of the SaaS access control application, is intercepted within the network software stack of the client device.

1459825918-fbb0dabb-fe13-4fd1-b921-336443e8f813

Techniques for generating a distributed stream processing application are provided. One method generally includes binding secondary SERS particles to the primary SERS nanoparticles after binding of the primary SERS nanoparticles. In the event of a grill fire, the thermocouples detect the high heat, send a signal to the control panel, that in turn activates a mechanical lift to move the barbecue's cooking-grid away from the flame. A receptacle cover is pivotally attached to the receptacle flange.

1459825919-40c3606d-775e-4c7b-9a3d-73133db2cf7a

A method for weaving a pile fabric with areas having a corded structure, a backing fabric being woven on a weaving machine by inserting backing weft yarns during successive weft insertion cycles between binding and tension warp yarns, while pattern-weft yarns are inserted outside the backing fabric, and are covered by pile warp yarns forming cords. The hot edge ring has a first surface and a second surface. A blade including a portion is disposed within the recess.

1459825919-c1d75eeb-f24b-4bd9-8fb2-9218740fc205

An electronic couponing technique includes transferring coupon information, which may include a coupon ID to a first portable terminal and storing same therein. The division is performed at a rectangular multiplier using the Goldschmidt or Newton-Raphson algorithm. The supporting members are disposed at opposing ends of the belt and support a rotation of the belt. The programmable logic fabric is coupled to the one or more signal processing engines for routing of information between the signal processing engines. The first polarizing plate is disposed on the upper substrate.

1459825919-cb58a982-8272-4efe-87a3-f8d7a97922d9

A software product and method of monitoring a field device in an enterprise having an industrial process. A pressure sensor responds to a rise in air pressure supplied to the bottle by shutting off the pump. In the wireless network, the sensor node transmits in response to a sensed event and/or a request from a control node.

1459825920-496d54fb-2c57-4fb8-ad9d-2a7befbd80c3

Novel organic arsonic compounds are described as tumor inhibiting, and cancer treating compounds. The low and high density zones may be formed from laminates having different equivalent densities than the layers used to form the laminates. A server program 411 controls the sending of music data to the client 402, and registration of information in a music database 415, a link information database 416, and a ranking information database 417, searches the music database 415 for the requested music data, and sends the music data to the client 402. A third step may include second fabricating the chip to add the upper metal layers. These processes are realized with software by a DSP. At least the first shaped strip is joined to the second web.

1459825921-2b3e811f-3fde-44e3-b739-61e676074e3c

A method for forming a structure comprising multiple parallel surfaces having a precise separation is disclosed. The first peripheral edge is provided on the edge portion of a first upper surface of the substrate on which a light-emitting diode

element is mounted. The grinding assembly additionally includes two or more grinding elements that are axially mounted on the shaft in a spaced apart relationship, each grinding element including at least one disc-shaped grinding wheel. A first blocking device is associated with the second slide assembly and coupled to one of the ramp and the follower.

1459825922-2f3e6f6f-0149-4d57-b0c2-7a2c15078d63

A modular integrated socket apparatus comprises a shell, a pop-up structure, an adapter module, a connector base, and a coupling device. A bar is mounted in the enclosure and rotates about its longitudinal axis. An oxalic acid aqueous solution is injected from the oxalic acid injection apparatus into the circulation pipe. Upon receipt of at least one of the hash codes and the pixel data together with the location data, image data are generated. During the monitor interval, the connection module determines whether the load has been connected to the output terminal of the power supply. The solder resist layer is formed on the dielectric layer to expose portions of the redistribution lines.

1459825922-4179e33e-3818-4b2d-9d6c-c36b1c553649

An apparatus and method for shaving the inside of barrels. The device further includes a first lens set receiving the first light to generate a first transmitted light, the first transmitted light having a first profile, the first profile having a first profile error portion and a first non-error portion. These features of the invention are achieved by providing a thermal control circuit, a temperature sensor and a heater that are integrated along with a laser output power monitor photodiode into the submount assembly substrate. The content distributor can form a social network of members based on association of viewers that correspond to one or more of the client devices, and can determine recommended on-demand assets from different ones of the recorded on-demand assets for the members of the social network.

1459825922-4e22b548-99dd-4743-b8a1-2704e38441aa

According to various embodiments, the system and method of the present invention process light-field image data in a manner that reduces artifacts and that yields 2-D images with extended depth of field, and with variable placement of the center of perspective. The pump light beam is pumping a laser medium. The recording layer also has, when unrecorded a refractive index, at a selected wavelength from 400 to 660 nm, comprising a real part greater than 1. It is based on performing property-specific analysis on iteratively less abstract models of the design in order to obtain interesting paths in the form of a Witness Graph, which is then targeted during simulation of the entire design. The various embodiments provide for an improved cooling fluid delivery system of design simplicity, ease of use, and interchangeability that allows a cyclist an evaporative cooling concept safely, efficiently and conveniently, while riding in conditions of elevated or extreme temperatures.

1459825923-68dc48b2-31ed-4d09-abda-e5a95097f46f

Providing a narrow strip of electrically conductive rubber extending from a lower undertread layer to the surface of the tread by positioning a slotted chimney block in an outer tread rubber passage of a tire tread die and having the chimney block passage in communication with a lower undertread passage of the tire tread die. The sheath body is configured to be installed over a medical device. The sum signal thus generated is representative of the desired clock signal to be recovered. The multiplication results are then summed up to obtain an addition analog signal.

1459825924-17470a78-90e8-45bf-ac86-37aba91c22db

Devices and methods of forming a device are disclosed. The polisher comprises a base, a turntable, a polishing pad and a head drive mechanism for driven rotation of a polishing head. Moto-Auto Visor is also beneficial to Handicapped Individuals that can't easily remove and install a Sunshade. In an alternate embodiment, the

position sensor may include a sensing circuit that receives an analog signal from the sensing element and provides both analog and digital output signals. The carboxylic salts may be mixed with other nutrient substances to further improve performance. In an example, an apparatus can collect interrupt requests from a plurality of peripheral devices, and can communicate interrupt information to a processor.

1459825924-424afdef-e694-4799-8d32-f5ebff7cc4bf

An axial setting device having two discs which are rotatable relative to one another, which are supported coaxially relative to one another and between which there are guided balls in pairs of ball grooves whose depth varies across the circumference. The voice communications apparatus includes a transmitter frequency characteristic corrector circuit for correcting the frequency characteristic of a signal input from the telephone set, and a receiver frequency characteristic corrector circuit for correcting the frequency characteristic of a signal to be input to the telephone set. Preferably the ionic liquid catalyst system comprises a Brønsted acid. The core part is located farther from the medium facing surface than is the coupling part, and is magnetically connected to the main pole. The output terminal of the multiplier core is connected through a series LC circuit to the source terminals of the first and second nMOS transistors. A vortex disrupter structure extends from the exhaust dome to a point distal of the turbine to evenly distribute the exhaust gas entering the recuperator and sustain diffusion of the exhaust gas to increase the expansion ratio across the turbine.

1459825924-5ad2929c-400c-4d04-863e-9b94e1a897f4

Methods, devices, and systems for ultrashort pulse laser processing of optically transparent materials are presented, with example applications in scribing, marking, welding, and joining. In one implementation, a semiconductor processing method includes forming a substantially amorphous Ta<sub>2</sub>O<sub>5</sub> comprising layer over a semiconductive substrate. The control unit decides a driving order of the laser diodes according to the modulation signal of the light receiving unit so as to control driving of the laser diodes, and decides current values of the laser diodes according to the modulation signal of the light receiving unit so as to control current amounts of laser diodes to be driven. A treatment timer is associated with the container holder.

1459825925-3b522ed7-93a9-4105-b9cb-2e8f36f22995

The present invention provides novel crystalline forms of ascomycin as well as processes for the preparation thereof and pharmaceutical compositions comprising such crystalline forms of ascomycin. Preferably, the barbell is at least partially within a horizontal channel defined by the beam when mounted thereon. By placing input and output devices, in series, external voltages can be divided between the devices thereby reducing junction voltages seen by internal devices. A reservoir tank of the hydraulic fluid is connected to the hydraulic circuit by piping. The timing of such deactivations may be made compatible with mobile stations that do not recognize transmitted registration flag information.

1459825925-9ca5436a-3231-49d7-8c5a-4d409ee0e224

An antenna for transmitting and/or receiving electromagnetic waves has a flat ground plane, and an array of radiating and/or receiving elements. Furthermore, the thickness of liquid crystal layer in the transmissive region can be adjusted by controlling the film thickness of the organic insulating film for transmission and the film thickness of the color layer for transmission. The terminal receives the control signal and the data signal according to a notified control signal position. The second resistors couple primary inverting inputs of the op-amps to a common low voltage reference rail, which is coupled to a true ground reference pin through a coupling wire which exhibit a combined inherent resistance.

1459825925-b187d2ec-934a-4d6a-892b-1252cdc8b110

A network-capable device stores an address of another device. The present invention provides a multi-year calendar not much bigger than a standard business card which encourages the recipient to keep and use the invention as a calendar for possibly several years, with the business person's name and contact information pre-printed on the invention. To install, the rim is slid over the wheel, and the rim and tire are bolted to the wheel.

1459825926-19780ffc-b9c1-41f4-8be6-8fee061e4b18

An engine tool comprises an engine, a housing retaining the engine, a top cover provided above the housing, and an air cleaner room provided at the housing. In addition, they cause cosmetic problems in the carrier after implantation as a result of their external configuration. According to an embodiment of the invention, the detecting element is suitable for measuring at least one colorimetric characteristic of an image produced by the display device.

1459825926-3e56979e-b662-4c15-89c6-467aefccb7ba

An aero-acoustic aviation engine inlet with a single air blowing slot or multiple air blowing slots flows air over one or more segments of inlet acoustic lining surfaces at speeds that are higher than the inlet mean air flow speed, for aggressive inlet noise abatement. Absorber tubing is connected to an supply header and to an return header. At least two plates are disposed in parallel relationship and joined in sandwich construction, with one of the plates constructed to accommodate the venturi nozzle. The method can also include the steps of bonding the conductive vias to the substrate contacts, and forming terminal contacts on the interposer substrate in electrical communication with the conductive vias.

1459825926-99e27e00-7b9c-40c9-9d60-431f75b7a4cb

An electrical generator system includes a source for producing heated gases, a conduit connected to the source for receiving a flow of the heated gases, and a generator assembly positioned in close proximity to the conduit. The sensors are arranged to receive shockwave-only signals. The system and method may be used for bag filling applications. The ceramic layer and the metallic layer are alternately arranged on top of each other in such a way that an external layer forming an external surface of the wear-resistant coating is embodied as a ceramic layer. Alternatively, a high frequency intercept tone or call waiting tone is also provided when the called parties are already engaged in conversation when an urgent call is incoming. The dielectric spacers are etched back to a second width smaller than the first width.

1459825927-85072af4-e1d4-47fc-b8c5-6570d6e61131

A tree cutter in combination with a self-propelled vehicle is disclosed for cutting underbrush and small free standing trees, such as, Cedar. Thus, decoding can be enabled at terminals having inferior decoding capabilities and display capabilities. The end of each of the stop blocks is a stepped structure, plus the elastic deformability of the stop blocks, which makes the recess capable of holding different sized semiconductors.

1459825927-a6e1b75a-caad-4150-a33e-b859d767e155

A level difference or a uncut portion is prevented from being left between adjoining worked regions without forming any useless worked region. The circuitry may include a constant current source inserted in a leg of the defibrillator circuit or a resistor of selected value inserted between a high voltage source and the high side of a defibrillator circuit. The first heat pipe has a flat top face thermally contacting the bottom of the fin set, including a first transferring portion thermally engaging with the base and a second transferring portion extending from the first transferring portion and projecting beyond the base. Upon receiving an incoming data packet, a packet community set is determined for the data packet.  $5$  and  $X \geq Y$ , wherein  $a$  represents the thickness of the filler alloy layer clad on the core material of the inner side of the hollow structure, and  $X$  and  $Y$

represent the Mg contents of the core material and the brazing material, respectively. In particular, the compound has a 3,3'-bicarbazole core substituted at the 9th position with at least one of dibenzofuran, dibenzothiophene, dibenzoselenophene, azadibenzofuran, azadibenzothiophene and azadibenzoselenophene.

1459825927-ea650731-ef99-4a5e-8b16-7f84cbd74ff9

A multiple integral pressure transducer system for installation in oil field downhole coiled tubing systems. The rotor is connected to the stator by a high frequency connection via a line. The terminal can synchronize contents of the plant documents in the document server with those in the control system before storing the synchronized plant documents in the terminal. According to one embodiment of the invention, the temperature sensing element comprises a temperature sensing resistor and the heating may occur via non-nucleating heating. A source transmits traffic for the LAG.

1459825928-04cc5a27-3c23-43ad-ac13-f7faf30d9057

An optical film in which at least one layer of a cholesteric liquid crystal layer and a retardation layer are laminated, wherein an in-plane retardation of the retardation layer is 5 nm or less, and a virtual thickness direction retardation:  $R_{Zch}$ , and a thickness direction retardation:  $R_{Zre}$  have a relationship of  $R_{Zre}=0$ . One of the processors adjusts the motor assist torque to reduce the driver effort based on specified requirements defined by boost curves. The transparent panel is adapted to insulate the thermal energy captured by the liquid circulating in the enclosure. Hence, even rays exhibiting low energy loss capability can be detected in real time with high sensitivity. The two knife edges of the electrodes are spaced apart from each other and extend perpendicular to each other. Composite objects are defined by definition objects and are displayed in encapsulated or expanded formats.

1459825928-83430e54-cf79-4f80-95c4-c64a1267cfdd

An electromagnetic transmission apparatus comprises a plurality of electromagnetic coupling elements, wherein each electromagnetic coupling element has at least one resonant structure. The slave robotic unit includes the driving mechanisms which are more compact than those of the conventional MIS system. The second receiving region includes an upper socket and a lower socket.

1459825928-a7bbfa53-e6b8-466c-bdef-27fa48d65755

The present invention provides a semiconductor switching circuit and a semiconductor device using the switching circuit that can maintain sufficient isolation characteristics even when dealing with high frequency signals. The compounds of this invention have the structure: wherein R1a, R1b, R2a, R2b, R3, R4, R5, R6, R7 and X are as defined herein, including stereoisomers, prodrugs and pharmaceutically acceptable salts thereof. The blades of the VAWT are disposed so as to avoid interferences with communication signals. to detect the loss of traction by one or both drive wheels and adjust the operation of the motor until traction is regained. Thus, it is possible to eliminate play generated between the inner peripheral surface of the cover sheet and the outer peripheral surface of a sheet inserting portion and play generated between the inner peripheral surface of the disc substrate and the outer peripheral surface of the disc inserting portion.

1459825928-eacd255f-882d-4205-b785-d29f212d1dd5

The present invention provides an improved motion estimation encoder for digital video encoding applications. The condensable fluid in liquid form is contained as a bath in a chamber in each stage of the condenser, and the carrier gas is bubbled through the bath to condense the fluid into the bath. An inclination judgment unit calculates inclination angles each defined by each reference installation direction stored in the reference installation direction storage unit and the installation direction measured by the acceleration sensor.

1459825929-182e0db4-b4e4-4172-9e63-cc72f3d80de6

A composite gland sealing for the interlocking coupling of a housing end piece including an anchoring groove, a plastic ring and several locking inserts. Best operational practice requires that the air passing through the filter be distributed uniformly over the sorbent bed. When the motor is driven by limiting the current of the motor by I<sub>03b2</sub> and I<sub>03b3</sub> after T1 passes, it is decided that there is a probability of occurrence of an abnormality when rotation of the motor stops and the decision is reported to the external device. By means of the cantilevers, the inlet-side and outlet-side tube sections are deformed as a result of lateral displacements of the flow tube.

1459825929-d1f135be-f9e8-488f-81cc-6c06d0b7f82e

The present invention provides a method and an apparatus for abstracting logical topology information of a Peer-to-Peer network. The actuator has at least one protective member for protecting the last article in the stack being formed, said protective member being suitable for being interposed between said last article and a current article coming from the arrival corridor. The plurality of synchronization code inserting positions may be positioned at periodic intervals in an input code string, and the input code string may include a multiplexed code string and information indicative of a delimiter of the multiplexed code string. Further provided herein is a method for determining exposure of a subject to cyanide. Pull content, such as documents, having the greatest average access latency are sorted and a predetermined number of the documents are prefetched into the cache. The other ionic or non ionic preservative agent is preferably at least one component selected from the group consisting of 2-bromo-2-nitro-1,3-propanediol, parabens, imidazolidinyl urea, phenoxyethanol, DMDM hydantoin, 2-methyl-5-chloro-3,4-isothiazolinone 2-methyl-3,4-isothiazolinone and quaternium-15.

1459825929-d39c448d-1d6d-40f8-b0ca-76cc774ffeee

A connector, a system and a method connect, attach and/or connect a first cable and a second cable via the connector. The method generates a shutdown key, saves that shutdown key in each of the plurality of virtual tape controllers, and takes both virtual tape servers out of operation. The methods of the invention provide for specific detection of anthrax over closely related strains of Bacillus, as well as accurate detection of low numbers of B. Engagement of the bottom edge of the scale with the protrusion automatically moves the scale in the channel to provide the height of the protrusion by measurement indicia on the scale aligning with a top surface of a raised central portion of the cross member. Additional protection paths are provided between the nodes.

1459825929-f306e06a-7274-4e02-b8d3-ca80ac83cef0

Methods and systems implemented in an information handling system are provided for managing call event data between agents and callers for calls completed through a carrier. The system includes at least a first thread protuberance disposed on a first threaded surface of the support pedestal and at least a second thread protuberance disposed on a second threaded surface of the support pedestal. Thus, the sheet feeder restricts excessive rotating force being transmitted to a pick-up roller, so that damage or malfunction of the pick-up roller or a drive unit is prevented.

1459825930-466d5932-91ca-4ee0-9a2d-1cde246cbc3f

Highly-available processing of an asynchronous request can be accomplished in a single transaction. Because connection elements are no longer necessary, a high weight savings potential results, because, for example, rivets and rivet flanges required for this purpose, as in the case of conventional assembly from individual parts, become superfluous. The debugger agent is generally independent agent, in that it can work with a variety of types of test scripts, test script handlers, programming languages, and debuggers without customization. The design of the

cutting blade allows the mechanical motion of the blade and the emission of the ultrasound energy to remove accumulated bone chips and prevent excessive temperature rise. The aggregator network examines the processor messages for messages that have identical or similar data payloads and aggregates messages that have identical or similar payloads. The inventive variety demonstrates a unique combination of characteristics including white stigmas, purple-brown anthers, good shade tolerance and turf quality, and resistance to hunting billbug, fall armyworm, yellow patch disease, Rhizoctonia blight and zoysiagrass rust disease.

1459825930-83b0de2e-cb0d-4f32-91d0-aa0635ae42e7

A semiconductor substrate structure includes an electrode pad formed on a semiconductor substrate, a protective film formed on the semiconductor substrate with a distance from the electrode pad, and a bump formed on the electrode pad. The rivet feed slider includes a rivet receiving chamber which is configured to sequentially receive the rivets, and an aperture is in communication with the rivet receiving chamber. The front panel and back panel form an interior area sized and shaped to retain a card.

1459825930-8bb61b95-6cff-40d8-9897-7ad60c553d0f

An eccentric facing unit wherein a tool driving shaft is concentrically disposed in a spindle for relative rotation with respect to the spindle. The cell array includes multiple word lines, and the voltage supplying and selecting portion is configured to generate at least two different voltages to be supplied to the word lines of the cell array during an erase operation. The latch is connected at a fixed position with respect to the connector housing. Next, the computer system receives a process to be executed, and schedules the process to be executed by at least one of the processor cores based on the analysis.

1459825930-912f41f9-f810-4342-9733-efd445e3fe9b

A system for arranging a number of images into a compilation of images a metadata derivation unit configured to derive metadata from the images based on the content of the images, and an image arranging unit configured to arrange the images into a compilation of images based on the metadata derived from the images. The tissue engaging section can be appended to an accessory channel formed on an outer surface of the elongate insertion element, wherein the central longitudinal axis of the tissue engaging section is offset from a central longitudinal axis of the insertion element, or can be in the form of an elongate helical ribbon disposed around at least a portion of the insertion element. The stand-off can be further secured to the PCB using one or more of adhesives, interference fit techniques, snap-assembly features, and other applicable techniques. The electrodes are arranged in succession, in the direction of production. A conversion section converts content having a predetermined file format and a predetermined bit rate as a transfer target into content having the file format and the bit rate represented by the information obtained by the obtainment section.

1459825930-9595ffb2-00bf-4bdc-8f2c-c0998f428895

In a method for detecting the cadence of a sequence of images, each pixel in each current field in the sequence of images is compared to at least one pixel in at least one previous field. The methods and clock generator units all use two reference clocks: a frequency-accurate reference that has comparatively high Phase Noise, and a frequency-inaccurate reference such as that from a BAW or MEMS clock source that has comparatively low Phase Noise. Bob's modulator voltage is then set to a negative value and the process repeated.

1459825930-ecda8f3c-fec8-46ff-a4ea-f158101300a4

A liquid crystal display device and a fabricating method thereof that are capable of preventing breakage of a pixel electrode. The velocity of the motor must be determined to maintain the proper current to the motor. Annular grooves 41 are arranged on the cylindrical shaft 40 for receiving C-shaped retaining rings 70, for

preventing the heat resistant bushings 50 from coming off.

1459825931-22b0ff98-85a3-4ed4-8385-02d8e2f8b69c

An electrical connector for receiving a camera module includes an insulative housing, a number of contacts retained in the insulative housing, a pair of metal springs and a metal shield covering the insulative housing. The force sensor may be a capacitive force sensor. Other examples of the present invention show methods for regenerating a borohydride by reacting an aluminum hydride to a borate compound to provide a regenerated borohydride. After the black level adjustment period ends and the black reference level reaches a desired value, the CPU starts reading of a black reference signal for shading correction. When there are conflicts, conflict resolution techniques may be applied.

1459825931-3462ef0b-7359-4c99-830b-4b1b71b9aa8a

A method of forming a dual segment liner covering a first and a second set of semiconductor devices is provided. If the output information is selected and a shutter-release button is pressed, the selected information is presented to the person who is the subject. The rectangular cotton collection cage mounted to the trailer is removed and replaced with an upright vertical rectangular frame which supports sign material. The imaging system also includes a calibration image receiving unit for receiving image data representative of the calibration image. The antenna is provided on an inner side in the first surface, with a space greater than the wireless communication-capable distance being provided from an outer peripheral edge of the first surface. A packet that is generated by the method of generating the packet includes a preamble, a start frame delimiter that is positioned after the preamble, a first physical layer header that is positioned after the start frame delimiter, and a physical layer service data unit that is positioned after the first physical layer header.

1459825931-6ef7898d-846e-4686-ad74-c6615f09bc81

A method that identifies common peaks among unidentified peaks in the data from different LC-MS or LC-MSMS runs is provided. The gantry system may be configured to be collapsed on the vehicle during which the gantry system is inoperable and to be expanded during which the gantry system is operable and supported at least in part by the vehicle. Even when the contact surface is soiled by solder deposition after repeated applications to contact objects such as solder balls, simply grinding the contact surface and revealing a new surface, the contact resistance between the contact surface and contact object can be kept unchanged by grinding so that the test can be conducted with the benefit of low resistance at all times. Swivel fixtures are attached at each end of the pillow by virtue of the central tube. The model can be calibrated based on the received output signal for each of the plurality of samples.

1459825931-97dad8b-b467-4a59-b509-66375a9cf7cb

A system and method of channel estimation for a multi-user broadband wireless channel estimation in multiple antenna receiver systems use a specifically selected delay in the pilot symbol sequence portion of the transmission which is a multiple of the minimum Cyclic Prefix delay length. The detection result from the pressure detection sensor is transmitted to an ECU via a vehicle body side communication device provided on a vehicle body. The processing continues by generating a spectral shaping signal to compensate for non-linearities of the analog feedback signal. The reaction gases and heat produced by the COS oxidation reaction are harnessed to enhance the productivity of the well by creating fractures in the treatment zone and by melting of paraffin and resin deposits in the treatment zone. The sequence of cDNA clones of the human gene are provided, and the sequence of the gene can be used to demonstrate the existence of germ line mutations in hereditary non-polyposis colorectal cancer kindreds, as well as in replication error+ tumor cells. Finally, a signal analyzer determines the glucose concentration in the blood of the subject.

1459825932-18c38c3a-fee6-468e-8096-0cd7ae5aaf94

Methods of preparing improved settable compositions free of Portland cement and methods of using such compositions in subterranean operations are provided. A nozzle associated with the fan bypass passage includes a first nozzle section that is operative to move in a generally axial direction to influence the bypass airflow, and a second nozzle section that is operative to also move in a generally axial direction between a stowed position and a thrust reverse position that diverts the bypass airflow in a thrust reversing direction. Wherein the suture trimmer in accordance with the present invention may be additionally utilized to position knots formed within a suture loop prior to trimming the free end of the suture loop. The serial resonance section is connected in parallel to a capacitive reactance element, and a serial circuit composed of an inductive reactance element and a PIN diode as a switching element. The second input has a structure the same as the structure of the first input and the second output has a structure the same as the structure of the first output.

1459825932-2863c73f-0ce5-42ef-962e-b914bd3865dd

Methods and apparatus are provided for transcoding a data message, comprising a plurality of data fields and an authentication code ), to produce a transcoded message for transmission to a destination device. The handle includes a first grip at an outer end of a short arm and a second grip at the outer end of a long arm. Each profile comprises a set of two or more of the criteria. The filling temperature of the compressed gas stream is controlled by adding heat to the compressed gas stream by a trim heater or to the vapor stream to be compressed by recirculating part of the compressed gas stream to an inlet of the compressor. The PAS system and process can include: a pulsed tunable laser, such as a CO<sub>2</sub> laser, a reflector, such as a parabolic reflector, an acoustic reverberant resonator in which a microphone is installed, and a data acquisition and analysis system.

1459825932-4fd5d4e3-eeff-4d77-960a-8a04f04a2ad4

A structure of rivet nut gun having a body, a handle and a pressure cylinder. A plurality of traffic cones can be loaded into the magazine section, and a leading one of the traffic cones can be moved into the vertically oriented chute section for discharge and deposition onto the roadway surface. The second portion is thicker than the first portion.

1459825932-7bbb3a45-e494-4670-ac6b-1f3923dcef97

The present invention relates to a method for efficient routing in a multiple hop wireless communication network. N transducers, where N is an integer, are fixed on a surface of the individual over the thorax. The method includes determining, by a computer, an identity of a user of the participating telecommunication device. Based upon the plurality of signals, a predicted on-peak time value is determined. The container includes a volume for receiving the surgical fluid to be delivered to the handpiece and an end for removably engaging a receptacle in a surgical console and for fluidly coupling with a source of pressurized fluid in a surgical console.

1459825932-8a1e9465-94ee-4c54-9d05-16f3ca21e0b7

Medical devices, systems, and techniques are described for reducing the profile of a stent. Also provided are methods, systems, and compositions for decreasing the yield of one or more undesirable products during fermentation. Embodiments of the refractive index profiles in accord with the invention are shown having two or three annular segments surrounding the central void. The seating surface sheet part includes a seating surface core and the backrest sheet part includes a back surface core. The combination of a UV laser and a high vacuum quartz cell, in which a photocathode and an anode are installed, is utilized as triggering devices to switch the spark gap from a non-conducting state to a conducting state with low delay and low jitter. A CPU outputs to an interface the tone color data, and the series of note data and rest data at a tempo designated by the tempo data.

1459825933-7c708788-8540-47c2-b8f4-287ae4ab5893

A self contained motor-powered disposable loading unit for use with a surgical cutting and stapling apparatus. For this purpose, a two-way DC\2014DC converter 5 and the secondary battery 4 are installed on the DC output side of the AC-DC converter 3, and that portion of the load current that exceeds a predetermined peak cut level is discharged from the secondary battery 4 during peak loading. The configuration file may specify a first stage that specifies processing of a protocol-agnostic portion of a message. The separable components can be moved along an inherent guidance system and safely secured in the closed position by a bilateral locking mechanism. As a result, heat-resisting property of the NiSi layer can be increased, and thereby the NiSi layer can be inhibited from being transformed into a disilicide.

1459825933-8808cfe7-12ec-44bc-8981-87f6ce09bb81

Systems, apparatuses, and methods for low wander timing generation and/or recovery are disclosed here. The method also includes embedding the voice data within associated data in the software application, if the software application is voice-aware. The low-power operating mode may be initiated by a command received by the IP telephone from the IP telephone controller according to a schedule, which may be modified locally by the user to individualize the user's schedule. The outputs of these amplifiers are inputted to differential amplifier, whose output is compared by comparator with a prescribed value generated by reference value generator.

1459825933-d71791c4-6c1a-4da4-b98f-7ccd3ea99229

An automated method for creating only the necessary joins in a SQL query. Thus, the combination of the RF and DC voltages in such an arrangement forms a pseudopotential designed to provide for minima for the trapped positively and negatively charged particles that result in the overlap of the ion clouds so as to provide for beneficial ion-ion reactions. The method further effectively expands a memory capacity of a Flight Management Computer by providing swappable memory capacity such that a re-certification to Federal Aviation Administration standards of the Flight Management Computer is not triggered. The information may be exchanged via a serial bus between the plurality of radio transceivers, where the serial bus may conform to an I2C multi-master serial bus. This second periphery bounds a second planar area.

1459825934-302449a1-0985-4a91-8874-24612fff8db3

An embodiment of the invention is a logic minimization method that provides improved user design performance without a substantial increase in user design area. Dianthus \2018Sangria Splash\2019 is tolerant of high temperatures and resists center die-out. The transmitter is configured to transmit an electromagnetic signal to induce an electromagnetic response in the duct and the electromagnetic response is detected by the receiver. Still further provided by the invention are methods for producing soybean plants by crossing the soybean variety A1026862 with itself or another soybean variety and plants produced by such methods. By combining gelatin and other hydrocolloid film forming polymer materials, edible film compositions are achieved by solution casting which exhibit superior and desirable properties for adhering to the meat product and presenting a shining, appealing surface. The adhesive layers are applied to the bottom side of the adhering portions such that an upper one of the memo sheets is adhered releasably to a lower one in the stack.

1459825934-b3d0f829-06d9-4964-a38b-86568367e97d

Metal carbonyls are used to deliver CO to organs to limit post-ischaemic damage. The user of the comparator stores his evaluation of the properties included in the targets to be evaluated in a database in the server in the data network using a graphic one- or two-dimensional evaluation frame. In another example, a pool or spa is illuminated by one or more multi-color sensor responsive light sources that may

be employed as individually and independently controllable devices, or coupled together to form a networked lighting system to provide a variety of programmable and/or coordinated color illumination effects in the pool or spa environment. Moreover, the user interface component may also be configured to incorporate a retrieve progress display element that indicates a current status of a retrieve operation for a record. At least one load sensor between the first frame and the second frame, the at least one load sensor configured to measure a weight of the luggage case is also provided.

1459825934-dc9f220c-6613-4897-8084-18352c5877b0

A task synchronization mechanism operates on a global lock that is shared between processors and on local locks that are not shared between processors. In one aspect, a method includes receiving a plurality of training examples. The pipeline processor architecture further includes one or more additional co-processor pipelines. A processing unit is configured to obtain position information of the receiving antenna units according to the satellite signals and to obtain position information of the base station antenna according to the position information of the receiving antenna units and the preset position relationship between the receiving antenna units and the base station antenna. The response is then transmitted from the base unit to the remote unit for display. The robot system includes two handling robots each having a hand for gripping a workpiece and a welding robot having a welding torch, a robot controller for controlling the robots, a personal computer with a robot programming device connected to the controller, and a teaching operation panel connected to the controller for teaching each robot.

1459825934-ef1d88a5-d2b6-4383-a828-221bb7ef0b26

An embodiment is directed to an application server configured to set-up a communication session within a wireless communications system. The TFET includes a gate-stack, a channel region underneath the gate-stack, a first and a second junction adjoining the gate-stack and being capable for electrical continuity with the channel. In addition, methods and compositions are disclosed to treat and prevent metabolic disorders such as obesity, diabetes, and increased cardiovascular risk. Whenever a read or a write occurs to one of the assigned surfaces via the host data path, the corresponding flag is set.

1459825935-8f7e2a92-09b0-40f6-be35-4fffb1361b85c

A method for sharing a storage device amongst a plurality of computers while providing data integrity in the storage device is presented. The original image area includes a plurality of original pixel values. The second projector corrects the projection target image based on the coordinates such that the projection image by the first projector and its own projection image are in a desired relationship.

1459825935-b42c0499-5006-4340-8009-d580c4a54a63

A system and method for monitoring and/or detecting the flow of one or more fluids in a fluid system including leak detection system integral to the fluid system configured to detect incipient, early stage levels of the leak. The diffraction grating has a first grating region and a second grating region, which have different diffraction efficiencies. A hardware detector is connected to the USB connector for determining the port type.

1459825935-bc05ce9d-e157-4ff9-aca8-e628b4186cd1

An integrated circuit leadframe has a pair of leadframe rails that are specially treated to adhere to injection mold compounds to a lesser or greater degree than portions of the leadframe rails outside of the treated areas. The memory device has a package configuration that is compatible with an SDRAM. Each vending device is operatively coupled for communication with the centralized ticket manufacturing controller, normally via a network connection.

1459825935-e659c466-6c0e-453a-b83b-3561bf41a01e

An electrical plug has locking hooks on the ends of flexible arms extending from its housing. Besides increasing the specific conductivity at very low doping concentrations, the doping brings about substantially no negative change in the color impression of the layer for the human eye. A guide element provides an elongated track having a first part extending generally parallel to the longitudinal axis of the flow control element.

1459825935-f7cdaaa1-8ef6-414c-bec6-4534981b90c1

A device for welding plastic sheets using of hot gas heated in a tubular conduit through which an electric current flows. Each of a TX series transistor, an RX series transistor, and an RX shunt transistor is comprised of a low voltage MISFET, while a TX shunt transistor is comprised of a high voltage MISFET. In our particular embodiment, the auxiliary window is a toolbar or sidebar window located within the host application window itself.

1459825935-fe98be1b-17d3-484e-828a-3208caed8a22

An image reject mixer arrangement 1 comprises a transconductor 2, first and second mixer cores 3 and 4, first and second phase shifters 5 and 6 and a summer or combiner 7. A spring-biased lock bar 170 locks the dumbbell grip in the notches during normal use. Multiple system parameter scenarios are coordinated. Profiling is done for individual pieces of load controlled equipment rather than for the site as a whole. The sending peer is arranged such that if it receives a threshold number of duplicate acknowledgements, it performs a retransmission.

1459825936-02ea1407-6ab2-44d7-909d-2d6398ceb63f

An interfaced carrier assembly including an interface circuit having printed contacts to provide electrical interface or feedback control for lapping operations. An example compression circuit includes a comparator configured to compare data provided by a group of memory cells associated with a repair address. A completed process module that has invalid commands removed is compiled as a service procedure.

1459825936-89fd7643-b0f9-4d45-bbb8-9c6070b8fabc

Methods are provided for installation of a rain diversion system including formation of a deflector with a machine placed above a forming machine dedicated to formation of a trough. Data is received from a first client computer system at a master data server that includes a data store for master data used by the first client computer system and a second client computer system. In the image processing unit 11, the motion image data 112 that have been stored are selectively referenced and processing for polygon drawing is conducted based on the assignment from the motion reproduction assigning unit 102 and the like, and a demo screen containing motions of the player which differ for each reproduction are displayed on the display device 2.

1459825936-c8491893-f32c-45bd-98fb-50f23f8d956a

A textual search index is used to identify data objects that have numerical properties that satisfy search queries. First and second beams are provided with the first beam being secured to one leg of the first pair of legs and one leg of the second pair of legs. A confidence factor is then determined for each such association rule and these confidence factors are stored in data partitions for the temporal data sets. For instance, an information handling system maximum operating temperature is detected by firmware running on an embedded controller during imaging of a hard disk drive and fails thermal testing if the detected maximum operating temperature exceeds a predetermined value, such as a value that would not be reached if the thermal subsystem functioning properly. The memory access control circuit controls the first, second, and third connection circuits according to priorities assigned for the connection circuits and determines which of the second local bus, first local bus, and system bus will be connected to the local memory

bus. The growth chamber is heated whereupon the source material sublimates and is transported via a temperature gradient in the growth chamber to the seed crystal where the sublimated source material precipitates.

1459825936-ced00a91-9cda-4c9b-a90e-d30d1f7002bf

Devices for removing particulate from surfaces may include at least one belt coupled with at least one guide to rotate the belt about the guide. Furthermore, both when data is saved in spare sectors SS and when data is written over data sectors DS, appropriate pointer information in RDM table stored in a reserved area RA including a nonvolatile memory is updated as required. A composition further comprising an additional fungicidal compound. Numerous transistor configurations and suitable fabrication processes will be apparent in light of this disclosure, including both planar and non-planar transistor structures, as well as strained and unstrained channel structures.

1459825936-d18c71cc-a21d-4c84-84b4-af2dc3cbbdd1

An adaptive non-contact testing method is provided for testing a touch panel, wherein an air nozzle generates an air jet toward a selected position on a touch panel under testing to cause the touch panel to generate a touch signal. The invention utilizes program constructs which correspond to and map directly to the adaptive hardware having a plurality of reconfigurable nodes coupled through a reconfigurable matrix interconnection network. The PDP further has crystalline MgO layers each provided on a part of portion of the face of the front glass substrate having the row electrode pairs formed thereon and facing toward the discharge space. The housing is in electrical communication within the loop body, and includes a transceiver, control logic and an energy source. The bitumen film is sufficiently cooled after magnetization in order to preserve the magnetization, whereby the orientation of the magnetic powder particles, which is adjusted during magnetization, is maintained. In one embodiment, the apparatus comprises a memory and multiple finite state machine comparison units operating in parallel to compare packets to signatures to identify matches, if any, between data units in the packets and the plurality of signatures.

1459825937-1166add6-cd04-4b7f-a85c-f75f1785e561

A blind rivet formed with a tubular shell, and a mandrel extending through the shell. The system includes, a parallel flow mode when product flows concurrently from at least two units to a single unit; and a serial flow mode where product flows from one unit to another at a given time, wherein the batch manufacturing plant is modeled based on the parallel and serial flow modes. The cellular impulse and the reflections of the cellular impulse may be compared to determine the electromagnetic reflective characteristics of an ambient environment. The first filter portion is formed from an annular pleated paper filter media comprised of two layers with a water sensing chemical therebetween.

1459825937-1b703a2c-afdc-4204-b70e-ad113f875ba7

A computer based image data processing system reads image data from a framestore and processes this data in response to user commands. A metal collar incorporated in the seat frame has a cylindrical shape and is covered by a resin member. The control unit performs, when detection of contact is started on the touch panel, character recognition processing based on a trajectory connecting each position at which the contact is detected. The frequency doubler can include one or more additional delay circuits in series after the first delay circuit, the output of which is provided to a multiplexer. Potential applications for the system include subcutaneous, long-term, automated drug delivery, for example, the delivery of insulin to a person with diabetes. This enables the data packet reception test results to identify the number of data packets correctly received within the prescribed time interval and identify which data packet reception faults are due to reception of a faulty data packet or reception of a valid data packet in a faulty manner.

1459825937-2a75dbcd-f256-480d-aca7-e211fd8c3706

A transmitting arrangement includes a matching circuit, a reference circuit and a comparator. The electrolyte layer comprises a water absorbent polymer and an aqueous alkaline solution. The base body is fastened with one end thereof to a body part.

1459825937-bc2f705b-ac53-4c80-850d-60d279ca3d88

The present invention is a computer system and method that manages connections between one or more data network interfaces and one or more phone interfaces. The grounding electrode includes a notch portion opposite to the coupling line portion. The side and back sections are connected to a central vertical spine between the side and back sections. Using these techniques, the brazing could be accomplished at a temperature in the range of 750 to 1050 F. The first recognition result is stored in a memory device in association with the first speech input. Depending on the types of queues that are utilized, there can be difficulties in managing the order of execution of commands.

1459825938-37f8f481-2f57-4e4b-9006-cbfff9b2d5f4

A multi-chip module that includes a conductive element to serve as an electrical connector for electrically connecting respective electrical contacts of at least two power semiconductor devices and serving as an output connector. The arms are arranged circumferentially around a common illumination region, so that the region is illuminated from several directions. The bottom plate portion has an outer dimension smaller than a fixing hole formed on the fixing plate.

1459825938-b83e67f9-df50-4cfa-a0c7-ff1c9a580435

A detecting unit detects an object in an input image. At least one through hole extends in a vertical direction through the carrier board, the wiring, the adhesive layer, and the conductor layer and forms a hole wall surface. By using dedicated subcarriers for burst information, scheduling decisions can be made closer in time to the actual bursts. The top surface of a filling oxide film in the shallow trench isolation which is adjacent to each channel region is higher than a top surface of the semiconductor substrate in the channel region. The method still further includes selectively applying a first bias to the first metal electrode to electrostatically dope the first end of the carbon nanotube and selectively applying a second bias to the second metal electrode to electrostatically dope the second end of the carbon nanotube. Charging the variable toll provides an incentive to the driver to encourage driving that does not include tailgating or a disincentive to the driver to deter tailgating.

1459825938-c756eb01-b1f1-41f9-8e12-1b3f84b45511

Disclosed is a wheel speed sensor for a vehicle which has a function of detecting revolution of the wheel in order to provide a uniform braking power when a vehicle brakes. The replacement flange is placed on the surface, and welded to the surface utilizing cold metal transfer. The system includes a syntax pattern selector module and a statement assembly module. Liners are provided with a plurality of conduits for directing pressurized lubricant from the centralized lubricant source so as to minimize lubricant loss.

1459825938-dca95c68-d2c0-4ff9-ba52-4400fe43c043

A current supply circuit comprises a reference voltage generator generating a reference voltage that varies with temperature, a current circuit generating a constant reference current irrespective of the temperature based on the reference voltage, and a current source generating a mirror current by mirroring a base current as a replica current of the reference current. According to a first embodiment, two different loss-of-focus thresholds are used. The expansion tool is moved along a path inside the host pipe, stopping at stations on the way. Preferably, the truck includes a dump bed that is adapted for dumping in

either of two opposite directions. There is also provided a photographic light-sensitive material package formed by housing the photographic light-sensitive material in the packaging material for the photographic light-sensitive material.

1459825939-34774723-047d-4f46-901e-54eb3d6b1490

A nonaqueous electrolyte secondary battery includes a positive electrode, a negative electrode, and a nonaqueous electrolyte. The spoke is a generally slender element with a longitudinal axis with a span portion between the rim and hub and a tensile axis of applied tensile load along the span portion. A second outlet port is opened at a second space formed between an axial backward end surface of the first pump casing and an axial forward end surface of a second pump casing, so that discharge pressure of working fluid of the second pump is supplied to the second space. A combiner is provided for combining the first filtered signal with the unfiltered signal for producing a composite signal. The compound passes from the tube through the applicator by way of a slit, and that slit is formed by an arrow shaped element placed in front of a hole.

1459825939-7c2a8caa-0e12-4d1b-a009-36fe192363eb

The present invention provides method of producing a trivalent and tetravalent mixed vanadium compound having excellent solubility with sulfuric acid directly from a tetravalent or pentavalent vanadium compound by using a reducing agent, and a method of producing a vanadium electrolyte. The base member has an opening therein. The upper thread section has a thread pitch which is smaller than the thread pitch of the lower thread section. A boss in a height middle portion of the mounting bracket is fitted into a cabinet. The tunnel has a leading edge forward of the transom and an interceptor plate projects downwardly from the hull at the leading edge. The air flow splitter is disposed in the air flow path upstream from the air flow regulator, the splitter dividing the air flow path into first and second downstream flow paths, with the first downstream flow path leading to the respirator.

1459825939-8cb5244b-5900-4823-94af-2fb5607f8f1e

The invention relates to ultrasmall, monodisperse nanoparticles comprising silicon dioxide to the surface of which at least one antigen is attached. The combination of actions may include hiring, contracting and cross-training. For example, the longer frame period may be an elongated frame period, which is the longest period during which each of the voltage waveforms has a respective constant voltage value. Further, based on the input attachment angle, the axial angles of the astigmatism of the left observation optical system and the right observation optical system are determined. A bottom edge of each of the forwardly facing ladder hooks disposed within the top side of the back support. The device serves during a failure simulation to modify the overall power delivered by the power plant, with this modification being performed with the help of first adjustment means.

1459825939-c014b45f-c7e7-44c4-9098-60e9e1551f0e

Disclosed herein are ethylene-based polymers having a density greater than 0. The subcutaneous imaging marker comprises at least a first element and a second element, each of which have a primary imaging mode. The termination has a body extending in a longitudinal direction between opposite first and second ends, and a lateral engagement face formed on the body. The shock absorbing device may further include a bearing device configured to rotatably guide movement of the first stem relative to the second stem along a direction substantially parallel to the longitudinal axis of the first stem and prevent radial sway between the first and second stems. Advantageously, said rest position is selected to be as close as possible to one of said extreme positions of the movable member, taking account of the movement amplitude required of the piston to impart a desired excitation to said load. The remote health-service session includes a health-service provider at the second physical location providing a health service to a patient at the first physical location.

1459825940-01f60541-6734-4821-96d8-6d63ff00260a

A repositionable medium includes a base, a paper, and a first repositionable adhesive. The method avoids having to measure the neutral plane radius by dividing the uncured belt into discrete molding sections and adjusting the length of each section prior to molding. The formulations are further characterized by good to excellent solubility of the salts in aqueous solutions. The transistor has gate area that extends into isolating trenches.

1459825940-206a87a5-2610-47a2-84ad-d65228a6be70

An adsorbent article having a base body or matrix onto which is applied an adsorptive coating. The cover is engaged with the main body, having a jointing tube protruding into the main body and two notches cut in the jointing tube. A first STI structure is formed to a first depth and a second STI structure is formed to a second depth.

1459825940-444338b8-169e-4b30-a61c-4d257e03fba1

A wheel axle suspension for attaching a wheel axle to a vehicle chassis has a trailing arm extending crosswise to the axle body and an axle pad arranged between the axle body and the trailing arm. The system includes a tract dilator for locating the puncture, an introducer, and a pusher. During the conference the library of digital objects is downloaded to the participant communications device. By way of example, the thin film and an insulating dielectric material disposed between two electrodes can provide for rapid loss modulation. The catheter shaft may be formed by stepwise extrusion, co-extrusion, and/or reflow processes.

1459825940-4f54549e-4cbb-4a5c-95e0-398f243132fc

Apparatus, methods, and articles of manufacture for media monitoring are disclosed. The hybrid Brillouin/EDFA apparatus of the present invention includes at least two couplers, a phase modulator, an Erbium-doped fiber, a laser source to pump the Erbium fiber, an optical circulator, and a length of fiber used for Brillouin amplification. A variety of metallic coatings may then be deposited onto the bare segment of the optical fibers. The thermistor being connected to the second port reflects the signal being output from the second port by varying the power of the signal according to temperature, so as to input to the second port, in order to adjust the attenuation amount of the signal.

1459825940-d46a137d-b2ce-40f4-9408-add020652348

An electronic price label promotional information verification system which ensures that promotional information for an item obtained from a promotional information file is equal to other promotional information displayed by an electronic price label for the item. An RF coil assembly is constructed to have a plurality of RF coils arranged in axial and tangential direction for image data acquisition with acceleration in at least two dimensions. Preferably all of the filaments are identical. The RFID transceivers can be coupled to secure tapes of various lengths and widths and mesh bags or sheets of various sizes and they can be applied at the carton-level using them to locate, track and identify the integrated circuit, printed circuit boards and products in which they are implemented and/or the cartons in which they were placed.

1459825941-1496dbab-58fe-4866-887a-80d8b66d7274

A locking, removable handle assembly for a vise is provided. This method, known as BK by Measurement, utilizes a manual measurement procedure where predetermined points are identified and measurements are taken of a patient's residual limb. At least one electrode in a memory element is reactive, while another may be inert. This structure provides semiconductor devices in which memory cells having desired characteristics can be readily fabricated. The presence of a substance in the breath causes the indicator reagent to undergo a visually ascertainable change.

1459825941-56f80782-f9b4-466c-a960-05418428f142

Described is an optical information medium measurement method of measuring a degree of modulation in an optical information medium of a multilayered structure having a plurality of information layers. The technique takes full advantage of the multi-resolution characteristic of the discrete correlation function by starting the processing at the smallest scale and if necessary gradually building correlation planes into larger interrogation areas based on the result of inter-level correlation correction and validation. The light beam can pass through at least one optical component in the optical system, where the optical system has astigmatic properties selected to maintain desired irradiance within the defined area of the medium through a range of working distances between the optical system and the defined area.

1459825942-3d4e4922-bbbc-4801-8c2c-017ca047453a

A platen roller assembly for a printer includes a platen roller, a retaining clip, a plurality of bearings, and a pulley assembly. In the optical displacement-detecting mechanism, a light source having a spectrum half width of 10 nm or larger is used, whereby the light source can be driven with an output power of 2 mW or larger without generating mode hop noise and optical feedback noise. The anti-theft system generally includes a counter that counts the number of uses of the thermometer during a period beginning from the time the thermometer was last on the mount. The connector is pre-produced, such as from relatively rigid material by a moulding operation, and then placed in the mould which is used for producing the bellows. The additional first edge and the additional second edge are immediate neighboring edges. According to one embodiment of the invention, the measuring circuit comprises an op-amp, a RC network connected in a feedback loop of the op-amp, and a scaling resistor connected in series to one of the input terminals of the op-amp.

1459825942-473c5b02-f6ad-4659-a797-d63832fbbbb6

The invention provides methods of detecting a nucleic acid. Rarely used or unused IO ports are identified in a computer system and a debugger program is instructed to halt program execution when an access is made to one or more of the identified ports. The information indicative of a command for the digital apparatus to execute to interact with a host apparatus.

1459825942-55d4d9e5-763a-40f8-b051-2c6902a58fe1

A method and apparatus for use with a transistor array for enhancing the array's performance and/or reliability and/or longevity by sensing the temperature of each transistor in the array and initiating corrective action to maintain its temperature within a desired operating range. The device includes a cap comprising a cap head mounted to a hollow shaft with internal threads therein. A support bracket can be configured to be coupled to the output shaft and to support a front wheel of the vehicle. By dynamically changing the formats of the media item, more robust and reliable communication between the media source and the media player can be achieved. An emitter is attached to the shortened conductors after insulation is stripped from the conductor tips.

1459825942-65ca02a3-3372-4815-b318-b7eda22beeaf

In one embodiment, a scheduler for use with a star switching fabric includes a scheduling star switching fabric operable to receive a plurality of packets each associated with one of a plurality of wavelengths and a plurality of selecting elements associated with the scheduling star switching fabric. The IV may be used with a machine that includes a work-piece and an interference body positioned proximate a surface of the work-piece such that a relatively small gap extends between the work-piece and the interference body. One bulbous region serves to hyperextend the valve leaflets and the other assists in stabilizing the balloon position to reduce migration. A circuit breaker may be used to disconnect the inductive power outlet in case of excessive power loss. If variable data need be

entered to access the host screen, the server sends the user a submittable form on which to enter the appropriate information, which, once entered and sent to the server, is used by the server to retrieve the host screen. A first method includes reacting an imino-di-carboxylic acid and an organoboronate salt.

1459825942-65f53514-b47c-4dca-b5db-c60ae491ca52

A slurry removal control mechanism for a CMP polisher is provided. In the case in which the movement of the radio terminal between RNCs has occurred during a period until the radio terminal actually received service data after it joined the MBMS service, the radio terminal notifies a moving destination RNC of at least identification information for specifying a moving source RNC. The outgoing data model indicates a platform independent interface that is utilized to communicate with the service provider. As a result, coded data obtained by efficient compressive coding that suppresses the code quantity can be appropriately decoded. The reproduction is based on spatial analysis of directional cues in the input audio signal and conversion of these cues into audio output signal cues for two or more channels in the frequency domain. An energy management system can enable components of a device within a home network to power to different operational modes in order to determine different power consumption levels.

1459825943-1ad43db1-4c17-40cc-9278-7ba0e3067d20

A face panel for a computer housing includes a face panel body and a cover plate assembly. As the apparatus for processing an MMT signaling message according to an embodiment, an MMT receiving device includes a context information measurement unit for measuring network context information to be reported to an MMT sending device. The AV switch may enable generation of outgoing PDUs by inserting or modifying a corresponding traffic class designation within each of the incoming PDUs. Also disclosed are 2-pole, 4-pole, and triplet filters implementing a unitary resonator assembly in conjunction with a unitary mounting structure, and a diplexer implementing a unitary resonator assembly in conjunction with a unitary mounting structure.

1459825943-260bf105-1d3f-4fd6-9afc-96ee3a33d260

A drink component thermally sterilized and flavors which has been removed of microorganism by filtration are formulated under aseptic conditions, and a mixture obtained is filled into containers. A first cushion first side is located adjacent to a base first side and features a first cushion component, a first heating element, and a first massaging component located inside. The particulate accumulates as a surface loaded layer until it achieves a certain depth of particulate or gray scale characteristic or color depth indicative of the end of the useful life of the filter prompting a change of the filter structure. This permits effective lossless entropy encoding despite the differing characteristics of photographic and graphics image content. In one aspect of the invention, the engine output torque is increased by the peak efficiency torque value associated with the starteralternator, and a switching circuit is periodically activated to maintain the desired charge on the energy storage device. The systems and methods decrease the amount of time required to heat-up the electrical resistance igniter to a temperature sufficient to ignite the gas while regulating the output voltage being delivered to the igniters to prevent over voltage damage to the igniters.

1459825943-8eedeefc-c28e-4c9d-bbf6-6f1e8975031e

The present invention provides a motor assembly method for mounting to a base. The connection for the base electrode is formed by an electrically insulated conductive polycrystalline semiconductor layer. A distal portion of said surgical instrument is introduced through a percutaneous penetration into the body cavity within the patient. The bolt is operated by a knob provided on an outer surface of the cutter retaining portion. Each processing element that completes processing of a thread turns off a corresponding diverter. A display is provided on a remote control device, prompts are provided on the display, and viewer responses to those prompts

are monitored, stored in memory, and thereafter processed to reward viewers for responding properly to the prompts.

1459825943-9044ae2b-2f26-4f1f-918d-3a371c22933e

An injection syringe of the present invention comprises a hollow barrel, a needle seat and a plunger. Most preferably, an electronic control system is provided to enable precise control over the speed and positioning of the stacker arms in both horizontal and vertical orientations. The control sections have conditions for entry to the block and conditions for exit from the block. An associated enclosure incorporates a loading door preferably configured for operation in response to the position of the ram device. When the voltage level of the power supply rail is higher than the predetermined level, then the power surge is presumed to be an ESD pulse, and thus the ESD power clamp is enabled to turn ON and discharge the ESD power surge. The controller stores the logical address tag block in logical address tag block areas ensured other than data areas on the disk array which store the data stripe.

1459825944-46571e80-4dee-4b36-beac-c7c99111c64a

Samples of materials used in industrial processes are analyzed to determine the concentration of certain materials of interest. An actuator is positionable in the base, rather than in or around the vertical column. The packer assembly includes a deflation sub that houses the components of the emergency deflation mechanism.

1459825944-76e4b381-4771-42dc-ae0f-a49b73269b89

In a communication network, the network management system NMS keeps one or more element management system EMS in synchronization of network topology changes using requests that are automatically generated or manually requested and then sent from the NMS to the affected EMS whenever a node topology change is made at the NMS. The RF signal repeater system includes a signal tagging means that adds a unique electronic signature to the repeated signal such that position determination errors due to a non-line of sight propagation path can be corrected. Additionally, embodiments of the invention can employ a one word commerce model that abstracts the particular model used by various electronic commerce vendors' web sites. The response is processed to find out whether the forwarding node is misbehaving or not by verifying whether the transformed information is equal to an information which can be or has been derived from the requested packetpackets, wherein the processing is carried out both by the sending node and the receiving node. The bearing gaps are configured such that the second bearing gap is larger than the first bearing gap. The trash can closure defines a flexible sheet cover configuration to be resiliently retained temporarily over the open end of the receptacle trash can container that will be retracted and collapsed on itself as it is removed.

1459825945-046611a6-2098-4cc7-9ff6-2fa68848b2d3

When a patient is fitted with an external gastrostomy connection to the stomach, ingested food can be removed through the gastrostomy connection using a pump-based or siphon-based system to achieve weight loss. The first chip includes a first bump structure overlying the first substrate, and the second chip includes a second bump structure overlying the second substrate. In addition to the damping chamber, a closing chamber is provided, to which an end face of the outer nozzle needle is exposed in the closing direction. The slit defines a restricted fluid flow path and a relatively small interior volume when in an undisturbed state, defines an expanded fluid flow path and a larger interior volume upon the introduction of the second medical instrument into the slit, and retracts to define a restricted flow path and a small interior volume upon the withdrawal of the second medical device from the seal. The apparatus, methods and systems incorporate a modern processor and therefore corresponding modern components and have circuitry that can be used to access original games.

1459825945-b947cc2d-845b-4668-8368-63cc4b7f8181

The invention provides systems and methods for exchanging gas in an oxygenator device, and methods for preparing and using such oxygenator devices. A signal generation/output module is provided together with the signal input transfer module, for generating the positioning signal in which a plurality of signals having different frequencies are defined as one group. A bottle carrier has a plurality of apertures, each aperture is structured to frictionally engage a top of an associated one of the plurality of bottles when the top of the associated one of the bottles is inserted through the aperture.

1459825945-e995760e-722d-4d6a-b916-c696697cd35d

An electrolytic process and apparatus for oxidizing inorganic or organic species is disclosed. Link state topology exchanges provide each switch with network topology graphs to determine paths from source to destination end systems. The device electrode of the slider is exposed at the surface of the slider on the side opposite from the medium-opposing surface without being covered with the light source unit. The method further includes estimating a first number of unique search results based on the predetermined hash value range size, the predetermined number, and a largest hash value in the smallest hash values.

1459825946-0875dcf8-5641-408c-b426-fb567a07a27e

An apparatus and method for recovering and recycling hydrogen from a reforming process raises the pressure of at least one hydrogen-rich gas stream from at least one catalyst lock hopper and delivers at least a portion of the pressurized hydrogen-rich gas stream to at least one predetermined downstream location. Three preferred embodiments are disclosed. A moveable fence, has first and second ends, with the first of the moveable fence ends being pivotally attached to the first end of the fixed fence.

1459825946-60bfccbc-d35c-4187-b4bb-605d45f35e53

A method for forming microscopic 3D structures. The one or more print options are identified for subsequent resolution, and can be applied to one or more other network services. In this state, the autonomous traveling unit is rotated by 90° to the right so as to face a plane formed by a second member of the charging unit at the right angle.

1459825946-6e97c496-dfd6-4c68-9906-b4484ee7f6fd

Aspects for improving signal quality on high speed, multi-drop busses are described. If no appropriately sized variant exists, the enlarged character is assembled from a plurality of component glyphs that are stored with the font, wherein the component glyphs include an extender that may be duplicated within the assembled character in order to achieve the desired size. The deflecting housing contains a deflecting chamber, and has at least one inlet communicating with the deflecting chamber and at least one outlet communicating with the deflecting chamber. The short operations can be less than about 80 bytes. The device includes a third fluid mechanics cylinder, which moves the said piston of the dead space, wherein the third fluid mechanics cylinder is activated by means of a compressed fluid, supplied by means of an independent hydraulic system, in order to obtain continuous variation of the dead space. The system further includes a curing system coupled to the drying system, and configured to treat the dielectric film with ultraviolet radiation and infrared radiation in order to cure the dielectric film.

1459825946-702bc7a8-9e9f-45e5-9162-03e111c13d8e

The present invention relates to a wireless communication system. This apparatus is constructed partly or entirely of substantially zirconium-free materials. A forward error correction block size is maintained at a constant amount. The metadata can then be used to filter the set of information cards that can satisfy a security policy from a relying party.

1459825946-a8a9ef11-2e00-4ecd-8ef3-0583f6d228a7

A bypass logic circuit generates select signals by using prediction result flags which are results of prediction about branch, instead of a branch condition not-taken signal actually output from a branch unit. These embedded data marts, referred to as workspaces, are assigned centrally manage data by reference only but rely directly on the centrally managed data and the underlying infrastructure. A data flow diagram may be automatically generated from the first diagram. The initialization controlling section makes the display layer a uniform reflectance by applying pressure to the display layer with the pressure applying section. The at least one STI region defines a sidewall surface with the substrate and may include a nitride layer lining a bottom portion of the sidewall surface, an oxide layer lining a top portion of the sidewall surface above the bottom portion, and an insulating material within the nitride and oxide layers. Other embodiments are also described and claimed.

1459825947-08d21a34-71e9-4957-b836-1ddce48178dc

A movable die is fastened to a stationary die, a relationship between a contact force of an injection nozzle to an injection hole of the stationary die and a closeness is investigated, the injection nozzle is brought into press contact with the injection hole of the stationary die by a contact force achieving a predetermined closeness, and a lubricant is coated by a predetermined pressure. A P-type silicon substrate includes the active area partitioned by the shallow trench isolation. The aortic graft is bifurcated and includes ipsilateral and contralateral legs. A visitor to a social networking website may select to not have their information displayed at selective a social networking website, while still being displayed at another social networking website. The circuits are located respectively corresponding to the contacts. The endwall shape includes a non-axisymmetric trough which extends from a leading portion of the at least one flow passage to a point near a trailing edge portion of the at least one flow passage.

1459825947-4a57eefa-7f1c-415f-8d72-9685ed232560

A method and a system for allocating restoration capacity in a network link in a communications network provides that a common pool of communication capacity is provisioned in a network link, such that the common pool of communication capacity includes spare capacity for new service and restoration capacity. The appearance inspection system includes a marking station. Upon discharge of the fluid from the cylinder through each valve, the fluid is forced to travel through a restricted labyrinth to further dissipate the impact energy.

1459825947-a9ec35f6-8489-4195-bbf5-91398d1952ed

A switching element includes: a first electrode supplying metal ions; a second electrode less ionizable than the first electrode; and an ion conducting layer arranged between the first electrode and the second electrode and containing a metal oxide that can conduct the metal ions. The lighting device includes a housing, a lighting element disposed in the housing, and a first attaching unit connected to the housing. The diester is added to the mixture in an amount effective to produce seal swelling and to lower the pour point.

1459825947-cdfa2d93-ed0b-432c-a266-f0efc36e2db5

An end cap arranged to slidably support a rack, is inserted into an end of a housing in which the rack is inserted. The hybrid switch may be initially installed/activated as a narrowband switch in order to operate with a network of all or mostly all narrowband switches. An FFT unit FFT-processes the received data to obtain an FFT result. There is a bag holder constructed and arranged to hold a bag in place and normally open so that in a first position, mail placed into the deposit port falls downwardly through the bag holder and into a bag in the collection chamber and which bag may be preliminarily sealed while in this position, and in a second position, the bag may be more securely sealed and removed from the bag holder. By communicating both the access point address information and GPS location information, both PSAPs that are configured as E911 Phase I and E911

Phase II may display address location information of an emergency 911 caller.

1459825948-3626afd5-63ef-4651-a59e-1e12837d4e31

A three-dimensional sail apparatus that is made up of a plurality of spacedly disposed foils and a sail cloth for attachment to the foils on opposite sides thereof. The light duct comprises a rear face forming at least one reflecting facet designed to return some of the beam substantially along an optical axis of the light duct. The functional capabilities which may be modified include both software and hardware configurations of the telephone switch.

1459825948-5aca5d77-f942-4e5a-94db-a0276b975df5

Fast exchanging and sharing a file between plural computers operating by different type operating systems are capable, even if disk space allocation system is unknown for OS. The specified location or platform is within a range less than a predetermined maximum object distance. A max-min search circuit determines maximum and minimum turning points closest to the center of the data processing window and that are located on opposing sides of the window, to determine values and locations of maximum and minimum pixels of the edge. Responses to the queries that are entered through the user interface together with individual identification information are sent from the remote apparatus to the server system across a communication network. A corresponding apparatus and computer program product are also provided.

1459825948-b3cb0e3d-b77f-45d7-a7bc-fb65bd204e72

A projection lens for use with LCD panels is provided. A noise reduction board is formed on a board different from the rotating electric machine control circuit board. A set of leads is provided on the suspension assembly so as to extend generally orthogonally to the first set of termination pads and in adjacent relationship therewith. The application program includes an atomic instruction that directs the x86-compatible microprocessor to perform the cryptographic operation. The primary voltage regulator provides power to these same certain circuits when the integrated circuit is in an operational mode.

1459825948-e4e863e3-a021-455e-b9f6-fcd1e998b33d

A photoconductive antenna is described that includes a substrate that includes a pair of trenches. The present disclosure includes many variations of such apparatus, such as various column designs, material selection criteria, and end-use considerations. One aspect pertains to techniques for authenticating an electronic device, such as an accessory device.

1459825949-2040b40d-c1cf-48b1-9243-52aa06aa590e

An apparatus includes a semiconductor layer having therein a cavity. Multiplexers between the sections control connecting the sections into longer or shorted paths. An analog-to-digital converter converts the analog voltage from each memory cell into a digital representation of the analog voltage during a read operation of each cell.

1459825949-d3e644cb-4fc6-469e-92e4-16e2e31d6f9d

A four-stroke internal combustion engine is provided that is capable of use in many power tools, including those power tools subjected to tippable applications. Each receptacle contact has a body portion, a pair of arms extending from the body portion, a pair of mating portions formed on free ends of the arms, and a tail portion extending from the body portion. Lastly, for each intermediate OADN, the method calculates TX power change for each added channel in each OADN and sets TX power using obtained TX power value. Then, each CCD datum read from the CCD imaging unit is stored in the memory in the raw datum state without addition of an adjacent datum. In turn, the initiating hardware thread detects a change in the assist thread executing indicator, which signifies that both the first assist hardware thread and the second assist hardware thread terminated. The small diameter portion

is a part of the circumferential surface of the developing roller.

1459825949-d6bcba8b-77d2-4978-aa6c-a2b3a5906cb6

Tissue engineering scaffolds comprising collagen or a collagen-like peptides incorporated within or between polymeric fibers and methods for their production are provided. These polymers are generally of the ethylene, alpha-olefin, diene terpolymer type. A memory is coupled to the processor and configured to store instructions. The station as the destination of CTS transmits data in response to CTS information. The torque detection unit detects torque information of the rotary tubular member. The method involves introducing a gas lance into the hollow body and forming a cavity plasma to form a plasma cloud arranged at the tip of the gas lance by applying an electric radio-frequency field to an RF electrode.

1459825949-f434b98a-e6ac-4f71-9b60-f0fbd727e95f

Methods, systems and apparatus, including computer program products are described for formatting and sending data corresponding to web page events and user interactions with content displayed by on a web page to a web analytics system for storage and reporting. The method comprises the steps of deploying a reverse gate and then opening a throttle of an engine in response to actuation of a brake pedal. Also, it can be used to obtain panoramic photographs using digital cameras. The inserts are disposed in a plurality of circumferentially-spaced seats about a working end of a cutting tool body.

1459825950-0946dd0c-066f-482f-8b58-3b0db575b99d

The semiconductor device includes: a first die configured to include a first input pad and a first output pad; and a second die configured to include a second input pad and a second output pad. To allow a faster dressing of the grinding worm the invention is characterized in that the grinding machine further has a dressing bar which has a dressing edge, wherein the form of the dressing edge corresponds at least partly to the ideal envelope of the grinding worm. One or more resilient spacers can be positioned with the continuous loop reinforcement assembly and can be configured for the receipt of a matrix material. The first and second pyroelectric charge cancellation electrodes are electrically connected to the electrodes on the package which are electrically connected to each other within the package, respectively. The method continues with the processing module determining a plurality of storage locations and performing a dispersed storage write function to store the set of encoded data slices in the plurality of storage locations.

1459825950-195e413f-fcb7-449c-bad6-273973c985b4

A fiber optic probe provides in-vitro measurement for measuring fluid media containing bubbles and particulate matter where disturbances to fluid dynamics must be kept to a minimum. This is possible by using a spring to support the lamp, which will allow to pull down the lamp in order to do the electrical connection. The flexible portion is adapted to enable the torch head to be positioned relative to the handle. The lock cup has a set of radially inwardly pointing teeth for engaging with the locking pawl.

1459825950-566bf26b-c3a7-452b-bb37-8a958648c359

A method for air filtration having a plurality of interlocking filters for use in an HVAC system or in other air filtration systems. A buried layer of a first polarity type is constructed on a semiconductor substrate. The total concentration of module Ag after reflow is less than 1. The DCAC conversion portion converts the DC voltage from the ACDC conversion portion to a high frequency AC voltage to be applied to the fluorescent lamp and lights and dims the lamp in response to the dimming control signal. The second system computes a cross-correlation on the regions of interest using a plurality of transforms to find a coarse alignment transform having a highest correlation. Therefore, the operating speed range can be reduced by switching from one winding to another.

1459825951-032617c7-c336-4241-aa43-b870ba25c2d2

A frequency planning method for use in an IEEE 802. Load balancing across different radios in the same sector of a cell site can be facilitated through detection of the unbalance network load and changes to one or more parameters can be made to rebalance the network load. Next, inverse Fourier transform or least squares operations is performed on the multiplied values to compute channel impulse response. A peel removal knife is located to sever the peel of each wedge from the center outwardly after the transverse chunk cutting blades have cut the flesh. The high-frequency electronic switch effectively suppresses leakage of high-frequency signal at the time of off-state by turning on/off between the signal input terminal and the signal output terminal so as to be able to be isolated substantially high-frequency likewise in accordance with a level of the pulse signal input to the control terminal. A conductive film is conformally deposited and selected regions are anisotropically plasma etched, forming conductive film gate straps overlying a gate electrode in a center section of the CSS nanostructure.

1459825951-35b9468b-ae2a-4026-a748-90f01a16b3e2

A process for producing a silica-based film which comprises irradiating a film comprising at least one siloxane compound with electron beams to thereby convert the film into a film having a dielectric constant of 3 or lower and having silicon carbide bonds represented by  $\text{Si}\text{C}\text{Si}$  is disclosed. The liquid may be remover liquid, intermediate rinse liquid or deionized water. The plasma is a high density plasma and preferably contains argon,  $\text{C}_4\text{F}_8$ , and nitrogen. The GCW sensor receives and converts the polarization-modulated light beam into an amplitude modulated light beam that is directed towards the detection system. In some embodiments, the table is created by an instruction defining the table's structure and specifying a plurality of partitions in which to store duplicate copies of some data and in some embodiments, the table is accessed without referencing the overlapping partitions. The frames are opened via geared hinges until retainer straps are fully extended, this allows display boards to be viewed in an upright position, a strap socket is removed from a strap pivot post, and one frame is rotated approximately 360 degrees via a geared hinge.

1459825951-39cb2ab9-c994-44ee-9a7d-6fb652a8496b

A glass for press molding, containing substantially no lead, consisting substantially of, as represented by mol % based on oxides:  $\text{Bi}_2\text{O}_3$  25 to 70%,  $\text{B}_2\text{O}_3$  +  $\text{SiO}_2$  20 to 75%,  $\text{CeO}_2$  20 to 10%,  $\text{Al}_2\text{O}_3$  20 to 20%,  $\text{Ga}_2\text{O}_3$  20 to 20%,  $\text{Al}_2\text{O}_3$  +  $\text{Ga}_2\text{O}_3$  20 to 30%, and  $\text{ZnO}$  +  $\text{TeO}_2$  +  $\text{BaO}$  +  $\text{W}_2\text{O}_3$  20 to 40%, and having a refractive index of at least 1. The apparatus includes a hardware device control unit, a guest Operating System unit, a virtual machine monitor unit, and a host OS unit. The CPU finding a match for an authorized user deactivates a shift lock which may be built into an automatic shift vehicle or a solenoid or other switch added to a standard shift vehicle.

1459825951-96c3ef41-84c9-49f9-8158-962ac4f057d2

A method and apparatus for handoff to a rescue channel is introduced without the need to send and receive handoff control messages. The method includes receiving data that defines a role for a first group of users, the role including one or more permissions each defining a permitted activity of the first group of users with respect to data of users in a second group of users, and setting the one or more permissions based on the defined role. The dashboard also includes an indoor humidity tab.

1459825952-38501c87-f13d-4f2a-a0e2-9c5376fc543d

The invention relates to a medical pump device comprising a rotary valve having preferably only one rectilinear channel which respectively connects the inlet and the outlet of the pump device, or connects the inlet to a pump chamber, or said pump chamber to the outlet, upon rotation of the rotary element of the valve. The apparatus preferably includes a film dispenser for dispensing a film web, at least

one drive down roller configured to engage the width of the film web, and at least one roping mechanism. The jacket material is made of a plastic laminated film and is deformed by pressure. The laminating station feeds the sheets of material above and below the strips to form the laminate before passing it through the laminating station where the adhesive is first heat activated to bond the component parts of the covering product together, and subsequently cooled to cure the adhesive. One of the cage and the plunger includes a magnet, and the other of the cage and the plunger includes ferrous material magnetically attracted to the magnet to magnetically bias the plunger to the closed position.

1459825952-4b65440f-94c9-4d77-a100-20d68e61b4b0

A method of activating a zeolite membrane comprising a step of placing the membrane in contact with a fluid mixture containing ozone, wherein when the fluid mixture is a gaseous mixture, the fluid mixture has a temperature of at least 423K, and wherein when the fluid mixture is a liquid mixture, the fluid mixture has a temperature of 353K. The target element includes three layers. The managed challenge system is linked to the rewritten application module.

1459825952-65454172-6b7d-4782-8ca3-8204f7da1a05

There are provided a positive electrode active material for an alkaline storage battery, a positive electrode for an alkaline storage battery, and an alkaline storage battery each of which has an excellent output characteristics and also has an excellent self-discharge characteristic and an excellent cycle lifetime characteristic. Typically, the sensors that are used to produce two-component ocean bottom sensor data are hydrophones and geophones. Apparatus and methods are described for transmitting the data portion reliably from the initiating terminal to a Public Safety Answering Point CPSAP), by using the same transport connection as the user data. In response, either a session may be created or reused. The inner cable 41 is operated to effectuate braking, and the projection 24g of the free end 24e interferes with the resilient stopper 33 of the resilient member 30 mounted on the strut 23 and is positioned on the rotating trajectory of the brake lever 24. A passivation film covering a bonding pad provided on a semiconductor chip is provided with two apertures in which bumps are formed.

1459825952-aeaa22f3-fba2-459c-97b2-14fb6fb023b9

The springless electric gate tensioner receptacle and plug connect and axially adjust relative to each other in order to mechanically tension the electrical fence gate wire. The method includes: selecting a frequency transform algorithm to be used for a current block from a plurality of frequency transform algorithms according to a result obtained by transforming frequencies of peripheral blocks adjacent to the current block; and transforming the current block into a frequency domain by using the selected frequency transform algorithm. The method also includes switching to communicating with a second cell. The energy recovery system may be configured to store fluid from the hydraulic actuator under an overrunning load condition, and the stored fluid may be directed through the pump inlet and into the hydraulic actuator. The write-protection control circuit may store start and end block addresses of an unlock region of the non-volatile memory array, and selectively activate a write enable signal according to the relationship between a write address and the start and end block addresses.

1459825953-03c393fa-7f25-4d3e-8ab3-d0981621c775

The startup, retrain, renegotiation quick connect or other processes of handshaking between communication systems involve the exchange of certain modulation, constellation, precoder, prefilter and other communication related information. In the solid-state laser apparatus 1, a main pipe 11 for circulating a coolant through a solid-state laser medium 3 is provided with a heat exchanger 14, whereby the laser medium 3 is prevented from raising its temperature. Instead, the user is, upon entering a silent period, reallocated to a SID communication channel, shared between a number of different users in silent mode. The first and second contacts

are spaced from one another when the plunger is in the first position. The invention allows expanding the sample of responses available to range finding, up to the entire test administration.

1459825953-6eddc4a9-7dd1-4114-933b-45e5ba267bc3

Methods, systems, and products are disclosed in which generating evidence of web services transactions are provided generally by receiving in an ultimate recipient web service from an initial sender a request, the request containing a proof of message origin. A heat sink is positioned adjacent the optoelectronic device and a reflector at least partially surrounds the optoelectronic device. A pathology slide slides into a slot in the protective sheath and is held into place by retainers running on the interior face of the protective sheath. A smart timer may generate select signals to the multiplexer and sample-and hold circuits to prioritize updating of the control signals.

1459825954-32dbb291-02aa-4933-9536-ed874650b847

A pin for a semiconductor device is disclosed. Multi-word information groups are analyzed to determine whether each of the information groups includes control characters. The switch controls the transmission of a sampling timing pulse from the timing pulse generator to the image correction circuit. In another embodiment, the storage controller receives object data from a server and allocates the object data to the plurality of pool volumes. A runway incursion detection system has a display unit, a computer and a software product that enables methodology herein. The first planetary gear mechanism 12, 13 each form a planetary type on the condition that an eccentric member 74 is rotatable, and form a star type on the condition that the eccentric member 74 is unrotatable, thereby switching lifting operation of the diverter 160 and transverse conveying operation of an article by means of belts 170, 170.

1459825954-42a38852-6381-4cfe-ad34-194ac6ee9d73

Optimum usage of time diversity and significantly higher data rates are achieved by utilizing an adaptive Ultra-wideband impulse radio transmission scheme based upon information about the channel state at a particular time instant. The method also includes mixing the two pastes and applying the mixed composition to a dental substrate. The down-regulated genes of the present invention form the basis of nucleic acid vaccines, or provide targets to allow preparation of attenuated mycobacteria for vaccines against mycobacterial infections. If the RFID reader is in an over-heated condition, it can be turned OFF and during this period any requests received on an interface to the RFID reader to perform a read of tag are not processed. Then, an image composed of the pixels in the previous stages, the pixels corresponding to the split images, and the black matrix area can be formed on the screen.

1459825954-510c0d00-3ceb-464b-af66-e96a70fdd8ee

A display device includes a display panel and a lens plate covering the display panel. The actuation element comprises at least one connecting element and a selector. A signal processing circuit processes signals from the antennas. The acoustic transducer is the same piezoelectric element and is supplied with electrical signals from the control unit, which electrical signals are converted by the piezoelectric element into audible acoustic signals in a frequency range of 20 Hz to 20 kHz.

1459825954-8bda5e90-4cde-455d-b7a5-438f4e4ea6b3

An adjustable accessory support assembly for a motorcycle accessory includes a base connectable to a support bracket mounted on a motorcycle and a slider accessory connectable to the motorcycle accessory and coupled to the base. If a first index I is greater than data size S, a second index is generated and output prior to outputting invalid data stored in the memory at the location of the first index. The support systems may be controlled with switches positioned on the fingers upon

which each support system is positioned. Also described are unique implantable materials including coatings of dried, reversible adhesive.

1459825954-c63c2fd0-e35d-464e-849d-116523825dcd

Filter cartridges may have a core element formed of a non-filtering, self-supporting non-woven mass of indefinite length continuous synthetic polymeric core fibers, and at least one annular filtration zone layer formed of a mass of non-woven indefinite length continuous synthetic polymeric filtration fibers. The asymmetric transistors may have gate structures. The rake has a handle and a rake head is attached to the rake handle. For example, a SoC PLL may generate a clock output to a SoC divider that is dedicated to providing a clock to content address memory components. The moving plate and fixed plate both have fluid entry ports that align in an open valve position and are misaligned in a closed valve position.

1459825955-24cc8255-c640-420c-ac4a-e99cfcd7ed6a

A system for controlling access of a mobile terminal to a communication network including a set of terminals, wherein said mobile terminal obtains access to the network as a result of a successful authentication procedure. Each remote CPU generates test patterns having undefined values assigned to pins of the logic circuit that do not participate in fault detection. Each of the data interfaces of the first and second types is configured to be coupled to a corresponding data interface of a host device. The method also involves using the vehicle extent locations to compute a circulatory lane width, and generating display signals for causing the display to display an image representing the roundabout. A pair of wedge-shaped pieces are received in the arcuate gap such that their narrow ends and face in opposite directions to each other. The device further includes an electronic servo-control module of the motor, and a flexible connection for electrically connecting the instrument to the electronic module.

1459825955-4834359b-8095-4c61-8ae5-2b33cd900a6c

Actuator for an inhaler for delivering medicament by inhalation, having a mouthpiece for guiding medicament to the mouth of a user; and a removable protection cap for the mouthpiece. According to an embodiment of the present invention, the paper documents have identification tags physically associated with them. Polymers are loaded into a device and run through the structures. The method further includes generating an electronic postmark including the ancillary data. Wall thickness may also be varied of the length of the segment.

1459825955-7f1b13d9-3403-423c-99dd-4795578a8985

A dielectric filter and a dielectric duplexer, which obviate the need to change the design of a circuit board when the dielectric filter or the dielectric duplexer are to be changed and in which the degree of freedom of design is improved, and a communication apparatus using them are constructed. The turbine rotor assembly includes a hub rotatable about a central axis. The key factors for the bundles are a high specific adhesion for the liquid of interest, a high specific volume of the bundle itself, and alignment of the fibers within the bundle.

1459825955-929567d8-dc88-4390-bb07-9718cc40ca8d

A method for use in reproducing pages from at least one document. In a divided recording method, as division patterns used to allot image data to each recording scan, different division patterns are provided for black image data and for color image data. The mercury-containing precipitate is kept or placed in solution and reacts with one or more additional reagents to form a solid, stable mercury-containing compound. Fluid for applying two of the torque-transmitting mechanisms is carried through a shaft which is connected to a sun gear of the first planetary gear set.

1459825955-aeb7f885-644a-4aa7-b620-3a7c573e8614

The invention relates to a device and a method for electrical discharge machining

of a work piece by means of a working electrode. The device facilitates the operation of switching between an upper decorative stitching and no upper decorative stitching. The surface of the polysilicon film left after the step of removing the exposed portion of the polysilicon film is thermally oxidized to form a gate electrode and an insulating film simultaneously on the surface of the gate electrode.

1459825956-46735aee-2ca0-4598-983f-41007bec1d5d

A linearized oscillation synthesizer includes a phase and frequency detection module, charge pump circuit, low pass filter, voltage control oscillator, and a feedback module. The laser incorporates Nd:YVO4 as the gain medium. The system automatically generates complex content from protocol elements in the database, and can render overlapping sets of protocol elements differently at different locations in the document. A threaded stud is coupled to and extends from the distal end of the arm for coupling to a tree proximate a tree stand such that the surface is accessible to a person perched in the tree stand. In addition, a method for creating electrode shadows cast upon the brain model surface is provided. The first element-forming surface is formed with a plurality of first elements and a plurality of second elements, and each of the first and second elements has one end connected to a respective one of the first intermediate film conductors.

1459825956-834a21b3-3bb0-4cb3-afcf-8fbdaf380b88

A multi-port connector of different standards is electrically connected on a circuit board of an electronic device and includes a base, a High Definition Multimedia connector and a SPDIF connector. The stent can be discharged by moving the stent housing tube body to the proximal side relative to the inner tube body. The attachments are accomplished by rotatably coupled drive shafts.

1459825956-f1767eff-a95c-4f90-9609-7d00a2f188aa

A portable activity monitoring device adapted to couple to a body of a user, the portable activity monitoring device comprising a housing having a physical size and shape that is adapted to couple to the user's body, one or more motion sensors, disposed in the housing, to detect motion, and a user interface, disposed in the housing. The pattern-forming material is a multilayered body comprising a substrate and a photoresist layer thereon which is overlaid with a three-layered composite film for near-field light generation consisting of an intermediate layer of a non-linear optical material such as antimony sandwiched between two dielectric layers. The composite material may contain an amount of metal sufficient to render the composite conductive whereby the composite may be used for one or both electrodes and for mounting the capacitor. According to the length of the nail, the adjustment member can be turned to select one of the loading positions for loading the nail therein. The variable delay circuit is located between the data IO device and at least one port. The fault diagnosis node performs fault diagnosis based on all of the fault reports.

1459825957-277e9264-c55e-4cc3-ab8c-7738db0d3628

An exhaust emission control device includes a plurality of devices for removing particulates accumulated in a particulate filter. Specially, the invention, in a preferred embodiment, relates to loading ash-like materials which require treatment prior to loading onto a truck or vehicle to avoid slurry spillage, overload or airborne particulate during loading or transport. The needle is directed through the flap of tissue until the needle is disposed within a second chamber opposite the septum.

1459825957-4d488e60-8fc0-4d0f-816d-9352b389818b

In a light source apparatus, a reflector has an inner reflective surface complementary to a part of the outer surface of an ellipsoid with a pair of focal points. The snap element has two discrete positions that provide the output element

in one of first and second positions. The woven layer has a first surface and a second surface opposite to each other.

1459825957-5d75096b-7e32-42b3-8d6a-8c082fd074c6

An apparatus and method for block acknowledgements with reduced recipient state information are described. A stationary mold carrier can be fixed to the one component of the machine base. The service may analyze data from the customers based on Benford's law to detect potential anomalous transactions in the data from the customers. The assembly further including one of the following components selected from the group of: a protective cover that detachably connects to the core portion and the road milling machine; or a milling extension segment carrying a second road planing bit assembly wherein the milling extension segment detachably connects to the core portion and the road milling machine.

1459825957-a9e22c1e-e9b9-4220-916f-8dfa8ca9eddb

A paper feed assembly for a printer including a media tray for a stack of sheets of media to be fed, a pick mechanism capable of pivoting including one or more picking devices in contact with said media. The plaintext unit may include a logic device such as a first programmable logic device, e. This elongation accommodates thermal and other stresses between the foregoing substrate and another substrate joined at the free end of the reformable member. computes and transmits to the unit R a plurality of sender's quantities; and3. The third electrode has a bias voltage being two volts higher than a pixel voltage of the sub-electrode. The shape of the disc is also altered to draw nuclear hernias back into the interior of the disc and to produce a disc shape that improves functioning of the disc.

1459825958-005051ba-55c8-4a65-bdf4-a684ebc5a13d

The invention relates to the use of rotigotine, its salts and prodrugs, as a medicament for preventing and/or treating Parkinson's plus syndrome. In one embodiment, the aircraft can be launched from an apparatus that includes an extendable boom. The distributed RAID applications on each of the data banks coordinate among themselves to distribute and control data flow associated with implementing a level of RAID in conjunction with data stored on the associated storage media of the data banks. The device housing is either deep drawn or includes two clam shells that are secured together. Thereby, the present invention can produce positive and negative voltage by means of the inductor.

1459825958-2960f308-768e-4b70-84a8-42c0a47606a6

A lithographic printing plate precursor comprising a support having a hydrophilic surface having provided thereon an image-forming layer containing a hydrophobic high molecular compound having at least either a functional group represented by formula or a functional group represented by formula : . Each side arm has attached thereto a respective engaging member for engaging lateral ribs of a first seed box for lifting the seed box. The differences of each pixel value from the average output intensity within each block is determined. In addition, the transport device is provided with a pressure source which is connected to the pick-up module.

1459825958-92b93777-cb3e-4aad-8168-9dff80c1695e

A system, method, and program for optimizing the data channel availability on a computer device through selectively delaying the closing of an open channel on a computer network having expensive bandwidth, such as a cellular telecommunication network. 0 through an Ethernet TCPIP medium. One end of each bit line is connected to a bit line bias circuit. pneumoniae, and treats the subject.

1459825959-7ec4d931-7d2f-4286-be9a-71519500d64f

Systems, devices and methods are provided to switch between transmit and receive modes in wireless hearing aids. The first frame 50 has a first portion 55 to which the third lens 53 is fitted and a second portion 56 where the second lens element is disposed inside the inner periphery thereof. Buy-a-pay payments are also

provided to buy additional symbol combinations. Meanwhile, dust which has entered the equipment is caused to fall through the through hole, thereby ensuring electrical conductivity well. Different arthropods such as termites, fire ants, carpenter ants, and roaches can be treated with the subject embodiments.

1459825959-b26c78da-3b87-4f08-a0f0-0e00207ac661

An injection-molded plastic part having a first thermoplastic component and a second thermoplastic component. A moisture barrier layer covers a remainder of the piezoelectric layer over the pumping chamber that is not covered by the annular lower portion of the ring electrode. The microelectronic structure is fabricated, in particular, by sputtering platinum in order to form the electrode structure at a sputtering temperature of at least 200 C. With this, a gas-liquid separation distance of the refrigerant increases.

1459825960-e5ae1a48-af10-4d3f-8b1e-64a1f4985f68

A multifunction device includes a plurality of slots capable of accepting the insertion of media. A position-feedback is employed by the ECM to control sinusoidal motion of the washing machine agitator. Next, the user is guided to record a representative voice message for the directory, and simultaneously, user's representative-voice recording data produced from the voice message are stored in the representative-voice file. The rutile TiO<sub>2</sub> is combined with the precipitated calcium carbonate in a ratio of at least 1 part rutile TiO<sub>2</sub> to 6.

1459825961-6fe56d58-420f-4189-b33d-69967487c607

Integrated circuit components are imbedded within a laminate substrate disposed on a thermally conductive core, which provides a thermal sink. , the residence time of solid feed in the reactor ranging from 3-15 h. Such advertisements may be broadcast on the same channel as the television program. The proxy server stores the query and origin data in a cache. After the capacitor in the down converter is charged, the external capacitance and the capacitor in the down converter are coupled in parallel.

1459825962-0aaabe25-c583-416a-9af0-21b6fc0f63a8

A method for a multi-terminal session, and a communication system and related devices thereof are disclosed according to the present invention. Horizontally-spaced union strips are extended across the rails, and sheeted infill material is positioned within the open faces of the union strips, so that the sheeted infill material extends from the first union strip to the second union strip. The server receives data from a smart appliance. Defibrillation waveforms may then be delivered in a cyclical fashion between the individual counter electrodes and the combined counter electrodes such that alternation between single pathways and a dual pathway is achieved. The display system further includes a combining device for combining the selectively reflected portions of the cones of light in the ON direction and projection optics for projecting the combined reflected cones of light.

1459825962-ee22df8c-6635-48ff-a2ad-133df776710d

A safety apparatus comprising a first housing supporting a first spool and a second spool coaxially mounted and independently rotatable. A cable protection and guide device in which a number of link frame bodies are flexibly and sequentially connected to each other such that a connecting pin of a preceding link plate is inserted into a connecting pin hole of the subsequent link plates. A query abstraction layer is also provided and is based on the data repository abstraction layer. A plurality of words in the supported language that match a contents of the input buffer are identified, and a subset of the plurality of words are displayed to the user based on a frequency value associated with each of the plurality of words. The managed application process logically communicates with the application manager process. On use of the specific dye-ascorbic acid derivatives according to the invention, a positive effect on the moisture content of the matrices arises.

1459825963-086d45cf-7c37-4778-9a57-03aba4b429b8

The invention concerns a pigment preparation based on C. The active energy ray-curable resin composition contains at least a radical polymerization compound, a leuco dye, and a radical polymerization initiator. The pre-processing engine is configured to perform accelerated processing on received image data, and the compression engine is configured to compress processed image data received from the pre-processing engine.

1459825963-a03ff199-3eb2-454f-af02-17b602a14d30

A method for the production of press-hardened components, in particular a vehicle body component, from a semifinished product made of unhardened, hot-workable steel sheet. A tool engaging the end of the cannulated dilator provides leverage on the cannulated dilator for rotation as it is forced into the body cavity, a pusher tool provides leverage on the dilator retractor for inserting the dilator retractor into the body cavity. In memory state 0 a magnetic domain is pinned within tapered portion of the element. The radial carcass reinforcement ply is anchored in each bead portion and has at least one terminal end located in the bead portion. The method can include the steps of using stored program instructions to generate power tool related information on at least one display and collecting power tool related data using a programmable microprocessor.

1459825963-bc19bf59-7aaa-4d3e-b727-46f77072c13d

A vehicle rear structure is provided in which, when a seatback is tilted forward and folded, an upper surface of the seatback and a rear floor positioned behind the seat form a flat surface. The module comprises a cutting chuck having a surface with a plurality of cutting recesses defined in it for enabling a cutting device to separate individual electronic packages from a substrate having a plurality of electronic packages on the surface of the chuck. A partial data block transmitted by one emitter, comprising a set of k data symbols and a subset of parity symbols, is received from each receiver. The information transmitted to the PED may then be displayed, processed, stored or forwarded to another location if needed.

1459825964-200608b6-c08a-4ead-80b6-2b84d4f5313f

Methods and apparatus for adaptively adjusting receiver operation during non-continuous reception. The vehicle having a right wheel provided at the right of a main body and a left wheel provided at the left of the main body, includes a right lower arm that connects the main body to the right wheel, a left lower arm that connects the main body to the left wheel, and foot placement sections that are respectively mounted to the right and left lower arms in order to place feet of a driver thereon. Some of the through passages are located at lower areas of the support units to position some of the supporting rails for supporting an appropriate lower shelf.

1459825964-50dec1cb-e75d-41d4-85ec-5ea454d3a6f5

The invention relates to a powder supply system for supplying a processing apparatus with a granular substance. A semiconductor laser device includes a GaAsP active layer, InGaP guide layers, and AlGaInP cladding layers. The facets may be formed in a single ion beam etching step. When a project file has been read which includes track data, identification information of a currently-set external equipment and parameters of the external equipment, the detected external equipment is associated with any one of external equipments which had been set for use at the time of storage of the project file. The second impingement cavities are located adjacent to each other, with one on the leading edge, another on the pressure side, and the third on the suction side.

1459825964-81f6d99b-0df1-4457-9631-ff2a570cf4ec

An erasing method in a nonvolatile memory device is disclosed. The steel pipe has a flange portion which can be cut at the opening end of the steel pipe, and the joint

portion is allowed to touch the flange portion. In the delivery configuration the central section, the first intermediate section, the first end section, the second intermediate section, and the second end section are all cylindrically shaped. The Home Agent allocates a home address to the Mobile Node for the session. The valve seal portion is coated by a thin diamond-like carbon coating having hardness between Hv 50 and Hv 500 in Vickers hardness. In some embodiments the packet start command is inferred from a read command containing a packet identifier or sequence number.

1459825965-174475cb-9484-4199-8ad5-0379d573e3c0

An integrated circuit package system is provided including mounting a first device on a carrier, mounting a second device over the first device and the carrier in an offset face-to-face configuration, and connecting the first device and the second device at an overlap. The overlay mark includes a plurality of coarsely segmented lines that are formed by a plurality of finely segmented bars. The etch stop layer, the insulative capping layer, and the conductive gate layer are patterned and etched to form a first set of conductive gate constructions over the substrate.

1459825965-46bf475b-26d9-44e2-8d54-419c0880f15b

Systems and methods that coordinate assignments of aircraft operating within a controlled airspace to ground radios are provided. An access controller has access control lines, each access control line being connected to each PE of the first and second PEs to control data access timing between each PE and the network. The support pad includes a main body having first and second ribbed portions with the first portion defining a deformable pocket. A unique adapter connects the side feeder to the main extruder which allows repair and/or modification of the side feeder without separating it from the main extruder.

1459825965-597d5547-3516-422e-8531-18312f4e48b0

There has been a problem that the distortion characteristic of a switch circuit for a high frequency is deteriorated. Related systems, apparatus, methods, and/or articles are also described. Also provided are vectors, host cells, and methods for producing bacterial Serpin polynucleotides and/or polypeptides.

1459825965-7566b441-eb9d-43f3-a816-1aefadb64b8c

A software implemented system and method for algorithmic correction of systematic image distortions within fingerprint imaging systems. Each of the at least two layers have differing material properties. The optical apparatus is caused to track the position of the sun by way of a tracking device.

1459825965-7ae7c82a-a20b-4bf9-8a4a-780156d66f04

A three-tiered TLB architecture in a multithreading processor that concurrently executes multiple instruction threads is provided. The method further includes forming a protective layer to fill the cavity. One mount includes a resilient member, upon which cooperating detent members are disposed. A light sensor is utilized to sense the pre-determined pattern defined by the invisible light passing through the pattern layer. The track cross-sections of the outer ball tracks and of the inner ball tracks of each pair of tracks are symmetrical relative to the axes of symmetry which, together with the planes, form identically sized angles opening in opposite directions, and each comprise a common point. A delay locked loop includes a detection circuit to generate a detection signal responsive to an input clock and a control circuit to synchronize the delay locked loop to a fundamental of the input clock responsive to the detection signal.

1459825966-6d3899f2-444e-46d4-b136-41af0df5137c

This invention relates to a process for improving the yield and properties of jet fuel from a kerosene feed. Thus, the present invention provides a plate-shaped member transfer facility capable of carrying the plate-shaped member in between two spaced-apart plate-shaped members between which a storage pitch is short and

carrying any one of a plurality of plate-shaped members out from the rack without inserting an end effect in a substrate storage portion of the rack. Co-solvents and phase transfer catalysts may be employed to facilitate the process.

1459825966-f4255ea2-1c2b-432f-bae2-92aedbd19398

Improved techniques and graphical user interfaces that assist users in searching through a group of media items are disclosed. Typically a two-dimensional plane located in three-dimensional space is used to visualize the universe of interest. The retaining ring cooperates with the connector assembly and a saddle that is positioned atop the spherical connector. The thumbnail images emphasize image region of greater priority to a user in view of a keyword or expanded keyword associated with the search results. The curing composition may be used in curing polyurethanes and epoxy resins. In another embodiment, a speaker mounting system contains a detachable base stand having at least one base attaching feature and a speaker unit defines a plurality of angularly spaced apart receiving features.

1459825967-413b9a25-9025-4373-9d43-a9e2bee17c12

The present disclosure provides a package for a medical device containing a cavity for receiving the medical device, a first closure having a sealed portal therein and a second closure adjacent the first closure. The catalyst includes an inert stabilizing agent for maintaining the catalyst crystal structure. Effects of temperature and load current have also been incorporated into the model. or lower, wherein the low-softening point polyester-based resin has a viscosity at 160° C. A variable signal level adjustment device is connected within the return path.

1459825967-645549ef-ac66-4045-be96-8e7e2432a685

A method for cleaning the glass surface of solar panels which employs the use of highly efficient sequestering agents and allows to replace deionized water with municipal or fresh water of up to a very high water hardness, without having a loss in the long term power output of the solar panels. A multi-core microprocessor is provided that supports the ability of system software to disable, or kill, selected cores in such a way that they do not cause drag on the processor bus shared with the other cores. Thus, a stable clock signal can be obtained.

1459825967-8f403824-e53a-48a2-b9f0-2c908f689a1b

A method and apparatus for correcting for vignetting include associating each pixel in the two-dimensional array with a pair of polar coordinates referenced to a preselected origin pixel and partitioning the two-dimensional array of image pixels into a plurality of sectors. Both are movably secured to a chassis, but the front mechanism moves two front segments positioned within two channels on the chassis and the rear mechanism moves a rear segment with a rear axle pivotally secured to a lower portion of the rear segment. A brakeinertia device may be coupled to the crank system.

1459825967-bb42f332-cadf-4349-aadf-e3ee6a21e6b0

There is provided a method of determining a transmission quality when receiving audio signals which are transmitted over a frequency-modulated path in analog form. The main vessel device and the side branch vessel device are able to be simultaneously delivered to a treatment site. The protocol information for the drug is entered into the peristaltic pump.

1459825967-dd71084b-2e72-4a36-b454-6971c7be2086

Embodiments of the present invention disclose a method, an apparatus and a system for controlling access points. The circuit comprises a main power supply unit with a voltage input, a main switching element and a reactive element. The collet has a protrusion extending the length of the pull section to increase the contact area with the anvil member. Various embodiments of the present invention eliminate or reduce the need to use an output capacitor. A bank of individually adjustable rollers supports the panel during the roughening operation and facilitates

adjustment of the extent of contact or impingement of the brush on the surface of the panel at a plurality of transverse locations across the panel. A contact hole may be formed between the gate patterns by forming and patterning the interlayer insulating layer.

1459825968-85e4e7c9-c3b5-496c-98f1-5dd1a8dfcec5

An illumination system for illuminating an object includes a light source and a lens array system. The battery charger is constructed to include a body, a circuit board, a reel assembly, an outlet lead wire, a rotatable reel, a securing axle, a slide switch, and a two-pinned plug. With this configuration, the cabinet and the antenna element can be installed in a vehicle at once and wiring of the antenna element outside the cabinet can be eliminated. This set of characteristics makes this materials particularly suitable for a vast range of applications in the nanotechnology field, such as, for example, nanocoatings, magnetic nanofluids, nanocatalysts, nanosensors, nanopigments, nanoadditives, ultra light nanocomposites, drug release nanoparticles, nanomarkers, nanometric films, etc. These bid condition data are transmitted to the server through a network, and the server collects participants in a bid on a home page.

1459825968-ace77462-7c6a-40d8-a225-0e16fc2539dd

A decoupling device including a lead frame and at least one capacitor unit assembly is provided. According to one method, a selection of media content copied from an electronic source is received. The receiving communications application notices from the RTP data flow that the other party in a communications session has changed its IP address. The semiconductor device further has a conductive trace between the semiconductor substrate and the metal structure.

1459825968-cac45373-6092-4ac3-8bbb-a55a011c8c23

A emergency capsized boat seating apparatus includes a boat that has a hull with a bottom side. The invention also related to compositions which comprise these compounds, and methods of using them to treat cancer in mammals. The light emitting diodes are arranged in spaced-apart groupings. A second beam splitter is provided connected to the waveguides after the polarization converter. The apparatus also includes a translation look-aside buffer.

1459825968-e34d9130-03f0-4b44-9516-00a0752f721a

A computer-implemented method of performing runtime analysis on and control of a multithreaded computer program. The network server may maintain a personal network directory for a telecommunications subscriber of called and calling party telephone numbers tofrom the subscriber and identification of applications software which may be periodically updated. A composition comprising a metal component, boron, and an organic component. A superconducting magnet includes the superconducting coil, a persistent current switch connected to the superconducting coil, and a quench detector configured to detect quench occurring in the superconducting coil. The protective tape is attached to upper sides and lower sides of both edges of the PC alloy portion. The user's thumb and forefinger are aimed at the V-shaped sidewall openings to grasp a midsection of a supported surgical sharps.

1459825969-2067bd9f-64fa-4346-a2b4-f48130742322

The present invention is directed to a process for the preparation of polysaccharide grafted latex particles wherein the polysaccharide has \u03b2-1,4 linkages, wherein the process comprises coreshell emulsion polymerisation. A call can be initiated from a wide-band telecommunications device to another telecommunications device through a gateway associated with one or more telecommunications networks, such as, for example, a WAN, LAN andor PSTN. A detected value is compared with a predetermined threshold value used to identify the area of interest, and a detection corrective value is calculated based on detected values from the region including the area of interest and detected values from the area of interest. The method further comprises selecting one or more rules

based on the sentiment of the post, and taking one or more actions in response to the rule. The set/reset circuit is coupled to the second node and the third node, and arranged to receiving a set signal and a reset signal, and selectively determining a voltage level of the third signal at the third node.

1459825969-458b12e8-a8cd-47c8-a8c5-bcc175a0cff5

Systems and methods for event simulation with energy analysis. The sensor may be a touch sensor. The method includes the steps of selecting a block for a user's particular operation, optionally, selecting a sleeve based on the selected block, and selecting a cutting tool based on the selected sleeve.

1459825969-57fd20d6-049c-47fd-94dd-44d02ca7a6c4

An apparatus and method of operating a liquid drop emitter, such as an ink jet device, for emitting liquid drops of different volumes. The walls, the bottom support and the cover cooperatively define a space for accommodating items to be packed therein. A gain of the feed-forward unit is dependent on the position of the movable object. In another aspect, a peel strength enhancement coating is disposed between a copper foil laminate and a dielectric substrate. The controller combines pixel values from rows in the first image with rows in the second image that are separated by the predetermined number of rows. The invention further relates to an apparatus for preparing these diamines and the use of the apparatuses.

1459825969-c1231588-f506-49f9-a0d5-2d58c52b7f14

A combustion heating device for heating a fluid to be heated includes a fuel supply device that supplies the fuel to the device, and a vaporizing device that burns a portion of the fuel supplied by the fuel supply device, and vaporizes a remaining portion of the fuel by using heat generated through combustion of the portion of the fuel. One or more electrodes are coupled to the mechanical support, so as to contact tissue of the patient when the mechanical support is implanted in the patient. Position of the airplane is determined, such as by inputting aircraft position from a global positioning system. A second syntax element is calculated from the image data by a second syntax element calculating unit that reads out the image data stored in the storage unit.

1459825970-061a22be-3c76-4309-b8cf-631e1f1c7330

The present invention relates to methods and compositions for removing hydrophobic soils from textiles. The base plate is surrounded by a hollow frangible hull, which in turn is supported by another base plate, which also supports from below a distal end portion of the depending non-projectile thermal actuator. The circuit includes a first inverter, a second inverter, and a current source. If the acknowledgement message is not received, the judgment unit determines that the data receiving apparatus is connected to the data transmitting apparatus through a second network and subsequent content data transmitted is limited in usage right.

1459825970-61447fee-7398-4f60-b18e-eea035a1acab

A roll-over protective structure for a frame structure of a cab assembly including an outer tube and an inner tube disposed within the outer tube at a pre-determined location to define a composite tube. The sipper spout extends upwardly from the top member and has a curved sipper surface that truncates to form a substantially flat landing surface. In addition, waste carpet may optionally be used with the recovered polyvinyl butyral as a filler material; thus, further reducing the amount of waste that is landfilled or incinerated. The compact display unit presents to a vehicle operator a range of pre-selected permissive communications between the vehicle and a remote server by a vehicle operator during operation of the vehicle.

1459825970-83e2fc58-d68a-49d4-b933-e752778a6965

A videoconferencing system which encodes different streams of information. To achieve this object, the aging process takes place while gas generated inside the panel is evacuated. The use of a twisted-pair wire as a heater minimizes the effect

of induced magnetic field. The coupler is for receiving and splitting the RF signal and delivering a first RF signal via the first output terminal thereof. Each piece comprises a border that is connected to the border of the other piece in the connection region.

1459825971-17579d3e-a190-44a5-827e-6518e86106ca

A method and apparatus for communication in a system employing differing transmission protocols. In the method, at least one reference data unit for prediction of a DC coefficient of a current data unit is selected from at least one previous data unit that is scanned according to region of interest-oriented scanning and then transformed before the current data unit. In order to provide the shell with the same mechanical stability, despite the reduction in wall thickness, as shells whose wall thickness is not reduced, the wound body of the shell is produced from chemical fibers, preferably from synthetic and inorganic chemical fibers. In response to change of the mobile device to an access network of the network entity, a control message comprising the authentication code is transmitted from a mobile device to a first network entity, for verifying the authentication code by the first network entity or by a second network entity of a previous access system.

1459825971-4e3e3eac-7c03-476b-98fe-24075b00cece

The application relates to new substituted xanthines of general formula wherein R1 and R2 are defined as in claims 1 to 11, the tautomers, the enantiomers, the diastereomers, the mixtures thereof and the salts thereof, which have valuable pharmacological properties, particularly an inhibiting effect on the activity of the enzyme dipeptidylpeptidase-IV. ; A is a single bond, alkylene, etc. The upper wall can be compressed while not containing water and extensible for containing water. The VCO comprises a voltage-current converter and a ring oscillator. The nozzle member is provided in a recording head of an ink-jet recording apparatus and ejects ink toward a recording medium. Virtual requests may be included in various protocols, including credential-based protocols and certificate exchange-based protocols.

1459825971-5755ba8a-fb9b-4a24-8ed9-caa06b87845f

Systems and methods for improved digital RF transport in a DAS are provided. The shape memory alloy can be produced by a first heat treatment step comprising heating at 1200 to 1350°C. A host computer system includes an ESL data file comprising a data image of the ESL's registers. A lost circulation material conveying portion can be in material receiving communication with the material metering portion at a first end portion and in material expelling communication with the drilling well mud pit at a second end portion. Push-button calibration is achieved by storing the reference value resulting from the force produced by gravity acting on a standard mass. The objects generally include an elastomeric layer formed from an aromatic polyurethane and a foam layer which is subsequently applied to the elastomer.

1459825971-812838a0-67cc-4e42-af40-b1079139cd4e

A safety syringe employs a mechanical logic arrangement to control the movement of a spring-biased protective shield that covers the needle except during an injection, and which limits the number of injection cycles. An ancillary benefit of the invention is improved process-ability of the grid array package by improving the mechanical containment of the solder during the reflow process and improved electrical isolation between the individual solder attachment points. The signal generator generates a periodic signal. The conductivity-enhancing agent is capable of eluting from the delivery element when the delivery element is contacted with bodily tissue or fluid and increases conductivity of the tissue, making tissue ablation more efficient. A hermetic terminal is provided to allow the fiber optic element or bundle to communicate with the body interior.

1459825971-accedd47-f984-4bb5-960b-e44511eb0a9d

A pipe end-sealing tool includes a body. Systems comprising and methods of using said apparatus to suppress vortex induced vibrations. The position of the knife holder assemblies is programmably controlled for efficient and accurate positioning and adjustment of the knives along the rotating shafts for a variety of slitting configurations. The upper silicon layer including at least one component of the active electronic device and at least one component of the optical device.

1459825972-17f7bb2f-670c-41eb-9428-94b0539d5caa

A method of reducing or inhibiting kinase activity of C-KIT in a cell or a subject, and the use of such compounds for preventing or treating in a subject a cell proliferative disorder and/or disorders related to C-KIT using a compound of the present invention: or a solvate, hydrate, tautomer or pharmaceutically acceptable salt thereof. The restore program may create a client environment to which a backed up client may be restored, which may include one or more client volumes. Molecules to be separated are placed in the focusing section and move to an equilibrium position under the influence of an electric field.

1459825972-192059fd-f73f-46de-9509-cda23565c9ab

A dial plate includes a substrate having a curve with an opening formed at the center; and an indicating member attached onto the curve of the substrate. The ONU receives downstream signals from a first plurality of OLTs through a designated port of an arrayed waveguide. The anchor device is then disengaged from the shovel position and then locked into an anchor position and then inserted into the hole and then covered with beach sand to secure the post portion of the anchor device in a vertical position with a portion of the post exposed above the surface of the sand.

1459825972-a0c71a8b-37c0-4279-80cb-9b120a77860c

A bipolar transistor device with a large current capacity is formed by connecting a plurality of transistor elements to each other in parallel, each transistor element having a collector layer, a base layer, and an emitter layer formed respectively in a semiconductor substrate. The secondary source can include combusting conventional secondary fuels. The spintronic element may be used as a spin injection device by injecting charge carriers from the magnetic material into the MgO tunnel barrier and then into the semiconductor. A user can hold the sleeve when the mop is wrung by a dehydration device. The regulating member regulates the amount of developer carried on the developer carrier.

1459825973-62746059-e3b5-4d08-bcb6-86fdea91e28f

A method for crediting a customer account maintained by a vendor of services in response to payment received from a customer is disclosed herein. A data structure is provided that identifies one or more server-side entry points for use by a client computer upon which diagnostics on-demand are to be performed. The inverting input terminal of each operational amplifier is connected to the corresponding sensing electrode in the sensing element.

1459825973-6fb9adb4-1939-40ba-b1a3-ee1e8c768849

A container for a substance, such as an ant trap container for ant bait is comprised of a minimum number of component parts that are each formed in a cost effective manner to produce an inexpensive container. In certain example embodiments, an interlayer of or including a metal oxide such as tin oxide is provided under an infrared reflecting layer so as to be located between respective layers comprising silicon nitride and zinc oxide. , rice, wheat, barley, oats, rye, sorghum, cornmaize, pastures, grasslands, rangelands, fallowland, turf, tree and vine orchards and IVM, but also additionally in ALS and ACC'ase tolerant crops. The portion to be positioned is positioned to a main assembly side positioning portion by the portion to be urged when the process cartridge is set in the main assembly. In certain embodiments where the antiarrhythmic is azimilide it may be administered

orally in a dose of about 25 mg to about 300 mg. The apparatus comprises an electric source capable of generating an electric field across a region of tissue and means for altering the permittivity of the tissue relative to the electric field, whereby a displacement current is generated.

1459825973-b5257c20-0ad7-4500-811e-da7f58f4c543

The claimed subject matter provides a system and/or a method that facilitates creating a composite application. In one embodiment, a single masking step is utilized to form mask openings over a substrate, and both impurities are provided and material of the substrate is etched through the openings. The system permits inter-networking of HAN devices and integration of data management within home automation networks while still providing access to HAN data via external remote networks such as the Internet. A gate-side boundary of the first doped region underlies part of the gate electrode. A feedback line from the bus terminator permits monitoring the logic level on the signal line by the software controller.

1459825974-078ca700-9c71-402b-ba62-92fcd1b5c2d7

A cutter mechanism has a fixed blade and slidable blade which cooperates with the fixed blade to cut a recording sheet. The methods are particularly suitable for amplifying a plurality of RNA species in a sample. The extending direction of the contact surface is inclined relative to the axial direction of the commutator, and the contact surface is V-shaped when viewed in the extending direction thereof.

1459825974-2ea03b51-d5bc-40b7-9b6a-42c3c7a40f0d

A system and method is provided for facilitating robust reception of multiple frame protocol messages. The invention relates to the seeds of soybean cultivar 5420128, to the plants of soybean 5420128, to plant parts of soybean cultivar 5420128 and to methods for producing a soybean plant produced by crossing soybean cultivar 5420128 with itself or with another soybean variety. The integrated analysis can be performed within one or more modules that are fluidically connected to each other. The system also includes programming logic configured to determine if the user of the application is authorized to access the first resource. The fixture is mounted to the positioning mechanism and is moveable relative to the attachment portion. Accordingly, it is possible to make a spring characteristic for working when supporting a load of a human different from a spring characteristic for working when removing vibration even with an extremely simple structure.

1459825974-b0886973-3e44-435b-993e-7916592c8f6b

A solid state illumination system is provided as a replacement for conventional arc light, metal halide and Xenon white-light sources for applications in life sciences including, microscopy, fluorescence microscopy, and endoscopy. The components of the apparatus include a saddle for holding a recording medium such as a disc, a conveyor that travels the saddle through a tunnel in which multiple UV lamps are positioned to direct UV light on the recording media travelling through the tunnel. The applied voltage etches metal ions off one electrode and deposits the metal ions onto the second electrode. If the endpoint responds, a list of monitored endpoints is updated with a new timestamp indicating the time when the response was received.

1459825975-0dce4f02-1f40-4ebf-8249-2ea8edbfc8b1

The invention provides, in some aspects, systems for interaction with a control environment that includes controlled equipment along with control devices that monitor and control that controlled equipment. The antenna comprises a meander line radiator, a tapered line radiator, a straight line radiator, and a dielectric layer. It is determined if the quality metric for the second reader is above a threshold.

1459825975-310a5d2f-0b53-42ba-8e6b-ce75958cf046

A method for manufacturing a plurality of hybrid electronic circuits for active implantable medical devices and circuits made by the process. According to an

embodiment of the present invention, an image to be a document is read and is subjected to image processing, and thereby digital data is acquired. The method comprises applying to a set gypsum material at least two of the following inorganic phosphates: at least one monobasic phosphate salt, at least one trimetaphosphate salt, and at least one acyclic polyphosphate salt having at least three phosphate units. The units are wet or immersed in the liquid, so that the units may be expanded into a wet towel. By virtue of this action, even though a fluctuation in current density of a current flowing through the interconnector and an area in the vicinity thereof occurs for some reasons, the fluctuation can be suppressed. The second MUX is coupled to the fourth MUX.

1459825975-98373e23-44b7-491b-b500-accebafeb3ac

A system may include a first connector housing, a magnetic data storage device mechanically coupled to the first connector housing, a second connector housing configured to be mechanically engaged with the first connector housing, and a permanent magnet mechanically coupled to the second cavity. The opposite side of the exchanger is held directly by the case. The precoding is performed independently on an antenna basis. To increase the depth of these doped regions, individual recesses may be formed in the surface of the drift layer where the elements of the junction barrier array are to be formed. configured as a brake pedal module, braking of the vehicle can be achieved by means of the service brake system by way of the second brake operating device. Thus, when a clockwise or counterclockwise rotational impact is applied to the hard disk drive, the actuator latch restricts rotation of the actuator so that the actuator cannot escape from the parking zone and the hard disk drive can be protected from being damaged.

1459825975-fe3ee3fc-0fd1-451d-baab-69aca42dd878

An information processing apparatus includes an obtaining unit, a specifying unit, a calculating unit, and an evaluating unit. The system, method, and computer program product are optionally further extended to harmonize synchronization of data retrieved by other methods with data updated using AJAX. The coated substrates are useful in polymers, catalysis, heating and shielding applications. The threshold voltage of the first and second pass gate transistors is such that a subthreshold current is provided to the first and second pull-down transistors when the memory cell is not being accessed such that the conduction terminal of the pull-down transistor that is turned off is maintained at a voltage level corresponding to a logic high voltage. 5 to 3 mol % of the monomer and the molar ratio between the monomer and the monomer is within a range from 4 to 20.

1459825976-215918f6-d567-489b-847b-797347fd28b0

A lead-acid battery having a reliable exhaust structure suppressing unexpected leakage of acid mist and gas to outside the battery. In one embodiment, the laminate includes: a liquid-impermeable first layer having a first surface, a second layer having an interior surface adjacent the first surface and an exterior surface, at least a portion of the interior surface is joined to the first surface by an adhesive applied to the exterior surface, and the adhesive having a first bond peel strength of about 1 gmm or greater. A gap is provided between the two block pieces that are adjacent to each other to serve as a circulation space for circulating a medium. A first conductive layer is deposited over the first and second conductive lines the said trench.

1459825976-2922738c-6017-49eb-83aa-2407d3b49cb6

A microscope, which moves an objective lens along an observation optical axis with respect to a specimen, includes an imaging unit and a supporting unit. The electrode sheet is molded from granules which are produced from ingredients including an electrochemically active material, an electrically conductive filler and a binder. The external persistent memory storage device is connected to the computer system hosting the persistent memory storage device to be examined, for example, by way of a USB or Ethernet port. A movable member is disposed so as to be

movable in the conduit direction by sliding in contact with the inner wall surface of the communicating pipe.

1459825976-aae5569d-1920-47b6-b7dc-007dde1823f1

A masking layer is formed on a dielectric region of an electronic device so that, during subsequent formation of a capping layer on electrically conductive regions of the electronic device that are separated by the dielectric region, the masking layer inhibits formation of capping layer material on or in the dielectric region. A local area network interface 150 may receive a transmission control protocol data transmission from a source local area network device. Both control lines are interconnected with the signal line through asymmetric-switch nanoscale junctions of like polarities.

1459825976-bc938cfd-a31c-4e78-a87e-78d34426c44a

A therapeutic, fitness, and sports enhancement device comprising a cylindrically shaped body having a predetermined density and predetermined diameter including a plurality of projections of a predetermined shape. The bank has a hollow body having openings in its upper surface and notched, removable plugs that fit in the openings to help define elongated slots through which coins or paper money can be inserted into the bank. The power source control circuit selects one of the first functional circuit and the second functional circuit and judges whether power source is short-circuited or not. Also, the set-top box presents media content provided by the application according to the mapped activity. The charging controller is configured to cease or reduce transmission of the charging energy during a charging energy conservation period that is at least a portion of the predicted charging energy rejection period. The free-space navigation sensor is coupled to a second side of the circuit board.

1459825976-c7ea7b9e-d012-4fa5-a2ea-8d04fd375a6d

An actuating apparatus which may be arranged to provide an actuating rotation or force on demand. When a communication device requests IP connectivity to another communication device, either the local or remote communication device's associated service node or their agents, formulates an appropriate direct IP pathway to traverse any pertinent NATs and instructs the applicable communication devices to self-configure to establish the pathway. The composition may also include a compatibilizer or homogenizer, such as chlorinated polyethylene.

1459825977-47b21513-9544-4e16-bf64-5e064f10ab5b

A high spatial resolution X-ray computed tomography system is provided. The target is monolithic or bonded and contains at least 99. The court rule database includes formulas written in a Date Calculation Scripting Language for calculating the court dates. The test architecture enables each of the plural wrappers in the IC, including wrappers in cores embedded within other cores, with separate enable signals.

1459825977-62769294-7d56-4486-8f61-20097adb66db

Embodiments of the invention relate to virtual link aggregation. The support unit includes an outer tube having at least one locking hole. The magnetron has a size only somewhat less than that of the target and is scanned in the two perpendicular directions of the target with a scan length of, for example, about 100 mm for a 2 m target corresponding to at least the separation of the gap between parallel portions of the loop.

1459825977-7418dfcb-e197-4c45-aa61-8eb91a2889eb

Methods, systems and apparatus for vehicle and communication monitoring. An image of a scene of a geospatial region comprising an object is received as input. 1 gcm\u22123 or have a mass median aerodynamic diameter of not more than 10 \u03bcm or are in the form of flakes having a thickness of not more than 100 \u03bcm.

1459825977-e5c4d2ba-2663-4913-b050-33538ed77588

A system includes a processor device. The solvent system comprises methyl alcohol and monochlorobenzene in a weight ratio of about 6:1 to about 1. Such systems and methods dynamically bring together modules or elements to create a gaming environment in conjunction with a game of skill in the context of a networked gaming environment, such as a communication network within a casino, or a wide area network, such as the Internet. In response to the opt-in indication, and a recommendation generated by the pricing optimizer based at least in part on an analysis of the client's resource usage and the pricing of instances reserved for the client, the resource manager includes a particular resource instance currently reserved for the client in a listing of instances available for reservation by other clients.

1459825978-486848f7-f8bb-49bf-a54f-1c5fd7952bf6

A power adapter including a power reducer for no-load or light load applications and method of operating the same. According to one aspect of the present invention, a macroblock may be partitioned into two, or more, sets of blocks. A plurality of spacer rings are supported between the forward casing flange and the liner closeout segments such that one of the spacer rings and the liner closeout segments present a flat face for direct attachment to an aft flange component of a gas turbine exhaust frame.

1459825978-5efad58f-52c4-4bf4-9a6b-1a72d6d94d06

A drying device for a washing machine includes a rotatable drum configured to house laundry items; a tub having the drum therein; a driving unit on the tub and connected to the drum, configured to drive the drum; a drying unit configured to store liquid water and circulate air in the drum to remove moisture from the laundry; and a control unit configured to control operations of the drying unit. 120 inch from the front end of the tip, and a concave waist having a radius of curvature greater than about 0. An operational amplifier is formed, that has the potential of the connection node between the current detection transistor and the current detection resistor applied to its inverse input terminal and a feedback loop, so as to make a pair of input terminals of the operational amplifier be at the same potential. The output of the control circuit is connected to the bases of the differential pair of the variable gain amplifier, whereupon the ratio of the output current to the input current of the pair becomes dependent on the control voltage. The method and apparatus are further capable of determining a proximity of the first and the second locations when there is text that is different in the first and second corresponding screens at the first location, and generating a colorblindness accessibility indicator based on whether text that is different was detected and or the determined proximity.

1459825978-b15be7e2-a84d-45d9-9fd8-40f7d06d0703

A method is disclosed for performing a handoff in a telecommunication system. Also, a mask layer is formed on a substrate, then an AlN layer is formed to cover it, and then the AlN layer is lifted off by using a solution for etching. Phase information is extracted from the inphase and quadrature data. The connecting device is covered with the leakage proof element and has a head holder, a connecting tube, two pivotal pins, two buckling elements and two springs. The pattern has an attenuation which is different than the attenuation of the remaining portions of the optical compensation plate. Another embodiment is a system configured to perform an embodiment of the method.

1459825979-00f77d70-676e-4931-8fdc-33c91f8edbf9

The present invention relates to an arrangement for adjusting a number of settings in an x-ray imaging apparatus for recurrent mammography examinations, said apparatus comprising at least one x-ray source, a collimator arrangement and compression pedals for positioning and compressing the breast of a patient to be examined. In one example, vacuum is supplied to a vacuum reservoir via an ejector

during a first condition, and vacuum is supplied to the vacuum reservoir via an engine intake manifold during a second condition. The identifier code of the medium to be used to purchase a value stamp is received from the user. Thus, the light beam is blocked by internal defects when transmitting within the substrate to generate bright spots to be detected by the image capturing module for locating the defect position. A current application circuit is coupled to the voltage-current dependent circuit and is configured to apply a current that limits or even altogether stops an applied overvoltage condition from reaching a load circuit. The device further includes a correlator configured to correlate the data stream with a reference data sequence to obtain a correlation result, and a position determiner configured to determine the position of the satellite receiver by means of the correlation result.

1459825979-045ecc91-635f-4ad7-8d80-c3536a4dfa3f

A co-fired hermetically sealed feedthrough is attachable to an active implantable medical device. The power-supplying unit supplies voltage and current to the transferring unit to transfer a toner onto a recording medium. The first lip and the second lip at least partly cover a portion of the cover body where the fastener is to be positioned. Input portions of the first and second signal electrodes are arranged at a same side edge of the substrate. The compounds of this invention possess both  $\alpha$ -adrenergic receptor agonist and muscarinic receptor antagonist activity and therefore, such compounds are useful for treating pulmonary disorders, such as chronic obstructive pulmonary disease and asthma.

1459825979-dc64c343-428f-423f-b1e7-7a5b7634af5b

A technique for detecting and correcting errors in a memory device, in accordance with one embodiment of the present invention, includes a data storage area arranged in a plurality of blocks, wherein each block contains a plurality of words. Testing is effected by portable field equipment or by a built-in test equipment facility with the flowmeter transmitter. The communication device includes a processor configured to receive information from the tethered device during a first tethered connection and to determine, in response, a parameter associated with a synchronization period during which the tethered device may use the network connection to synchronize data between the tethered device and the another computing device. Each column in the detector array corresponds to a wavelength in the 4. The ribs having a thickness defined as measured from said leading edge toward said trailing edge. Since the resistances for the fixed temperature difference control change over time essentially at the same rate, a resulting output error is very small.

1459825980-0370e492-e4aa-4d7b-83d4-576e5cadd131

Novel *Bacillus thuringiensis* genes encoding toxins which are active against lepidopteran insects have been cloned from novel lepidopteran-active B. The invention also provides pharmaceutical compositions comprising such compounds, methods of using such compounds to treat diseases associated with  $\alpha$ -adrenergic receptor activity, and processes and intermediates useful for preparing such compounds. A valve assembly is configured to selectively supply hydraulic pressure to the passageway solely from the first pump, solely from the second pump, and from both the first and second pumps.

1459825980-73827528-7223-414b-872b-06be9cb2fdcc

A framed covering for an architectural opening includes a collapsible shade that is moveable between open and closed positions relative to the architectural opening with the collapsible shade being mounted within an enclosed framework that is adapted to be secured to a structural member having the architectural opening therein. The internet radio includes controls suitable for manipulation by human digits, a communications unit used to provide the radio a communications link to the internet, an audio unit, and a processor. The current invention marries such output modulation techniques with a control method which is derived through

intelligent monitoring of the input voltage waveform. Sending sources that are permitted to print can also be registered in memory. A relief image is formed by imaging the imageable material to form an imaged mask material, exposing a relief-forming material with curing radiation through the imaged mask material to form exposed regions and non-exposed regions, and developing the imaged relief-forming material to form a relief image by removing its non-exposed regions. The number of priority levels for the high priority requests may be two or more, and in one illustrated embodiment is equal to three.

1459825980-7a926992-b612-4176-9044-56a7f75ffd15

A new and distinct cultivar of geranium plant named Fisrosalm, particularly characterized by the combined features of rose red, round, cup-shaped, semi-double flowers, medium green foliage with distinct zonation, vigorous growth, tall and wide plant habit, and mid spring flowering response. Each of the terminals has a noise filter function, and is fixed to the shield case. The disclosed level shifter is configured such that the size of the preceding logic gate and circuitry within the level shifter can be reduced, facilitating its layout in pitch-limited areas. The data may include data tags or a step of adding data tags to the data to assist in data interchange may be performed.

1459825980-90272e03-4215-426b-947b-589cfe05ab75

Apparatus for recovering timing of data input to a receiver, the apparatus consisting of an interpolator which receives the input data and generates interpolated-data in response to an interpolation coefficient, and a feed-forward equalizer having at least three taps. The light-generating unit has a light-emitting element for generating light beams and a brightness control element for adjusting the luminous flux of the light beam. Users can register for categories that interest them, from an available set of categories. Electrically modulating a lateral PN diode causes a phase shift in an optical wave propagating through the waveguide.

1459825980-df9325a3-3a2b-4e00-ae63-92fa8d981958

A state machine provides a power reducing capability by turning off a clock signal to a memory which stores the state of the state machine. The liquid drawn out from the liquid container is fed back into the liquid supply tank. One or more additional content items are received over the network. The optical fibers are not bonded to the front portion of the chip. This is accomplished in a cavity design that is relatively compact and economical.

1459825981-2171bc06-62f7-4a80-9594-c2ec97776b2f

A method and apparatus for staggercasting includes encoding a first signal representing content having a time duration and a second signal also representing that content. The positioning device and a tube are located on two ends of the slide member. The method further includes transferring a synchronization call to synchronize animations for the multiple views of the display.

1459825981-3cabf447-dc4a-4c6d-ad4c-d9c13500f59d

The invention provides a method of determining a susceptibility of a subject for development of ADHD. The light source section projects light onto an object for 3D imaging purposes. In a preferred embodiment, the set of crystallographic solutions may be a rank of crystallographic solutions which may represent the most probable crystallographic orientations. The state information can be stored as non-persistent data within the voice browser.

1459825981-84e91be7-8b46-4541-9935-ba541d400dbe

A capacitively-coupled plasma processing system having a plasma processing chamber for processing a substrate is provided. The chamber is sized and configured for receiving a fluid such as water, storing the water in use, and adding to the weight of the overall device. In doing so, the transmitted signal strength of the wireless

coverage area may increase, which in turn may increase the likelihood that the WCDs can acquire and use the wireless coverage area. The first open end of the second damper housing half is joined to the first open end of the first damper housing half to form an assembled damper housing.

1459825981-e6cdfef4-de90-49b0-bab8-0f89818d1530

A fabricating method of an electron-emitting device is provided. Furthermore, a gas discharge panel having a structure in which discharge mainly occurs at locations distanced from parts of the panel connected using the bonding agent Bd is realized. The network configuration further includes a link layer gateway computer coupled to both the first network medium and the second network medium.

1459825982-13b47a2d-8ba3-4220-a672-de7893a6c815

An electrical connector including a frame, electrical contacts, and a system for retaining and ejecting an electronic module. The flowable devices are adapted to move with a fluid flowing in the wellbore. Each of the lower labels includes corresponding visible indicia that are different than the visible indicia of the upper label and of the other lower labels. In another aspect, the assembly includes a connection adapted to manually, without tools, connect the light source to electrical power, the connection can be configured to have no electrically conducting surfaces directly exposed or accessible to human fingers and can be configured to be positioned relatively away from the light source. During deposition of the film, which may be accomplished by CVD, PECVD, rapid thermal processing or the like, the substrate temperature is controlled to establish a temperature profile particularly suited to the extreme temperature sensitivities of the deposition rates of organosilicate films such as those deposited from TEOS as a source material.

1459825982-3061d620-9591-442a-9fd3-906cab88a88e

An application server receives an HTTP request for execution of an instant messaging application operation for a sending party. An arc shaped magnetic body is disposed on a base of a spindle motor opposite a drive magnet and in the same direction as the opposing face, thereby generating an attractive force on the outer periphery side of the rotor. A second, workstation engaging member allows the user to move the keyboard back and forth with respect to a workstation. The computer system then communicates an acknowledgment to the VM indicating that the write request has been successfully processed. Based upon this generalized eventpoint architecture, new capabilities are enabled. For example, cannulae that can be connected to the circulatory system of a mammal and can be used in conjunction with a blood pump are provided.

1459825982-3ac5f856-71af-47b7-b76c-37ff47c02a18

Underground water valves having square operating nuts, such as but not limited to critical water valves which control different pressure zones or different demand areas, are secured by a shielding cap, each of which have a recess that receives a valve operating nut and a cylindrical projection which frustrates attempts to rotate the operating nut. The high-order, Nyquist-stable control system having NDC hereof is absolutely stable and will provide a 20%-40% improvement in performance over existing roll reduction designs when lower performance steering mechanisms are employed, and is superior to linear controllers. Browsing activity of the visitor across the Web pages is monitored with the client program. The windfarm system also includes a monitoring system for monitoring the windfarm system electrical output and thermal condition, and outputs of the individual wind turbine generators. The mark size and other attributes of the mark in the image are controlled in a manner that enables a view to easily recognize an old mark from a new one, thereby providing an intuitive recognition of the obstacle movement in a certain direction in the captured image, when the mark is superposed in the captured image for multiple times based on the accumulated detection data in the storage unit. The system comprises a monitor and a processor coupled to the monitor and configured to

generate a vertical situation display on the monitor.

1459825984-10e4409a-9cbf-4258-ac54-8f00f152abab

A spindle motor of a disk drive includes a stator with windings and a rotor configured to rotate a disk of the disk drive. A fixed end of the stalk is attached to a rigid support secured in the system to be measured with the broad face of the target disposed transverse to the fluid flow. A fabric canopy covers the frame and is tucked into and secured within the staple slots.

1459825984-40775c8f-fac6-4721-8100-4716471b68f4

A sound-proof wall made of FRP in the form of a sound-proof wall panel that includes a core and skin members made of FRP positioned on both sides of the core and whose weight per nit area is within the range of 10-60 kgm<sup>2</sup>; and a method of producing the same. The nanosized powders can be used to make structural parts having enhanced mechanical properties, magnetic parts having enhanced magnetic saturation, catalyst materials having enhanced catalytic activity, thick film circuit elements having enhanced resolution, and screen printed images such as magnetic bar codes having enhanced magnetic properties. In the signal processor DSP, the sum signal  $\sum S_1$  and the difference signal  $\sum S_2$  are formed from the two sensor signals  $S_1$  and  $S_2$ . The ISR calculates and stores the period of each pulse and the period of the previous pulse and calculates the rotational speed and instantaneous acceleration or deceleration of the engine at all times. The second display is a dual-view display simultaneously generating a third image along with the second image, with the second image viewable by the second pilot, but not the first pilot, the third image viewable by the first pilot, but not the second pilot, and the third image containing a subset of information from the second set of flight information.

1459825985-0cdf1b24-0692-4271-bb63-5928cf57778a

An ear warmer comprises a frame and a fabric member. 4\ and three sharp peaks of intermediate intensity at each of 13\ and 16\ and 17\ and 20. The component layers of the diaphragm are formed such that the average stress in the upper set of insulating films is more compressive than the average stress in the lower set of insulating films. The assembly is capable of reliably supporting heavy loads against adverse sway and seismic disturbances. At the receive end, received packets are synchronized using the stream and packet number identifiers, and multiplexed back into a DS3 signal. The method generates intermediate data-dependent cryptographic variables at each stage, which are systematically combined into feedback loops.

1459825985-23cdb960-46b1-4eb3-a44a-d5607124c882

An interpersonal relationships analysis method and system obtains an album comprising a plurality of photos, and recognize faces in each of the plurality of photos. The present invention is also directed to the use of the rotor in a centrifugal pump to pump coolant in a motor vehicle. The signal is generated to be fixed during normal operation of the bus master.

1459825985-bfd05603-58cb-45eb-ab9e-85cdb43c5435

An LED, and in particular an LED employing emissive semi-conductors such as conjugated polymeric materials, consists of a pair of electrodes, one or more intermediate semi-conductor layers arranged therebetween and optionally one or more further layers, and incorporates a microstructured feature adapted to manipulate spontaneous emission or propagation of light. The reagent includes at least one zero-valent atom, whether metal, metalloid, or non-metal, in complex with at least one hydride molecule. The invention also concerns method of coating ferrous and non-ferrous metallic substrate by applying the said coating composition on a degreased but untreated surface and coated articles so produced. The main body portion is movable between a radially collapsed closed condition in which blood flow through the conduit is blocked and a radially expanded open condition in which

blood flow through the conduit is unrestricted. The housing openings further facilitate the entry of flying insect pests into the trap. The seasoning method includes providing a seasoning film on the interior surfaces of a process chamber, typically after cleaning of the chamber.

1459825986-b8d9c74d-d12f-45fa-a50c-7e55205d077f

There is disclosed an accommodating intraocular lens for implantation in an eye having an optical axis. The valve with an integral orifice has the excellent flow rate control characteristics by improving the processing accuracy of the orifice and preventing the distortion of the orifice at the time of assembling. Next, a screw of the anti-vibration adapter is fastened to a nut part of the lens device to support the lens device on the anti-vibration adapter. In other embodiments, multiple sutures are placed with helically-shaped needles of differing dimensions. A run-in tool configuration includes a modulator for real-time wireless communication with the surface and/or remote downhole tools.

1459825986-dd241954-d773-4cbb-8ce4-42d136cf047a

One aspect of the present invention regards an automotive steering wheel control system having a steering wheel, a magnetorheological damper in communication with the steering wheel and a road wheel control system operably connected to the magnetorheological damper where the magnetorheological damper controls the steering wheel in response to a torque signal from the road wheel control system. The header controller sequentially supplies a top shim header of each packet received from a plurality of lines to the pipeline and performs an actual operation on the top shim header of each packet, based on the obtained information. The cross section of the attachment means is generally V-shaped and arranged such that the setsquare can be removed and reattached to the guide rail with consistency, whereby the angular displacement between a reference surface of the setsquare and the intended line of cut to be made by a power tool disposed on the guide rail remains constant after each reattachment of the setsquare. The tool is designed as a cutting device having a parting slide displaceable essentially transversely to the axis of the branch.

1459825986-e7bb146c-a6ab-43de-847d-404a658f89d7

A human-portable utility locator system for locating and tracing a buried utility line characterized by an electromagnetic field emission. The remaining fuel is then injected in one or more fuel pulses, none of which start before about 20 to 30 CA ATDC. In response, the installation computer determines if the computer program is already installed. The device comprises a pair of electrodes of which at least one is a transparent electrode, and a liquid crystal layer between the pair of electrodes comprising a liquid crystal composition comprising at least one dual-frequency switchable smectic liquid crystal, and at least one dichroic dye. , , which are independent of initial realization, are linearly combined at each iteration, by applying constraints to the linear combination coefficients of realizations and  $i=1$ . Embodiments of the invention may be used, for example, for storing, modifying, and accessing data for device, sensor, actuator, logic and memory applications.

1459825986-f21293c0-d973-4ad6-a4c3-1a1c593d0b39

A high altitude oven that includes a baking compartment that includes a pressure maintenance mechanism for maintaining the baking compartment at sea level atmospheric pressure during operation of the oven. In one embodiment, the large number of antenna elements of the M-MIMO antenna array are used to create precise transmit and/or receive spatial nulls at specific User Equipments being served by a neighboring cell and/or in select areas of the neighboring cell. In one embodiment, the customer dials \*XX and the terminating phone number, where XX are predetermined digits. Sampling circuitry samples the output signals associated with the respective first and second opposing surfaces of the scanned bill. A lens may be positioned adjacent to the LEDs to collimate the light. This makes it possible to incorporate the phototimer detection unit without affecting the aperture ratio of

pixels which influence the performance of the X-ray imaging apparatus and the characteristics of a MIS type photoelectric conversion unit, thereby performing proper exposure control.

1459825987-042ca6e2-62e5-43b6-bfc3-12bcce62f004

An electrode includes a conductive adhesive layer and a conductive foil layer having a void therein. In a lightning current detection sensor 10, an insulation-coated wire 22 wound in multiple turns is collectively covered with a base tape 21 and a cover tape 23. The device further comprises an emergency switch connected to the fuel shut-off valve and configured to respond to the emergency shutdown signal. In preferred forms, the extruder includes specially configured, intermeshed extrusion screws and a plurality of obliquely oriented steam inlets, and an upstream, dual-shaft preconditioner is used having individual variable frequency drives which allow infinite variability in the speed and rotational direction of the preconditioner shafts. The fixing ring positions the light emitters corresponding to the light receivers.

1459825987-1d550667-bbb4-47d6-8924-e92e42ed0aa0

A method and apparatus for automating the acquisition, reconstruction, and generation of knowledgebases of associated ideas and using such knowledgebases in many application including machine translation of human languages, search and retrieval of unstructured text, or other data, based on concept search, voice recognition, data compression, and artificial intelligence systems. to form a body containing silicon carbide and non-graphitic carbon. The source is applicable to optical telecommunications.

1459825987-793e07be-c22c-4183-9ab0-87c41452af08

The present disclosure relates to a utensil that can be used to manipulate batter. Such dielectric layer comprises a layer of a semi-insulating material which is fully enveloped by an insulating material and in which an electric charge is permanently present or trapped therein. A position-extracting means 20 extracts and stores absolute coordinate data of reference points. Actions including updating data are executed pursuant to the rules, and then the method determines whether additional rules are to be applied; and performs actions associated with these additional rules until there are no remaining rules to apply.

1459825987-98fe7b09-9ea0-48ee-a118-e95345b2d7bd

An active matrix substrate including a substrate, a plurality of pixel units, a plurality of driving lines, an electron static discharge protection circuit and a floating line is provided. The cartridge is provided with a water inlet for admission of untreated water, especially from a water-supply system, and with a water outlet, which is connected or can be connected to a consuming component, especially a beverage machine. The displacement-regulating ribs consist of three pieces extending radially and rectilinearly, so that the area of openings of the sandwiching members is made wide enough to ensure more a low dynamic spring characteristic.

1459825987-a0196e75-ecda-4ec9-8b13-b235a73a00c2

A sprinkler head assembly comprised of a base located at the upper end of a riser tube and which base carries an insert with an opening allowing for distribution of water. The device contains a plurality of sensors, a control unit and a display unit. An injection apparatus may include a hand-held injection facilitation apparatus, which may be coupled to a syringe. Because the configuration places these guidance and control system components at the perimeter of the vehicle, it also provides a platform for multi-aperture signal channels in the interior of the vehicle by freeing up volume within the vehicle.

1459825988-153f2dae-7922-43d2-9cb8-efa0c2dbe628

A magnetic recording medium comprising a magnetic layer and a protective carbon-

containing overcoat comprising a first carbon density, preferably of a low-density carbon, and a second carbon density different from the first carbon density, preferably of a high-density carbon, and a method of making and using the magnetic recording medium are disclosed. A rotation disc, the torque limiter or the like is wholly disposed, along a radial direction of the external gear, between the external gear and a peripheral wall of a baseplate. The dynamic structure is based upon content, which is extracted using an inverted index according to attributes and values defined by the XML structure.

1459825988-17695cfd-23d4-4c76-b02a-922498325c5d

A chisel for breaking spot welds of a vehicle includes an elongate handle section with a grip and a slightly angled chisel section with blade faces on three sides and a rib generally parallel to a blade edge to limit insertion of a blade between vehicle body parts. The PWM module is coupled to the gates of the two MOSFETs to alternatively turn on the two MOSFETs. Each terminal includes a pair of opposite end sections. In the process, what are inappropriate to the production of the soil fertilizing and/or conditioning products are sent to the second sub-system, which deals with incombustible waste. The mechanism adjusts the swath of the image-formation mechanism so that the bar codes are formed as part of the image on the media sheet within a single swath by the image-formation mechanism. As a result, the messaging interaction system is capable of presenting rated interactive responses in a personalized, artificial intelligence-based manner that meets the local user's expectation.

1459825988-224beacf-514d-4709-8bb9-c68d0e79dec7

Trajectory-based games of chance are described that may be implemented on a video gaming machine. A preferred catalyst comprises rhodium and samarium supported on an alumina or modified alumina support having certain surface area, pore volume, pore size and metal dispersion characteristics that permit light-off of the reaction at temperatures below 500°C. The pinning regions suppress the spread of a depletion layer of a drain region, and a short channel effect caused by fine processing.

1459825988-2b101a42-78d7-4325-8aaf-71c33322f5b8

A high-carbon steel wire rod with superior drawability which has the chemical composition of C: 0. The discharging prevention circuit includes a first power line, a second power line, a capacitor, a current detector and a switch. Advantageously, no further RPM polymer is used.

1459825988-7db72281-a24c-4af9-bc1b-8db0a93f1686

A substrate support assembly and method for dechucking a substrate is provided. In particular, information regarding the antenna configuration and/or the transmission diversity scheme can be conveyed by masking, such as cyclic redundancy check masking, to provide information regarding the antenna configuration and/or the transmission diversity scheme. A robot moving mechanism 14 moves the robot 11 in parallel with the workpiece 2 that is being conveyed by a conveyance carriage 18. Within the light guide, the laser beam gets separated into plural, successive beamlets having different phase shifts, different polarization states and/or path length differences equal to or greater than the coherence length of the laser beam.

1459825988-cbee31e3-7851-487e-9c5e-390569f99e2f

A capacitive sensing system with a sensor having a thin film structure. Contacts are connected to the housing and have leg parts that extend parallel to the direction of mating that are inserted into a circuit board. The band-pass filter is applied in one or more concentric zones and/or angular regions. The pivoting seat is disposed in the case body, and the pushing member is pivoted to the pivoting seat. For example, isolated lignin and lignosulphonate or waste streams containing lignin and lignosulphonate can be converted to methylol derivatives and treated with further reagents to produce controlled release fertilizers, hydrogel

fertilizers, and soil stabilizers. The illumination unit includes first and second reflectors, and at least one light source module placed between the first and second reflectors.

1459825989-00bf36ed-4b2f-45be-b55c-21428f109b24

Systems and methods for measuring one or more characteristics of patterned features on a specimen are provided. The inner and outer sleeves cooperate to define an inner passage for the flow of a fluid, and are permanently coupled such that there is substantially no rotational movement between the two sleeves. Thus, the software routine obtained may be tailored to the particular computer executing the native application. In response to and based upon detecting the first address, a second data request is generated to a second address. This may allow a substrate assembly coupled with the socket module to become slimmer by a thickness of the substrate, resulting in providing a more size-reduced terminal. The protective cap is supported between the terminal supports thereof against the drive shaft and the drive housing of the windshield wiper drive in relation to the output shaft via a supporting bearing.

1459825989-6619cb95-7772-42a2-b60a-bef744869d3b

A roller cone drill bit is disclosed which includes a bit body adapted to be coupled to a drill string. The system is to perform data communications within a network configured by a plurality of devices. A plurality of pre-equalization weights may be generated based on the generated plurality of vectors of baseband combined channel estimates. The transparent amorphous carbon layer may be included in a final structure in semiconductor devices. Knowledge of the transmitter configuration by the inactive mobile terminals improves the accuracy and reliability of the channel quality estimates.

1459825989-f6478a63-bfffb-4af0-86f5-7cc2f16942cf

A wheel, such as a traction wheel, with a momentum enhancing apparatus. An airflow control device is provided comprising a flexible web and a magazine adapted to receive the part of the flexible web that is not deployed. Then, forming electrically active parts of the device at those regions.

1459825990-49775a4f-45d6-40f2-9f20-28e650f48831

A method for determining a thickness of a shim for setting up a predetermined preload of a bearing assembly that rotatably supports a shaft within a housing. The present invention also provides a food/drink, a pharmaceutical product and an oral care product having a good taste which can fulfill the recent high-level demand for taste. The dummy patterns are spaced at the second pitch from the most adjacent ones of the patterns aligned in the row direction, and the dummy patterns are spaced at a first pitch from the most adjacent ones of the patterns aligned in the column direction.

1459825990-97f51bef-d876-4a68-b9e6-ba9cf321ee81

According to a preferred aspect of the instant invention, there is provided a system and method for using satellite communications satellites to control and receive data from a land cableless seismic system. An auxiliary chamber is formed using the space between adjacent branch pipes. The invention further relates to genetic complements of plants of variety CH479202. Application of an input signal between the input electrode and the ground electrode causes vibration of different order modes to be excited and coupled, such that an output signal is extracted between the output electrode and the ground electrode.

1459825990-b088ede2-93c0-47d6-a176-eb6021bc3672

Human G-protein chemokine receptor polypeptides and DNA encoding such polypeptides and a procedure for producing such polypeptides by recombinant techniques is disclosed. The test terminals including a first test terminal input with a high frequency signal with a frequency higher than a frequency of a signal output from a

second terminal. A receiver speaker and microphone are carried by the housing. The assembly may further include an outer glove with interior dimensions substantially equivalent to the exterior dimensions of the inner glove. In the step of forming the contact hole, a groove portion in which the semiconductor layer is removed is formed, so that formation of parasitic channels is prevented.

1459825990-e2094804-117f-4037-a1e6-b212ef3c82db

A mounting structure for display of at least one display board wherein the structure includes at least a pair of spaced apart retaining members where the display board may be pressed into secure engagement between the retaining members. In one embodiment, the linker molecule is covalently attached directly to the antigenic determinant on the cell surface. The disinfected, decontaminated water is suitable for reuse. The points are uniformly assigned a fixed set of data as their content. Such transfected cells are used in therapeutic methods to treat subjects with cancer or microbial infections.

1459825991-069d07a3-202d-4623-a68f-fb29aa47a85e

Method to control a clutch device within a transmission selectively coupling an internal combustion engine to a driveline includes controlling slip of the clutch device in response to an engine autostart event. A plurality of axially spaced guards extend outwardly from the shear bar assembly toward the rotor assembly and limit the size of fragments which can pass through a shear zone formed by the interengaging rotary and stationary teeth. The time period of operation below nominal minimum frequency may be predetermined as a fixed time period of operation below nominal minimum frequency, or as a variable time period based on the amount by which the frequency deviates below nominal minimum frequency. In some embodiments, the reactant fluids are pre-heated by absorbing heat from various components of the vehicle. These magnetic force lines have portions that are roughly parallel to the center axis 42 of the discharge electrode 14, the lengths of which parallel portions become longer as the magnetic force lines approach the center axis 42. At least some of the Six if present is converted to SiO<sub>2</sub> and at least some of ySi<sub>4</sub> if present is converted to xSiO<sub>2</sub>.

1459825991-30eb5b89-bf32-4bcd-af8e-3ea0cc3bf8c8

A charging system is incorporated in a computer communicable through a predetermined communication channel with a wireless peripheral device having a predetermined identification code. The base top panel and electronics enclosures form a structure to which various light units, lenses and covers are attached to form the finished light bar. The rotational bracket includes a locking tab to overhang a locking edge of the front cover.

1459825991-7d3dcc20-bd43-41f0-a76e-e6526f51c9ac

A divided conduit containing a thermoplastic conduit and at least one strip-shaped textile. A load mode identifier detects if the parameter write messages are operator initiated or program initiated. The particles in the gas are typically given a charge that is opposite to that of the charge imparted to the volume of collection liquid so that electrostatic forces help draw particles from the flowing gas into the small volume of liquid.

1459825991-8d9b981c-7c1a-43f3-9252-c5821cb116dd

An electromagnetic coupler including a conductor pattern formed in a first conductor layer, a feed pattern connected to a feeding system and a ground pattern separated from the feed pattern. The sheet discharge member is provided in the discharge portion to form a sloped portion continuous with a downstream side of the discharge port in the direction in which the sheet is discharged. The first and second portions may be part of a continuous shield, where the first and second portions are separated by an inversion of the shield.

1459825992-a5e2e81a-92b1-4898-b47c-30c8abe8bf81

Voltage boosters or pass circuits for generating a boosted voltage are advantageous in the decoding and programming of memory devices and, in particular, NAND flash memory devices. In recording data related to a content by dividing and recording the data in a plurality of sectors continuously, dummy data to be used for extracting a clock in PLL for data reproduction is recorded on a region adjacent before a sector from which data recording is started. \u201d Defined-care model or the healthcare asset management model has two primary components, one which is referred to herein as a \u201chealth management and retirement account\u201d, and the other of which is an infrastructure \u201cconnected portal\u201d that interfaces through a technology platform with the health management and retirement accounts and the account holders. The sound generator attached to the second flap includes a printed circuit board, a sound card containing a controller and a memory storing audio sound data, and a reed switch. This invention also relates to methods for producing other wheat varieties or breeding lines derived from wheat variety 26R87 and to wheat varieties or breeding lines produced by those methods. A transmission actuated by a motor is placed on the second rail, According to id invention, the holding devices comprise an external bowl-shaped supporting surface in which each end of the spindle is fixedly mounted, respectively.

1459825993-1a5c4b5a-8fb9-43d2-ac0c-b8746512437b

An object is to provide a water discharge device in which a water sprinkling member having water discharge ports can simultaneously achieve both good rotation start-up ability and good rotation stability. The optical system of the invention comprises a variable mirror and a moving optical element group. The driving surfaces and driving spaces are configured to engage a threaded fastener. The complexes function when irradiated with low energy visible light with or without molecular oxygen.

1459825993-ecb6f449-3c78-473e-beb1-da714692b895

Resolution enhancement techniques aid in accurately transferring features on a layout to a wafer. Dried molecular sieve catalyst particles are used to make the catalyst. The control module is configured to monitor a degradation factor related to an energy threshold value of the fuse and direct the switch to open the circuit to prevent the power source from supplying current through the fuse. Applying pressure to the contents of the container axially displaces the sleeve-like part of the seal relative to the pin-like projection, so that the contents of the container can exit. When charging the capacitive electronic part has progressed sufficiently, the switch is controlled to open.

1459825994-671c0eca-d95a-4094-8af7-fdcd1944d85c

The DIP connector of the present invention comprises a housing being provided with a receiving chamber into which a counterpart member being to be fitted, and a contact being fitted in a storing concaved part being concaved from the receiving chamber. By such arrangement, the photo-sensitivity and the total track length of the image capturing lens assembly can be reduced. The single address configuration table entry includes a wildcard for matching the source address of connection requests that are originated by any of the multiple source devices and destined for the destination device. A sequence of hash values are generated for the document.

1459825995-53b3dd79-31bc-41c6-b169-617d92418b54

A control apparatus controlling testing of a memory under test that includes one or more row repair memory blocks and column repair memory blocks. The plant displays a semi-decumbent growth habit, medium branching and forms a great profusion of blooms. The rubbing cloth has a plurality of slits formed parallel along the longitudinal direction of the roller base. A method of securing a liner in a well comprises lowering a liner having a gas filled chamber in the well, actuating a valve to open fluid flow into the chamber, removing the gas from the chamber, and moving the valve into engagement with a sleeve coupled to the liner to provide an indication of a position of the valve.

1459825995-cc84be19-7903-4db3-a9d1-e8c42a8f9e8d

A molecular system is provided for nanometer-scale reversible electronic and optical switches, specifically, electric field-activated molecular switches that have an electric field induced band gap change that occurs via rotation of rotor units connected to immobile stator units. A controller in the system receives inputs on cutterbar drive power, machine travel speed, and crop cut quality. The storage subsystem comprises data storage locations addressable as rows and columns in an array.

1459825995-e6a1b13a-73eb-4240-ab18-ca644e36a876

The present application relates to methods and systems for intelligently routing requests to one of a plurality of redundant servers. The robot controllers include robot group control units each having an operating mode storage unit to store operating mode information to select a robot. An upper cutting edge forms four upper cutting edge portions having an identical length corresponding to a determined angle with respect to the center axis. Finally a third clamping plate is provided, which abuts on the containing plate, in order to allow deformation and to prevent blow-by through such sealing means. The geogrid is placed on the surface of the regressed scarp and then anchored to the soil of the scarp by tensile ropes.

1459825996-0fffd2e63-b9b2-4442-9b14-76364ff6229a

Rollers between which an endless belt is wound have a pair of first grooves looping around a rotational axis of each roller. A received signal is separated into frequency synchronization signals and data, and a determination is made whether the frequency synchronization signals are adequate for estimating the frequency offset. The desktop integration module is an application which monitors documents with which the user interacts for predetermined events, and obtains content data and metadata from the monitored documents. The electric transport vehicle includes a sensor unit adapted for sensing continuously a floor track signal. The endpoint then transmits those digital message bits as part of the encoded information signal.

1459825996-15102c9b-c063-4abb-84aa-2d4f6648c518

A flat-conductor connection element for an antenna structure is described. The package further includes a first semiconductor chip having a front surface and a back surface. When the engine coolant temperature is higher than the reference engine coolant temperature, e. In another aspect, a polishing article for polishing a substrate includes a body having a polishing surface and a conductive element disposed therein. At least one of a fuel vent manifold assembly for venting the interior space of the fuel tank and a fuel refilltransfer manifold assembly for supplying fuel to and withdrawing fuel from the interior space of the fuel tank.

1459825996-a6f49a19-c627-45da-8d35-3f807477db56

A line-illuminating device 10, 20 having a light guide 11, 21 of which the cross-sectional shape is rectangular and its one corner is chamfered to form an emission plane 11a, 21a is provided, in which the light guide 11, 21 is housed in a light guide casing 12, 22, wherein the chamfer dimension of the emission plane 11a, 21a is more than 40% of a height dimension of the light guide 11, 21. A differential input circuit and a current steering circuit may be common to multiple output circuits, and a common offset compensation may be provided to compensate for a substantial portion of offset associated with the multiple outputs. An estimated value of slip is adjusted based at least in part on a comparison of the modeled value of the second motor variable and an estimated value of the second motor variable which is based at least in part on a value of bus voltage and a value of bus current. The microlenses in the first array collimate light incident in a sagittal plane orthogonal to the meridional direction.

1459825996-f4ab4699-13b4-44fd-8544-a31f5f38d15b

Disclosed herein are methods and devices for stimulating soldering of a substrate

with a component during a reflow process. An external connection is provided. At least one of the actuator assemblies has a hydraulic actuator movably connectable to an aircraft control surface. The method further comprises determining email traffic based at least in part upon the determined email addresses. The remaining phase offset is build out when no edge to edge alignment is required.

1459825997-250b3a9f-f047-452b-b44f-026dffa9aaad

A system logs life experiences using geographic cues. These aqueous coating compositions contain one or more water soluble poly resins having the general formula  $\text{C}_{14}\text{H}_{20}\text{O}_2$  and one or more polymer binders. The computer system can further partition the plurality of IO handles into one or more subsets, where events received via IO handles in the same subset are correlated and events received via IO handles in different subsets are uncorrelated.

1459825997-26f96819-3e9e-4647-8c38-43f9bfff362f3

By automatically adjusting the object detection mechanism of a bar code scanner from a long range mode of operation to a short range mode of operation, the scanner will remain capable of detecting and decoding bar codes even if the object detection mechanism repeatedly detects the presence of a background object. One or more wireless sensors are attached to the animal, for example, to measure motion-related parameter associated with one or more parts of the animal. A first insulating film is formed which covers a side surface of the pillar. The power transmission sleeve is interposed between the drive sleeve and a wheel hub. The reservoir is designed such that the liquid metal does not leave the reservoir even when in liquid state. The raised rings reveal the nature of the thermally conductive material, yet protect it from scratches and abrasion during use, such as when the cooking vessel is resting on a stove top.

1459825997-b86532c5-5951-4a2e-a5b5-03a103bf706f

An internal combustion engine incorporating rest cylinders is provided which does not need a high response performance when operating a throttle valve and which can eliminate engine output variations as the number of operable cylinders changes. A considerable sequence of streamed data is sequentially read and subsequently assigned to matching bins. A casing data relay includes a downhole receiver coupled to a well casing and a transmitter coupled to the receiver. A three-dimensional scanner located below the membrane measures the distances to the bottom of the membrane over an array of positions. The positioning of the center of gravity of the golf club head and the optimized inertial properties provide the golf club with greater ball spin robustness and better performance.

1459825997-d70aa5c0-9a57-4fb1-9545-621b3676e5fa

In a full-adder of complementary carry logic voltage compensation, two input terminals of a first multiplexer are connected to a carry input and a carry inverted phase input respectively; an add signal is connected to a select signal; an input terminal of a first inverter is connected to an output signal of the first multiplexer. A key obtaining unit obtains a second key, with use of key management information recorded on a recording medium on which related content relating to the encrypted content is also recorded. Clamp claws sandwich the tube support body.

1459825997-eefdf286-fa4d-4a40-9467-eeb7c218a651

An apparatus and method for supporting PCI Express is disclosed. The compounds and compositions of the invention can induce the biosynthesis of various cytokines and are useful in the treatment of a variety of conditions including viral diseases and neoplastic diseases. The heating unit is configured to generate heat for thermally fixing the toner image to the sheet. The first locking member is at one side edge of the panel and has two spaced-apart flexible arm portions, at least one arm portion including a first latching member.

1459825998-62508249-dc26-4832-904e-2b482d4d120e

A system for collaborative document annotation whereby notes associated with a document, such as an image or text document, are stored in a notes database on a central notes server. A resin product is subjected to electroless plating after ultraviolet treatment in which ultraviolet rays are irradiated through water or a solution is performed. The golf club head has a mass between 140 grams and 215 grams.

1459825998-96fff03a-9e8c-4109-b51f-ac07a593dcb6

A call between a calling party and a called party, one or both of whom may be subscribers to Internet Telephony services, commences upon the receipt of a call dialed by the calling party to the Plain Old Telephony Service number associated with the calling party. The waveguide is formed utilizing a two-step proton exchange process in which the substrate is bathed in a strong acid and then subjected to a plurality of annealing cycles. 2 nm RMS or less roughness of the surface.

1459825998-c7195c7c-9ba2-4fd8-9738-b409984e7899

A mounting and fixing apparatus for analog-to-digital electrical equipment according to an embodiment of the present invention comprises: a mounting rail, an electrical equipment-insulated pedestal and a stop element. The monopole antenna includes a main body, an extension part, a connection part, a signal feeding terminal, and a ground plane. The device is also effective to facilitate penetrating of the device into bone due to the configuration of the distal penetrating tip. In this exemplary embodiment, a hierarchy prioritizes these modes in the following order of high priority to low priority: off; local; remote. In accordance with an embodiment of the present invention, the semiconductor device comprises a first semiconductor chip comprising a first coil, a second semiconductor chip comprising a second coil inductively coupled to the first coil, and an isolating intermediate layer between the first semiconductor chip and the second semiconductor chip.

1459825998-c8e9c4e9-0d60-48d3-82d4-67f857f3b7f6

This invention relates to asymmetrical, substituted polysiloxanes which show good compatibility in a variety of oils and improve the spreading behavior of oil-based formulations, to a process for preparing these asymmetrical polysiloxanes and to oil formulations containing said asymmetrical polysiloxanes. This circuit provides a precise, quiet, linear regulator that provides a tightly regulated output with a fast regulator working in parallel to ensure that the output voltage stays within an acceptable boundary. Thereafter, the packet receiver device may receive, from the packet receiver device, flow control data that includes a received flow control identifier generated in response to the sent flow control identifier.

1459825999-2f3d1507-2bdb-466f-a0ee-9f5902d079ca

A sensor device has a sensing portion, a connector terminal, and a case housing the sensing portion therein and forming a terminal fixing portion. With such a quality criterion, it is also possible to monitor the burn-in of faulty memory units on a wafer. The printer has an unwind mechanism that accepts and holds web rolls of different widths in center-justified relationship with respect to a print head. There is additionally provided a method of forming the image sensor APS cell having a predoped transfer gate and a doped pinning layer.

1459825999-6693f532-6f68-4cdb-91d5-fdf0a3cc14ec

A system for atomic file transfer operations over connectionless network protocols includes a processor and a memory coupled to the processor. The traveling vehicle 2 is supported by the auxiliary wheel 6 and guide rollers 24, 20 such that the traveling vehicle 2 is orientated horizontally in the left-right direction, or the branch lane side D of the traveling vehicle 2 is oriented slightly upwardly. In one embodiment, the first detector detects an electron energy loss electron spectrum, and the second detector, positioned behind the first detector and detecting

electrons that pass through the first detector, detects the position of the zero-loss peak and adjusts the electron path to stabilize the position of the spectrum on the first detector. The payloads of the packets stored in the buffer are modified and thereafter, the modified packets with the modified payloads are sent to the second network node. In a preferred embodiment, the two relatively rigid articles comprise radiant heating tubing and a wire mesh supported on a bed of particulate material.

1459825999-f97ca64d-df49-403c-b1c8-253168b99af7

A pipelined reorder engine reorders data items received over a network on a per-source basis. Additives are added to the ferroelectric liquid crystal. In the zoom lens system, the conditions: 1. The frequency of the power is then changed to a probe frequency and maintained at the probe frequency for a probe-time-period, which is less than the main-time-period. 5 equivalents of water, said water being continuously fed during the hydrolysis reaction.

1459826000-3f920a71-d9e9-4ae7-97fe-c7f82cd595b8

This invention relates to novel quinazoline derivatives, and their pharmaceutically acceptable salts. Efficient air currents may be provided by rotating the air currents around the wick, by providing a helical channel for the air to flow around the wick, and/or by aligning a fan with the longitudinal axis of the wick. That is, link information about the memory areas written with partial image data for a same image is written to each memory area.

1459826000-78cbd4ee-6815-4ea0-a72f-d56f55be2231

Apparatus and a method are disclosed for venting gas from an annulus region of a flexible pipe. The carrier disc has a hub which is supported by a hub bearing on an eccentric disc which is part of a driven drive shaft. At least a portion of the data is provided to the lender by the applicant. Neither the upper or lower attachment devices interfere with normal operation of the vehicle window, nor do they restrict a pet from normal movement within the vehicle. Since the luminance of the screen is changed suddenly when the test video is displayed actually, this change can be sensed by an optical sensor 20.

1459826000-ae49159c-ca7c-411c-bf11-2584ff9f9d8e

A dynamic random access memory structure is disclosed, in which, the active area is a donut-type pillar at which a novel vertical transistor is disposed and has a gate filled in the central cavity of the pillar and upper and lower sources/drains located in the upper and the lower portions of the pillar respectively. In the illustrated embodiments, varying amounts of impurity sources are introduced during the cyclical process. The handle will be therefore really soft for facilitating use when connecting other products. In alternative methods, one cavity retains the deflector 40 for conveyance to the installation location on the structure. The gate driving circuit is configured for scanning the liquid crystal panel.

1459826000-d50a94eb-afec-4a83-8364-d144599d19b2

User equipment and a base station in a carrier aggregation system, and a call admission method thereof are discussed. The method comprises contacting a negative pole layer and a positive pole layer one with the other or with an optional layer interposed therebetween. As a module, the building structure extends downward from a planar ceiling surface which forms the ceiling of an uppermost unit to a planar lower floor surface of the second lower other unit. Oncoming flow to the control element may come from an axial direction or from a radial direction, and outgoing flow from the control element occurs in the axial direction. It will assist if the selected point of the cycle is an extremity thereof, as the rate of change in these areas is at a minimum.

1459826000-ea3d347e-251a-4766-b09a-69266e193556

A ROM disk having a block data format provided with linking areas as with a

rewritable disk. The structure can be used as a capacitor, as a discrete transistor as a single-transistor amplifier or as a building block for more complex circuits. The portable computing device can include at least a single piece housing. The touch screen system also includes a touch controller receiving the sense output and including; a noise compensation block configured to generate a compensation capacitance to compensate for the parasitic capacitance and provide a compensation output, and a signal conversion unit that receives the sense output and the compensation output and generates a noise compensated sense output. The attitude and/or azimuth orientation of the system may be varied prior to, during, and/or after release of a releasable item. The method includes: calculating, for a nonlinearly filtered image, a variance value of an area surrounding a current pixel used for identifying an edge of the image; and re-filtering the current pixel when the variance value is greater than a predefined first threshold value, so as to recover an anti-aliasing edge.

1459826000-f5714ee6-cbed-4923-a362-2379f5fafee5

An exemplary balance controlling circuit includes a transformer, a first capacitor, a second capacitor, a first inductor, and a second inductor. An aqueous catholyte is placed in ionic communication with the cathode to store reaction products generated by reacting the alkali-metal ions with the oxygen containing anions. The simplified parametric loop filter implements symmetry between filters, symmetry within each filter, unity DC gain and zero-forcing to 1) reduce the storage space in memorizing the fixed filters, and 2) reduce the computational complexity for performing filtering. The remote phone message is sent to the local telephone device for silent playback. A selected one of a plurality of network nodes is identified to facilitate the communication session based on a number of packet data protocol contexts associated with one or more of the network nodes. The electro-stimulation can be defibrillation or heart pacing or both.

1459826001-2c224f67-7ac0-4006-980a-b3229e387b5a

A method of measuring contamination in fluid that is expelled from a food processing system is presented. The system is particularly useful for persons said as asthmatics who require additional room air filtering and special needs relating to air damping and airflow. A waterwheel located in the waterwheel chamber and a fan located in the mist chamber are provided around a rotating axis so as to rotate together, and then warm water in the water storage tank is sprayed onto the waterwheel by means of the pump, whereby mist is generated. The microwave plasma torch employed is capable of generating laminar flow during processing which allows for the production of spheroidal particles with a homogenous materials distribution. Advantageously according to embodiments of the invention, the error code incorporated in the original sequence belongs to a non Boolean group.

1459826002-30071e63-0762-48c7-8474-08c4344c0976

A slot interface access device including a slot management module; a slot control module; and a physical slot to management slot contrast table, the slot management module, the slot control module, and the physical slot to management slot contrast table being provided between an input and output control module and a slot interface lower than the input and output control module. At least one layer of material is thermally sprayed on the core to form a rough surface having a roughness from 400 microinches Ra to 2000 microinches Ra or greater. Various arrangements are described, wherein the nozzles are arranged in a single row or two staggered rows; the printing is effected in a single pass or two passes; the nozzle line sections are overlapping, contiguous or spaced from each other; and the deposit zone of one nozzle overlaps at least a part of the deposit zone of another nozzle.

1459826002-35d95dfc-b2bf-4ee7-8b55-87132518fe28

A double-sided LCD device includes a double-sided backlight unit, front and rear LCD panels, and first and second circuit boards connected to the front and rear LCD

panels, respectively, by TCPs. The collector assemblies generally include a rotating drum with flexible fingers having widened ends extending outward there from. By positioning the first handle intermediate between the housing and the battery compartment, the center of gravity of the thermal imaging camera coincides generally with the handle when the thermal imaging camera is in use, that is when batteries are present within the battery compartment. Spiked end caps are also provided for increased anchoring of the device to the carcass. The secure shell daemon obtains a public secure shell cookie associated with the user from the keystore of the user. The determined components are compared to reference components in a data library.

1459826002-72bf5126-8d28-4e42-986e-9cebba5a2497

A desk caddy intended for grade school children sitting at a desk having a storage bin. The ETRS subsystem includes an ETRS valve, a park servo, a park mechanism, a mode valve, and a plurality of solenoids. The one-way mirror forms a non-right angle with an emitting direction of the beam and has a penetrating surface and a reflecting surface at opposite sides thereof wherein the beam penetrates the penetrating surface, and can be reflected by the reflector to the reflecting surface and then reflected by the reflecting surface to the beam receiving end. As the light source is activated, capturing a test image of a scene illuminated by the at least one light source by the image capture device. Polymer compositions containing from 5 to 40% of monoethylenically unsaturated carboxylic acid monomer, from 35 to 65% of alkyl acrylate ester monomer and from 20 to 60% of alkoxyated acrylate monomer provide improved cleaning performance in laundry detergent formulations relative to conventional polymer compositions.

1459826002-9e886d82-cd58-4ad3-bc29-fb3bef358681

A method and apparatus is disclosed for providing content to a user. The method includes ranking the documents in the collection based on the respective times that the documents were created, ranking the documents based on how similar their respective contents are to the topic of interest and ranking the documents based on originality of their respective contents. In one implementation, a content creation application includes a first interface configured to facilitate composition of a message by a user and a second interface configured to receive a search query from the user, display search results relating to the search query, and receive selections of the search results from the user. The electronic elements of the first electronic element subset are arranged according a first predetermined method and the electronic elements of the second electronic element subset are arranged according to a second predetermined method, wherein the second electronic element subset is adjacent to the first electronic element subset. The horizontal busbars distribute the electricity to the high-amperage circuit breakers coupled thereto and to the vertical busbars. ESD protection for the capacitor can be provided by a pair of oppositely-directed diodes formed in the substrate and connected in parallel with the capacitor.

1459826002-9fc23d65-44e1-45d1-b839-2eef48334f2c

Electrical connectors having improved impedance characteristics are disclosed. Moreover, trees are very vigorous. Rotation of the main rotor assembly 2 is achieved by means of a main engine assembly 5.

1459826003-9e70e734-7c2a-49d7-93ee-a39bf58e1850

An ESD protection circuit having a smaller area is provided. A fame is disposed on the base and an arm has a first end pivotably connected to the frame. At least outside the retaining area for the brake band, several areas having a reduced wall thickness are provided in the retaining membrane.

1459826003-c382e392-20d5-49a7-8784-20637d0f981f

The present invention provides a method and system for an innovative design of the automatic stabilization and pointing control of a device based on the MEMS

technology, which is small enough and has acceptable accuracy to be integrated into many application systems, such as, laser pointing systems, telescopic systems, imaging systems, and optical communication systems. The valve also includes a vent system comprising a control chamber in flow communication with the fluid inlet of the valve and a vent outlet in flow communication with the fluid outlet of the valve, and a solenoid for venting fluid venting fluid from the control chamber to the fluid outlet. One version of the invention has an angled pocket.

1459826003-c3c9e02e-f3b8-46c6-a6f9-54def57c257b

A system and method for utilizing circuit switched and packet switched resources are disclosed. In one embodiment, a first media segment is forwarded to a client node. Small quantities, on the order of 10 sccm or less, of other gases such as C<sub>2</sub>H<sub>5</sub>F and CF<sub>4</sub> may be added. A rotatably supported driver rotates the eccentric. The first and second support layers are then joined. Another electrode is supported by the substrate and arranged to form an electric field coupling with the electrode including the compressible material.

1459826003-e9666a46-3c8e-4799-952b-8ca3a4b83a0d

This invention provides the user the ability to accurately nanomachine surfaces with reduced tip induced errors. The second antenna group includes individually-controllable, longitudinal second antenna elements. In the self-service mode, the checkout station is positioned on the opposite side of the checkout lane and the customer performs the checkout functions with little or no help from the merchant.

1459826004-3c53ca95-6078-4089-93e6-e114023d0206

One embodiment of the present invention relates to a method and apparatus for removing the effect of contact resistances for Hall effect device contacts. The system comprises a data source that may be configured to provide data to be printed on the flexible substrate, a processing circuit, and an energy source. The centralized service management module receives an interaction, such as an appointment request, from a client device or a service provider associated with healthcare services. The generated iterative reconstruction displays. The polymeric body and the outer cover are opaque.

1459826004-b0cdf2e0-ca91-4cec-9169-856403c13562

The present invention provides a fundamental cell, semiconductor integrated circuit device, wiring method and wiring apparatus for designing a layout of a functional circuit block or a semiconductor integrated circuit device using the fundamental cells, with a higher degree of freedom of wirings. The present pinless accumulator piston design eliminates the accumulator pin whereon the original equipment accumulator piston resides thereby resolving the problem of hydraulic leakage at the accumulator pin/piston interface. Two channels are provided in the bottom portion, each in open communication with opposite sides of the bottom portion. A first liner is disposed over the first spacer and over a portion of the workpiece proximate the first spacer, the first liner comprising the first material. The resulting memory cell has a small area requirement and a high number of program/erase cycles. The resulting current travels through the area of increased resistivity and thereby creates a larger voltage along the P-well from the center N-type structure out toward the distal N-type structures.

1459826005-4894a524-92b5-48e8-8f88-3a8872a4b6b2

Disclosed are methods, media, and vault servers for providing a secure messaging system using vault servers in conjunction with client-side restricted-execution vault-mail environments. The sacrificial layer is used to define a subsequently formed floating metal structure. Both message and conversation signals are preferably at similar levels. The validity signal specifies the validity of the corresponding error symptom in each case. The invention discloses genomic sequences the methylation patterns of which have utility for the improved detection of metastasis of colon cell proliferative disorders, thereby enabling the improved

diagnosis and treatment of patients. The cycle unwrapper converts the on and off angles around the wrapped 360 programmable sequencer to on and off times along an unwrapped bottle forming process which takes more then two machine cycles to complete.

1459826005-f8ee970f-9042-4f57-a904-7943e0c65811

A printing device for printing text, indicia, and images on a medium includes a housing that abuts a surface of the medium during a printing sequence and includes a print head which is moved from a starting position to an ending position during a printing sequence by a bidirectional first movement drive in cooperation with a second bidirectional movement drive. These sub-switches may be arranged in a hierarchy that increases the available bandwidth for transmitting multicast data frames across the switch fabric. The first power supply terminal is electrically connected to one of a source terminal and a drain terminal of the switching transistor. In a particular embodiment, the abrasive particles comprise a content of Nd2O3 that is greater than a content of Y2O3. The pawl is pivotally and translatably secured to the support plates and includes additional teeth arrayed opposite to the latch gear teeth and an extending end with an upwardly arcuate shape. In order to provide a vehicle with a heating appliance, with which safety-critical situations are substantially avoided, an overpressure safety device is provided in the fuel supply.

1459826006-1fdad82d-d8b4-44af-8b58-36cf6fb5c768

Several methods of forming angled orifices in a metal sheet are described in which an angled orifice can be formed from a preformed right-angled orifice. Management instructions are sent to the mobile device from a Management Centre using a wireless telecommunications network and, following a receipt of the management instructions at the device, the management agent processes the instructions and manages the applications accordingly. A flow decision unit decides a flow based on key information corresponding to a destination MAC address and a source MAC address. The larger the pH value or conductivity, the higher the density of electrolytes, selectively SO<sub>x</sub> or NO<sub>x</sub> in the exhaust gas. The wafer can be attached to or received in a digital camera, video camera, PDA, laptop or desktop computer, GPS unit or other devices to combine the functions of the transceiver unit with the peripheral device. Most preferably, the BCF yarns are formed of nylon-6 and exhibit an alpha-crystalline content of less than about 45%, and usually between about 45% to about 55%.

1459826006-20b46cf9-24d8-4a16-a621-623e21e9bf5b

A card socket assembly includes a base, two latching mechanisms, and an elastic member. The first station may include a storage unit configured to store relationship information defining a communication relationship between the first station and the second station. Embodiments of the present invention also include an improved low voltage amplifier using a 3-stage topology including a wide-swing folded-cascode input stage followed by a differential gain stage which provides improved gain and output compliance. By means of the initialization, the context-based adaptive binary arithmetic coding/decoding scheme is optimally adjusted before processing a start symbol of the symbol sequence so that no bit rate compression losses because of a delayed context-based adaptation are introduced. Status of grouping and processing performed on instructions by a processor at runtime can be acquired dynamically, such that processing capability of the processor can be better utilized.

1459826006-6fdf001d-a024-40eb-870a-fd5f371fff419

The present invention relates to an interpolation method for enlarging a digital image or predicting a moving vector of a compressed image system as a sub-pixel unit when the image digitized through a CCD camera ect. When the player chooses a selection, the gaming device randomly generates a value and randomly places the value into one of a number of adjacent slots. The patellar implant is a component

of a prosthesis including a femoral implant for replacing the knee end of the femur. However, upon contact with bodily fluids, water in the fluid can lead to deprotonation of the chromogen, thereby resulting in a shift of the absorption maxima of the chromogen towards either the red or blue end of the spectrum. When writing a pattern, an operation part determines the number of mirror blocks to be used where scan speed can be maximized, in consideration of required time for input of the writing signal to the DMD and light amount applied on the substrate. A first insulating layer is formed with an inorganic material extendedly from a surface of the first magnetic pole opposite to the recording-medium-facing surface to a top surface of the first magnetic layer.

1459826006-82f646bd-3e6d-4ec0-8b02-b6ada91decc4

A downhole zone isolation device is disclosed that features a non-spherical valve member that will not rotate while being drilled out. The apparatus comprises a first variable filter having a first reservoir portion and a first non-reservoir portion. Next, the capture manager determines to capture one or more representations of the one or more objects in the content stream. The second anode material is located adjacent to the first anode material along at least two long sides of the first material.

1459826006-afcae214-ef10-4280-ace7-b01c461ae055

A rapid emergency dam is disclosed. Task calls are directed to a task wrapper that associates the task call with a particular unique identifier, and stores parameters provided by the task call at memory locations associated with the unique identifier. , a bodywash, where the additive contains an encapsulated non-sunscreen, and methods of making and using the additives as well as topical compositions containing the additives. Information is associated with the tag before after or during the insertion. The first ground contact face is located opposite to the second signal contact face.

1459826006-c4060010-1a87-4d0c-a3ca-e0b1625b835b

A disaster recovery technology capable of achieving the high-speed FO and correctly reading the logs even if the unit of logs written in the main site is large is provided. Each half of this series connection is connected to a mid point forming a phase output by a phase reactor. An instructed recording end point C indicates a position at which AV data captured when the user gives an instruction to finish recording is recorded. Circuitry within the storage array may leverage the individual capabilities of the high-performance SAS SSDs to increase the overall performance of the storage array.

1459826007-0c24f402-ef2e-4d31-a54d-298067a40d56

A method of preparing a depilatory composition includes placing a quantity of sucrose into a heating vessel. The ink receiving layer contains inorganic particles. The connector is preferably equipped with a first slot limiting the side to side angular range of motion of the retractor blade stem relative to the retractor shaft, and a second slot limiting the top to bottom range of motion of the retractor blade stem relative to the retractor shaft. The MEP correction module that generates a corrected NMEP for the combustion cycle based on the measured NMEP, the offset correction, and the slope correction. In one embodiment, the SAW device includes: a piezoelectric substrate, a conductive layer located over the piezoelectric substrate and a resistor, coupled between a portion of the conductive layer and the piezoelectric substrate, that forms a return path for static charge migrating from the piezoelectric substrate to the conductive layer.

1459826007-567e764a-6743-4b96-8292-b71e79fa0094

The present invention relates to a method and apparatus of processing digital power with pulse area modulation. Devices are authenticated based on a first set of data collected from the device, and if authenticated, may be permitted to send or receive service requests based on a second set of data that identifies the user,

includes data about the user, identifies the service and/or identifies eligibility criteria. Further, the electronic device control command is enabled in response to a code received at the portable communication device from a service provider. The hinting instructions preserve semantic meaning for the character while altering either stroke presence, stroke location, or both for at least one stroke of at least one feature of the character based on a reference character size and output resolution.

1459826007-5bc3c25e-64fd-4c5c-9adc-6d0b49f01655

The present invention provides a process for producing carbostyryl derivatives which are known to be useful as medical drug such as antithrombotic agent, cerebral circulation improver, anti-inflammatory agent, antiulcer agent, etc. The p-type electrode is formed in a mushroom shape, so that the contact area faced by the spreading region of a dopant for the photodiode and the electrode can be minimized and the capacitance of the photodiode can be reduced. A record associated with the originating IP address is created in a data store. In some aspects, the independent rotation is provided without a motive power device being provided on the arms or wrist member, i. Thus, lowering of luminous flux derived from red-based light with low luminosity is compensated by yellow-based light with comparatively high luminosity, and the resultant white-based light can be well color balanced, and hence, a semiconductor light emitting device emitting white-based light with high luminous flux and a large Ra can be obtained. The air-conditioning apparatus capable of executing an oil collection mode that collects a refrigerating machine oil stagnating in heat exchangers related to heat medium into a compressor by changing a flow velocity or a flow direction of the refrigerant flowing in the heat exchangers related to heat medium depending on each operation mode.

1459826007-c7741d90-c319-44b4-bc09-7fc3e7cb8b91

A conveyor system for controlling two conveyor belts with a single motor comprises a housing including at least one inclined section. In order to determine the minimum acceptable fare, the system typically solves an optimization problem that takes as input the airline's flight network schedule, fares and forecasted passenger demands for all products available for booking on the airline's flight network, and available capacity on each of the airline's scheduled flights. The ion-conductive materials each include i) an inorganic layered structure including a plurality of layers formed of an inorganic compound and ii) a sulfo betaine-type or hydroxysulfo betaine-type ampholytic surfactant.

1459826007-d62db825-ed98-42aa-ace6-95fff5e51c06

A method of reproducing from a storage medium video data and graphics data for displaying a menu screen. The cartridge contains a thermostatic valve. The method also comprises automatically sending information about accessing the local wireless communication network to a mobile wireless communication network. The sensing device generates an incremental signal from which the steering angle can be determined.

1459826008-19b11380-f530-4f6b-91e3-5a9b39681422

An in-line drug delivery pack that connects in-line with an intravenous line and allows for the mixing of diluent with a drug reagent to be delivered to the patient. A lockable entrance cover closes the entrance to the vehicle. The T-junction conduit has an input port and two outlet vent ports. The first common handover interface is configured to receive user and/or traffic data from both Data Retention Sources and Intercepting Control Elements. Fake multipath removal in continuous time-domain parameter extraction, a sparse channel-based method, is also described that further improves estimation quality and reduces feedback overhead. For example, in MEG measurements the object associated with the transmitters is the head of a human being on whose surface the transmitters are placed.

1459826008-9e86f2a5-d766-494b-92fa-7b51c3467380

A semiconductor manufacturing method wherein a trench is formed in an SOI substrate. The two contacts are in contact with each other in a switched-on state of the switching device and are not in contact in a switch-off state of the switching device. Each cowl brace includes an upper portion, a lower portion and a continuous body portion connecting the upper portion and the lower portion.

1459826008-b8f99edf-8cd2-4ee7-a630-2f116e76f485

A mobile terminal and photographing method for the same are disclosed. The protective articles of the invention may be used to provide substrates or articles of the invention having a fluorinated surface. Then, a fast Fourier transform is performed on each image to obtain a two-dimensional subset frequency space. This unit stores energy from the fuel cell and supplies energy to the effectuating capacitor via an electric transforming unit. A moveable rinse fluid valve member is disposed in the flow path and movable between open and closed positions. The scheduling signals can be defined to the same size in a PDCCH transmission region of said predetermined downlink component carrier in the event different MIMO transmission modes are applied to the PDSCH transmission or the PUSCH transmission, or in the event said one or more downlink component carriers or said one or more uplink component carriers have different bandwidths.

1459826009-2155d948-2ad0-4408-b4ce-4bbeca347ad9

A tolerance ring is disclosed and can include a generally cylindrical body having a side wall that defines a top, and a bottom. A mounting member is secured to peripheral edge portions of the layers and closes the gap between the layers while providing a means of securing the trap into an air intake tract. Other embodiments are disclosed. Thus, it is possible to create an inductance with a much lower value of parasitic resistance. Data from an accelerometer is stored in FRAM memory. The layer is epitaxially grown by use of a mask, wherein the mask satisfies the equation :.

1459826009-a95d064d-721f-4c51-89fd-dd280d728254

An enclosure assembly for use with a fiber optic cable, the cable having a lengthwise cable axis and including a plurality of optical fibers and a jacket surrounding the optical fibers includes an enclosure housing and a cable control clip. The upper unit includes a platter installed to a spindle of the moving unit, a separative platter separatably installed to the platter and having a polishing pad contacting with the glass, and a vacuum chuck for fixing the separative platter with respect to the platter by means of vacuum. High-speed drawing by means of roller dies makes a stock wire into a welding solid wire having the diameter of the finished wire or nearly finished wire. Dielectric features are associated with the first active region and break up the first active region. One or more of the position markers illuminates to display output from the electronic device. The gateway selects at least one of the clouds according to predefined Service Level Agreement information, and stores content provided from the user device to the selected cloud.

1459826010-77afe124-70ad-4594-93cf-071828d6b64a

A cooking apparatus is provided. With regard to the second n-ch TFT N2, a gate thereof is connected to a second capacitor C2, a source thereof is connected to a first reference voltage source YVDD, and a drain thereof is connected to a first capacitor C1. 3 weight parts for 100 weight parts of such blast furnace slag or its grading adjusted slag, and may be applied as an aqueous solution with concentration of 1. In the case that the candidate is included, a second discriminating portion discriminates whether the candidate is a face, by referring to second reference data, obtained by learning the second characteristic amounts of a plurality of images, which known either to be of faces or to not to be of faces.

1459826010-a4ed2c04-8dac-465e-88b5-8d72061d5ca5

Pseudo-random numbers generated by a PRN generator are mapped to predefined number

ranges or target ranges. The pilot mixer can further include features to cool the annular housing, including in the area of the corner recirculation zone. The weight is variable according a status of contact between the person and the arbitrary object and is calculated based on not only a physical property value representing the status of contact between the person and the arbitrary object but also a tactile feature quantity representing a feel that the person gets when touching the arbitrary object. The front panel and the rear panel are faced with each other, and the peripheries thereof are sealed to form a discharge space therebetween. The current value detection unit detects a current value that changes in accordance with the amount of electrons emitted by the charge supply unit. The peptide of the invention also can include an amino acid homology with the sequence shown in SEQ ID No: 2 corresponding to at least about 80%, at least about 85%, at least about 90% or can include the amino acid sequence shown in SEQ ID No: 2.

1459826010-e5d14859-2c72-4123-904c-94db0566e9c1

The invention relates to routing messages over a network of interconnected devices of a networked control system, particularly to routing messages for individually controlling devices of a networked control system such as light sources of a lighting system. The inner terminal has an attachment portion that is supported on a projecting anvil of the insulator that is disposed in an intermediate bay of the outer shielding terminal. The stone cutting machine can have a plurality of stone cutting elements and it can be configured to concurrently create a plurality of stone cuts. The sensing assemblies attach to the support frame and connect to the mandibular member to obtain positional data related to the movement of the mandibular member. Some embodiments may be a method comprising sending a request for logging data from a log analysis application to a repository of logging data gathered by a logging device, and sending a reply comprising a reduced representation of at least some of the logging data.

1459826010-f762b14a-6cf9-48fc-a09c-a30d9f07654b

A cable modem termination system measures signal qualities of upstream transmissions associated with one or more cable modems. Further, a controller is configured to control the display of the thumbnail image data and to display page data with the thumbnail image data. Thus, the first load-receiving member is moved in the axis direction with respect to the second load-receiving member, thereby applying a tensile force to the bolt.

1459826011-532052ce-0619-4dfa-95a5-89b3395ebd0e

The present disclosure provides a gravity gradiometer that comprises a detector for detecting a gravity gradient. At least one clamping arm includes a first end having a pivotal connection with the distal end of the elongate member. Each of the tags corresponds to a respective one of the cache lines. The attenuation characteristics of the first section are chosen such that the intensity of the optical radiation at the probe wavelength that reaches the second section is below the threshold for the onset of non-linear effects of the second section. At least one laser scanner measures the distance to a container wall from different angles, and passes the measurement signals to an electronic control, which calculates a steering angle reference value for the electronically regulated vehicle steering from the measurement signals. The processor then proceeds to check that the two identification data correspond in an expected fashion.

1459826011-9bb24ae0-3610-4b4a-a572-f67916bffe24

A method for converting image data from serial to parallel is provided. In order to reduce the effects of acceleration-induced deflections of the probe on the measurements made by the machine, accelerometers are provided to measure the accelerations of the probe and to produce signals indicative thereof. An application that automatically generates connecting lines between shapes, based on spatial relationships among the shapes, can reduce the amount of time for drawing a diagram.

1459826011-d62e0f98-915c-4d12-bcd5-4d7b19a19e65

An atomic layer deposition process deposits thin films for microelectronic structures, such as advanced gap and tunnel junction applications, by plasma annealing at varying film thicknesses to obtain desired intrinsic film stress and breakdown film strength. Such a method comprises processing cellulose fibers into a fiber mixture, and then forming a wetted mixture from the fiber mixture and a fire-retarding solution, wherein the wetted mixture has a solids content of the fire-retarding solution substantially uniformly and thoroughly dispersed therethrough. The support member supports the light emitting member. The candidate topic word is determined to be a topic word if the candidate topic word divergence value is greater than the reference topic word divergence value. A normalized string is generated based on the phonetically corresponding normalized character-sets.

1459826012-731b0f37-5ce2-44c5-a4d4-0d5125f036de

A foregrip for a firearm may comprise a mounting device configured to attach to a mounting rail of a firearm and a grip body. The standard cells are disposed and routed on a layout area. Fuel and compressed air at an elevated temperature and at a constant pressure are delivered to a combustion chamber, the amount of air being chosen so that at least about 90% of the oxygen in the air is consumed during combustion. For example, the control parameter may be generated in dependence upon the program instruction being executed, the output signal value which is in error, the previous behavior of the circuit or in other ways.

1459826012-8cc2b15f-9917-440b-ab0d-533338799e5d

Methods and apparatus are provided that prevent or inhibit functional regression caused by the stromal remodeling resulting from epithelial or fibroblastic apoptosis or necrosis in patients who will undergo or have undergone a thermal ciliary muscle tendinoplasty or scleral collagen shrinkage procedures. When an exported file system is mounted onto a client, the client creates a file system ID structure for the exported file system, wherein the file system ID structure is populated with unique properties of the exported file system, and wherein the unique properties include a file system ID. The ball body is further slowed down by the unraveled cord scratching the floor. The first polarization plate has a pair of second short ends longer than the first short ends, a pair of second long ends, and a first absorption axis. The hairclip device can maintain a hairdo stably and can be easily removed from the user's head in order that the user can arrange different hairdos conveniently.

1459826012-a101b650-38f5-4a58-848f-7b138a4d47cc

A mounting element for receiving a sensor has a sensor receptacle having an essentially cylindrical or funnel-shaped geometry. The connecting wire has one end that is embedded in the housing. The start point of the first step part and the start point of the second step part are set at positions offset by a specified distance from each other. Pole shoes are formed at ends of the cheeks. In this way the value of the current ratio parameter can be varied to cancel a non-linear dependence on temperature of the bandgap voltage reference, thereby providing a curvature-compensated bandgap voltage reference. The device uses a groove or a keyway with a retaining band having a key portion disposed on the retaining band.

1459826012-c3c73288-4840-4d20-b9ab-337bf3debbsc1

An infant incubator in which the heater for heating the air circulated through the incubator and the speed of the fan which forces air across the heater to circulate through the incubator are controlled to increase the temperature of the heated air and delivery of the heated air to the space in which an infant has been placed for treatment when an access door of the incubator has been opened. The system includes a vessel containing a first fluid and an injection nozzle to inject a cooling fluid into the vessel. However, if the dosage form has been physically tampered with, the TPTA trap reduces or retards burst release of the drug from the dosage form. A pump

impeller is operatively mounted to the impeller shaft within the pump housing, the pump impeller rotatable to draw the coolant into the pump housing through the inlet opening and discharge the coolant at a higher pressure through the outlet opening. The top surface of the intermediate section defines the point, a small portion to the toe side of the point, a small portion to the heel side of the point, and the flangeways in the vicinity of the point. A metal loop antenna is installed along the peripheral contour of the folder and an electrical connection means electrically connects the loop antenna to an RF board of the main body.

1459826013-1b7af1a4-ca2d-4b48-a7a7-c7afeb72f5a0

The present invention relates to a method for electron beam lithography that consists of a combination of electron beam projection lithography and electron beam writing. The sound absorbing layer is composed of a honeycomb material and a layer obtained by filling spaces with a hard foam material. The container is returned to the source of ice following the predetermined pathway, remaining there until ice is needed at a location. The order injection system places orders for products contained within the universal shopping cart from affiliated and non-affiliated merchants.

1459826013-982365ef-6a4a-45f6-a87f-22d11d004db8

The present invention relates to an integrated structure for an optical refractor, and more particularly to an integrated structure between a circuit board and an optical refractor which enables exposing the light source after dismantling to facilitate replacement and maintenance thereof. In addition, provided is a highly reliable semiconductor device which has stable electric characteristics by using the oxide semiconductor film. A trigger signal contains information about the desired stimulus intensity level. The dough is sealed by exposing both sides to boiling water, having a temperature 180 F. The full-band capture cable receiver can overcome the constraints of conventional cable receiver systems and deliver multiple channels, thereby allowing operators to provide consumers with an increased number of services.

1459826013-c2f9ab96-9d5b-49fa-a057-1267e8b9c56d

The present invention concerns a process for the mass production of carbon nanotubes and particularly a process for selectively producing multiwalled carbon nanotubes. The impressions being able to interact with one or more tongues formed in the stopper. The method for preparing the amorphous asiatic tromethamine salt is easy and effective, and the water solubility and bioavailability of the asiatic tromethamine salt thus obtained are greatly compared with the prior art. The first and second protrusions extend longitudinally outwardly from an edge of the first end. The device includes: acquisition means for acquiring the frame images being the imaging results; estimation means for computing a first matrix of coordinates of a joint of the 3D body and a second matrix of coordinates of each of the parts of the 3D body, and generating a first motion vector; computing means for computing a second motion vector; and determination means for determining the 3D body.

1459826013-e8011a89-1b1b-4bce-b57f-739b5ed449b5

An three-way audio system that uses directional arrays for radiating mid-frequency acoustic energy and passive directional devices to radiate the high frequencies. The inventive compensation tank is integrated into a main cooling circuit, wherein a means for directly introducing the cooling fluid is arranged on the compensation tank between the input and output connections and the cooling fluid flow coming into the compensation tank runs directly from the input connection to the output connection by means of said directly introducing means. One region includes an overhead representation of an area and an interactive control overlaid onto the overhead representation. In case one RS is equipped, plural entries in the RS are divided into groups, and by dynamically changing this grouping according to the dispatch frequency of the instruction to the arithmetic pipelines or the held state of the instructions, the arithmetic pipelines are efficiently utilized. The data

can be processed into a valuation report by a separate valuation server.

1459826014-1acb51a8-a08b-4e6f-bacb-695937dbc61a

A semiconductor apparatus includes, below a high-voltage wiring, a p<sup>+</sup> diffusion layer in contact with an n drain buffer layer and a p<sup>+</sup> diffusion layer in contact with a p<sup>+</sup> diffusion layer for reducing the electric field strength in an insulator film, which the high-voltage wiring crosses over. Thus, the base boards can be securely locked in the base pad rigidly and stably, thereby preventing the base boards from being detached or loosened from the base pad. This first code tree is a combination of a channelization code sequence and a first scrambling code sequence. When the vehicle is stopped for the main unit to capture an image of a subject, the first and second locks fix the main unit to the vehicle. An LMS algorithm processing unit updates each tap coefficient of the adaptive filter by using the LMS algorithm. Arranged on the outside of the wall of the discharge vessel is an electrically conductive means that is limited with reference to the longitudinal axis to a subregion of the discharge vessel wall, for example a metal ring.

1459826014-50f92ebe-3d8f-4860-b143-664dbf8b09e1

Provided is a method of controlling a digital image processing apparatus such as a digital camera which can continuously photograph the same subject using various setting values stored in advance, and a digital image processing apparatus. A controller reads the power of an amplifier twice. The first punctured turbo codeword which is received in the relay is de-punctured and regenerated in a decoding operation and the regenerated turbo codeword is transmitted from the relay to the destination in punctured form after puncturing by a second puncturing operation. The outer cylinder 2 is made of the hoop member similarly to the inner cylinder 1. More specifically, the present invention relates to the use of agents which augment inner ear antioxidant defenses to prevent and/or reverse hearing loss induced by noise, toxins, or other stressors.

1459826014-cdfffb1e4-8c3a-4598-aa89-5c296e2946d8

Systems and methods for enforcing in-order execution of commands sent from a master device to a slave device, where it is not necessary to provide a data buffer to store data associated with commands that are delayed to enforce in-order execution. A sample of the pulp is formed into a sheet, and bleed-throughs are created from the contaminants therein by hot-pressing the sheet. A unit element is promoted during the sorting if a usage value associated with the unit element is less than the maximum allowable usage spread parameter value and the unit element was used in an immediately previous single-sample integration operation.

1459826014-d2c186a5-62be-4ef1-a2ab-905a34019f71

A method and system for determining a position for an interstitial diffuser for use in a multi-component display is disclosed. A unit cell of a fuel cell includes a cathode electrode having a gas diffusion layer and an electrode catalyst layer. A plurality of leads are respectively in contact with the interconnects in an area positioned on the elastic protrusion. An actuator with a ram operatively connected thereto is situated adjacent the elastomeric tube, and a reference surface is positioned generally opposite the ram such that the elastomeric tube is squeezable between the ram and the reference surface.

1459826015-538fdd1e-fee6-414f-8606-34e8c37a0b04

An electro-optical device is provided having a pixel portion with a novel structure, and in which display irregularities such as crosstalk, which develop due to a drop in voltage caused by the wiring resistance of electric current supply lines in an electro-optical device, are improved upon. The method is simple and fixes a first substrate and a flexible material layer together by forming a support layer on the first substrate and forming, through etching, a groove in the support layer and coating UV resin in the groove so as to obtain a flexible material layer

that is flat, operable, and not prone to deformation. A first bending threshold must be overcome in order to initially recognize a user's flex input as a valid flex input command. The continuous web is disposed upon at least a portion of the continuous belt. Finally, monitor unit 10 receives TDSSS 56, performs a comparison to a reference MDSSS signal 52 locks between MDSSS signal 52 and TDSSS signal 56 and outputs distance between monitor unit 10 and tracked unit 12 using several phase comparisons.

1459826016-4279fe54-f140-40ab-9ca0-ddcaa3123765

A method of operating a self-service checkout terminal located in a checkout area of a retail store includes the step of generating a payment-tendered control signal when a user of the self-service checkout terminal tenders payment for a number of items for purchase. An OP AMP includes a positive input connected to the VXnode and the negative input connected to the output thereof in a direct feedback loop. The invention also relates to crossing inbreds, varieties and hybrids containing the dwarf allele to produce novel types and varieties of dwarf cleome plants for ornamental purposes. The heat exchange element is a perforated metal plate and/or a heating resistance.

1459826016-59d7a3d4-1b1a-4f50-b12c-92f7d8879936

A method of fabricating an integrated circuit having reduced threshold voltage shift is provided. The package substrate is provided with a plurality of first contact pads linked in a first daisy chain pattern. The decoder decodes the n-bit display data, and sequentially outputs the decoded data to the latch circuits. Yet another mode comprises routing fluid from the first chambers of both cylinders into the second chambers of both cylinders. Each successive compartment is disposed around the preceding compartment and defines a respective gas flow channel having an inlet opening and an outlet opening at opposite ends.

1459826016-62a94d8e-1337-4599-a60b-63dcb286dd37

A fuel efficiency degradation amount displaying device detects a tire air pressure and calculates an amount of degradation of fuel efficiency of the vehicle compared to fuel efficiency in a case that the tire air pressure is appropriate. According to the invention, the air in the monitored rooms is fed to the first detector unit via a first pipe conduit and to the second detector unit via a second pipe conduit. An event manager is adapted to sequence the plurality of event signals.

1459826016-e3aaed0d-8340-4f0b-ac8f-adf64d476bd8

A communication apparatus which can prevent leakage of confidential information transferred over a network when a fault occurring in a communication device is analyzed. In particular, the present invention utilizes a barcode comprising one or more sizes of semiconductor nanocrystals having characteristic spectral emissions, to either track the location of a particular item of interest or to identify a particular item of interest. A silicon oxide comprising layer is formed over the silicon nitride comprising layer. Each mounting arm has an arm portion extending to a light bulb socket, and a harp. Whenever a predetermined event occurs, the controller distributes the strategic data to one or more of the other team members.

1459826017-62b8cc58-1b17-4ca9-b283-ffc805dc6003

An information processing apparatus includes a main body having an upper surface, and a display part which opens and closes with respect to the main body. The main assembly includes a main assembly electrical contact, first and second projections, main assembly positioning portions, and a force application member. In order, in a transportation or disassembly state of the master cylinder, to prevent the first pressure piston from being pressed excessively out of the bore, the second pressure piston is supported by means of a stop component counter to the actuating direction positively in the housing of the master cylinder. When a self discharge occurs by approach of a charged body in this halt period and an absolute value of current that flows through the resistance exceeds the first threshold value, the

electricity removal operation is initiated in which the high voltage is applied on the electrode needle to produce ions. A first error message corresponding to the multi-part identifier binding attempt having a highest score is outputted if no successful bindings occurred.

1459826017-6abbb345-2ebb-4c41-a07f-64732e7e1866

Single-edged wood chipper blades which can be repeatedly removed from a wood chipper and sharpened, as needed, to prevent the need for disposing of multiple conventional blades over a prolonged period of repeated use. In one embodiment, bond members project away from a surface of the microelectronic substrate to define a fill region or cavity between the surface of the microelectronic substrate and the bond members. The VSB reception system detects the required multiplexing information from the field synchronization signal or the supplemental data and decodes the multiplexed data by using the null sequence and the detected multiplexing information, as well as demultiplexes the multiplexed data into the MPEG data and the supplemental data. 1 or higher is formed at the interface between a semiconductor substrate and an alumina film.

1459826017-7aa98ba0-c051-4500-b882-314fbc043fe2

The principal object of this embodiment is to provide regular feedback about the packet losses from a receiver to a sender in a RTP based network, based on which the sender then decides to control its transmission rate resulting in better quality of experience for the receiver. The liner protects the cooling passage against corrosion, especially type II hot corrosion. 1 or higher, Ra is of 20-80 wt %, Rb is of 80-20 wt % and a sum of Ra and Rb makes up 50-100 wt % of the mixture. The main amplifier is connected in common to the plurality of pairs of local input/output lines for taking charge of the plurality of memory banks. This control unit itself predicts that a vehicle behind is about to impact its own vehicle, and controls the headrest actuating mechanism to move a seat headrest forward and thereby reduce the size of the gap between the headrest and the neck of the occupant of the seat.

1459826017-b096f1a3-efdd-4824-85c3-6d85317bb6c3

A stadium chair includes a frame for engaging a bleacher. A defect signature-based query is performed against system diagnostic data stored in one or more structured records. Each of the plurality of current balancing devices is configured to receive two currents and balance the two currents. Each of the plurality of network nodes are monitored to determine the frequency with which requests for the checking values assigned to a respective network node are directed to the respective network nodes. The DC-restored analog video signal is then provided to an Analog-to-Digital or AD converter 112 for conversion into a digital video signal. At least one main area of the suitcase shells is provided with an embedded cavity inside which at least one pocket is fixed via a base plate.

1459826018-033aa439-e37a-45f1-8f07-d5ba2dc82094

Cord organizers including a first shell, a second shell, and a spindle connecting the first shell and the second shell. An earpiece includes an electromechanical acoustic transducer having a diaphragm and for generating a sound by vibrating the diaphragm in response to an electric signal, a case on which a sound hole is provided and in which the electromechanical acoustic transducer is housed, and a holding member for holding the electromechanical acoustic transducer in the case. An air mover pushes ambient air downward through said cooling box from overhead of the work and across the heat exchangers.

1459826018-0b326313-b89c-45b5-806d-b5c5ab7ac347

An improved monaural and stereophonic headset is provided that allows subscribers to safely stow away an unused earpiece. In one embodiment, a cornice comprises a horizontal base unit having a face section, a top and a bottom, and one or more interchangeable decorative modules. By mounting the image-capturing apparatus with

the camera-side mounting surface and the holder-side mounting surface placed in contact with each other at the camera body using screws, the light-receiving surface is aligned with the image-forming position of the photographic lens. In an embodiment the reactor contains a lining that includes an oxidative catalyst. In addition, the output port may be unbalanced, and the input port may be balanced.

1459826018-5232620e-b4ed-48c3-b40e-1289a622d2ea

A plumbing tool includes an elongated hollow shaft and a resilient member attached to the shaft adjacent a shaft end. An analysis subsystem is configured to build classification models to perform on-line failure predictions. A void that is left between sidewalls of the first portion of the electrode over the ferroelectric film is then filled with fill material for a fill layer. The subset is matched with the data entered by the first person and unmatched entries highlighted. The receiving device is configured to encode all of the transaction ID in the responsive packet. For certain embodiments, an enhanced scanning request message may facilitate establishing a scanning cycle in the first RAT that aligns with a paging cycle of the second RAT.

1459826018-60655b72-520e-4d15-89be-b39666b3df58

A method of preparing a cured laminate employing electron beam radiation is provided. Even when there are variations in an input hand-written signature during the registration of the signature or during the authentication of the signature, the signature authentication device easily registers or authenticates the signature. In another aspect, coordination of benefit recovery entities access the data information exchange in order to perform recovery operations for the health plans, relating to health providers which rendered services to participants of the health plans.

1459826018-afe54fae-7481-467c-b565-99941464247d

The disclosure relates to a housing for an electric machine, for example, an electric power transformer, such as a dry-type transformer, with cooling channels being provided within the housing for a cooling medium. The entire unit is housed inside a blended set of athletic gloves and emits an electrical charge against an unwanted attacker. The central processing unit, the plurality of calculating subunits and the control unit are integrated on a single chip, the chip comprising a common supply current access for supplying the plurality of calculating subunits and the control unit with current.

1459826019-75132f9e-51f7-4f39-862b-99f33ed6269b

An apparatus and method for an X-ray dosimeter support, comprises of a material-poor support-layer, held by a frame elevated by at least one foot, comprising optimization for low back-scatter, high measurement-repeatability and ease of assembly and disassembly. The block repair device stores a block repair configuration that determines the dimensions of a repair block. These three abilities synergistically produce an automatic scheduling system that can enforce a wide variety of scheduling rules and requirements seen in actual staff scheduling situations. Separate parts of this duct are heated, in series, by the exhaust gas from the Stirling engine and the supplementary burner firing radially outwardly through the helical duct. This enables the inner conductor diameter to increase sufficiently to make the central hollow opening large enough to receive standard radioactive sources therein.

1459826019-b3976033-f8ea-42ca-b3ea-d58edb8e189e

To facilitate adjusting a bearing arrangement, particularly in a wind turbine, for different operating situations, the bearing arrangement has an adjusting device with which the bearing preload can be adjusted starting from a base preload. A transmitter inserts a user clock code containing a predetermined number of points into the digital video signal during TDM processing and transmits the digital video signal. The set of functional domains are associated with a set of ecosystems. A

nozzle-defect detecting device which detects a defeat of the operative suction nozzle is provided.

1459826019-f0c3e193-6c4d-47b7-b97d-d0f955465e1d

A method for encapsulating an optoelectronic component by depositing a diffusion barrier for protection against environmental influences by means of an atmospheric pressure plasma on at least one subarea of the surface of the optoelectronic component. Each of these node elements supplies features and options that facilitate peer-to-peer communications, data and service aggregation, propagated interfaces and distributed computational power. The flexible outlet membrane includes an outlet aperture and a sealing portion, and the sealing portion is movable between a closed position inhibiting fluid flow through the outlet aperture and an open position wherein the sealing portion displaces into the outlet port to permit fluid flow through the outlet aperture.

1459826019-fda0df1e-dac1-49b6-ab50-44181e73180a

According to the present invention, a method for integrating processes with a multi-faceted human centered interface is provided. The process generally involves the conversion of water insoluble components of biomass, such as hemicellulose, cellulose and lignin, to volatile C<sub>2</sub>+O<sub>1-2</sub> oxygenates, such as alcohols, ketones, cyclic ethers, esters, carboxylic acids, aldehydes, and mixtures thereof. A power source is in communication with a disconnect circuit of at least one of the battery pack system modules. Physiological data is taken from the received light.

1459826020-38bdc722-a0eb-4357-8d9e-756777a9d86f

A storage device contains a smart-card device and a memory device, both connected to a controller. Through the use of a computer system integrated with automatic individual animal identification multiple measurement and remeasurement systems with automatic data input and a cattle handling and sorting system, animals are individually identified and measured by weight, external dimensions and characteristics of internal body tissue. The lock mechanism includes a locking pawl which engages the strap teeth and an actuation strip which biases the pawl toward locking engagement with the strap. 0 with a physiologically tolerable acid. Each memory cell in the column is connected to a single one of the read bit lines. The data failure may occur on a host adapter, a device adapter, a communication fabric, a multi-processor, or another communication device.

1459826020-9c06fece-8f8e-4060-890d-ca0f1a368205

A device and method are provided for use with a noninvasive optical measurement system, such as a thermal gradient spectrometer, for improved determination of analyte concentrations within living tissue. The system includes a first mechanism for acquiring and analyzing image data from the sensor array. To allow the user to exit from such OIEs, that is, to change from a data entry mode to a navigation mode, multiple exit strategies may be simultaneously enabled for use by the user. Other embodiments are described and claimed.

1459826021-917fc0c1-bed3-4f5b-b53d-77fbfa4c6848

A method for coating vehicular radiators with an ozone depleting manganese oxide catalyst in slurry form utilizes a robotic arm with multiple spray heads for spraying the face of the radiator. More specifically, a polishing pad coated with compositions, which contain a capsulated abrasive, thereby used for planarizing interlayer insulating film formed on a semiconductor substrate by chemical mechanical polishing. The gaming system receives a wager, causes the reels to display a plurality of the symbols, and displays an object moving from the object starting area to one of the designated target areas and/or the object ending area along one of a plurality of object paths through the obstacles.

1459826021-cabab5ae-c18c-4dfd-bb58-2d8cd2f382f0

A drainpipe comprising a concentrating flow path to concentrate flow of fluid on an

inner wall of the pipe, which makes it possible to inhibit freezing of the fluid hydrodynamically without providing heat energy from outside, to thereby prevent blockage of the pipe. In the emboss-processing section, the upside and the downside of the target tape is detected based on the identifying information. In one embodiment, a variable frequency clock generator includes a phase modulator configured to form a variable frequency clock. The disclosed rate based traffic control system further requires each source end station to send one end to end control cell every time period T.

1459826022-2274d2c5-f212-4a59-9777-d5311256a1b6

The present invention provides a liquid crystal display having excellent visibility. The display element comprises opposed electrodes and an electrolyte containing silver or a compound containing silver in its chemical structure and a porous white scattered material provided between the opposed electrodes. A pair of inspection lands is provided on the substrate and connected to some of the inspection patterns. By decreasing or increasing trace width and spacing simultaneously, a constant differential impedance can be achieved.

1459826022-d0465d0f-6b62-4785-8af1-979ed8165fef

A rotary cutting tool includes a cutting tip having a cutting portion adapted to perform cutting operations on a workpiece and a threaded aperture defined therein generally opposite the cutting portion. In certain embodiments, more than two bondwires are coupled to an electrically common interface, wherein the bondwires are used for carrying a signal of the internal circuitry of the IC. The user equipment controls and activates the wireless radio frequency assistant to transform a first frequency of a radio frequency signal transmitted to the system of user equipment and the wireless radio frequency assistant to a second frequency. Within each chapter, images are ordered by time and grouped into clusters of related images.

1459826023-1d6220a5-ce4f-47b6-9fd7-839182efbdd6

Stimulating power line carrier injection with reactive oscillation comprises exciting a tank circuit to oscillate at the carrier frequency by sinking pulses of current between one node of a capacitor in the tank circuit and the other node of the capacitor. The plurality of data packets is examined to determine application requirements of an application of the wireless device. The center conductor is formed by first and second halves which mate within the axial bore of the dielectric.

1459826024-54915e5c-e4b7-4b47-b419-90da0fd762df

A cordless telephone system includes a base station operable to connect to an internet protocol network and at least one handset running a short messaging service application. The gap formation facilitating element is configured to render the sealing member to be a non-contact seal or to contact so that the contact pressure is approximately zero when the bearing assembly is in a rotating state. The system initially processes the database to reduce the number of cell and module records by combining hierarchically related cells and modules into larger cluster cells. In operation, braking is preferably initiated by the actuation of a brake master cylinder which provides hydraulic pressure to cause each rotating wheel with its corresponding hydraulic pump to engage. First and second segments of a segmented liquid inlet are in fluid communication with the first and second liquid feed channels, respectively. In the second mode, the locking member is in an intermediate position between the first and second positions and the trigger mechanism is freely allowed to articulate between the actuated and non-actuated positions.

1459826024-6e1ffe98-d373-4d53-aee1-db701fc78bb1

An apparatus and method of moving a mobile tower using solar power are disclosed for use with an irrigation system. Such system resources include, but are not

limited to, memory ranges, input-output register ranges, interrupt request lines and direct memory access channels. The lid covers the active surface of the semiconductor chip. The relative rotation is rotation which presses the control member against the control groove. The pair of generally opposed lateral sides are adapted to permit the initial flow stream of pressurized fluid to exit the housing in a pair of generally opposed diverted flow streams of pressurized fluid that are substantially perpendicular to the initial flow stream of pressurized fluid.

1459826025-0033bb6c-17d3-4c28-b462-c0920f3a322f

A process for the preparation of a dietetic milk jam having no sucrose and having the same organoleptic properties as traditional milk jam is formulated by addition of a solution of polydextrose at a pH of 6. The exclusive control section releases the exclusively secured logical and physical drives after the diagnostic section completes the diagnostic process for the physical drive. The polarizer disposed on the LCD device can greatly lower cost of the polarizer and the LCD device.

1459826025-956f298e-246e-4805-9759-ce9f5973a623

Process for the esterification of organic acids with alcohols in a reactor of the chromatographic type in which the heterogeneous solid phase is capable of acting both as an esterification catalyst and as a means exhibiting preferential adsorption towards one of the reaction products. Recording magnetic field leakage associated with the shield is thereby suppressed and corresponding far track interference is inhibited. Alternatively, it is accomplished by selectively varying the pattern of fill structures in different sections of a semiconductor wafer so that predetermined amounts of shallow trench isolation regions in the different sections are exposed. These timed data signals and termination signals from the timing circuit are applied to pull-up and pull-down circuitry, which drive respective pull-up and pull-down transistors coupled to the data bus terminals. The support extension extends between the face support and a back flange to define a lower cavity. The thicknesses of the first layers decrease from a side where the semiconductor chip is mounted toward a side where the organic substrate is connected.

1459826025-c63efbe6-ac5e-45e4-ac45-526590ec13dd

The present invention discloses an ultraviolet light curable lubricating composition and method for making such a composition that may be used to produce a lubricating layer. A wireless access device transmits the video signal to at least one mobile video device. Furthermore, it allows image data to be collected at either the alarm unit or the monitoring and control unit when an alarm condition is detected. With the object-oriented model, a system and method for storing and displaying data captured during a test run is implemented. The use of high-speed paths through the Internet allow wireless data communications across incompatible wireless standards.

1459826026-3ca296db-b6b7-4ba1-89cb-067504404bf1

A narrow-band single-photon source is disclosed, along with a QKD system using same. The inductor electrodes have bent shapes or curved shapes and a first end portion of the inductor electrodes is located in the vicinity of the central portion of the dielectric sheets, the middle portion thereof is located in the vicinity of the end portion of the dielectric sheets, and the second end portion thereof is located in the vicinity of the central portion of the dielectric sheets. A second laser beam, which is coaxial with the first laser beam, is irradiated to the thin-film in such a way as not to overlap with the first irradiated region, thereby forming a second irradiated region and a non-irradiated region.

1459826026-86782e39-4031-443c-8b48-32064f405353

The invention intends to solve a problem that an SI ratio of a signal from a target base station deteriorates when there is a terminal near another base station. Various embodiments additionally include one or more of the following: identifying

a group of sessions associated with the network element; and wherein the steps of identifying an applicable rule and initiating performance of the at least one action are performed for each session of the group of sessions. This filter is cleaned when the fluid flow is stopped, the filter collapses, and a force is applied to distort the flexible filter media to dislodge the built-up filter cake.

1459826026-c0e32aa2-3500-4bbc-bd4f-86bb0a81c4c7

A subject is disposed adjacent a linear detector array of a nuclear camera. The light collecting unit includes a lens exposed to outside light, and an optical leveling element. The terms provided by the player during game play are then collected, stored, and utilized to improve the performance of the search engine.

1459826027-69b42e17-98b3-4389-b3ad-004f0037d399

A mobile object apparatus is provided. The separable distribution rotor includes a first distribution rotor, a second distribution rotor, and an elastic member interposed between the first distribution rotor and the second distribution rotor. This is done after an event for a processor that triggers a legacy mode processor handling routine. The end portions extend from the body portion and gradually become wider than the body portion. One end of the control lever is in a fixed connection to the front seat, and the other end of the control lever is clamped by the two locating pieces.

1459826028-ae7b005c-4bf1-4680-832b-ba40127524eb

A cuvette for a spectrometric analysis instrument has two opposing windows made of a material, which is transparent to the light of the waveband used for the analysis. The chamber has a loading aperture equipped with closing doors through which the charging plates are loaded. After being used to pattern the polycrystalline silicon and silicon nitride, the anti-reflective coating is removed in a solution of hot phosphoric acid with the removal taking place before the silicon oxynitride is exposed to any elevated temperatures. Preferably, the displaying step is performed by displaying the retrieved programming information in overlaying relationship to the current program, and is discontinued upon the lapse of a prescribed time period. The device further includes a voice port coupled to the signaling conversion logic and configured to communicate selectively with the telephone station; and a data port configured to communicate selectively with the SIP client.

1459826029-4a753b1d-c030-4cbc-b99b-9fef4bf0a109

Embodiments of the invention include compositions and methods related to Maraba virus and their use as anti-cancer therapeutics. One embodiment includes a decoderdeserializer configured to receive an encoded serial digital signal, a ditherer configured to dither a least significant bit of each digital data word, and a reserializerencoder configured to serialize digital data and encode it, for example according to an applicable communication standard such as SMPTE 259M. The first microstructure and the second microstructure are a tetragonal crystal structure.

1459826029-81e0343e-7acc-4fc2-964a-999f1e354b61

A liquid cartridge includes an ink cartridge having a first housing portion for containing a liquid and a waste liquid storage cartridge having a second housing portion for containing a waste liquid, and a rewritable nonvolatile storage portion which stores a first threshold, a second threshold, liquid amount information and waste liquid amount information. Relatively simple and versatile methods are utilized to form the polymer nanocomposites. The bottom housing holds the nose of the cartridge in a concentric recess and holds the cartridge top centered by several radial protrusions in its mouth. The actuating assembly is operable to vibrate the window panel via vibration of the substantially rigid interface element relative to the vehicle structure. When the driving source rotates the driving rotor, the lock member is released from the held state to allow the driving rotor

to rotate the driven rotor relative to the housing. Such time code information may be inserted into a user data area of the picture layer of the encoded data stream.

1459826030-4828f712-421a-4675-a020-3788ab66ff75

An apparatus and method for testing a semiconductor device in an AC test regime. During a set mode, a first and second floating gate are programmed to different charge levels that are a function of an input set voltage capacitively coupled to the first floating gate during the set mode. Also provided are vectors, host cells, antibodies, and recombinant and synthetic methods for producing said polypeptides. The odds of the occurrence of one or more subsequent events are determined based at least in part on one or more of the pair of cards selected for the house entity's hand and one or more of the pair of cards selected for the player's hand. The blades may have one or more holes of various sizes in one or more blades of each propeller, either in the distal portion or the proximal portion of the blades. The method of the present invention permits the high forces developed between the occlusal surfaces of opposing teeth when engaged to be utilized to create the applied pressure on the photo curable material.

1459826030-a2a8b2e7-6d26-4d0a-bb36-330403172867

There is provided a semiconductor device capable of reducing dispersion in electrical characteristics, preventing occurrence of bridge shortcircuit in a silicide process and operating at high operating speed and method for fabricating the same. The assemblies have small cross sections and low bend radii while maintaining acceptable attenuation losses. , free swell blood absorbence capacity and after load blood absorbence capacity of superabsorbent materials is enhanced by combining the superabsorbent materials with enhancing agents which serve to enhance the blood absorbent properties thereof. halogenated aromatic hydrocarbons and polar aprotic solvents, in a weight ratio of solv.

1459826030-bfbfb162-3ac1-48c8-89d1-0bc63d5b58c9

A magnetoresistive sensor system includes a plurality of chip carriers, such that each integrated circuit among the plurality of chip carriers is associated with a respective magnetoresistive sensing components. The stations are equidistant from each other. The die is formed at its surface with an opening.

1459826031-39b7e144-ed92-45b3-a6e7-efda823fa473

A vehicle, particularly a motor vehicle, has a flap, which automatically opens as a result of an opening command. Messages are collected from a client and sent to the gateway or backend application in one round trip. The interface further requests a first set of priorities corresponding to the first set of user contacts, wherein the notification system will attempt to provide notifications to the first set user contracts in an order based at least in part on the first set of priorities.

1459826031-4f7b7e0e-7c0f-4216-b878-6ba3da20987a

A system for monitoring strain as an indicator of biological conditions, such as spinal fusion, glucose levels, spinal loading, and heart rate. The screen processing unit executes screen processing for an image to be processed. The primary storage node communicates the missing data strip to the secondary storage node, which writes the missing strip data to an outstanding strip log.

1459826031-a0ac9ba1-9545-44a3-9810-ab35c268ef85

The invention is a method and apparatus for purging an oxidant or residual fuel by controlled oxidation within a closed loop system. The calibration method is used for calibrating the optical touch display, and the optical touch display has a plurality of image detecting sensors. An audio signal is converted into a stream of audio packets and sent hop by hop to the different routers in the network having the loopback interface.

1459826031-b0580429-d486-42b7-aa68-520de86e779c

An apparatus for inspecting warpage of a sheet-like member includes a conveyance device for conveying a glass substrate in a substantially horizontal attitude and a non-contact displacement meter for measuring a distance to a surface of the glass substrate. The catheter transducer may comprise an intra-vascular, intra-cardiac or other transducer for insertion into or through a small space. These results are utilized by a multivariable linear controller to achieve nonlinear control of the subject process.

1459826032-6906b16a-4288-4e25-ac29-9b43b083ec6d

The present invention relates to a simple fuel vent assembly for use in inboard and outboard fuel tanks for marine vessels. Other embodiments are described and claimed. The attachment system of the present invention allows for simple and efficient connection between individual rigid holders.

1459826032-740fdf47-f9d2-4919-a290-63c0b988f29e

A wireless power transmission system for use in a mobile asset comprising a host transmitter for providing at least one of a microwave or a lightwave energy signal, a receiver configured to receive said signal, a converter for converting said signal to a storable energy form, and a controller to control the transfer of storable energy from said converter to at least one energy storage device. The dental capsule comprises a body portion, a transition portion and a discharge portion. The assembly presumes that there is some sort of baffle above the fire directing the flames to the front and a non-airtight glass door. The processed portion of the particular incoming stream is transferred to the selected processor. If the authentication is validated, then the programmable memory circuitry is unlocked on the next boot of the system to allow for reprogramming. New data can be written by applying a write voltage across the two terminals of the memory element.

1459826032-785fa07b-2f66-47ba-a318-6bfd04db0ad2

An improved gripping arm assembly including a two-piece gripper arm body construction which includes an arm clamp having alignment pins, and an arm main body with corresponding alignment holes for receiving the clamp pins, and a means for securably attaching the main body with the clamp. A second antenna element is placed at such a position where resonance arises at a frequency band of a first antenna element and connected to a ground pattern of a circuit board by way of an antenna grounding unit connected exclusively to a radio system unit. The unique system identifier is associated with the digital assets to generate digital assets entitlement data. The second portion physically receives at least a portion of the battery pack. An average pore size of the ePTFE is not less than 0.

1459826033-bed77e92-b0ed-4fdc-b373-d23ca7ca3d2e

According to one embodiment, a nonvolatile memory includes a memory cell array having a plurality of memory cells configured to store 3-bit data corresponding to first to third pages. 7 \u03bcm to 3 \u03bcm and a shape factor of at least 60. If every Transmission Time Interval has padding bits, the UE may send the scheduling request signaling to Node B in every TTI. The biometric analysis unit is also for providing match data that is indicative of whether a match exists and whether the match is above a certain correlation threshold. The table can be accessed by the storage system to reduce the amount of time spent locating the records. The optical component is sealed by a sealing member made of a resin.

1459826033-c580afa8-eab7-493f-9bea-199428ae3481

In an embodiment, a water containment barrier may include a hollow body at least partially defined by a front wall, a back wall, a top portion, a bottom portion, a first end, and a second end. The cryptographic algorithm may be an ECDSA signature, SHA-based Message Authentication Code or any other cryptographic algorithm. A second IPO layer and a polysilicon layer are then formed on the substrate and are etched to form a conductive wire and a top electrode plate thereafter. Each mattress clip includes elongated openings through which bolts are passed for

reception in aligned openings of the thigh support to permit limited transverse adjustment of the mattress clips.

1459826034-a2d100b6-7ddc-493e-9474-050caf9d22c1

This tolerance ring, which is for a torque transmission device, preferably has a ring body that comprises an elastic plate and is roughly a hollow cylindrical shape having a pair of edges that extend in the axial direction. An energy storage device and a bidirectional converter coupling the energy storage device to the power converter are also provided in the system. The method includes adhering a large glass substrate to approximately an entire surface of the large substrate opposite to a surface to which the second substrates are bonded; and cutting both the large substrate and the large glass substrate into first substrate units. The method automatically detects and monitors dispensing events, including detecting the type and amount of liquid, reconciling dispensing events with register ring-ups recording information, saving video specific to the dispensing event, and sending a page indicating anomalies. The icon display unit stationarily displays the icons representing display objects located farther than the predefined distance from the current location and movably displays an icon representing a display object located within the predefined distance so that the icon moves towards the current location in accordance with the movement of the current location. The flange has a pair of right and left flange bodies, bridges for joining the flange bodies, and an opening portion formed at the center portion thereof.

1459826034-d4723e0c-77c3-4048-8137-0941e5612a17

A security attachment device can be used to securely attach a license plate to an automobile. The core circuit includes at least one real input for receiving scan-in data for controlling operation of the core circuit. The mixing chamber has a mixer to allow it to form a homogeneous mix of the individual compositions.

1459826034-f6b63b02-288a-4cfe-aed9-f63f3f2d5377

Eyewear includes two ends portion and a frame having a bridge. in the heating chamber followed by irradiating the silicon film with laser light so that a silicon film having a single crystal or a silicon film that can be regarded as the single crystal can be obtained. An electrode paste is coated in a predetermine pattern on the thus-produced ceramic green sheet to form a sheet provided with an electrode.

1459826035-1c9c3da9-fd51-41f5-855f-974f7a15f4c9

A biodegradable polymer is disclosed having the composition g) from 8 to 80% by weight of a starch modified to include an hydroxyalkyl C2-6 group or modified by reaction with an anhydride of a dicarboxylic acid, preferably hydroxypropylated high amylose starch, a) from 0 to 87. The timefrequency map is further characterized by marking frequency bands with ingress level above a predetermined threshold with a \u201c1\u201d. A converter 120 is between the first battery 12 and the second battery 13.

1459826035-8270b99b-2543-49ef-a17d-bd0718128535

An electronic lock box contains a secure compartment for storing keys to a structure. Vaccines incorporating the immunovariant strain are effective in eliciting immunological protection against coccidial infection. Multiple light sources at different incidence and/or orientation angles apply light on the test surface, and scattered light is converted into signals and then analyzed. The changing device can be arranged and moved into a position with respect to the light-emitting diode and the fiber entry end such that the entry end of the light-guide element lies opposite the light-emitting diode and the exit end of the light-guide element lies opposite the fiber entry end. The mobile tag communicates with the communications facility using randomly scheduled communications each including a status message.

1459826035-8bb21b5d-e458-4a3c-aac4-338c6023627d

Starting and ending of a task is detected, where thread pooling is employed. The support structure includes two suspension members supporting the foils along the respective side edges, and each support member has several support elements interconnected by hinges and in sliding cooperation with the foils. The invention is comprised of a common ophthalmologic lens and a yellow pigment that absorbs short wavelengths of light of 350500 nm, both appropriate for use in humans. The double hinges include axial cams that apply a holding torque in the open position that resists the first and second housings closing.

1459826035-d000737d-eae1-4ec9-9418-ffd7870741d1

The present invention is a self-aligning walking aid that is suitable for use walking on level surfaces and for ascending and descending stairs. Accordingly, they devised systems, methods, and software that facilitate online access to documents, such as non-opinion legal documents, in context of a legal workflow. The method includes forming a high dielectric constant layer on a semiconductor layer. The other loop may be removably attached to a pole on the back of a chair and can also include a first portion of the connector. The first retaining seat has a first opening, and the second retaining seat has a second opening.

1459826036-a0e69572-c149-4d44-83dd-624a5963241b

Edible WO-emulsion spread of which the fat phase comprises a vegetable hardstock fat, which hardstock fat contains at least 5 wt. A flat base supports a supine patient's head. The remote server performs a database search based upon the requested information and caches the results of the database search in a local storage device. Those LLRs associated with noise-affected portions of the signal are handled differently than LLRs associated with portions of the signal that are not noise-affected.

1459826036-de6bf0f9-d217-4fdc-960f-0fe2c956eeda

A parking brake especially for an automotive automatic gearbox or an automotive automated manual gearbox. Feed rollers for feeding a wire are rotatably mounted on the upper and lower tables. The projection part can be integrally formed at a front end of the transferred medium. After attracting the attention of the subjects by playing back a recorded audio sound, an image may be automatically captured. An object oriented computer system having multiple participants is disclosed that utilizes a communications bus for sharing data between the multiple participants.

1459826037-a98526bc-700a-4b57-aedd-5a7c4c1a6695

A bat having a handle portion, a transition portion attached to the handle portion, and a barrel portion attached to the transition portion. A correlation system uses both a taxonomy distance metric and a term space distance metric to represent the similarity between categories. After a predetermined period of time, second information indicative of instability of the first portion is obtained. A coordinate detection unit detects a coordinate value of a position where the light beams are interrupted based on intensity distributions detected by the intensity distribution detection units. At least either of the base guide portions and the cover guide portions have projection portions that bring both of them mutually into a press-fitted relation in a cable connected state. Preferred compounds are 3-pyridyl ethers.

1459826037-b18a11da-9ba2-478f-a2db-2a276d397ce7

A delay section delays a detected signal by less than one bit time in the NRZ data. The microstructure of the web is controlled so as to facilitate throughdrying. Pulling the motion arm and leaning back to the straight standing position contracts the abs. The object contacts the adhesive side of the label portion to apply the label portion to the object. A parameter for local meshes divided from the basis meshes is determined. In this case, the method includes the step of sending another message containing an executable code for the reactivation of the modules, this executable code having an inverted function to that of the executable code used for

the deactivation of the security modules.

1459826037-f2fdc859-1897-493b-88ed-ae1f6805d9a5

Described is a system and method that separates a managed code runtime library or program into four parts, comprising a header, resources, metadata and method implementations. The pivoting lever is part of the mechanism used to lock the plug to a jack of electronic devices or other terminal housings. A gate mask having a spacer-shape is formed on the control gate layer. The fluid output of the steering pump is compared with the fluid output of the powered pump and the powered pump is operated so that the output of the powered pump is commensurate with output of the steering pump.

1459826037-fc6cee42-b5fc-4eb0-9095-00fe42fcadee

Some embodiments provide an application for retrieving, tagging, analyzing, and delivering content. The social network is represented as a graph structure and stored in distributed memory. The fruit grows in large tight clusters, the vines have medium vigor, and the plants are healthy. The bonus may include a fixed or variable number of additional turns.

1459826038-3ffe9cc0-7135-4136-84b4-dee75c331515

A method for extracting and matching gesture features of image is disclosed. The TSV repair circuit includes a first chip, at least one second chip, at least two TSVs, at least two data path circuits, and an output logic circuit. Statistical IDDQ values are measured in increments of the test vectors, and first array data is created including identifiers for the test vectors and the statistical IDDQs as elements.

1459826038-776f224d-ff2f-4f06-b9e8-4a5aa78c89b1

A display mode switching device and method automatically switches a display mode of a television set to an overscan mode or to an underscan mode depending on a content of a screen. A first processor core of a plurality of processor cores of a computing device may be transitioned to a shielded state, in which no new tasks are to be assigned to the first processor core and tasks already assigned to the first processor core are executed to completion, in response to a determination that a criterion has been met. The present application further relates to a method of identifying an object in an image using a keypoint descriptor; and processing apparatus and computer program products for implementing a method of the present application.

1459826038-90242077-3b9c-49bf-be02-8a6837571978

A method of mounting an accelerometer to an internal combustion engine comprises securing the accelerometer to a mating surface on an engine component external to a combustion chamber where the accelerometer can generate a signal output that is characteristic of engine knock, when it occurs, and at least one other combustion behavior inside the combustion chamber during a combustion event. Preferably the universal tint paste is 100% solids and substantially free of any solvents. The electron emission portion emits electrons in response to a voltage difference between the first driving electrode and the second driving electrode. Social networking communication data of the user is extracted from the social networking site. An intent log is maintained of all data and metadata modifying transactions, which is then relayed either asynchronously or from a last known consistent checkpoint to a requested checkpoint thereby rendering the requested checkpoint data and metadata consistent.

1459826038-939ecf46-b84d-4bb0-a66d-67467dba776e

A process for forming a polycrystalline silicon layer includes the following steps. A plurality of tuples is received via a data stream, whereupon the data stream is determined to be invalid based on at least one tuple in the plurality of tuples. The mounting hub is fixedly coupled to one of the first and second housing

portions.

1459826039-4221896a-975b-4606-8baf-6f6a77f07407

Power dissipation of a semiconductor integrated circuit chip is reduced when it is operated at an operating voltage of 2. The ventilator 11 is allocated to its own ventilator housing 18 that is connected to the dedusting device housing 10 and has a muffler 20 inserted downstream. When the male luer is engaged with any standard female luer, a female luer connector device drives the resilient member of the male luer into a compressed position to open the forward end of the male luer and permit liquid flow between the luers.

1459826039-afc8b845-e174-4808-b725-ce875d7330a5

A new and distinct Chrysanthemum plant cultivar is disclosed, characterized by a decorative-type inflorescence, consistent flowering response to short days, blooming consistently after 49 days of short day length, free branching habit, light pink ray florets, a very uniform round growth habit, and a large quantity of blooms per flowering branch. The trapping device includes a permanent magnet and a cooperating soft iron member which together form an L-shaped configuration relative to each other, with the magnet extending axially relative to the rotation of the wheel and the soft iron member extending radially, or vice versa. The at least one mounting feature may be configured to couple the retainer to a card. Alternatively, the well may be configured to contain a fluid having an identity calculated to affect the crystallization process. A process for monitoring a urea solution in a tank of a motor vehicle is also provided. The controlled release block copolymers comprise least two blocks selected from the group consisting of polyesters, polyethers, and polyurethanes.

1459826039-ea6ef85d-9edb-4247-a03e-654901379632

An electrical connector system for mitigating corrosion and maintaining an internal environment conducive for connectivity and the protection of internal electrical contacts is disclosed. The method comprises a step of placing the casing containing the bundle in a vertical position, the lateral opening of the casing being disposed toward the bottom, and sealing the lower end of the casing. The air supply duct is preferably comprised of a double-fluted distributor pipe leading to one of the transverse ducts. Further, parallel implementation of thermal process and adhesion enhancement process exerts no influence on throughput. Increased doses of dopant simply reduce the substrate resistance with no effect on junction depth. Control devices are provided in the form of a state machine to control the generation of the internal clock through the switching device and to control the clock request generation device in accordance with a predetermined state of two signals, one generated internally by the device, the other by the external clock controller.

1459826040-3b6f9d0f-6092-4709-ad9e-17cef1425ff2

An apparatus and method for removing cuttings in a deviated borehole using drilling fluids. The display device is installed at the back of a face panel on a host computer, comprising a dial meter and a signal detection circuit, wherein the output of the signal detection circuit is connected to the dial meter and the input is connected to a specific hardware component inside the host computer to receive signal outputs from specific hardware components. The vendor then notifies the delivery agent to make the delivery. Upon completion of the transaction, the call agent asks the caller to take part in the survey and seeks permission of the caller to use the caller's caller identification information in the survey. The strips are also oriented in the lid so that they are substantially vertical when the device is in the tilted position thereby enhancing a condition for proper capillarity.

1459826040-6046e050-edd4-480d-9ccd-be445405a3f8

A method of manufacturing footwear includes providing a modular forepart and a modular rearpart, overlapping these parts along an overlap margin a preselected distance, and permanently joining the parts to selectively manufacture footwear of

at least two different sizes, for example, a full size or a half size or some other partial size. The subscriber-based system acts as an electronic repository to ensure that data files remain intact, secure, and unaltered from their original form. A configuration file having one or more macros included may be stored at a TFTP server. The plate is integrally formed of an extruded polymeric material. In response to either determination, another pre-started job is determined in which to perform the task.

1459826040-86a820f6-2a88-4ade-a970-9e7948ec03e6

An element is inserted between the upper edge of a wallboard and a fluted ceiling. The system includes a power transmitter and a plurality of power harvesters or receivers. The carrier may include a high-speed portion to assure high-frequency connection between the semiconductor chips and may also include an internal capacitor and/or thermally conductive member for enhanced operational capabilities. The second chamber interior is in fluid isolation from the first chamber interior. The lip holders of the corner bracket assemblies receive the connecting lips of the panels. The cage is linked to a vertebral spacer for artificial vertebrae by means of bone fusion to prevent vertebral sinking or slipping of the vertebral spacer and to improve bone fusion efficiency.

1459826041-28b48a07-d2d6-4294-a62b-8fbdb5aed9de

A method of strengthening glass plate is provided. The compounds are useful in the treatment of diseases and disorders where RTK activity is implicated such as a hyperproliferative diseases. The first processing water stream is supplied back into the treatment step and the second processing water stream is subjected to a chemical-physical clarification. The polyisocyanate mixture includes a polyisocyanate compound having two or more isocyanate groups or a urethane prepolymer having two or more isocyanate groups. In contrast, when the pressure adjustment assembly is oriented in the stop position, the axial compression pressure is substantially reproduced at the calibrated operating pressure, PC.

1459826041-5cf78dfa-e49a-4c26-898a-91f1acd9b457

The present invention provides cement compositions that comprise water, high alumina cement, a soluble phosphate, and cement kiln dust. In a memory read control circuit, burst length is changed based on whether or not a read instruction is issued at a cycle after a cycle at which a read instruction R is issued. Five upper electrode layers are formed on the lower surface of the fixed substrate so as to oppose the lower electrodes. The output shafts may be enclosed within pivotable housings.

1459826041-6e34cf21-6a31-4825-9b37-3508365f65cd

A torque wrench for implantable medical devices is disclosed. Prior to distributing a product to consumers, a manufacturer may affix a reactive tag to the item for gathering consumer feedback about the product. The GSSI bit slice includes balanced cells and bit delay elements, and may be placed either within or close to I/O buffers. On the other hand, the command decoder 108 can disable the specific command, for example, when a user uses the device 101, thereby preventing the specific command from being executed even when the specific command is erroneously issued.

1459826041-e23c40e4-2565-43ff-a857-37e07ecc53b5

The invention includes a method for placement of sidelobe inhibitors on a radiation-patterning tool. The bearing segment is provided with at least two flights having a sectional shape of a complete meshing type with one streak in the axial direction, the flights are arranged in the rotational direction with uniformly displacing a phase thereof respectively, and length of the flights in the axial direction is set to 0. Grooves extend forward from the rear of the planar portion and a part of the planar portion before the groove defines a deflection support of the lock arm. Moreover, it is unnecessary to fix the deodorant and easy

to compound with the absorbent article. Insertion of the apparatus into the EDP interfaces automatically triggers the execution of the embedded software for auto loading of the necessary code to control the transfer of the data directly from one EDP to the other. Unlike the known method translation techniques that work only with the constant pressure gas chromatographic analyses, the invention can translate the gas chromatographic methods where column pressure and/or carrier gas flow rate change during the analysis by an arbitrary program.

1459826041-e8b31237-bdd5-45b4-af21-85357a4e1c5e

A base station apparatus is disclosed for use in a mobile communication system including multiple cells having multiple sectors. A coated composite substrate is prepared in the press by applying a layer of a primer coating composition to the surface of a compressible mat comprising fibers and/or particles and a resin binder. The defocusing system is configured to modify optical power of either the transmitted portion or reflected portion of the collected light. The contrasted sheet is analyzed to determine the quantity of contaminants that create bleed-throughs. The data attributes are associated with corresponding structured data elements of the accepted hierarchical textual file. The second resistor has a resistance sized for controlling a trigger voltage of the parasitic NPN bipolar junction transistor for protecting a gate oxide layer of the NMOS pull-down transistor from an electrostatic discharge.

1459826042-04756fcd-2710-4d4a-ba5a-9a1de22586be

A new cultivar of Hebe, 'Frozen Flame', characterized by its vigorous growth habit, its narrow, variegated foliage with green-gray centers and white margins that is suffused with purple in cool temperatures in spring, and its free flowering habit with racemes of lavender flowers for 6 to 8 weeks in mid summer into autumn. A defect portion is formed at an area corresponding to a corner solder ball disposed at an outer peripheral corner, or at an area corresponding to the corner solder ball and peripheral solder balls at the inner conductive layer. Once cemented, the casing strings are released and moved upwardly, where the securement arrangement clamps the hangers into position, thus creating an axial load on the casing strings while also preventing movement in the upward and downward longitudinal directions. The method includes designing the plurality of gates in a regular and repeating alignment along a same direction, and each of the plurality of gates are designed to have dielectric spacers. A request for dynamic group memberships of the entry is sent to the server. Cylindrical ring couplers are formed by extruding a strip having a coupler cross-sectional profile, cutting a length of the strip and fusing the ends at a joint.

1459826042-cc09c0d1-375b-4127-91e9-088b3e8e7d43

An electrostatic chuck comprises a dielectric ceramic layer made of an alumina sintered body having a volume resistivity equal to or greater than about  $1 \times 10^{17} \Omega \cdot \text{cm}$  at room temperature and a volume resistivity equal to or greater than about  $1 \times 10^{14} \Omega \cdot \text{cm}$  at 300°C. The method includes detecting and monitoring by a computing system, a frequency signal associated with an input voltage signal used for powering computing apparatuses at a specified location. The discount or special price is granted upon a purchase of the item by the identified consumer prior to the withdrawal or termination of the promotion to the identified consumer. % of a bonding agent, about 20 vol.

1459826042-d3526b5c-6395-45b0-b7cd-5de395b740da

An electrostatic-writing mechanism for an image-formation device having an optical photoconductor mechanism of one embodiment of the invention is disclosed that includes a light source and an array of micromirror devices. Then evaluating a credit rating for the buyer and passing over the Internet the credit rating to a seller, and then receiving over the Internet from the seller seller's credit options for the buyer. The properties of the interconnection network are preserved during each recursion to thereby configure the massive switching fabric from

scalable circuitry.

1459826042-df00b779-4117-422b-abe7-03ab608a7157

An approach is provided for mounting individual wires from multi-wire cables onto circuit boards. The technique creates a sandwich structure with a weakened region at a selected depth underneath the surface. Electrical contacts are assigned to the semiconductor chip and serve to establish an electrical connection to electrodes provided on a printed circuit board. The typical inline compensator of the present invention is self-contained and compact enough to fit in the limited space available on a floating drilling structure. The rolling members are movable from an engaged position with the clutch members to an override position.

1459826043-a76e044b-2398-49c0-acdb-f0a9babeeaa3f

A cloud computing environment provides the ability to deploy a web application that has been developed using one of a plurality of application frameworks and is configured to execute within one of a plurality of runtime environments. The method includes forming a buried N layer overlying a substrate, and forming a monocrystalline layer overlying the buried N layer. For cells derived from animals or humans, or human or animal sperm and/or ovum and/or fermented ovum, the preservation is conducted at a temperature at which to start freezing to  $-196^{\circ}\text{C}$ . The vector is supplied to a two-dimensional inverse Fourier transformation as the input variable. The hard mask layer is polished down to the surface of the spacer layer, leaving the hard mask layer in place overlying the spacer layer inside the opening created in the sacrificial layer. The semiconductor substrate includes one or more vias having conductive material formed therein and which extend from an active surface to a back surface of the semiconductor substrate.

1459826043-b34db4ad-5e2f-4b21-851e-5b559dfd1301

The present invention is generally directed towards an air induction system in a motor vehicle and more specifically to a methane storage device connectable to the air induction system. Thus, a bidirectional current flowing in the bidirectional main switch for cutting off an excessive charge current and an excessive discharge current of a battery E can be detected by a simple circuit with low power losses and a high accuracy. To achieve compliance with foundry rules, the electrical element is fabricated to include a non-conducting region that negligibly effects the electrical characteristics. The color manager further comprises a driver operatively associated with the luminaire, the converter and current selector and arranged to drive the luminaire in accordance with the driving current level as selected by the selector. A towing vehicle protection valve is integrated into the parking brake modulator, and a compressed air line to the compressed air control outlet is automatically blockable when the reservoir pressure made available for the trailer falls below a predetermined threshold value. The LEDs and the substrate of the LED light bar are arranged in a plurality of sections to correspond to a predetermined backlight scanning arrangement.

1459826044-98002264-4c65-4e95-ad85-e44ed32152a0

An intermediary system that seamlessly evolves the 2G2. The airfoil may include a first compliant region positioned between an inboard section and a first outboard section and may include a second compliant region between a second outboard section and the inboard section. A plurality of communication-related functions are mapped into a corresponding plurality of regions of cells, and local instruction memory is configured to store program instructions for implementing all or a part of the associated function. By the above-described structure, ON characteristics when the gate is turned on can be improved while suppressing the elevation of the forward voltage  $V_f$  and the recovery current of the diodes. An apparatus comprising a substrate having a dimension suitable as a medical or dental implant and a coating on a surface of a first coating layer derived from an alkoxide and a second coating layer that promotes osseointegration.

1459826044-bf84835f-36e9-4ed1-941c-326011c2f424

A method for manufacturing a semiconductor device is provided. The stator may be comprised of either a typical three-phase winding, or a series of magnetic actuators arranged in a toroid for which the rotor band acts as a continuous armature. The loosely coupled inductors allow manipulation of the LC tank circuit of one of the oscillators to increase the bandwidth of the other oscillator, and vice versa. In use with a pneumatic power tool, the outer sleeve member is securely held against the tool by way of coupling the conventional gas line assembly, placed within the inner sleeve member, to the conventional pressurized gas line connection of the tool. So that differently thick print media, especially label courses, can be printed with little wear on the printing head, the invention provides that the pressure beam is made liftable and lowerable. This invention further relates to methods for producing maize varieties derived from maize variety 10914980.

1459826044-f29d4076-5e65-4c8c-b4df-6549012c9e3f

Methods and apparatuses that enable memory devices to inform graphical processing systems about the results of WRITE de-skew training. A voltage equal to or higher than a withstand voltage is hardly applied to the piezoelectricelectrostrictive body, and consequently, the sensor is prevented from dielectric breakdown. A top cover is mounted to the adjustment plates and has multiple guide holes, the nozzles extend through the guide holes.

1459826045-155d9b2a-7131-4465-bb71-e1c1218a1424

An illumination poi is provided, comprising light emitters and light waveguides optically coupled to the light emitters. The rotor blade may generally include a shell having a pressure side and a suction side. The database models all the major objects in TAPI telephonestatic line, static phone, static addresses, open lines, open phones, open addresses, calls and request Ids.

1459826045-60f741fc-61b7-4756-834c-d351594e226d

Fixing device for railway rails, including a ribbed plate which supports the rail, is to be fixed on a rail substructure, and has ribs between which the rail is accommodated with its rail base, with the ribbed plate being a drawn sheet member. The main tubular body identifies at least one balloon. The coaxial cable also has an inner conductor having an end that extends longitudinally outwardly from the end of the shield conductor. This enhances the accuracy of the learned electric mileage, thus accurately calculating a possible EV running distance.

1459826045-9c11cdee-fe14-4c4b-b658-9dcc8ab3f1cb

A discrete rotor position estimation method for a synchronized reluctance motor is provided. The cutter elements, the ends of which directly contact and cut through rock and other materials, have tapered contact structure ends which are flatter than those known to the prior art, obtaining increased durability. The valve system may comprise a common rail fuel injector, electrohydraulic actuator system, electronically-controlled fuel injector, gasoline port injector, fluid metering valve, relief valve, reducing valve, direct valve or direct-injection gasoline injector. The capacitor includes the pixel electrode and a second multilayer film overlapping with the pixel electrode, positioned at a predetermined distance from the pixel electrode, and having the same layer structure as the first multilayer film. The method still further comprises assigning a visual indicator to the location data point based on the EP parameter value associated with the identified point and in accordance with a visualization scheme corresponding to the EP parameter.

1459826046-0be673a8-1b2e-4ffa-877f-73970ebd3876

Therapeutic composition having anti-infective activity. The storage medium comprises a plurality of separated electrically conductive charge-storing elements on its surface. The first position locks the table to the miter saw and the second

position permits rotation of the table.

1459826046-4be80f67-5a33-42f0-b7a4-b7fe8ed47973

A water-dilutable epoxy resin composition ABC of an epoxy resin AB and an emulsifier C, a process for its preparation, and a method of use thereof to make elastic coating films that impart good corrosion resistance even in thin layers. The device comprises at least one sensor providing an output signal, the sensor being responsive to body movements of the sportsman. The handle allows simplified construction, reduced costs, and increased user safety. The conveyor enables loading and unloading of the dolly on the first side of the trailer and on the second side of the trailer. This can make it easier to be manufactured, reduces the cost, and decreases environmental pollution. 5 at a temperature ranging from 5 to 80 C.

1459826046-5de54dfd-1847-40e1-a732-18f82e4f18a8

A lamp driving apparatus includes a controller, generating a control signal for lighting at least one of plural sets of lamps, each set having at least a first lamp and a second lamp, and generating a switching signal; and a lamp driver, supplying power to the at least one of sets of lamps in accordance with both of the control signal and the switching signal. The temporary memory stores one or more rendering instructions and rendered results therefor in association with each other. Returned ultrasound is sensed by an FBG sensor. At least one probe is arranged to measure the clearance between blade tips and stator lining.

1459826047-200a93e5-c14d-4d36-83e7-c7d02f3f0613

Methods of controlling calcium intake and phosphate metabolism and metabolic acidosis in patients suffering from renal failure and associated hyperphosphatemia or patients predisposed to development of a hyperphosphatemic condition are provided. An integrated circuit includes configuration memory cells coupled to a hard macro via configuration registers. The identifications of the goods and the electronic addresses for the corresponding hangers are associated with each other and stored on a computer database. Voltages applied between the X and Y electrodes and between the A and Y electrodes at the trailing edge of the ramp waveform are denoted by VXY and VAY, respectively. The storage node oxide is in a peripheral region over the semiconductor substrate.

1459826047-74a3d811-f37f-4a5e-8e20-03f9fd0c35df

An electrical connector includes an insulative housing and a plurality of contact modules received in the insulative housing. A base of the transistor is connected directly to one contact of the winding, and a second contact of the winding is capable of shifting a voltage of the base of the transistor. The method involves applying a first soft erase pulse on the first electrodes of the plurality of display units to reduce the wall charges of the plurality of the display units followed by applying a soft priming pulse on the second electrodes of the plurality of display units to re-generate the wall charges of the plurality of display units. The plurality of through-holes of the first layer may at least partially be aligned with the plurality of through-holes of the first conducting layer and the plurality through-holes of the second conducting layer. The access node transmits the QoS neighbor list to a subset of the access terminals. A side of the manifold having the outlet is engageable against a face of a bearing house.

1459826047-bdecd8a7-aef7-4dad-a7c2-764b0b153b63

An apparatus for mounting and arranging a plurality of flat panel video display assemblies. The source and reception signals are separately subjected to preprocessing 2 and psychoacoustic modelling 3. A card-type medium can be detachably attached to the card slot that is exposed, and with respect to the card slot that is not exposed, the attaching and removing operations of a card-type medium are restricted.

1459826048-088f3db7-606c-4762-8043-290aa66848e9

The present invention relates to novel arylpyrrolines having the formula and their use as insecticides, as well as to processes for the preparation of the arylpyrrolines wherein L, A1 to A4, Y1 to Y3, R1 to R3 are as defined in the specification of the patent application. This enables to measure a fine oscillation of an object to be measured. dipeptidyl peptidase IV, according to general formula. The at least one oxidant may be oxygen, water, ozone, or hydrogen peroxide, or a mixture thereof. This technology is designed as a replacement for conventional light sources, such as incandescent light bulbs, halogen bulbs, CFLs and metal halide lamps.

1459826048-34cc17eb-9dae-4154-9bfd-2c6acfc7822

A process reduces the insect, arthropod or pest content in land mass by providing molecular iodine in the land mass in a concentration in aqueous material in the land mass of at least 10 parts per million. The present invention further provides for players to be highly distributed, for example throughout the US, while still using the single centralized ball draw and still supporting different bingo games in parallel. The adapter also includes a first seal for sealing an opening in the threaded portion and a second seal for sealing the aperture. The system-side circuit includes a switching circuit connected to the positive output terminal and the control terminal. The second transistor receives a second input signal inverted to the first input signal. Each clamping unit includes two parallel first crossing sections of the string disposed at a front side of the stand, and two parallel second crossing sections of the string disposed at a rear side of the stand.

1459826048-b4401edf-065b-48cc-8c8b-8bf81d97179b

The invention provides an improved ceramic packing element having the basic shape of a cylinder with an aspect ratio, defined by the diameter to length dimensions that is from 2. Multiple light sources may permit a single apparatus to have the capability of emitting multiple, preselected wavelengths. The dopant compound only adheres on the hydrophilic regions.

1459826048-fa1f675f-ee54-4fa5-ae99-14e3dbe9543d

An axial conveyor is described, in particular for conveying gasliquid dispersions, wherein the conveying elements comprise a wall-sweeping edge pointing in the direction of the pressure side of the conveying elements. The invention also includes the method for manufacturing the RFID label and the machine applying the method for manufacturing the RFID label. In addition, several instructions and apparatus for implementing these instructions are described which obtain performance advantages if the operands are not limited to the width and accessible number of general purpose registers. The polyimide membranes have UV cross-linkable functional groups and can be used for the preparation of UV cross-linked polyimide membranes having CO<sub>2</sub> permeability of 20 Barrers or higher and single-gas selectivity for CO<sub>2</sub>/CH<sub>4</sub> of 35 or higher at 50°C. The latches include pawls that fit within pawl receiving chambers in the socket and couple the plug to the socket.

1459826049-023341ec-3f3c-48c4-98a7-754e5b108a8c

A device used to prevent water from exiting a shower or bathtub that consists of a guard, a curved channel, and a pair of hooks to rest onto the lip of a bathtub. The handle can be moved into or out of an emplacing space, so as to prevent the inner casing from being dropped on a ground surface due to an excessive exertion of force upon pulling out the inner casing from the emplacement sink. MOS transistors connected in series are disposed between the power supply terminal and a backup capacitor. The image with restored brightness is displayed and the surface condition of the solder is judged on the basis of the distributions of the color components of this image.

1459826049-8813c488-0e25-4c2d-81c6-466fe2a4bbea

A system for performing broadband differential time domain measurement on a

subscriber loop. The safety controller has an input module for automatically reading process signals, a failsafe signal processing module for automatically processing the process signals, and a failsafe output module which produces control signals as a function of the signal processing module. The collapsed bags can be re-stored for future use and the gel biodegraded as by disposition the conventional sewage system. The control unit is further operable to generate an alert if an expected print job has not been received at the presentation system in accordance with the schedule.

1459826050-157e4f03-a7b4-4b93-bafd-6ac030eb2c43

A method of making an integrated circuit includes providing a semiconductor substrate and forming a gate dielectric over the substrate, such as a high-k dielectric. The apparatus may detect a user object that controls the 3D image, and determine a target virtual tool matching movement of the user object. The planar illumination facility converts a light beam from the LED received on a side of the planar illumination facility into a top emitting planar light source, uniformly illuminates the reflective display, and is substantially transmissive to allow reflected light to pass through towards a beam splitter. The grouping program is used to identify periods where the vehicle is in a stationary mode and periods where the vehicle is in a moving mode traveling from one location to another, based on the information provided by the GPS unit.

1459826050-39287c2a-23a5-461a-b655-e3e2b902b106

At least one forward-biased semiconductor diode having a potential barrier is used as a temperature sensor whose sensitivity can be finely adjusted. The housing of the hydraulic unit is mounted on a mounting surface of the casing of the electronic control unit so that the casing of the electronic control unit protrudes from the housing of the hydraulic unit to one side. The MOAF algorithm also automatically determines those cells in an area which are most heavily loaded and those cells which are lightly loaded.

1459826050-4e6980e8-a5db-4689-8601-64e4a7673f74

A new and distinct cultivar of *Alstroemeria* plant named \u2018Zalsadim\u2019, characterized by its erect and strong flowering stems; vigorous growth habit; intense golden yellow-colored flowers; and good postproduction longevity. Addition, subtraction, multiplication, and division are accomplished with the controlled application of energy to a phase change material. Lengths of line segments obtained by connecting the selected coordinate points in chronological order are calculated. A plurality of exterior cladding units are held in place by the bracket members. Insertion openings in the front portion of the front retainer have guide surfaces for guiding male terminal fittings therein.

1459826050-7896f917-9ed6-4196-bb91-7909172a5c52

A system and method for determining whether a wireless device has transmitted one or more forged satellite measurements. Among its unique features, is the fact that different compression strengths can be obtained by varying the proportion of ingredients and resulting densities. An opening having a width  $W_2$  is formed in the guide. NFET2 includes a source, a drain, a gate electrode having a gate area  $A_2$ , and a p-substrate.

1459826050-e0e0967c-8ba3-4f57-97ec-82dcd1537d61

A tool and method to identify a defect in a vehicle through a vibration frequency is provided. Also disclosed is a network comprising a first path computation element and a path computation client in communication with the PCE, wherein the PCC is configured to send a request to and receive a reply from the PCE using a PCE protocol, wherein the request comprises a lightpath constraint. The collection of the EDI transactions is received according to the source format. The capacitances of operating the phase lock loop at the two frequencies are determined and stored. Also disclosed are compositions and products for screening and for treating cancer

in a patient, as well as methods of treating a patient afflicted with a cancer. In one aspect, the invention concerns a method and apparatus for cooling and initial cleaning of raw syngas gas, so that the treated UCG product stream is suitable for downstream applications such as for energy or chemical production.

1459826051-18d66ca6-b7e7-427f-9ef1-d31869068c4b

Bearing bores for engine mount components must be periodically repaired. The expandable storage volume includes a namespace for storing information for accessing data objects stored at a plurality of data constituent volumes managed by a plurality of nodes of the storage system. In this device, a reset voltage for resetting the sample hold circuit obtains at least two different values. Upper ends of suspension struts are fastened to the top surfaces of the towers by bolts and nuts. At a depth of 100-700 m a given amount of hydrogen is mixed therewith according to the wishes of the diver, whereby the oxygen content should not exceed 3 vol. The present invention is also directed to a method for vacuum depositing a conformal composite coating directly onto an organic optoelectronic device, such as an OLED device, on a substrate.

1459826051-47f08984-f8d4-4d98-bd30-0a8998aa3cc9

A fault tolerance system for one or two failed disks in a disk array includes a CPU, a disk array, and a bus. The roving yarn is manufactured according to the invention from a fiber assembly, which undergoes a true twist application by means of one or more air flows. The disk is non-movably held in an axial direction on the hub, in the tensioned condition where the threaded shank sits in the threaded bore of the shaft. Video primitives are generated based on the received video data. The circuit is coupled to the temperature sensor and configured to identify for a coarse temperature range one of a plurality of fine temperature ranges corresponding to the temperature measured by the temperature sensor and generate temperature data that is provided on an asynchronous output data path. Magnet wire is wound upon the assembled bobbin and flux rings to form the coil assembly.

1459826052-116936db-a036-49c3-b7cf-bcc79d00b17f

A timer for assisting in the control of various medical regimen is described. A plurality of projections define drainage channels. Ions in the plasma diffuse from the core portion to an annular volume within the chamber where the ions are separated according to their respective mass to charge ratios. As such, the cable may maintain a lightweight character and a low profile of less than about 0. Within each cell, the bit lines are arranged on a layer separate from the wordlines, and extend orthogonal to each other.

1459826052-45eb10f2-fa68-4887-ae0b-52e736f7ff39

The present invention provides a novel compound that is capable of largely improving a life time, efficiency, electrochemical stability, and thermal stability of an organic electronic device, and an organic electronic device that comprises an organic material layer comprising the compound. LED dies, either as bare LED dies or packaged LED dies, are mounted to the substrate to form separate arrays of LEDs. In certain embodiments, SRPs that indicate an increased risk for altered bone mineral density occur as gender-associated polymorphisms. The request is sent to initiate a communication link for real-time user support.

1459826052-4e1fd693-74d1-429b-8d07-37a9cebddd6f5

The invention relates to an asynchronous transfer mode method of transmitting digital signals in which terminals send to the same station. The frequency multiplier receives a test clock signal in the test mode and generates multiple internal test clock signals, each of which has a frequency equal to a frequency of an operation clock signal in the normal mode. This tip segment of the housing structure is positioned to form a gap over the touch-sensitive surface.

1459826052-9572092a-0ff4-43c4-9681-a6b4f3f8fcfd

A baby bottle dryer and organizer is herein described. In a market area in which an LTE RAN and CDMA RAN operate, a base station receives a PCI that indicates a particular one of the LTE coverage areas detected by a mobile terminal. These devices include but are not limited to a spin-wave crossbar, a spin-wave reconfigurable mesh, a spin-wave fully-interconnected cluster, a hierarchical multi-scale spin-wave crossbar, a hierarchical multi-scale spin-wave reconfigurable mesh and a hierarchical multi-scale spin-wave fully-interconnected cluster.

1459826053-546e222d-f10b-4caf-8d27-005fcbc7c65c

In a system comprising a first fabric and a plurality of devices coupled to the fabric by fiber channel connections, the devices are logically grouped to form configurations and zones. One or more interdigital transducers and a passivation layer can be formed upon the piezoelectric substrate. A second open-faced bearing is coupled to the dampener frame. The control mechanism operates the switch in conjunction with a separate physical switch as a single logical switch and assigns a virtual switch identifier to the logical switch, wherein the virtual switch identifier is associated with a link aggregation group.

1459826053-ae4e91f0-c3f7-4374-8473-ac3c18b41988

A process and system scribe sapphire substrates, by performing the steps of mounting a sapphire substrate, carrying an array of integrated device die, on a stage such as a movable X-Y stage including a vacuum chuck; and directing UV pulses of laser energy directed at a surface of the sapphire substrate using a solid-state laser. Similarly, single-ended write circuitry includes transistor which provides aid in transitioning latch node from a logic state 1 to a logic state 0 when latch node is being transitioned from a logic state 0 to a logic state 1. Each of the tufts has a tuft base proximal to the nonwoven web and a distal portion opposing the tuft base. The evanescence is limited to about 100 nm from the tips.

1459826053-fe07f639-8369-4aa6-9188-648384d06c88

Methods, systems, and apparatus, including computer programs encoded on computer storage media, for automatically updating metadata. The computing device transmits vehicle notification data to a second vehicle based on the location data. In response to a wager amount, the processor randomly selects one of a plurality of outcomes and causes the selected outcome to be represented on the display. The scan operator continues to process new data added to the table until the initiating user or application closes the associated cursor. Therefore, the maintenance cost is reduced and the system may be operated normally.

1459826053-feacc80f-9f7e-45f5-b762-d8696ba6b3ac

Techniques for determining which resource access requests are handled locally at a remote computer, and which resource access requests are routed or \u201credirected\u201d through a virtual private network. The semiconductor device may also include third insulating pillars disposed between the second insulating pillars and disposed opposite one another across the first through third regions. , preferably an isolate having a protein content of at least about 90 wt % d. The inlet port draws gas from the outside of the motor housing.

1459826054-6156e06d-0401-4349-a132-0e0b520fb3af

An internal voltage generator when activated, generates an internal voltage to be supplied to an internal circuit. The ultraviolet light bulb preferably includes a casing for holding a starting gas and a vaporizable material, and at least one electrode electrically coupled to the power source for exciting the starting gas and the vaporizable material within the casing. The built-in systems of the aircraft process the data to allow pilotless operation of the aircraft along a predetermined route while maintaining proper spacing from prior art and other automated aircraft. A smart sensor system includes an on-board processing unit for performing the method of the invention.

1459826054-f6ee001d-5ce6-483a-bc18-59b69ddc6fffb

When information is received specifying a desired product and a desired light source type, e. To simplify the process of configuring a network monitor, information about the service level objectives is loaded into the resource itself. The storage control unit receives data transfer requests directed at available logical subsystems in the storage control unit, wherein the available logical subsystems are determined based on the configuration of the plurality of logical subsystems. The system may further comprise a mixing valve operative to proportionately mix the fuel and modifier agent. , in particular the PAHs of naphthalene, phenanthrene, pyrene, flouranthene and benzopyrene may be reduced with placement of a carbon-based andor metallic disc at the tip and with practices of the invention herein.

1459826055-09ab05e1-66dc-4204-afe3-fe74e6cf0b5d

A method and system are disclosed for playing, storing, accessing, and retrieving multimedia content and providing the content to a surgical environment. An action receiving element is bendably connected to a distal portion of the transition piece and extends distally therefrom. The loop desirably has a diameter that substantially corresponds to the inner diameter of the medical tube.

1459826055-41b149f0-f485-44b3-b549-80494921a17e

Systems and methods for assigning short codes to provide uniformity among wireless carriers. A CPU 15 determines an output of a feeling model based on signals supplied from a touch sensor 20. Specially, a cellular communication system is described in which the basestations are centrally located and RF channels are diverted, by means of an RF switch, to remotely located cells.

1459826055-6128aead-c778-4a08-8836-5cc7181633bf

A vegetation cutter attachment system for a trolling motor to aid in cutting water weeds and grass that wrap around the propeller or motor housing of the trolling motor during use. According to embodiments of the invention, the vane can have multiple concentric layers of radial cooling holes extending about the vane; each layer being fluidly connected to the adjacent layer or layers. Some embodiments may employ a clamp, for example a peripheral clamp such as a cover or bezel clamp. The brackets may have a vertical adjustment allowing for an increase or decrease in the working height of the stall dividers. The package structure has an elliptic bottom surface having a semi-major axes and a semi-minor axis and a semi-ellipsoidal surface connecting and surrounding the edge of the elliptic bottom surface, wherein the maximum height of the ellipsoidal surface from the elliptic bottom surface is between the semi-major axes and the semi-minor axis.

1459826055-e6512a78-7b84-41aa-ae0-b25264a844d9

A connector housing includes a resin body and multiple metallic terminals insert-molded into the resin body. Presynaptic neurotoxins are delivered focally, targeting the nerve endings of the trigeminal nerve, the occipital nerve and the intranasal terminals of the parasympathetic fibers originating in the Sphenopalatine ganglion. Reconfiguration data is sent by the line termination device to at least one of the network termination devices, the reconfiguration data being specific to a communication protocol to be used for the transmission of the above-mentioned frames and enabling the reconfiguration of a modem of the destination network termination device. The additional current may be provided gradually in relation to the signal line voltage, or may be provided in full whenever voltage exceeds the threshold. A phase of the first light is delayed by about 14 phase so that a second light is emitted from the first surface toward the reflection layer.

1459826056-03235c7b-028c-4d09-8b03-ff1f56d013fa

A semiconductor memory device comprises a logic circuit supplied with a first supply voltage; a cell array supplied with a second supply voltage higher than the

first supply voltage and including plural mutually intersecting word lines and bit lines and plural memory cells connected at intersections thereof; and a word line driver operative to drive the word lines. The semiconductor device also includes a laminated structure of a SOG layer, wherein the laminated structure is composed of a base layer and a surface layer formed on the base layer and is formed over the MOS transistor and wherein the surface layer is denser than the base layer. Yet another step includes moving the actuator arm after completion of a startup delay period from a pre-actuation position to a discharge position along a path substantially parallel to an axial length of the container to actuate a nozzle of the container to discharge a fluid from the container. An electronic circuit board, a normal pressure cavity, a sensor, a vapor-liquid separator, an atomizer, a liquid-supplying bottle are sequentially provided within the shell, wherein the electronic circuit board comprises an electronic switching circuit and a high frequency generator.

1459826056-0ef09b63-fe35-4743-b921-91aeae523ac3

The invention relates to a light indicator, comprising an indicator element illuminable by a light source. The method comprises forming polysilicon lines overlying a substrate with a dielectric layer therebetween. The MRIC instruction includes the address of a run-time-instrumentation control block. The splitting apparatus may comprise a pair of arrays of half-cylinder lenses comprising a convex side and a flat side. Further, the action table may be divided into portions corresponding to the group number.

1459826056-41379137-5fd1-442e-adc8-6adcac3438f9

Aqueous coating compositions containing a first polymer containing reactive functional groups with a selected level of carboxylic acid functionality and a polyfunctional crosslinker agent containing functional groups that are reactive with appropriate functional groups of the first polymer, are disclosed. A current source is connected to a first electrode and a switch is connected to a second electrode for selectively connecting the second electrode to ground. In the second step the deposition unit is activated in order to deposit the metal on the plate when in the first step the detection means has not detected any defect in the plate. A second directional control device is connected to the reservoirs. Anti-lock braking systems are used to provide signal information indicative of the wheel rotation status. The recording and reproducing unit records the display screen on the recording medium as screen data through the capture operation.

1459826056-9e9e86d3-557c-4390-9a3b-81e383292661

A combination electronic communication and medical diagnostic apparatus includes a first component for transmitting or receiving a remote communication signal and a second component for generating vibration to be used in a medical diagnosis. The device may be in the form of a boxed hardware component and may be configured from an HTML interface. Access to a location estimate of the mobile device may be selectively authorized at least partially in response to a request received at the mobile device from the location server including the location identifier.

1459826057-c58f9937-0210-4915-8529-139969a051e8

The invention relates to a method for test pressing tablets with at least two layers. The personalization server maintains information about how to personalize a callmessage management interface provided for managing the user's calls and/or messages. The coupler has an elongate body with an open end and a hollow core sized to receive the head of the stake or nail intended for use with the present invention.

1459826057-ed6c0037-3fdd-4a4b-8f1d-8801e31daa40

A system comprising multiple devices that are operable when servicing a device-under service is described. In one embodiment the asset value of a network node is determined. A microprocessor is programmed to recognize the signal produced by

initial deformation of the cornea contactor tab so as to proceed with an eye examination only after receiving the strain gauge signal verifying that a previously unused cornea contactor has been inserted. An alignment fiducial mark extending from the top surface of the wafer into the substrate to a depth below that of the circuit layer is constructed. The faceplate may be angled away from the surface upon which the dispenser is positioned. The notification message may cause the host server to at least temporarily refrain from communicating and/or to queue server-initiated IP messages intended for the mobile station.

1459826058-1c44b246-2a27-4795-9a8a-ae086c6adc62

An anode assembly for an impressed current cathodic protection system is disclosed. Plural retainers are secured within each of the panels at spaced apart intervals, each retainer including a connecting portion extending outwardly from the inner surface of each panel, and an anchoring portion. The image material graded as potentially illegal has the age of the persons shown determined, and potentially illegal image material which shows at least one person whose ascertained age is below a prescribed age is graded as illegal image material.

1459826058-5c76719f-459a-44e7-9f32-b95026d0c7a5

A system for loading videos includes an interactive video player is with a loader. The system can include control circuitry for reducing an amount of bias current at high temperatures and increasing a power of the laser at low temperatures. Sufficient controlled energy is transmitted from the surface into the engaged tissue to contract the tissue and inhibit incontinence. Prior to roller forming the outer edge of the bore, the spider arrangement is supported on the true rotating center of the drive shaft tube. The recessed portion at least partially extends into the opening.

1459826058-6085da79-9ab9-4a5e-bcc6-3758729fd5c0

One of aspects of the present invention is to provide a medical lancet, which includes a first ascending region, a descending region, and a second ascending region subsequently and integrally formed of biodegradable material. Such a location is not easily pointed out especially when the facility is damaged. The pattern of these disturbances is a controlled one, designed specifically to avoid causing noticeable disruption even to sensitive devices, but to be unusual enough that it is statistically unlikely to be naturally occurring. The upper sections of the lace portions are tied together to form a knot and a pair of distal lace ends.

1459826058-8f84df63-1e4b-404b-a0e3-fb9497dfc72f

With a method producing hydrogen by making iron or iron oxide contact water, water vapor, or a gas including water vapor, a hydrogen generating medium, which has a high hydrogen generation reaction rate and is resistant to a repetition of oxidation-reduction without degrading its activity, is provided by adding a different metal other than the iron to the iron or the iron oxide. The controller also includes an input for receiving an enable signal including enable events responsive to the power converter output. A fertilizer tube is mounted behind the furrowing knife. The average fiber length of the kenaf fiber is preferably 100  $\mu\text{m}$  to 20 mm, and the kenaf fiber preferably contains a kenaf fiber having a fiber length of 300  $\mu\text{m}$  to 20 mm. The check valve prevents the waste ink and the pressurized air from returning to the cap member.

1459826058-9bbcce35-22f6-42db-b428-0e150c4fc9e8

A regulated two-stage turbocharger system is described, including high-pressure and low-pressure turbocharger units. The crosslinked nanoparticles on substrates can be used in electrochromic devices and/or photovoltaic devices. 0.2 mass % of Mg and provide a distribution index F1 for the sulfide particles defined by the following equation of  $\theta$ . The MAC header includes a CT identifying a type of each of the information elements multiplexed into the MAC-PDU and an LI indicating a size of each of the information elements.

1459826059-7b0ee702-3e7e-44cc-9076-a989ad9d23cd

A single operator exchange fluid jet thrombectomy method employing a single operator exchange fluid jet thrombectomy device having an outer catheter assembly and separable and exchangeable components in the form of an inner catheter assembly allowing functioning as a rheolytic thrombectomy catheter or as a crossflow thrombectomy catheter. In some embodiments, a radio source may embed instructions to control an electronic device into a radio signal. Systemic delays, arbitrarily imposed delays of a broadcast signal and variances in the precise broadcast times of taped television programs have to be equalized so as to provide fair entertainment. The indicator is configured to indicate operating conditions of the escalator.

1459826059-bc984f41-f250-4f8d-bd30-31b93898974e

The invention contemplates a method for recognition of proteins and other biological molecules by imaging morphology, size and distribution of crystalline and amorphous dry residues in droplets containing predetermined amount of certain crystal-forming organic compounds to which protein to be analyzed is added. The appliance also includes a substantially rigid wand which is connected to a suction inlet on the vacuum cleaner by a flexible hose and which is suitable for use in cleaning above the floor. The second region may be doped with implanted phosphorus and the third region may be doped with implanted boron. The delay circuit provides a result to an external connector at a second clock rate that is slower than the first clock rate. Since a transverse vortex discharged from the side edge of the blade, and on a large scale, is organized by vertical vortexes formed in the notches on a small scale so as to be segmented into stable transverse vortexes, it becomes possible to reduce aerodynamic noise. The flexible substrate is bent so that the light source is disposed at an end of the light-guiding member and that the flexible substrate is housed in the frame.

1459826060-59210257-2ebc-4d7e-b6d9-c1d624b4221d

A resonant DC-DC converter used to drive an LED array includes a half-bridge converter configured to receive DC input power and produce a square wave voltage. The method includes receiving at a calling module, using a standardized interface, a call request from a remote client, the standardized interface enabling interoperability between the calling module and heterogeneous remote clients, generating a call to a party specified by the call request, and transmitting a response received from the party to the remote client for client-specific processing. The method additionally comprising calculating a competitive bid for the user, based on the complex usage pattern and a pricing structure of the provider. The goalie structure is preferably inflatable, and the track is preferably constructed from a plurality of track sections.

1459826060-79612134-b968-4c3e-a315-d79ed66c7e97

A solid mesh swimming pool cover incorporates a mesh layer that has been successfully used as a porous mesh cover for several years with a thin impermeable base layer. The shaving razor can include a razor handle configuration that reduces the propensity for the shaving razor to roll in a user's hand and improves the maneuverability of the razor cartridge during shaving. The disk control device further comprises: a first coupling unit for connecting the internal coupling of each disk control unit to read or write data within the disk control device; and a second coupling unit for connecting the internal coupling of each disk control unit to transfer data between a plurality of the disk control devices. An adapter is coupled to the housing and the vibrator whereby the adapter vibrates when the vibrator is activated. which comprises reacting a compound of the formula: wherein R<sub>y</sub> is chloro, bromo, iodo, O\u2014C(=O)F<sub>3</sub>; and R<sub>g</sub> is a C<sub>1</sub>-10 alkyl; with an olefin forming reagent in a suitable base to yield a compound of Formula, or wherein m=0 and oxidizing the sulphur as necessary or desired. Each value of the hash table identities which of the address tables are storing the address entry corresponding

to the associated key.

1459826060-9a4fe758-d476-4589-857b-403964667b96

A hard coat film comprising a substrate film and a hard coat layer disposed at least on one face of the substrate film, wherein the hard coat layer comprises 100 parts by weight of a resin of an ionizing radiation curing type and 0. The system includes a guidewire, a filter assembly, and a distal introducer. The intensity value for each position in each  $i$ -th spectral band is adjusted to generate an adjusted intensity value for each position in each  $i$ -th spectral band in accordance with 
$$\log \sum_{i=1}^S W_n I_i * F_n$$
 where  $W_n$  is a weighting factor,  $*$  is the convolution operator and  $S$  is the total number of unique spectral bands.

1459826061-2ab78748-a9f4-4edf-8a64-b16bab81bcf2

A process of sending packets of real-time information at a sender includes steps of initially generating at the sender the packets of real-time information with a source rate greater than zero kilobits per second, and a time or path or combined timepath diversity rate, the amount of diversity initially being at least zero kilobits per second. The gate frame is installed on the upper portion of the main frame, has a pair of left and right columns that are disposed along a substantially vertical direction, and has a beam that connects the upper ends thereof. In this embodiment, the identification code is linked to an identification file containing identification information uniquely corresponding to the mailpiece. A lock pin is located in the large-diameter portion of the rotor, whereas a lock hole, with which the lock pin slides into and out of engagement, is located in the inner face of a sprocket. The cavities of each pump are skewed so each pump chamber is larger in volume at the inlet end than at the outlet end. In one embodiment, portions of the gate electrode is in the spaces between the discrete storage elements and extends to more than half of the depth of the spaces.

1459826061-673b5e08-b831-42d3-bf84-744926638798

In a throw-away tipped drill, a slit is formed at the bottom surface of a tip attachment seat which faces towards the end of its axial line direction, with this slit extending towards the rear of the axial line direction. The first pair of wheels is propelled by an internal combustion engine. A resilient element is adapted for applying an urging pressure against the locking arm so as to normally retain the locking arm in a locking position.

1459826061-e4373298-5e95-4e27-a34e-3181bd03eb5e

A system and method for the selective catalytic reduction of nitrogen oxide in a furnace exhaust includes cooling the furnace exhaust in a first heat recovery section to a temperature between 400 F. Preferably, disposed is a thermosensitive layer 24 which changes from a transparent state to a light scattering state when the layer is heated to a specified temperature or higher. One particular application is assuring consistency between forwarding and control planes of a Fast Reroute backup tunnels used to protect an MPLS Traffic Engineering LSP from a link and/or a node failure.

1459826062-97afa42d-d6a6-4f6b-ac03-6478c14d91de

A liquid cartridge detachably loadable in a cartridge loading section of a liquid supplying device is provided. The lower casing and the upper casing enclose an inner space. A cooling system for an area around a lamp that accounts for a good part of an amount of heat generated by the projection type display device is isolated from a cooling system for other parts including a liquid crystal panel. The pulley is coupled to a ring gear of a planetary gear set having a planet carrier with planet gears engaged between the ring gear and a sun gear. The catheter system includes a first channel configured to receive a catheter device, and the first channel has an opening located within the recess.

1459826062-d03ea02c-7e8a-4623-ad09-ebfbd0fe5b15

A free space point-to-multipoint optical transceiver has a reflective element and an optical feed mounted on the reflective element. Thus, the control is not affected by payload information. The lookup table includes a plurality of entries. A solder preform layer is located between the device layer and the top layer for securing any MMIC chips. An electric wind speed detector located in the vicinity of the pool and coupled to the electric control system causes the control system to override the programmed sequence in response to wind exceeding a pre-established threshold to operate the pump system to supply water to the pool return jets. A system for authenticating a terminal subscriber identity module in an IM domain includes: UE, an S-CSCF, a home device of the UE and an HSS.

1459826062-f2082fae-08ab-465c-8aab-b01089fa5cb2

A data security system comprises a host processor, and a plurality of remote computers. Each pair of the display electrodes is made up of a scanning electrode and a sustain electrode which are arranged parallel to each other on the first substrate. The first spectral sensitizing dye is an anionic benzimidazole-benzoxazole carbocyanine and the second spectral sensitizing dye is an anionic oxycarbocyanine. The airbag cushion is attached to, or contained within, a portion of the lap belt portion seatbelt webbing. The invention also provides an efficient method of producing memory devices with the selection element in the same layer as one of the control lines. The fluorine-containing polymer has a weight average molecular weight determined by gel permeation chromatography in the range from 1,000 to 50,000 and a receding contact angle with water and the photoresist film formed therefrom is 70° or more.

1459826063-0ffefef35-2ce3-41a1-a368-e958b7540a8d

A method of fabricating high quality passive components having reduced capacitive and magnetic effects by using a Schottky diode underlying the passive components in the manufacture of integrated circuits is described. A ticket ID is assigned to the service request, and responsive to an initiating action of the user, a virtual token is generated that has a specified relationship with the ticket ID. Another embodiment includes a forming assembly for use with, for example, a battery part having a bifurcated acid ring with spaced apart lips. The client request is processed using the selected agent components. The resulting backup tape contains substantially the same set of files that would result from a full backup, or, if desired, a higher level backup. Also included is a controlled current source configured to receive electrical current from the wind turbine unit or at least one other wind turbine unit located in proximity to the corrosion protected wind turbine unit and further configured to operate the impressed current anode.

1459826063-189d6aec-a03e-41a0-8348-380a8e1792dd

A memory access control device for controlling access to a plurality of memory devices with differing latency, controls, when performing a first access and then a second access, the timing of performing the second access, according to a memory device accessed in the first access and a memory device accessed in the second access. According to the method, a first insulating layer having a contact hole formed therein is formed over a semiconductor substrate. This switching to another communication protocol may be performed based on a variety of factors including effectuating communications of higher throughput, supporting uni-directional communications vs.

1459826063-7a78efc2-1861-4bfa-b89a-d4e1803f117d

A mobile data network supports making subscriber data addressable as devices in a mobile data network. To transfer the thrust of an actuator, especially in an injection valve, mechanical tappets are used, which have substantially the shape of a cylinder whose defining surfaces are substantially triangular, with the corners rounded. An inflatable bladder can be used within the outer structural layer to

cause expansion, and a seal can be disposed for cooperation with the outer structural layer to facilitate sealing engagement with the surrounding wellbore wall. The system transmits the application package from the sharing device to the receiving device via the network connection.

1459826063-b34d4f7b-4bda-440e-b4d8-89ddae9535eb

An improved railroad frog, and method incorporating the same, for facilitating the intersection of rail lines in a more efficient, effective, and durable manner. User input deactivating the appliance is received and processed by a first and second microcontrollers, which separately and independently act to remove power from the appliance upon receipt of user input. The sensor calibration system may also have a controller in communication with the sensor and the positioning device.

1459826063-b99e8e0f-04ae-4ed5-8b79-361856f08fb7

Systems for servicing the data and memory requirements of system devices. The rectifier circuit 110 includes contacts 117, 118 and 119 and functions as one of a full-wave doubler voltage rectifier circuit and a full-wave rectifier circuit according to the opening and closing of each of the contacts. The first PND receives and displays a social interaction information signature of the second PND. Alternatively, the bottom of the tub can include a plurality of ball bearings. The adhesive tape includes a base formed as a thin sheet, an adhesive attached to the reverse surface of the base, and a projection projecting along the length of the outer surface of the base within a portion of the width thereof. The second magnet is disposed on a surface of the first leaning portion facing to the cover plate.

1459826064-2bc2f6e4-9654-4b82-b5a3-bc2b6d2aae1a

The invention relates to a dishwasher comprising a cabinet, a door for allowing access to a washing volume inside of the cabinet, and a water tank to be filled with water for washing. The wall may have a region of varying wall thickness providing a lens. The syringe and marker are enclosed in a sterile package which includes a top cover and a bottom cover. A plurality of buttons may be attached to a top portion of the handle body to release the plurality of handle arms. In this device, the frequency or number of the sustain pulses inputted to the paired sustain electrodes is adjusted in accordance with the detected area ratio, so that the luminance is always corrected to the reference value to thereby achieve proper expression of preset gradations. This reversing of the door assembly of the present invention does not require complete disassembly of either of the inner or outer door assemblies.

1459826064-69df82e3-f73d-445a-bdce-4c6a1f930cca

A production string with flexible electrical and/or hydraulic cables extending along therewith is lowered into a well through a blow-out preventer on the seabed and is formed by screwing together pipe lengths. When coding a B picture as a target picture, information indicating whether or not the target picture should be used as a reference picture when coding another picture is added as header information. The device comprises a main channel and an inlet channel that communicate at a droplet extrusion region so that droplets of solution are deposited into an immiscible solvent in the main channel. A protrusion is disposed on the pivot.

1459826064-7737331e-9a81-488c-a94a-3890a2c261e7

A housing for retaining an electronic component, including a lid and a lower part made of synthetic material, wherein the lid is joined in a force-fit manner to the lower part by clamping geometry, and in order to affix the electronic component in position, the lid applies a specified force to the electronic component after being joined to the lower part due to its design. A P-well blocked layer is formed directly beneath a parasitic device. The apparatus also includes a harrow for further mixing the soil and crop residue, and spreading the mixture evenly over the field.

1459826065-4418792d-86ae-4b38-8364-13c5c47fae97

A hand-operated device that can be actuated to dispense a predetermined volume of liquid food product for use in food preparation and food consumption is provided. The body part includes a rotary portion, disposed at a front end thereof, that can be inserted into the tissue of the organism from the hole, a needle member accommodated in a portion, inside the body part, rearward from the rotary position, and a pressing mechanism for advancing the needle member from a side surface of the body part and pressing the needle member into the rotary portion. A connector plug is plugged into the header connector over the battery to cover the battery and shield the battery.

1459826065-467f6351-14f8-4277-91c9-8d89745e992f

In accordance with embodiments, there are provided mechanisms and methods for determining whether a developed application associated with an on-demand database service will operate properly with at least one other application. Reference and comparison images are acquired at different times from a moving web. The system uses data from the inertial measurement units to estimate a position of the object.

1459826065-d3d63443-3125-4e4b-897d-ad62c862bf9a

A delivery device that includes a cutter for opening a barrier layer to provide fluid access to a dose chamber, and a diverting structure for direct air flow toward the dose chamber. Thereafter, the stored sequence in the receiver is compared to a stored copy of the continuous transmission to determine the time that the stored sequence was transmitted. The first logic tree is configured to provide a flag signal indicating whether at least one bit of the data is active. An output beam is generated by the semiconductor laser based upon the received first current and the received second current.

1459826065-e4ed5642-1e10-4e78-b2a2-6a11840b391e

A safety device for firefighters to mark a viable exit for a building includes an audible sounder and a number of laser diodes in a housing with lenses that create panes or sheets of light. A charge pump circuit is coupled to a drive circuit to provide a power source for driving the first transistor. A method of installing such heat exchangers in rotary kilns is also disclosed. The compressor is stopped by disconnecting a power feed circuit. The invention also provides methods and compositions suitable for therapeutic applications.

1459826066-258a2e8c-e54d-4964-9e31-4ea87787c438

An ink jet printing ink for use in an ink jet printing method. The electric motor includes a rotor and a stator assembly. In addition, multiple test patterns can be selected and customized for the specific needs and constraints of different types of networks to form the basis of scheduling performance tests to optimize the performance testing efficiency.

1459826066-83ec5f87-913e-41a0-b5ff-17442a4a4097

A process is provided for preparing a compound having the formula . The reduced diameters of the proximal section and the distal section are smaller than the reduced diameter of the middle section. Thus, the high reliable and steady movement is performed.

1459826068-4f02814b-b2e2-4389-a400-e8b22c5ad240

Charge balanced semiconductor devices with increased mobility structures and methods for making and using such devices are described. The shaft has a distal end portion which is made deflectable. The wireless device may be configured to dynamically reconfigure a modulation coding scheme to compensate for varying signal qualities in some modes. The transverse rods are connected to at least one of said longitudinal rods to form an orthogonal reinforcement mesh on said mobile workstation and as the workstation in said first direction, said mesh is deposited on said prepared surface. The conducting pattern comprises a curve having at least

five sections or segments, at least three of the sections or segments being shorter than one-tenth of the longest free-space operating wavelength of the antenna. Based on such displayed game actions and sequences, the disclosed gaming system and method determines whether the player or the opponent wins that competition for the competition game.

1459826068-a7640c1c-db88-4122-93ae-0d7faead1ed8

A technique is provided for delivering plant supportive materials to plants. The packet processing device receives as an input a combination of header information and a destination to be registered and calculates an index value by one-way function calculation using the input header information. The airflow-organization testing system for a clean room includes a sample gas supplier and a thermal imaging device, and the thermal imaging device can continuously detect a spatial position of the sample gas and display it on a display, thereby improving detection precision and expanding detection range. In the location of a coronary artery, the surface probe element sensor is moved about against the epicardium over the suspected location of the artery of interest until a surface probe element sensor of the present invention at the surface probe distal end interacts with the lumen probe element of the vessel lumen probe.

1459826068-af5664c8-e057-496a-8677-3c127630a9f0

The invention provides an improved lock bar system for enclosing at least one peg hook. The computer system includes a memory hub controller coupled to a plurality of memory modules each of which includes a memory hub and a plurality of memory devices. Even if chattering occurs in the mechanical acceleration switch, the first-stage igniters and a backup capacitor are conductively connected by turning on a driving transistor, such that an electric current is sufficiently delivered to the igniters. One of the at least one first metal structure and the at least one second metal structure is activated toward metal plating without activating the other of the at least one first metal structure and the at least one second metal structure. The selecting unit selects at least one first operation area that is an operation area in which the amount of change exceeds the first threshold as a halt area for which the operation of the control value used by the facility device installed in the first operation area is halted when the number of first operation areas exceeds a predetermined second threshold.

1459826069-01f5ef6b-f9c4-49a3-a165-8f8565e28110

A processor is provided that includes an execution unit for executing instructions and a replay system for replaying instructions which have not executed properly. The conveyor belt alignment system includes a mounting plate for attaching to a structure, a first plate attached to a second plate, wherein the second plate is adjustably attached to the mounting plate, a support frame adjustably positioned upon the first plate, a plurality of first idlers extending from the support frame, and a plurality of second idlers extending from the support frame. The storage device comprises a solid, preferably silica- or alumina-based CO<sub>2</sub> storage material, which can be regenerated. A pressurized platform bears pressure from the pushing end, when the pushing end is pushed onto the pressurized platform.

1459826069-23b0ac80-7cf4-40a9-840f-7cdf7b548b0c

The present invention provides a method of treating sebaceous gland disorders comprising administering to a patient in need of said treatment an effective amount of a compound named -acetyl-sulfamic acid 2,6-diiso-propyl-phenyl ester or a pharmaceutically acceptable salt thereof. In aspects, image restoration is accomplished by recovering spectral information from data corresponding to a compressed image. A specific portion of the flow waveform is identified, and a linear regression of the identified portion of the flow waveform is performed to determine an estimated leak flow in the breathing assistance system.

1459826069-36d8d434-1ea9-4cde-8be7-a07aeb75d640

A non-volatile memory device includes an array of non-volatile memory cells. The substrate holder comprises a main body, a plurality of burls and a heater and/or a temperature sensor. Then, the mould cavity is opened and the moulded product is removed from the mould cavity. Alternatively, a user set service characteristic configurations may also determine the choice of a communication pathway that meets the user requirements of quality of service and cost.

1459826069-5adf7755-aa05-43bb-a1ac-53e61426b502

In a polycarbonate resin composition containing a polycarbonate resin and a polycarbosilane compound, the use of the polycarbosilane compound modifies the surface properties of the polycarbonate resin composition without adversely affecting the intrinsic characteristics of the polycarbonate resin, such as transparency, heat resistance, and mechanical properties, etc. The first bus and the second bus are each adapted to separately connect to respective ones of a plurality of bus-compatible devices. An ablation catheter includes a coaxial transmission line with an antenna device coupled to a distal end of the transmission line for generating an electric field sufficiently strong to cause tissue ablation. A window extends through an upstream portion of the cylindrical sleeve exposing the flared tube to the exhaust stream. To limit the formation of focal points that can lead to hot spots as light travels down the shaft, the shaft substrate is formed with dimples or longitudinal corrugations. Any received PDU within the TTI that has a sequence number that is sequentially before the starting sequence number or that is sequentially after the ending sequence number is discarded.

1459826070-71ce59bd-c265-4f26-8582-05e2cf98eeb3

An embodiment of the invention relates to a frictional clutch for a hand-held device for transferring a film from a backing tape onto a substrate. The base assembly is vertically movable relative to the housing. In this manner, the phaser may be warmed up rapidly, without adversely affecting engine operation.

1459826070-9d76f553-1ad8-49d7-b6db-d4f639060b57

The present invention provides a lock structure of plug of cable including a main body and a key. The trap has a bend part and a horizontal lower pipe connected to it. The mechanism includes a motor shaft pulley fixed to a motor shaft of a motor, a saw blade shaft extending in parallel with the motor shaft and an intermediate shaft extending in parallel with the saw blade shaft and positioned between the motor shaft and the saw blade shaft. Once the feed forward filter reaches a certain level of convergence, the training circuitry is reconfigured to evaluate and update the actual level of the signal EQTR. Running of the starting process of the optical disk drive with the medium is inhibited when the authorization of the medium is determined as being incorrect.

1459826070-af5c2b03-768e-4a22-a837-138d3a9b533c

A device for protecting medical apparatus from contamination by infectious agents comprises a containment body having an inlet destined to be set in fluid communication with an extracorporeal circuit of blood, and an outlet destined to be connected to a fluid line operatively connected to a pressure gauge of a medical apparatus. In another part, the present invention includes inclusion complexes of a lapachone or a prodrug thereof and a cyclodextrin, preferably a  $\beta$ -cyclodextrin, such as hydroxypropyl  $\beta$ -cyclodextrin, etc. The test element has a sampling end with a sample opening through which the fluid is collected.

1459826071-3b565723-f261-473a-a696-d269d428951d

It is an object of the present invention to provide a focused ion beam apparatus capable of prolonging a service life of an aperture, preventing contaminants from increasing when a column valve is closed, and being quickly restarted. The system includes a transmitter, a variable optical attenuator, a receiver, and a computing device. Preferably, an additional switching device is added to implement such a canceling capacitance for each parasitic capacitance. The user rotates the cabinet

display, the countertop display and the backslash display to visually illustrate various options and combinations. Since the subcache memory serves as a buffer for data to be transferred from the main cache memory to the main memory, the main cache memory withdraws data to the subcache memory even if the main memory is in a busy state. The jumper connector also includes a conductor held by the body, wherein the conductor is configured to be electrically connected to more than one lighting component during the same manufacturing step in which the connector body is secured to the substrate.

1459826071-a613c433-3fa4-4b0e-b5a8-5424ae80ac8c

A closure strip and a cursor of a bag. Further, there is a port switching unit provided for switching to at least one of the parallel and serial ports to enable data transfer to and/or from a storage device connected to the port. The composition is comprised of cellulose insulation and a joint compound. The other ends of the arms are pivotally attached to, and maintained at a fixed spacing, by a crosslink member. In response to the comparing step, at least one time frame in the forward link having available capacity for transmitting a portion of at least one further traffic stream is identified. The method includes taking and saving a snapshot of current state of a virtual machine as well as a snapshot of the corresponding vTPM, upon receiving a request for taking a snapshot of the virtual machine.

1459826071-b9c1bb2b-6635-4bb1-8c36-a6d6e7e3d6ca

A method of analyzing milk components having the steps of collecting a milk sample, ionizing the milk sample, and using an ion mobility spectrometer to detect predetermined components within the ionized milk sample, wherein the ion mobility spectrometer is positioned within a milking system from which the milk sample is taken. The front frame has an adjusting base mounted on the front frame. The control device controls the sewing machine in a first stage under only a normal sewing mode in which the normal sewing operation is executed.

1459826072-24b728c7-1b54-43e5-9139-69c501f7e0ca

Methods, systems, and apparatus, including computer program products, for location-based emergency information. The reactor includes a first toroidal chamber, current carrying conductors, at least one divertor plate within the first toroidal chamber and a second chamber adjacent to the first toroidal chamber surrounded by a section that insulates the reactor from neutrons. It is further determined whether a plurality of operations execute more efficiently when combined. The Pin signal for a bit is true where the bit has a carry in that is the same as the carry in to the block of bits, i. When the embedded component is deviated in the through hole to allow the electrodes to be in contact with the metallic ring, the electrodes are prevented from coming into contact with the same section of the metallic ring to thereby avoid short circuit. The brake modules have assigned thereto individual drives with controls for stipulating a reference speed relative to a speed of the machine.

1459826072-39b0769c-f308-46af-abef-83c9f1c7d3e1

A capillary absorption spectrometer and process are described that provide highly sensitive and accurate stable absorption measurements of analytes in a sample gas that may include isotopologues of carbon and oxygen obtained from gas and biological samples. When the aimed number of fingers is satisfied and there is a path to be added, an unused finger is used if any and, when there is only an effective finger, the number of fingers assigned to a branch signal is not increased. The method also includes storing the corrected OSNR in a non-transitory computer-readable medium. When the amounts of currents of local signals flowing into the mixers increases, the effect of noise suppression is expected.

1459826072-ec820a6b-1ac6-49f1-9230-f4977caeba6f

An antenna assembly for emitting a signal. 2 mm to 8 mm, a bulk density of from 0. The customer can either accept the transaction amount to complete the transaction

or reject the amount to cancel the transaction. For producing a single-curved glass sheet, the elevating mechanism is operated to lower the opposed ends of those beds to their original flat positions. The vehicle terminal determines a range of cells of which cell data are required for navigation based on vehicle state information, and requests the map data transmitting server to transmit the cell data of the cells thereto.

1459826072-fcd7b543-f931-430b-8258-1c66f5c9406e

A data processing apparatus having a plurality of memories is provided in which address generation logic outputs to at least one of the plurality of memories a target memory address corresponding to the data to be accessed. The first power supply circuit converts a source voltage from an externally supplied direct current power source into a first voltage and provides the first voltage to an output terminal. Golf balls of the present invention include one-piece, two-piece, multi-layer, and wound golf balls. The SRFFT control block determines a decomposition structure of a 2M-point FFT and controls the SRFFT processor to repeatedly perform a butterfly computation along the decomposition structure.

1459826073-06a07df8-b0c8-4fa2-b2ba-3c4a6ef41d3e

To provide: a coated wood composite having surface properties such as transparency, smoothness, gloss, uniformity, and depth, and excellent in various physical properties such as durability and strength; and a method for producing such a coated wood composite efficiently and easily. The ejectable device includes an impulse cartridge having multiple charges that are independently activatable. A highly doped silicon region of the first conductivity type is in the drift region and is laterally spaced from the lightly doped silicon region such that upon biasing the schottky diode in a conducting state, a current flows laterally between the lightly doped silicon region and the highly doped silicon region through the drift region. The first wire and the second wire are each horizontally disposed along side each other forming a part of a sidewall capacitor between facing sidewalls.

1459826073-504d02d2-6e9e-4267-85eb-cf3edc6b86a7

It is intended to feed back any somatic sensation information on given body surface portion in easily understandable form without the use of special sensations, such as visual and auditory sensations. 04 times and equal to or less than 0. The system identifies a first string to be transmitted within a first message.

1459826073-644278ee-0786-45ef-8d2d-d6810d5f69d8

The present invention relates to a method and apparatus for controlling data traffic in a time-division duplex system that uses multi-component carriers. The device includes at least two supply circuits for making available the currentvoltage supply and a protective device for intrinsically safe current and voltage limitation of the power supplied by the supply circuits to the load in the explosion-proof area. A method of manufacturing the sealed body in which sealing is uniformly performed is provided. The first copolymeric binder can include at least one of the multiple polymerized monomers but which is different than the copolymeric shell.

1459826073-6feb3589-ace6-4c5e-9cec-be7f9f119a4c

Systems and methods are provided for dispensing portions of viscous material, such as the viscous materials used to form crystals of membrane proteins or soluble proteins. The insulator includes a rear body portion, a middle body portion and a large-diameter portion located between and protruded radially outwardly from the rear and middle body portions to define a rear shoulder section connected to the rear body portion and a front shoulder section connected to the middle body portion. The printed circuit board with a signal connector is connected with the display panel and disposed between the display panel and the printed circuit board. A master clock generates a system time signal that the network devices use,

together with a network time protocol to generate a local clock signal synchronised to the system time signal for both rate and offset. A module card comprises: a base board; a chip mounting on a surface of the base board; a golden finger on the board and electrically connecting to the chip; and a packing layer forming on the chip for covering the chip. The invention is embodied in a route and path management system which includes a data collector for collecting data from the individual network elements, a management server for processing the routing data collected into manageable route and path objects and a graphical unit interface for allowing a user to manage and monitor routes and paths in the IP network.

1459826073-bb54a9a1-6e2f-4520-9b11-1f9d2627350e

Methods, systems, and apparatus, including computer programs encoded on computer storage media, for speech recognition. For example, the method receives at least one block of a signal to be encoded. Further, an insulated gate field effect transistor formed on the same substrate as the gold electrode is used as the potentiometer. The seat includes a seating surface configured to receive the user's buttocks in a sitting position. The first switch control circuit controls the multiple stages of shift register units to turn on in a forward sequence; the second switch control circuit controls the multiple stages of shift register units to turn on in a backward sequence. The resiliency of the contact bumps serves to bias the wobble plate to a normal or rest position when tilt forces are removed from the contact bumper.

1459826074-3662309d-2d10-400f-b7d4-540264cdb647

A computer network environment that supports both Common Object Request Broker Architecture and Data Distribution Service can employ the techniques described herein. The packaging case is used for a wiper blade curvedly deformed into an arc shape when mounted and used on a vehicle. Also disclosed are applications of the nanoparticles of the present invention, and methods of fabrication of the nanoparticles of the present invention. Also partially defined by the impedance assembly is a flow opening which extends from the inflow end to the outflow end.

1459826074-e22af45b-eb35-48dd-aab4-cc1ea68eb6d2

There are provided a semiconductor memory device and a refresh control method thereof to realize a refresh operation without any problem for external accesses while realizing low current dissipation operations for executing the refresh operation in separation from external access operation, in which the refresh operation is inhibited during execution of the external accesses. Embodiments of the invention include an attachment for a harvesting machine, and a method of harvesting a row crop in a way that directs harvest residue into relatively narrow strips, leaving strips of soil between the strips of harvest residue in better condition for strip-tilling. Additionally, vibration of a rotation body can be minimized due to the simple configuration of the disc centering device.

1459826075-3a1ccd19-071f-4be7-8770-b0838e1c2557

The invention provides an antenna system for wireless communications and in particular to a multiple antenna system for operation in conjunction with a radio frequency front end for wireless communication. Specifically, the collaborative presence awareness system is such as to enable users to specify complex presence awareness policies. Novel compositions, methods of preparation, apparatus including layer-by-layer assemblies coating, electrospinning and ultrasonic atomization, skin coverings containing and medical use of the complexes are described. In response to an indication that the name of the calling party is unavailable, the method accesses the databases and searches for the matching telephone number and corresponding city and state names. The sampling voltage adjusted at the lower level periodically adjusted to a higher level to reduce errors in the determination due to insulation films on the contacts.

1459826075-8dfcb2b2-f0df-46e1-93e5-6ed774a77e8e

An oil supply passage of a cylinder head increases design freedom of cylinder heads. The moving part is linearly movable. A bottom portion of the ferrule is sized to receive and surround an upper end of a hose of a club head. For example, in an SOI FET, sub-insulator layer voids can be selectively placed in the substrate below the source, drain and/or body contact diffusion regions, but not below the channel region so that capacitance coupling between the these various diffusion regions and the substrate will be less than capacitance coupling between the channel region and the substrate. The fluency transform has a plurality of modes, each mode being selected in order, the code-length being calculated for all of the modes. This invention also provides pharmaceutical compositions containing such compounds; processes and intermediates useful for preparing such compounds; and methods for treating disease conditions mediated by muscarinic receptors, such as overactive bladder, irritable bowel syndrome and chronic obstructive pulmonary disease, using such compounds.

1459826075-a4b3d4ca-bf6d-4ba6-8bc8-2fa35d2610bb

In an ink jet printing apparatus including a plurality of nozzle arrays, if a print position displacement between the nozzle arrays is adjusted, it is possible to perform high-speed printing at the time of performing a printing operation using only a single nozzle array. The invention is multi-output multiplexor that, depending on the control signals, allows various modulating circuits to pass no voltage, pass some voltage or pass all the voltage on one of the multiplexor's ports. The glass sealing material includes a P2O<sub>5</sub>/Al<sub>2</sub>O<sub>3</sub>/ZnO-based low-melting glass that includes 55 to 62 wt % of P2O<sub>5</sub>, 5 to 12 wt % of Al<sub>2</sub>O<sub>3</sub> and 20 to 40 wt % of ZnO in weight %. Techniques disclosed herein provide an hermetic seal between the tube and the mounting frame and a rigid seal between the MEMS sensor to a pressure sensor while decoupling thermal expansion stress from the MEMS sensor.

1459826076-0e386b87-387e-443d-b9b3-bbd6e4a6a9c4

Articles of manufacture and a method of making the articles are provided. A first WTRU modifies a physical layer protocol data unit frame to include beacon information. The array further includes a plurality of electrical insulators and an electrically insulative housing having a plurality of slots. The current limiting module decreases the output current when the input voltage decreases to less than or equal to the first threshold, decreases the output current until the input voltage increases to greater than the first threshold, and decreases the output current by an additional predetermined amount after the input voltage increases to greater than the first threshold.

1459826076-9c6007a8-f3a9-420a-a6f6-f186c0426c65

Light source monitoring apparatus includes a light source having drive electronics for supplying drive current to the light source. In-fed spring assemblies are precompressed prior to winding on the mandrel, which is mounted to a pivotable arm to permit controlled compression of the spring assemblies against a fixed compression roller. A torsion spiral which is capable of rolling up the special curtain and a stop means for lifting the second circular tube are arranged in the second circular tube.

1459826077-0cd63d00-02fa-4e1f-8bd1-97edf64dafa4

A display apparatus according to the present invention has a plurality of electroconductive layers outside of an image display area. Each combination plate is made of foaming PU and has a protruding edge to extend upwardly. The bed has an opening defined therein. Circuitry on a second data path may be configured to adjust the input signal based on the configured acquisition parameters. The actuator has a third wall that extends toward the base plate and between the first and second walls. When the axial-flow fan is operating, a first airflow is generated.

1459826077-3f59da2a-bb0e-4236-a023-ece0212d8465

A modular weighted base bicycle stand having cross over and adjustable application. In some embodiments, the method provides the ability to specify for a particular firewall rule, a set of network nodes at which the particular firewall should be enforced. Then, a stress-dispersing weld bead is laid to extend between the weld area which is an area subject to stress concentration and the first component, wherein the stress-dispersing weld bead is set to a direction and length capable of preventing fatigue crack from occurring in the first component. In one embodiment, the memory representation is a graph comprising a number of nodes and directed links between the nodes. The extension further has a second flanged area in order to avoid over-insertion of the second member into the first member. Wherein the wobble data signal and the wobble clock is generated according to the read back signal.

1459826077-84de287f-1a8a-4520-bddb-e24fc6e354e3

The present invention provides a method of manufacturing a semiconductor device. Preferably the cocatalyst is organic such as an alcohol or a carboxylic acid. Next, the user inputs an operational instruction for setting a plurality of distortion parameters pertaining to the image data, which include a distorted side of the distorted object image, a central line and a distortion ratio.

1459826077-8592f839-2364-44cd-9d0e-d47e6df3f2dd

In one embodiment, the invention is directed toward an apparatus that includes a first layer and a second layer attached with one another via sets of fastening elements formed on the layers. This change in the closing timing increases with the decreasing engine loads. The display movably is supported by the mainframe. The data contains information for the client system to resume execution from the saved system state without executing a boot-up process after a power-off state.

1459826078-12fe5310-fbc0-485b-990b-d9512c6dc544

A method for detecting a fault in a physical system uses a model of the physical system and calculates estimated dependent variables or conditions for the system using substantially only independent variables that are measured from the system using hardware redundancy or selected based on their better measurement reliability. In some aspects, transdermal delivery may be facilitated by the use of a hostile biophysical environment. This may also be done by determining a center point between the start and end point.

1459826078-5177db86-3e28-4fb1-a992-9c0694202f4d

A disk drive is disclosed comprising a head actuated over a disk comprising a plurality of data sectors. The display apparatus with the camera includes a display element in which display pixels are arranged, and an image-taking module which forms a plurality of object images through a plurality of aperture areas formed among the display pixels of the display element and photoelectrically converts the plurality of object images. As a result, a structure of the device is simplified, and the device may be highly integrated due to repeated stacking. For chemical treatment, on the other hand, part of the water being delivered by the ballast pump is bypassed into an ozone impregnator thereby to be impregnated with ozone from an ozonizer. The numbers  $\lambda_1$  and  $\lambda_2$  are dependent on the wavelength  $\lambda$  of the light guided by the fiber, the number of missing gaps therein, the diameter  $d$  of the gaps, the spacing  $s$  thereof and  $N$ .

1459826078-ac67e65c-8c9d-40ec-b5dc-fc378c877448

A magnetoresistive element measurement circuit configured for measuring resistance of a magnetoresistive element biased by a current source is disclosed. In detail, the invention includes a first reversible electric motor coupled to the member for moving the member backwards and forwards. , as obtained by a handheld device such as a cell phone.

1459826079-36891029-d77e-47e0-a25e-ce2db8a80649

Devices and methods for iteratively sampling a wideband signal in order to recover one or more narrowband signals are disclosed. AV data recorded on a pre-recorded tape is output from a reproducing unit of a first digital VCR with protective information indicating whether the copy of the AV data is inhibited or not. The method provides a guidance information overlay on the image. The ice maker further includes an ejecting unit that is disposed on a side of the tray member and that is configured to facilitate separation of an ice piece made in the spherical shell from at least one of the upper tray and the lower tray. The subclasses are grouped by functionality into at least two groups comprising a standard group and an extension group. In the final state of the transfer of torque, the power-receiving clutch transmits the entire drive torque.

1459826079-64aa9a86-b22c-4df3-aa09-72c6ff460522

An entertainment system for use with a magnetic resonance imaging device that includes video glasses and headphones. In one embodiment, a system includes an eye analysis module that analyzes a patient's eye and generates biometric information relating to the eye. When the vacuum switch is open, the chopper is actuated precisely when the AC grid voltage is temporally located relative to the chopper input voltage, such that the amplitude of a voltage difference between the AC grid voltage and the chopper input voltage corresponds to a predetermined test voltage.

1459826079-d1405e92-e9c7-47e6-9c83-9120a5e0b529

A substrate has a top surface for receiving a semiconductor die. Also included is a pair of leads disposed over portions of the free layer. A cigarette filter of such a cigarette filter material can efficiently and selectively reduce formaldehyde. If no non-congested paths are found, the multimedia bridge scales the video portion of the UBR multimedia conference signals so that the UBR multimedia conference can continue. The etched preliminary active pattern is trimmed to form an active channel pattern having a width less than a lower width of the hard mask. 3, performing crosslinking between the units of the solution, and thereby forming a solid lens in the enclosure, optionally under a forming pressure.

1459826080-483bad6e-8008-4b82-af1c-159f53f276ce

A system and method for securely exchanging plurality of information items used to generate a plurality of encryption keys used in a public key-and-private key system. The level is calibrated by using a known level surface to stand upon and then adjusting the level so that it reads level when standing on the known level surface. The LED array is mounted in the lamp holder. The cooling stream passes through a turbo expander creating work output. The channel is transitioned from partial service mode to full service mode when the channel is in partial service mode and the modulation mode for the channel is greater than the trigger value. If the digital hardware determines that a digital data value is less than the low percentage value, the ratio  $k_i$  exceeds a second threshold value, a predetermined interval of time has elapsed, and the gain level is not set to the highest gain level, then the gain is increased.

1459826081-3554bdce-b8a9-416d-862d-3a3f82e9be06

Embodiments include an article of manufacture, apparatus, device, system, computer-program product, and method. The system includes a driver circuit shared by a pin interface and a complementary pin interface. Improved physiological assessments of photosynthesizing organisms can use SDC analysis and temporal LSE measurements to assess variable fluorescence corrected for SDC-retrieved background fluorescence. The spring biases the axially slidable spring seat against the stack of disks to normally close the compression flow passages, and the stack of disks is held by the spring seat.

1459826081-46cde8d5-4fb1-4bb7-923d-cea4e220dc91

An ADSLPOTS filter arrangement includes a filter and a switchable return loss correction circuit coupled to one side of the filter. The controller circuit

monitors voltage produced by the voltage regulator circuit. A water circulating system is provided for circulating water from the aquarium through the at least one tray and back to the aquarium. The facial image enhancement module augments the user's image using the embedded Facial Enhancement Technology in real-time.

1459826081-cda05d32-c6ee-4270-9e53-98960211bcf0

An isotonic drink that is especially designed for children between the ages of 6 and 12 years. The optical transmission line is formed by fusion-splicing a first optical fiber on the upstream side and a second optical fiber on the downstream side. When a new measurement of the process variable is unavailable to the controller, the reset or rate contribution component that was generated in response to the receipt of the previous process variable is maintained when generating the control signal. Under the condition that the accuracy is reduced, if the latency is likely to be greatly lower than the requested latency, the system changes to a calculation system having a higher processing accuracy. A plurality of link data records may be stored in the first level.

1459826081-fe54a222-5df8-487a-bf4d-1ac7f5d0be13

A semiconductor memory device includes a plurality of memory areas. The pump includes a pump frame with a platen. The jets are composed of wavelet transforms processed at node or landmark locations on an image corresponding to readily identifiable features. , to reduce the encoding rate to meet bandwidth constraints associated with a wireless communication channel. A bracket is connected to the flashing via the fastener, and the bracket is sized to support at least one roof-mounted structure on the roof.

1459826082-af08985d-7c88-453c-9e97-c9276502d31c

A single damascene or dual damascene interconnect structure fabricated with a photo-patternable low-k dielectric which is cured after etching. This polymer is composed of segments A1 and A2 each having at least either of modified and unmodified amino acid groups, and segment B composed of PEG having a number average molecular weight of 8000 to 50000. Depending on the nature of the input power supply, the first power stage is an AC-DC power converter with variable output voltage control and a second stage is a DC-AC power inverter with constant current control.

1459826082-baa3b03f-8dda-465b-abf2-50bc07d14c17

An apparatus for measuring alignment and tilt of a CRT neck attached to a recycled CRT funnel portion includes a support structure that engages and supports a seal edge of the CRT funnel portion, and a plurality of stopper pads which engage respective alignment stoppers molded on the CRT funnel portion. For this purpose, the radiation image pickup apparatus has a switching unit which is arranged between a signal wiring and an amplifier and can switch electrical connection among a plurality of signal wirings and electrical connection between a predetermined one of the plurality of signal wirings and the amplifier corresponding thereto. The assembly has the universal magnet roller press apparatus and a plurality of magnet roller adaptors for attached to the magnet roller during removal and installation of the magnet and the hub. The cartridge containing a first non-isoelectric separation barrier and also a second non-isoelectric separation barrier disposed between a selected one of the cathode buffer zone and the anode buffer zone and the first barrier so as to define a first chamber having an interstitial volume of less than 5 ml therebetween. The system utilizes a variety of sensors inside the container to sense internal environmental conditions. The link assembly couples the trigger mechanism and the bubble generating device in a manner in which actuation of the trigger mechanism causes the bubble generating device to move past the wiping bar and to contact the wiping bar, so as to create a film of bubble solution across the bubble generating device.

1459826082-f49ebaef-ec57-464f-ac07-788b0cf430a3

Described herein are methods and devices that employ parallel compression of image data using a lossless compressor and a quantization compressor. An oil pan is disposed below the crank case. by contacting the solvated FDCA composition with hydrogen in the presence of a hydrogenation catalyst under a hydrogen partial pressure within a range of 10 psi to 900 psi. The present invention can also be integrated with MEMS element into a single chip to achieve single-chip MEMS. The annular locking member engages the case and the driver sub and restricts the rotation of the driver sub relative to the case about the central axis. The flexible head member is adapted to be received by the structure to secure the accessory to the structure.

1459826082-f88993e3-bd36-4fd5-9733-395a0fea72aa

A method and apparatus for restraining pipe against internal forces at a pipe or fitting connection and to join and seal at least two pipes to form a pipeline is shown featuring an improved restrainingsealing mechanism. According to the invention, the inner surface of the straining ring has at least two grooves in the form of circular splines, they extend across the entire angle region of 360°  
0, and the outer surface of the neck has the same number of cams in the form of spline profiles, which extend across an angle range of less than 360°  
0. A ball, coupled to the end of a handle, is inserted into the socket, permitting the sanding pad to both pivot and rotate freely about the handle.

1459826083-33f89ea7-8448-4068-8c47-ecadc5944653

A computer system having a host computer is connected to a disk drive for providing a key to enable a feature controlled by the disk drive. Each flange has an inner edge and an opposing outer edge and joins an opposing side of the nose at the flange's respective inner edge. As more speakers are added, content is adaptively associated with that you speaker, and taken away from the previous. A key-using process execution part 1010 executes the key-using process such as generation of a keyed hash value, by using the key generated by the key generation part 140. The inhalation tube is connected to an apparatus for providing pulsed amounts of the material entrained in filtered atmospheric air.

1459826083-54677638-5bfa-474f-8422-8db7f3370e97

An integrated housing for a lens and a photodetector, which is being cooled to low temperatures to enable the detector to detect faint emission of photons. Operations are also performed to thicken the feature skeleton by replacing the plurality of smooth edges with corresponding pairs of curves that locate longitudinal boundaries of transitions between primary regions of the feature skeleton. A net-list or schematic is generated from the multi-layer display of the vector format data. At a first end of travel of the trolley along the track, the trolley is disposed laterally alongside and vertically offset from the mounting frame such that the space above the mounting frame is unimpeded to permit a user to access the attic space using the deployed ladder.

1459826083-658cdba4-3bbd-4ce6-b97d-d5832399cf82

A general short-range remote control alerting system consists of at least one transmitter or encoder device in communication with at least one receiver or decoder device. The first segment preferably has a unitary body with the plurality of compound segments spaced from such a first segment. The received sheets are scheduled to be printed with at least one of a first and a second sequence by at least one of a first and a second marking engine based on a comparison of the image content in corresponding selected portions of each front and back image. An optical combining switch matrix is disposed downstream of the wavelength-conversion channels and combines outputs from separate wavelength-conversion channels into a single output channel. A software control bit is used to switch between a power-on mode of operation and a power-down mode of operation.

1459826083-74823772-3b46-4cd2-b675-e9b5778732f2

A Push-to-talk over Cellular communication session is established between an inviting PoC client and at least one invited PoC client using an IP Multimedia Subsystem network. The bridge circuit may be coupled to a first bus employing a first communication protocol, and a second bus employing a second communication protocol. The speech data is then analyzed to identify all possible triphone sequences in the stream, and the various units chosen for each context. The cooling circuit additionally includes a suction accumulator and a flow path extending between the evaporator and the suction accumulator, while a fourth flow path extends between the suction accumulator and the compressor. In another feature, a buffer synchronizes phase data to a reference signal before inputting it to a digital modulator of the phase locked loop.

1459826084-0ebd51e6-1500-430c-bd1e-761dd1c98565

The present invention relates to oral compositions comprising a stannous ion source, a fluoride ion source, and a polymeric mineral surface active agent that binds stannous, said compositions providing adequate therapeutic efficacy with minimal side effects of tooth staining and astringency. The oven may include at least one cooking element and at least one control system coupled to the cooking element, the control system including a processor, a storage device, and an input interface. The board-dividing apparatus is equipped with a number of cameras and with controller which utilizes deviation measurement information to adjust the spacing of the saw blades. The first power amplifier is used for receiving the RF signal, amplifying the RF signal and outputting the RF enhanced by the first power amplifier and a feedback signal. The method further includes the step of configuring the peer system components using the propagated parameters during customization of the FPGA-based SoC and creating a software interface to the selected system components and to the peer system components. The contoured composite seat back provides designaesthetic flexibility.

1459826084-7f064d81-efaa-4b7f-a4be-e79081ce89e2

A pawl structure of ratchet wrenches has multiple engaging teeth, a first recess and a second recess. The camera is operated by use of the control device to expose a thermal image over a selected time interval to correspondingly select a thermal image over a particular selected temperature range. slags, which are in liquid form by introducing water into the liquid slag thus causing it to cool at a slow rate so that the solidified slag contains a porous crystalline or utrified structure according to the rate of cooling, which structure is stable at ambient temperature. The plurality of electrode heads can be affixed by the fixation mechanism at a plurality of spaced apart locations of the GI tract.

1459826084-dd7c9791-d2de-45f1-8d4d-7c4733af7755

A method, system and computer program product for adaptively tracking the position of an entry portal, such as an automatic garage door. The print may include additional invisible information which relates to specific parts of the image. The apparatus includes a conduit having a flexible metallic hose portion and a metallic head. The MWT is constrained to operate under an aggregate transmit power limit. The cover is pivotally and slidably engaged with the main body for covering the receiving groove, and the latching tab is latched with the block. Using the mask, the background from the second image can be removed and replaced by virtually any other desired background image.

1459826084-edf52e3f-0005-494a-b876-df907e7b162f

A two-stage amplifier of a first-stage amplifier 21 and second-stage amplifiers 22 and 23 is provided. Related apparatus and methods are also described. The first link plate has an outer side.

1459826085-717e6591-6f0c-49a5-99f0-de52dc215ab1

This invention provides an improvement in a control stick adapted to control the movement of an object. Also described are irreversible inhibitors of Btk. The

intermediate masks are used in a mask stepper or scanner progressively for projection again into a common pattern on a test mask. During the operation local high points which project above the spherical surface are ablated. A first insurance premium may be calculated for the single insurance policy using at least the first amount of insurance and the first replacement cost.

1459826085-9c574321-8171-4ec2-a0cc-ce42020f3752

A method, a user communication device, and a base station are disclosed. The bottom cavity is designed to engage with a through-hole. The invention provides for a reduction in response time of the actuators and a reduction in complexity of an algorithm used to control the apparatus. However, NCT UEs may receive signals from both the first carrier type and the second carrier type.

1459826085-bab3c76a-c5d7-4856-84c1-5781fd60631a

A system and method for reconfiguring a computing environment comprising a consumption analysis server, a placement server, an infrastructure management client and a data warehouse in communication with a set of data collection agents and a database. When a magnetic disk is produced by using the resulting magnetic disk substrate, the yield and, furthermore, the reliability can be improved. The resulting complex is reacted with a polyclonal anti-FMRP rabbit antibody and then mixed with an anti-rabbit IgG antibody conjugated to phycoerythrin.

1459826085-fec82438-8648-4e06-bd86-87b5ea50878b

An environment recognition system recognizes a substance moving in relative thereto, with using a modulated beam. A pair of spaced securing portions extends from an end of the load plate, around which the load plate is pivotally mounted to the stiffener. One of the plurality of input voltages is provided at a center tap of a secondary winding of the transformer.

1459826086-a0bab020-3371-443b-9424-3136e6469f45

A compression and decompression system in which a reversible wavelet filter are used to generates coefficients from input data, such as image data. One embodiment comprises a method for automatically loading data including configuration data to a configurable integrated circuit upon initialization of a system in which the configurable integrated circuit is embedded. Two flow restrictions and a valve mechanism may be employed to control lubrication of the differential mechanism. Stiction, buried charge layers, or a combination of stiction and buried charge layers can be incorporated to modify the stability of one or both deflected states for the cell. When an area density is defined as a value calculated by integrating a concentration profile of second conductivity type impurities in each of the channel region, the first anode region, and the second anode region in a depth direction, an area density of the channel region is higher than an area density of the first anode region and an area density of the second anode region. The method may, for example, be used for zero level packaging of MEMS or NEMS devices.

1459826086-b3e5aac0-8711-4ce4-9a7b-320068ad686c

MDCT or FFT-based audio coding algorithms often have the problem named here spectral pre-echoes when coding an energy attack signal. The method also includes requesting that a data network connection device remotely connected to the end device attempt to determine a cause of the problem when the end device cannot resolve the problem. The station also comprises a stop which is arranged on each side of said sliding surface and which is provided for the printed products, and comprises a slotted nozzle which is provided for the adhesive and which extends over the entire width of the sliding surface.

1459826086-e6e8c962-95c4-4573-b1c4-560806bcac4d

A container for shipping and/or storing a stack of paper is disclosed. The substrate has the semiconductor chip mounted on one surface thereof. Also, since this connecting member only serves to connect the pair of holder plates, a thin rod-

shaped connecting bar can be used.

1459826087-24c8cb8f-ef0a-4eba-b22f-329059b1b2d7

A transceiver of an apparatus supports communication with at least one additional apparatus. The system includes a local agent for facilitating a remote session; an operating system generating a request to enable a display device controlled by a display adapter; and a filter executing in a driver and in communication with the local agent, the filter intercepting the request generated by the operating system. Each seed metering unit is selectively driven by a common drive member, such as a drive shaft.

1459826087-577a8190-5d8d-4a70-bc96-3c2bacab9269

A unified web-based voice messaging system provides voice application control between a web browser and an application server via an hypertext transport protocol connection on an Internet Protocol network. Trenches are formed in a semiconductor substrate at gate edges. In each reaction cycle, the enzyme catalyst loses activity.

1459826087-67a4270a-976d-4d4e-b9c9-cd67427ec42e

A shoe press belt having formed on an outer surface a plurality of parallel machine direction grooves. A storage module is recessed into the rear of the seat back and can be conveniently accessed by a driver in a driver's seat along side the passenger's seat when the passenger's seat's seat back is folded onto its seat cushion. In a preferred, but non-limiting, embodiment the resonant load circuit forms a load in an RF low noise amplifier, such as a balanced inductively degenerated common source low noise amplifier. The timing windows can be viewed in terms of the individual process parameter. If the regular transmission is carried out, the transmission judging part refers to the transmission history table. Such a runtime system enables users to leverage the computational power of parallel-processing computer systems to accelerate/optimize numeric and array-intensive computations in their application programs.

1459826087-7ff16953-e214-4fe5-a444-a5b6f9e836de

An apparatus supplies power to at least one discharge lamp. A tip seal element is mounted on the adapter plates. Remaining peers of the plurality of peers may be arranged at subsequent distribution levels in order of descending upload capacity, such that each peer has an upload capacity that does not exceed the upload capacity of any peer at an immediately preceding level. The power protection element is coupled between the two output terminals to protect to the logic circuitry from high power transients.

1459826087-9c9531e3-0c60-43c9-89c5-24c042e16f3a

The permanent magnet electric generator includes a plurality of ferromagnetic bars disposed in spaced apart relation about the circumference of a non-magnetic, annular rotor body circumferentially surrounded by an even plurality of stator rows uniformly distributed around and arranged normal to the rotor. The outer wall panels in the side walls are disposed orthogonally to the outer wall panels in the end walls to define a rectangular or square outer container configuration, and extension panels on opposite side edges of a first pair of the inner wall panels extend diagonally across interior corners of the container to define with the inner wall panels an octagonal inner container configuration. The lever may consist of two parallel rods fixedly attached to each other and pivotable around a common axis, or the rods can be independent, pivotable around the corresponding axis. The method includes collecting sets of transmittance images representing transmittance of electromagnetic radiation through the dispersion, generating values of a general interfacial property factor from the transmittance images, and characterizing the interfacial property using the values of the general interfacial property factor. The interface system is configured to receive the request message for the processing system. In addition, each of the resources includes a termination

protocol unit which collects states of updating processes of the resources, and executes a termination protocol by determining whether to commit or abort the own updating process, on the basis of the collected states of the updating processes, regardless of the notification from the coordinator.

1459826087-f79757e8-acd9-4edb-b8f6-4baaf18c0a07

An electronic component comprising an integrated device and a plurality of packaging layers in which routing between locations on the device and lands on the surface of the component is provided by a redistribution layer. Then, a reflective action of a muscle to resist this load acts on the gluteus maximus muscle, and then the leg is moved further backward, resulting in a wearer's waist being twisted backward greatly. The inlet and outlet ducts are horizontally spaced apart from each other and are fluidly connected to each other through the intermediate ceiling cavity to form a ventilation path.

1459826088-7928a5c0-8238-46f6-9e95-2696646a0f9e

RGD-chlorophyll and RGD-bacteriochlorophyll conjugates that home and accumulate in necrotic tumor domains much longer than in tumor non-necrotic domains are provided for use in minimally invasive tumor-targeted imaging, tumor-targeted photodynamic therapy, and/or on-line prognosis of necrotic tumors. The cellular cushioning article may be used to wrap items such as fragile items needing protection during storage or shipping. The first magnetic pole width  $H_1$  and the second magnetic pole width  $H_2$  are formed to satisfy the relation  $H_1 \leq H_3 \leq 3T \leq H_2$ , wherein  $H_2$  is a physical tape contact width of the transducing head and  $3T$  is a width of three adjacent recorded tracks traversed by the head. The plurality of membranes are coupled to the liquid-filled chamber, and a plurality of optical waveguides are coupled to the liquid-filled chamber.

1459826089-1789f45b-4627-4af4-a163-fda66bce5687

A variety of electrodes for use in a plasma arc torch are provided that improve cooling between the electrode and an adjacent cathodic element such as a cathode. In one embodiment, the holding tool includes a body portion including first and second curved portions, where each of the first and second curved portions includes two or more teeth. The microwave transmission is received by a base unit comprising another microwave transceiver and Ethernet transceiver linked to a computer.

1459826089-3a870dd4-2706-45bf-b1cb-cd9cb407ef62

A system and methods of using commodity switches to produce a switch fabric are disclosed. In one embodiment, a gesture recognition simulation system includes a three-dimensional display system that displays a three-dimensional image of at least one simulated object having at least one functional component. The mounting apparatus includes a pair of mounting uprights and a hitch tongue which is easily mounted in a hitch receiver which is secured to the front of a vehicle.

1459826089-94c154f3-1f74-4e6c-b861-46d368409cbf

An air suspension includes a plurality of air spring assemblies that each include a piston airbag and a primary airbag mounted over the piston airbag. The pod making system has a base for receiving a pod packaging material and a sealing tool pivotably connected to the base. A securing feature can have a first notch that is adapted to engage the orbital ring to allow rotational movement while securing the gear within the aperture. The first portion excludes at least a portion of the message body.

1459826089-caafe75b-a36f-4357-8a4f-8112a7a73f4d

Devices with electrokinetic elements are disclosed as well as their method of microfabrication for use in micro-scale analysis, mixture separation and reaction. An intermediate node is selected for relaying the message unit between a source node and the destination node in response to the predicted location of the destination node. The first encoding scheme may be performed based on a number of

transitions within the group of data bits for each data channel. The ELCD provides a code-demodulated signal to the TCD and the PE. Thus, a negative electrode can be produced without being degraded by air.

1459826090-2a0232c9-1c62-4bc6-bb40-0897a9a8a8e6

First and second polarization plates are disposed on both sides of a liquid crystal panel in which thicknesses of a liquid crystal layer are set up depending on colors of color filters. The sensor structure is provided with trenches whose width is not larger than a maximum trench width, which is sealable by the first sealing layer in the form of plugs which do not extend to the trench bottoms. In response to the determined conflict, the access terminal can employ a modulation and coding scheme for the data block. The extension driver extends or overrides functionalities of the BAMS driver.

1459826090-f830d2d6-f99a-4605-8551-276bf5175b8b

A method for auto-addressing a device in communication with a controller is disclosed. The first gas stick has a first flow path that includes a first plurality of ports formed in a common plane, and the second gas stick has a second flow path that includes a second plurality of ports formed in the common plane. The electret layer can be formed of a material that retains its electret properties extremely well even in high temperatures and humid conditions.

1459826091-0b3678fa-c96f-4abd-b1a4-9819b0ca4341

Provided is a solid electrolytic capacitor with low ESR and excellent reliability during high-temperature storage. The first battery module is connected to at least one second battery module subject to a current load after obtaining the first voltage intensity. The positive electrode includes an exposed positive current collector portion uncoated with an active material and formed in one end in the width direction of a strip-shaped positive current collector, and a positive lead is attached to the exposed positive current collector portion. A first catheter engages the first component for translation to the implantation site and a second catheter engaged with the first is provided with a prepositioned guide wire inside the second leg which may be employed to easily position a guide wire for engagement of the second leg with the leg extension.

1459826091-5bd36b49-032c-4e4f-a3cc-c71396b94048

System and method for developing cognitive skills in a student, utilizing a computing device to present stimuli and to record responses. The different buses transmit signals changed at different timings. Each processor can work on any one of the connection levels and can independently process incoming or outgoing DTUS. The spacing between the two nozzles along the scanning axis and the spacing between the two positions along the scanning axis are predetermined. Wherein each pressing arm includes a bending portion extending to the central plane and a pressing portion extending from the bending portion, the pressing portions are overlapped seen from a direction along which the contacts are arranged.

1459826091-ee5d7bd9-d0d1-46e2-a916-b4b73d15e641

A vehicle alternator control device has a power transistor, a flywheel diode, a voltage control circuit, a primary power supply circuit, and a secondary power supply circuit. Therefore, a light incidencereflection plane of the LCD panel is disposed in an almost hermetically closed space and an optical path from an integrator lens to the LCD panel is formed in the almost hermetically closed space. It is assumed that the surrounding dielectric material is a first dielectric with a first permittivity and the substrate is a second dielectric with a second permittivity. The conductor extends from the electrical connector to the mounting interface to provide a conductive pathway between the mating connector and the circuit board. An object recognition or identification system or other morphological characteristic determining system may be used to determine that the occupant is one which requires adjustment of the component. 5\xb0 with the plane of

incidence on the exit window.

1459826092-4ddaf4b4-7bc3-40f3-831f-50df381ea33f

Method of producing spring wires shaped as a cylinder. A false bottom or other compartment may be provided within the purse, for containment of the battery pack and its circuitry, and into which the cable-like sources may be plugged into, during usage. The wire is gripped and rotated in the anti-helical direction for a relative rotational interval of greater than one-half, and preferably three-fourths, of a complete relative revolution. According to the present invention, REM mirror uniformity is improved with minimal sacrifice in switching speed by utilizing a lower drive voltage when the mirror electrode sheet resistance is high, and a higher drive voltage when sufficient mirror metal is present to appreciably reduce the sheet resistance. The processes comprise reacting said compound with a hydrogenating agent and a heterogeneous hydrogenation catalyst in the presence of an ionic liquid. The passivation layer is disposed on the first built-up layer and is provided with openings exposing the first interconnection scheme.

1459826092-c45ddaa9-d208-4c15-a789-c97060054d52

According to one embodiment, an LED package includes lead frames, n LED chips and a resin body. The stiffer the media, the more likely the tendency to curl. The adaptive filter may be disabled from updating responsive to at least one of the first condition and the second condition not being satisfied. A first clutch between the first and third coupling, a second clutch between the first rotary element and the third coupling element, a third clutch between the first and fourth rotary element.

1459826092-cb413fd1-ff7b-445f-8724-9cf3afb9c32d

Tools and methods for abrasively cutting downhole pipes and casing. The type of the input image data is determined. The liquid in the orifice effects resonant oscillation with a vibration input during engine idling operation.

1459826092-e7e69702-1ca7-461f-a0ce-a1266d82ceda

A compact and efficient ultraviolet laser source based on a optically-pumped solid-state or fiber laser that produces near-infrared output light suitable for nonlinear frequency conversion. Each circuit module includes a circuit board accommodated in the housing. In some embodiments, a type of shielding mesh is selected to make more routing area available in locally congested areas. When a user speaks, that user's VCC IHS detects audio, thus designating a speaker participant.

1459826093-525330ed-6d6a-4f25-8e80-0dbf451cf7b3

The invention relates to a method of producing soluble polymer granules which are suitable for use in washing and/or cleaning surfactants. The present invention focuses on a surface of an electrode containing a metal and on a layer containing a light-emitting organic compound. An optical radiation source which produces optical radiation at an instantaneous intensity sufficient to cause non linear or otherwise enhanced interaction between optical radiation photons and the donor compound is used to decompose the donor compound and deposit the metal on the substrate. The electrical stimulation enhances air flow to the respiratory system. The limiting filters are switched according to the endoscope ID or observation state in the fluorescence mode. The clock input IO includes a first input buffer having a large threshold, a second input buffer having a small threshold and an input selector.

1459826093-565c9b8b-0a93-4b0e-96bd-e38a24aa1e35

Disclosed is a method of manufacturing a through-via. In one embodiment, an information handling system includes power level detection and power control modules. The present invention, by automatically substituting equivalent medical items for a requested medical item and by automatically archiving each prescription transaction, simplifies the prescription filling and record keeping requirements

for the pharmacy technician and pharmacist. The third wall portion includes a tab.

1459826094-33faff3d-ab11-4f2b-9767-a53d0201d0c9

An apparatus, system and method for a neural engine for recommending picks in an on-line fantasy sport draft and in on-line fantasy trades. In the method, the roll mantle is supported on the roll axle by means of hydraulic sliding bearing members which are arranged to accomplish radial fitting with bearings of the roll mantle in the loading direction and in the lateral direction with respect to it, and the axial fitting with bearings of the roll mantle. The data packet is encapsulated further in another new header, which is used to specify new VMAN tags.

1459826094-35c3a9b1-3598-4060-a0c0-68727c486ee2

An endoscope includes a rigid portion having an illuminating portion disposed therein and a cover integrally molded to include a transparent first resin member and a colored second resin member. The spools comprise an inner spool nested inside at least one outer spool to form a module. The first and second means are alternately disposed to define each of the sub-pixels into a plurality of different azimuthal angle domains. In an illustrated embodiment, the flex circuit includes portions including the first or base layer and the second or top layer and one or more reduced thickness portion including the first or base layer and not the second layer. A method for manufacturing an antenna window including disposing a mask on an aluminum substrate and anodizing the aluminum substrate to a selected thickness is also provided.

1459826094-be75796b-2e5c-4414-afb3-c55b2b9c5474

A system and method for self-servo-writing of multi-slot timing patterns is described. The linear fluid device features a movable piston means for linear motion, a feature wherein said body provides rotational movement for fluid port alignment and a pressure vessel containing an end cap and cavity sized to guide the movable piston. The board may include a frame and means for securing a dry erase marker to the board. A preferred embodiment includes the complementary overlap with a design of any geometric shape. The second forming instruction generating unit generates a second forming instruction for causing the second image forming apparatus to form another page that cannot be formed by the first image forming apparatus. According to another embodiment of the present invention, a method of deflating an inflatable device is provided.

1459826094-e004b815-081e-4f6b-b39f-ecdbf185de22

A method for synchronizing a base station to a mobile station includes transmitting a signal sequence K of length n from the base station to the mobile station. The electronic circuit has input and output terminals. Ventilatory response is estimated based on detected values of actual heart rate, arterial oxygen saturation, right ventricular O<sub>2</sub>, stroke volume, tidal volume, and respiration rate. A finger extends into a recess formed at one end of the cartridge, thereby positively positioning the cartridge in the slot.

1459826095-05c9aab3-e93f-4b64-8256-3a1f294fa229

A fuel cell system has a fuel cell stack and a controller. This SAF is composed of two ferromagnetic layers that are separated by a coupling layer. In the case of viruses, files or storage areas which have been altered are scanned against a super-set of virus definitions. At least a portion of a thermal load from the electronic component is transported to the thermal energy absorbing material, and the portion of the thermal load is absorbed with the thermal energy absorbing material while undergoing an endothermic reaction during a phase change of the material, such that a temperature of the electronic component is maintained below a mounting surface temperature. This abstract is intended as a scanning tool for purposes of searching in the particular art and is not intended to be limiting of the present invention.

1459826095-0c4a1926-716e-473f-a835-f4892448acbc

A bismuth oxychloride effect pigment has a zinc oxide or microfine titanium dioxide particulate at about the surface of the crystals of the bismuth oxychloride. The tape measure system includes a housing with a recoil unit containing a length of a tape measure, a dispensing neck extending from the housing for guiding and dispensing the tape measure, and wherein the dispensing neck includes a guide edge for marking a surface of a measured object. Recently, such memory elements have begun to be implemented on chips along with high-speed logic circuitry.

1459826095-615deca4-2b94-490a-ace4-8cfd85125b40

A neurofeedback technique uses color as its feedback cue. The spliced wire also includes a stabilizer structure surrounding at least a portion of the superconductor joint, wherein the superconductor joint is in electrical contact with the stabilizer structure; and a substantially nonporous electrically conductive filler, wherein the filler substantially surrounds the superconductor joint. Also, another manufacturing method includes a first step of implanting an ion of an impurity element for imparting a conductivity type, a second step of implanting an ion of a rare gas element, and a third step of removing a resist mask after the first step and the second step. Each guide rod system includes a guide rod. Each of the isolating bodies has a through hole for slipping on the main core part and a guided slot. Accordingly, the wafer can be prevented from being further damaged, wafer particles are prevented from polluting the fabricating equipment, and the operating efficiency and productivity of the fabricating equipment are enhanced.

1459826095-7c9bf263-bb39-432e-bd23-3c04b2e77b2f

A signal detecting method and device for a multi-codeword multi-input multi-output system are provided, which are used in the field of communication and solve the problem that it is complex to implement a signal detecting method in the multi-codeword MIMO system and the error between the signal obtained through detection and the signal actually transmitted from the transmitting end is large. The device includes a key, a nut and an elastic sheath provided with a wall that is adjustable by deformation in a housing of the support, by screwing between the key and the nut, between an insertion configuration and a locking configuration. The method and system include providing a strain element and providing a coil. In embodiments, data is transformed by decompressing a compressed instruction, decrypting an encrypted instruction, decoding a macro instruction, or transforming a non-native instruction into at least one instruction.

1459826095-c02d4437-1560-467f-ab7d-4957cdc66716

A continuous coating system has several treatment chambers that are arranged one after the other in such a way that in each case, a wall of one treatment chamber having a passage contacts a wall in the adjacent treatment chamber that also has a passage. The composition is effective and convenient for supporting blood lipid health. A portion of the sub-collector lateral to the remainder of the HBT is rendered electrically insulative, preferably by an ion implant, to provide electrical isolation for the device and improve its planarity by avoiding etching through the sub-collector. Specifically, the EPDM rubber composition comprises 100 phr of an EPDM rubber, 5 phr of a polyolefin containing at least one carbonyl group and 10 phr of a crystalline polyolefin resin.

1459826096-1f74a62e-ddd1-4d76-888c-35f64a6ba7ac

A digital image capture and processing system providing a high degree of adaptability to ambient illumination levels and having great dynamic range. Received data is clocked into a FIFO buffer within the elastic buffer based on the recovered clock and read out based upon the local clock, with the buffer expanding or contracting by adjustment of an index to accommodate skew of greater than one clock period. In another aspect, the invention relates to a method of treating a subject having an inflammatory condition, comprising administering to the subject

an effective amount of an agent which modulates the binding of MEC to CCR3 and/or CCR10. The array is configured by providing elongated sourcedrain regions of zigzag configuration in side-by-side relation. The system provides a user with an opportunity to adjust program guide settings with a given one of the interactive television program guides.

1459826096-7b69cd4f-d1aa-4eae-bbca-daf7522cf55e

Methods and systems are disclosed for determining whether a patient is a responder to cardiac resynchronization therapy. A MESH-type of network is provided to allow for the deployment and integration of large numbers of low power radios. A portal at the base of the central shaft provides access for placing shoes on a shoe tray and retrieving the shoes from the cabinet. Each cylinder has a scaled line for indicating the amount of coins vertically stacked in the cylindrical columns.

1459826096-9887667d-895a-48e1-ba26-02c5c979a147

An integrated circuit includes a node coupled between a terminal of the integrated circuit and a transmitter circuit. The radar may be scanned in at least one dimension, which may include angle or range. A damping system employing such a friction wedge includes a bolster pocket insert.

1459826096-c34ce7e0-239b-4825-ae61-57723c75d790

A fuel saving system for a vehicle powered by an internal combustion engine and having a hydraulically activated automatic transmission. In an embodiment, a user's mobile terminal codes the video in multiple layers. A receiving structure is located between the immovable portion and the movable portion for receiving the heat pipe therein.

1459826096-cdb7ce7f-a1e6-41e5-b9de-2c1d2e2f23bb

In a method for exchanging data between several stations belonging to various data bus systems. The cutting portion includes a plurality of blades separated by flutes, and a tapered inner surface with threads. The data retrieval program obtains data from the plurality of power supplies. The two rows of first connection contacts are disposed on the top and bottom surfaces of the connection board, respectively. The magnification results of the image and the high-frequency portion are then processed by a fusion process, so as to output an image having sharp but not blocky edges, rich details and strong contrast.

1459826097-34259249-5414-429e-9473-2c0a768ce043

A tire chain includes a side member. The endoscope illuminating optical system is constituted to illuminate an observed region by light guided by a light guide 1, by way of a gradient index lens 2, and the gradient index lens 2 satisfies Condition Equations and below:  $2 \leq \frac{d}{r} \leq 60$ . The ATM channels can provide ATM-cells at different traffic parameters, such as, for example, different cell or bit rate, priorities, and bursts. A length adjuster threadedly connects one of the longitudinal ends of the center link with the tie rod.

1459826097-3c4ff8b6-5af7-460b-818e-9abdaaaeec86

User interfaces for multiple display regions are described. An inner surface of the cover plate is provided with a fixing portion. The base layer has a volume resistivity set to not less than 1. The loss in water weight and the exit air relative humidity is tracked by sensors and recorded. In addition to functional testing, scan testing of die and ICs is also possible.

1459826097-ddfbbf9f-f335-4a28-a208-0a54b1549895

The timing of output signals can be controlled by coupling a digital signal through a signal distribution tree having a plurality of branches extending from an input node to respective clock inputs of a plurality of latches. In certain aspects and embodiments, the described compounds or salts thereof, formulations thereof, conjugates thereof, derivatives thereof, forms thereof are active on one or more

protein kinases, including a Zeta-chain-associated protein kinase 70, and any mutations thereof. The housing space includes a first side face; two second side faces adjoining the first side face, and an insert face adjoining the first side face and the second side faces for admitting the inserted card.

1459826097-ff255737-8a80-49c8-8dbb-535824456023

A system may include several nodes coupled by an inter-node network. The output signal includes an amplified representation of the transmit signals from the two transceiver modules. Therefore, since the amount of the upper can be reduced and a separate insole is not necessary, the total weight of the shoes can also be reduced. Only when the SIR value exceeds the SIR threshold value, a demodulated result of the calibration signal is outputted. The TFT further includes a storage electrode line having a storage electrode disposed in a central portion of the pixel region.

1459826098-1d6bba0a-3119-4068-a2f0-c74d4d5caa86

A golf ball 2 has a hollow center 8, a mid layer 10, an inner cover 12 and an outer cover 14. The input of the amplifier is electrically connected to the at least one terminal of the transistor; and the output of the amplifier is electrically connected to the at least one isolated well of the at least one transistor. The fruit matures under the ecological conditions described during early June, with first picking on Jun. Insulated glass units using the disclosed insulating spacers and windows employing these insulated glass units have significantly better thermal performance than prior art insulated glass units and windows.

1459826098-328cbda9-b7ad-44ef-b2b5-8e71dd06b976

An electronic device may include a printed circuit board and a speaker box defining an acoustic volume between spaced apart first and second speaker box walls with the first speaker box wall being between the second speaker box wall and the printed circuit board. Call records provided by telephone companies are evaluated against specified rules. The command terminal receives commands including read and program commands. Thus, the computational effort invested in the POWs is recycled to accomplish the minting operation. Interlocking hook assemblies for elastic members include an elastic member with interlocking hook devices 900 including two similar interlocking hook devices 800 with a connector groove 801 and a catch feature 802 and elastic member 811.

1459826099-e25eb3c5-4130-4c3b-a6ed-5f7b954d3ce6

A bistatic radar system and method. In one aspect, a method includes receiving a request for access to a security system device; determining whether the device is set to a first mode or a second mode; and in response to determining that the device is in the second mode, generating one or more notifications to authorized users identifying the access to the security device. A radio-frequency current is modulated by the frequency mixing stage to generate an output mid-frequency current signal.

1459826100-6b944a87-d8f6-407b-91e8-b1bfedbf58fc

Methods and devices for forming a contact over a metal gate for a transistor are provided. This invention in it's preferred embodiment is shown on, but not limited to, the stern of a kayak. The strap also includes at least two modes of operation. The package can include a narrow seal surrounding the one or more encapsulated MEMS devices.

1459826100-f910232c-36f9-4e0c-a24e-f2f4c4e37493

Facial animation values are generated using a sequence of facial image frames and synchronously captured audio data of a speaking actor. The susceptor includes a plate shaped main body 13 and a surface corrosion resistant layer 14 including the heating face. The USB flash memory device further includes a folding portion which is proximal to the USB connector and enables the USB flash memory device to be

folded. As a result, the charging device can easily adjust an electric resistance, minimizing variations of the contact linear pressure and the contact nip, material and processing expenses can be cut down, and productivity of the charging device is improved. After the first compilation pass, executable code is made to interact with test data to generate statistical execution data which is collected by previously inserted counters. In the enhanced drag and drop operation, a user is presented a list of options of operations that may be performed when the object is dropped on the other object.

1459826101-dfa4e29b-03f0-4693-bead-cb1cbe8b1f33

A container assembly comprises a vessel for containing a biological medium, gametes and/or one or more embryo. In one aspect, etching a surface of the semiconductor substrate by dry-etching, detecting bright points on the surface of the etched surface with a foreign matter inspection device, and evaluating the quality of the semiconductor substrate based on the number and/or distribution pattern of the detected bright points are included. Instead of standardized models, test models may be developed and utilized, but this also incurs cost and delay.

1459826101-f0d63361-29c8-4b5d-b3af-5bc44e414f5f

Devices and methods for improving device therapy such as cardiac resynchronization therapy are described. The heaters are supported in accurate, very close proximity to the bimetal snap disc to ensure excellent heat transfer thereto. The connection detector does not contact receiving portions of the male housing when the connection detector is at the standby position.

1459826102-abe38b2b-bc97-4fc0-9c04-0f96b2857e80

A gel formed from an intimate mixture of polyvinyl alcohol, an alkaline or alkaline earth metal borate, water and an alginate and/or a carrageenan, having cryogenic characteristics, substances with cosmetic and/or pharmacological characteristics being easily dispersible in said gel, to be released slowly when the gel is applied to the human skin. The results may be trusted and confidential even if the target device has malicious operating system or other software running. A first combustion heater system is coupled to at least one of the reformer, the shift reactor, and the preferential oxidation reactor to preheat the component during a rapid startup sequence. A base portion extending downwardly from the bottom wall includes a plurality of base walls including side portions each having corrugated portions below the side walls. The first connector is electrically connected to some of the plurality of data electrodes, and the second connector is electrically connected to the data electrodes which are not connected to the first connector.

1459826103-9090328a-cec3-4c7f-8491-c304bd309344

An information recording device comprising at least a recording pulse generating means and a recording pulse selecting means capable of generating various multi-pulses each of which is a combination of a leading heating pulse and a succeeding heating pulse, and rectangular pulses each of which is a single pulse, as a recording pulse, is disclosed. The low-pressure buffer tank is in open connection with the engine. Stability is improved by diminishing a moment in a forward tilting direction when the user is standing upright. Alternatively, a pouch contains temperature-retentive granular material and is disposed within a corresponding compartment of the upper portion. A plurality of beads is provided.

1459826103-c12b94e1-55b8-4754-9c0a-cd088bb78c57

An electronic endoscope includes an illumination unit, an imaging unit and an image generating unit. The panel temperature  $T$  of the liquid crystal display device is controlled to be equal to or greater than  $T_{NI-65}$  and less than or equal to  $T_{NI-15}$ , where  $T_{NI}$  is the nematic-isotropic phase transition temperature of the liquid crystal composition of the liquid crystal layer. In other words, storage system may independently reclaim storage space not used by the client file system, without that file system's intervention. In a preferred embodiment of the invention, a

pressure relief valve is incorporated as the pressure relief mechanism in the inflatable module. The sensor can be used in any surface enhanced spectroscopic applications.

1459826103-cd5dd059-5eea-43d0-b7ef-8ceafebf00b9

A folding seat has a support structure, a backrest and a seat base. The right and left wings having at least a portion of which are rotatable from a horizontal position wherein they produce lift in forward flight, to an at least partially downward position wherein they act as landing struts. Two binarization approaches, localized background thresholds and Laplacian edge enhancement, are combined into a process to enhance the strengths of the two methods and eliminate their weaknesses. In decoding a desired level of the encoded data, a checksum is determined again on the basis of the encoded data and compared with the checksum written in the header. Advancement and retraction of a lancet may be controlled by a feedback loop monitoring the position and velocity of the lancet embodiments of the lancet driver can be configured to follow a predetermined tissue lancing profile. The device structure and methods of the present invention thus provide the advantages of uniform finFET fabrication while using cost effect bulk wafers.

1459826104-14e13f84-7a40-499c-8f0c-4202b1f92878

An electronically-scored game comprises an electronic controller and at least one sensor operatively connected with the controller, the at least one sensor adapted to detect at least one activity associated with the game and to generate a signal. The stator includes a first stator electrode of two or more layers and a second stator electrode of two or more layers in the interior of a dielectric substrate. The method can include retrieving a client-side script, for execution in a client-environment and detecting an incompatibility of the retrieved client-side script resulting from a dependency of the client-side script upon an expected occurrence of an event in the client-environment.

1459826104-24e36618-e8bb-4bb4-a88f-b9842cb10551

A printing machine as described has a plurality of image formation units each of which serves to perform an printing operation on a printing sheet. Each finger includes a shank and an inwardly extending tab. Before testing commences, the midpoint of an individual panty is placed at the center of the clamps. For the module, the beam can be an elongated, hollow beam, such as a box beam, which is made of a molded, pre-stressed concrete. The knowledge tree can be updated dynamically with knowledge mining functions or self-learning functions.

1459826104-2f6b7552-b86e-4750-ae48-e8eaa5b40862

An object of the present invention is to suitably perform a zooming control operation in the case that a zoom ring is provided at a lens-side portion and zoom switches are provided at a camera-body-side portion of a lens-interchangeable video camera. In particular, the present invention relates to diffraction gratings applied to a substrate, such as a hologram. Device data may be generated based at least in part on the received data.

1459826104-4e076f88-e7ed-426d-9347-de7b9cc272a4

A body pigment with a good skin feel for cosmetics is provided which has an appropriate crumbling property and combines slipping property and adhesiveness without compromising oil absorption. A gain application element receives a sequence of digital input samples and a digital gain signal, and combines the digital gain signal with the digital input samples to generate a sequence of gain-compensated digital samples. Thus, an antenna apparatus easy to achieve impedance matching thereof by use of a connection member can be economically realized.

1459826104-87a6ec3a-73e2-41fc-a7ec-3f312fec8c01

An approach is provided for improving reception availability for multi-subscriber identity module devices. In one form each of the controlled release ceramic

particles has an active material substantially homogeneously dispersed throughout the particles, wherein the active material is capable of being released from said particles, and the active material in said particles is substantially protected from degradation until release of the active material from the particles. The RRS includes a remote interface unit, a RF transceiver unit and an antenna. A roller engages a bearing surface on the lower portion of the gear racks. The absorbent component is capable of absorbing laser light within a given wavelength range thereby creating a welded area between a surface of the layer having the absorbent component and the surface of a layer facing the layer having the absorbent component while other layers remain unwelded. The photoresist layer is then developed, forming a photoresist pattern having rectangular-shaped openings formed at intersections of the first and the second exposure regions.

1459826104-d36fb172-4f66-471b-8377-9a31295f7a1b

The present invention provides a process for producing an optical connector, an apparatus for producing the same, and a process for forming a polymer coating film on an end face of a fibrous dielectric, which can dispose a refractive index adjuster only onto an end face of an optical transmitting medium with excellent reproducibility. At least one of the wide ion beams has a dose different from that of at least another wide ion beam. The membrane is deformable in response to the parameter.

1459826105-8d9b3b9b-bea4-416b-9c00-c4807fcfc7be

A decoder decodes a binary input string encoded with a variable length code using an offset lookup table and a symbol lookup table. The amplification stage includes a gain medium operable to receive at least one pump signal and to receive from a multiple span communication link an optical signal comprising a leading edge. The centralized registrar provides a content service with an initial script to include in the web page along with the contributor identifier. Processed workpieces and new workpieces may be exchanged by a simple underover motion of the two robot arms.

1459826105-9c1d61f6-f641-4a7a-b577-519a940d8a97

There is provided a method of manufacturing liquid transporting apparatus including: providing a channel unit; providing a piezoelectric actuator having a first and second active portion corresponding to a central portion and an outer periphery portion of the pressure chamber, respectively. Different embodiments disclosed include devices having threaded intramedullary components, devices configured to receive bone growth promoting substances, devices with resorbable components, and devices configured to reduce shear stress. The scanner further includes a couple of pulse width modulators or \u201cPWMS\u201d, a synthetic circuit, and a laser diode module.

1459826105-c86d7ea8-5d47-4db9-b8e0-2d2d971825da

Fluoropolymers containing one or more azide group wherein the azide group is not a sulfonyl-azide group and processes of preparing them. There is a first timing identifier for a first data set based on a timing characteristic of the first data set. The resource may be associated with an application, such as an email application that may be hosted remotely from a client device. Upon determining a current road surface from the monitoring, the road noise masking includes calculating a masking noise shape commensurate with the expected interior sound, and transmitting instructions including the masking noise shape to an audio system in the vehicle. In one embodiment, a trench-based photo cells provides very fast capture of photo-generated charge carriers, particularly when compared with conventional approaches, as the trenches of the photo cells create depleted regions deep within the bulk of the substrate that avoid the time-consuming diffusion of carriers. The substrate plate is transported along the first direction together with the mask, thereby preventing a diffusive reflection.

1459826105-d35e7a79-a7c8-48e1-8d0c-caed67d51fb0

An exhaust system for use with a microwave excited ultraviolet lamp system is provided to receive cooling air emitted from the lamp system and to contain and direct the cooling air so as not to contact a substrate being irradiated with ultraviolet light. The fourth and the fifth lens are cemented with an interface which is convex on the object side and has an aspherical shape. For a precharge-pulldown bus, if the wire has been discharged during the pulldown cycle of the bus, the precharge current pulse matcher does not consume any current.

1459826106-3c9fa7df-ccf3-4b37-a705-0ac42454a5f9

A tamper-resistant outlet cover uses a spreadable grounding socket engageable post to secure the cover in place to thereby block access to an electrical receptacle, typically a wall outlet. Assigned applications are automatically applied via a script to the policy recipients, thereby ensuring that the recipient has an administrator-specified workstation configuration. The data control unit transmits to the Banyan unit a control signal representing a channel to which data belongs, and controls the operations of the Banyan switches.

1459826106-755eda28-2e21-4f60-9c5c-f63538b35d82

A weighted open loop power control transmitter for controlling transmission power levels using a spread spectrum time division duplex technique having frames with timeslots for communication includes a demodulator configured to receive a transmitted signal from the receiver, a channel estimation device, a data estimation device, and a weighted open loop power controller. A method including arranging a plurality of second dice on a first die such that collectively the plurality of second dice include a surface area approximating the surface area of the first die; and electrically coupling a plurality of second device to a plurality of the first die. The method follows on from a preliminary step of detecting ambiguous concepts in a database. Moreover, because a plurality of openings of the porous board 32 are regularly arranged, forming either a tortoise-shell formed mesh 22 or lozenge-formed mesh 26, the porous board 32 can be easily molded with a mold 30 and can be accurately formed with high precision even in mass production. The other surface electrically connects to the circuit board through bonded wires and/or vias formed through the substrate.

1459826106-8a527afd-caa4-4aa1-85fb-1fc618a8c279

An zooming adjustment mechanism for an optical system is provided for reducing the length of the optical system along its optical axis, and enable the size down of the optical system. The scan driver includes a shift register and a multiple signal applying unit. The flared passage forms a convection chimney in which heat can accelerate up the convection chimney. Rounded bearing surfaces are in contact with one another for frictionally engaging one another, and a pair of elongate anchoring members embedded in the sea floor hold the turbines or hydro-foils above the sea floor in an aligned stacked relationship via end portions to assure their frictional engagement.

1459826107-2006c0c5-4665-4252-bcd4-9af73f995e95

A blade server for increasing the amount of processing capacity per rack bay is disclosed. The conical ring structure has a side opposite the tapering side that is cylindrical, and a cylindrical diameter that is concentric with the arcuate side. In varying embodiments, these controls allow a user to select a particular job set and, for example, to simultaneously pause, delete, or prioritize each print request associated with that job set. The connection between the board and the plug end is achieved by melting the solder. The semiconductor device includes a silicon layer, a gate insulating film formed on the silicon layer, a metal boron compound layer formed on the gate insulating film, and a gate electrode formed on the metal boron compound layer and containing at least silicon. For example, compounds of interest are of the formula: .

1459826107-adbf761-6c3a-4019-a79d-0a5c9ba3be6a

An innovative pharmaceutical form for controlled drug release relates to systems obtained by the assembly of individual release modules, of which the capacity to release the drug in time and in space depends on the way in which the modules have been assembled. Such partitioning may be performed by receiving information associated with at least one characteristic of the data and performing an algorithm to divide the data into related data segments. The encapsulation is specially profiled to allow the downhole tool to be expanded into the wall of the wellbore without leaving a channel outside of the tool through which formation fluids might vertically migrate. The sources of the pre-charge devices are grounded. The first socket is disposed through at least one of an edge and an end of the sensor element, and the second socket is disposed through at least one of the edge and the end of the sensor element. By preventing the collection of overspray it is not necessary for an operator to wipe the gun clean.

1459826107-b30d87c9-e576-43ba-a7d6-5969b2ed5d40

A capping mechanism is disclosed for a printhead having a plurality of nozzles arranged to deliver ink onto print media which is transported past the printhead. Foam springs have geometric cross-sectional configurations with mechanical spring properties which work in concert with the spring properties of foam. The transformations are used to create, from a set of CCD products produced from the set of SAR images, a corresponding set of co-registered CCD products. A curable birefringent liquid crystal material is applied to one or both of the layer of isotropic material and the flexible sheet. A second section of the rectangle may be filled by dividing the second section into  $n$  vertical subsections having equal width and filling the  $n$  vertical subsections using  $n$  region fill processors. The light-transmissible electrode electrically connects to the reflecting electrode and extends to overlap the effective margin.

1459826107-e8914c46-5809-40e1-b52d-8563fcfe6faf

Cosmetic compositions intended for topical application to the skin for lightening and/or brightening the skin are provided. The suture housing has an open position and a closed position, and the needle can be removed from the suture housing when in the open position. The intermediate assembly can form part of the equipment of a rail vehicle, or alternatively it can form part of the equipment of a platform. Impinging at least some of the first reflected portion of the beam of light on a second region of the dynamic filter. Air-cured tobacco may be cured in four weeks or less when treated with a wash solution of bicarbonate salts.

1459826108-0a9592d0-5a45-422e-a181-64773271a35d

Disclosed embodiments comprise an energy harvesting computer device in association with a communication device comprising interactive user interface operatively configured with CMOS multiple antennas on chip for boosting signal receptions and for providing faster data transmission speed. The front portion of the club head has a substantially flat surface for striking a golf ball. The transition portion is angled toward an anterior direction and a medial direction with respect to the implement, the proximal portion of the handle being connected to the transition portion and extending in a proximal direction substantially parallel to the implement. Further, the method may include executing, at a third computer, the service using the modified service request and processing, by a second set of software plug-ins based on the sequence, a result from the executing step. According to another embodiment, the biologically active agent is a catalytic antibody and the first substance is a prodrug. A relaxed memory model vulnerability in a computer program includes the presence of program executions that are not sequentially consistent.

1459826108-3a458f62-1b29-4e85-a4af-15cf6b4fb527

Components of an arrangement interval in first and second directions between first to third subpixels in a pixel satisfy the following expressions:  $p_{v1}p_{v2}p_{v3}$ ;  $p_{v30}$ ; and  $p_{h1}p_{h2}p_{h3}$ . The invention makes it possible to obtain particularly fast

colorations. Furthermore, the cylindrical members maintain at least one protuberance. A liquid supply path 53 for supplying the liquid as the detection object to the cavity 43 and a liquid discharge path 54 for discharging the liquid as the detection object from the cavity 43 are formed in the flow path forming base portion 50.

1459826108-6eefd05f-5d08-4f14-b30c-bddb9acade3d

A method for efficiently scheduling virtual resource blocks to physical resource blocks is disclosed. The switching circuit has a mode-selecting circuit, a comparator and a control module. The outboard end is pivotally mounted to a king pin.

1459826108-8b08881a-51be-41cb-94f9-f67b057e24de

The present invention provides a method of making a headliner for use in an automobile interior. In some embodiments, extended operation requests and responses are transmitted over the extension channel using SOAP methods reserved for extended operation requests and responses, respectively. By this method, a layer containing detected different portions is automatically generated in logic equivalence checking between a modified HDL and a gate level logic circuit, so that logic synthesis can be performed in a unit smaller than the unit for the conventional logic synthesis. The reference electrical parameter is compared with an operating electrical parameter corresponding to the operating driving current of the illumination source. The invention also relates to a device for generating and conditioning X-rays for applications for angle-dispersive X-ray reflectometry. Based on this display, an index is selected and the portion of the document data corresponding to the selected index is printed.

1459826109-0085d589-e1a4-4049-b33b-949503eba410

A device for producing an aerosol from vaporizable constituents of tobacco comprises a vaporizing chamber within which the tobacco is placed. The fixation device includes a base portion including a first leg, a second leg, and a groove located between the first and second legs and a top portion extending from the base portion. An exothermically reactive structure is disposed on the controlling mechanism, such that, when activated, an exothermic alloying reaction between alloys in the exothermically reactive structure operates the controlling mechanism. The layer may be formed on the substrate via molecular beam epitaxy. A third loading arm raises the first bale from the first conveyor to allow the first loading arm to raise a third bale from the ground and position it on the first conveyor, and then lowers the first bale to rest on the second and third bales.

1459826109-4c91192d-8090-4059-8c73-5961ea65f146

Methods and apparatus for reducing precision of an input signal, by comparing a portion of the input signal to a preselected threshold value, and determining a selectable bias responsive to the comparison. An animal control device includes a retractable leash assembly for being mounted to a collar or other harness. Signals generated by that sensor are applied to a missile's guidance system's processing electronics that then determines the distance from the missile to the beam from the width of the signal generated by the sensor due to detecting scattered radiation from that laser beam.

1459826109-4f4d265a-729f-47be-9cf0-5ea7e8a7727b

The present invention is a method, system, and product for optimizing timing in a circuit after layout of the circuit has been completed. The selectable torque transfer devices are engaged singly or in combinations to yield an EVT with a continuously variable range of speeds and up to four mechanically fixed forward speed ratios. A read command and address to the plurality of DRAM devices on the command and address busses in synchronization with the clock signal. A hook extends from the end of the shaft. Methods for using IL-12 as an adjuvant in combination with vaccines against Bordetella are also provided. The self-aligned buried contact

in the CMOS imager decreases leakage from the diffusion region into the substrate which may occur with other techniques for interconnecting the diffusion region with the source follower transistor gate.

1459826109-bfd78e46-dff2-4363-ba24-7ffa3a2d74f9

Generation of consistent connection data for a first circuit embedded in a second circuit. The light injector injects light into the light guide panel at a suitable angle for total internal reflection of the injected light at the surfaces of the light guide panel. The distance between the surface with the guide grooves and pits of the  $t$ th signal recording layer and the  $k$ th signal recording layer becomes uniform, and therefore the thickness of the  $t$ th separation layer can be kept uniform. 10 to 20, including near stoichiometric R values approaching 1, being the ratio of charged groups present on the component polyelectrolytes employed. A prong of the plurality of prongs includes a substantially right-angled bend in a middle region of the prong.

1459826110-37078b64-cd4c-4f69-b0d2-c9318795fe9e

The present invention relates to adjuvanted recombinant anti-rabies vaccines and the oral administration of such vaccines to raccoons and other wildlife. or below, and the synthetic resin emulsion has been produced by adding the monomer mixture for core formation and a pH adjustor to an aqueous copolymer solution, which has not been neutralized, produced by polymerizing the unsaturated carboxylic acid and the hydrophilic comonomer in an aqueous medium, and allowing a polymerization reaction to proceed. Subsequently a transition is made to color mode printing.

1459826110-9c2a8275-c2c0-4abc-81f9-973ec2ac3d20

Erroneous determination of an image caused by color shift is prevented. Resources associated with the wireless device are determined they should be re-allocated. A deviation of the measured alteration from the expected alteration is then calculated. The VI probe may then be inserted into the circuit along with a second known load in place of the Load 1, and a second signal may be applied to the circuit.

1459826110-cabac397-c1a7-4b9d-ad97-f1fa7c177a63

A method and system for providing a multi-level interconnection network is provided. The external bonding pads may be formed near the ends of the frame and have an upper surface facing away from the substrate. The plurality of modules includes a satellite signal receiver, a packetizer, a network interface, a concentrator, and a decoder. Thus, optimal welding of head-hardened rails can be achieved. 01% by mass to 1% by mass:where R1 and R2 each represent C2-C4 alkylene; R3 and R4 are each any one of a hydrogen atom, C1-C6 straight-chain alkyl, and C1-C6 branched-chain alkyl; and x and y each represent a positive integer and the sum of x and y is 1 to 16.

1459826111-bfc15a54-0140-4310-a4e3-a25c514dc529

A method and apparatus for providing a single service destination in a telecommunications network is disclosed. Each predefined two dimensional adaptive spline wavelet waveform is formed by the superposition of one or more B-splines. Each network device can receive and transmit media signals from media devices.

1459826111-c69e1347-627b-4a48-8a05-ad11f0ef6d82

A shielding device is provided in which a layer of deformable electrically conductive material is conformed to fit over the components on the board. If a contaminant induced electrical fault occurs in the selectively protected electrical system, the electrical fault is more likely to occur in the un-encapsulated controller, such that the selectively protected electrical system is disabled. With the closing apparatus according to at least one embodiment of the invention, a locking element can have a particularly simple design: it can be guided in the actuating element. The elongate member has a section that extends a longitudinal

direction of the wire body. The communications capabilities and processors in the MMA AT and the MMA AH allow the system to establish MMA AT to MMA AH links after the mines have been scattered. In the device, a pressheat unit presses a recording medium with a toner image formed against the belt member such that the toner image contacts with the surface layer, and heats the recording medium to melt at least a surface of the toner image.

1459826111-d5924ec5-ca52-462b-abd0-cdb2ea2f1e46

A set of seismic detectors is distributed throughout a defense zone in communication with a set of attack or other controllable devices. The method further comprises manufacturing a second key component at the first point of fabrication and assembling the second key component with the first common component at the second point of fabrication. The button is inserted in the cutout, and the arm is pivotably mounted on the computer bezel. Additionally, the handle body can have a compartment including a device for providing access thereto. The same control element also emits control signals for changing the operating state.

1459826111-e7b07420-5105-4e8c-944d-ac6b83f31823

A Lewis acid catalyst composition comprising a specific mixed medium and a Lewis acid catalyst, wherein the Lewis acid catalyst is at least one compound selected from the group consisting of compounds respectively represented by the following formulae and : $\text{NnM}$ ,  $\text{u2003u2003}$ and  $\text{CnM}$ . The firing control housing attaches to the cylinder frame and supports firing control mechanism components, such as a trigger and a pivotable hammer actuated by the trigger. Each sheet has a strip of adhesive proximate a leading edge of the sheet. The electrodes are in electrical contact with the conductive liquid and are located on opposite sides of one of the channels. In other embodiments, this is done by creating a tuple describing anomaly parameters for the anomalous query.

1459826112-0a681f08-bdbb-4cfc-9343-b541411b8fc1

A system is provided for aesthetically covering access openings in a tub skirt when access to the interior of the skirt is not required. In particular, the media objects are optimized according to the mobile device's characteristics to ensure efficient delivery and optimal rendering thereon. The instructions further, when executed by a processor, cause the processor to erase, if the particular service provider is not one of the favored service providers, the data stored at the wireless device. The eccentric weight includes a main body and at least one inserting portion having a density higher than that of the main body. This prevents redundant prices to be stored in the system and improves its cost effectiveness.

1459826112-94efc317-345c-4734-8ef5-d63b380e4745

A device for clamping at least two components for use in friction stir welding supports the components and holds the components in place using a plurality of channels placed under vacuum for clamping of the components during friction stir welding. The housing also includes a locking wedge. The resin composition is useful as a chemically amplified positive-tone resist excelling in focal depth allowance, sensitivity, resolution, pattern profile, and PED stability. The lamp can be easily mounted into and removed from the glass sleeve. This invention also relates to methods for producing other wheat varieties or breeding lines derived from wheat variety W000570E1 and to wheat varieties or breeding lines produced by those methods. Circular and functionally equivalent buffers permit sophisticated data processing in which preceding data subsequently are re-analyzed for the possibility that the data are part of a developing event peak, such as a developing shoulder thereof, or part of a declining peak.

1459826112-a451d91d-ab15-4611-9b7f-b572ae76f8f0

A gate adjustment system has a bull-nose glide, a flat glide, a plurality of spacers, a gap size gauge, and a gap adjustment wedge. The method includes maintaining a database of queues, each queue in the database being associated with

packets intended to be forwarded to a corresponding one of a plurality of final destinations via a corresponding one of the intermediate destinations. The fluid dispenser has an inside wall provided with at least two longitudinal ribs extending over the height of the skirt. The output may be in the form of audio and/or video. The calculating unit calculates a minimum unit forming each of the selected position detection patterns.

1459826113-5d8b4aa0-b0ef-4934-92e6-45695d613a24

Methods and apparatus for intelligent cache eviction at storage gateways are disclosed. If the lock element is moved to a lock position, a device controller determines whether the lead is moved from its initial position to a predetermined position and outputs a first detection signal as the result of the determination. The device of the present invention utilizes the holes produced by impinging photons in a pixel sensor cell circuit. The participant is informed that the item is of current interest. Similarly, a transmitter employing Cartesian transmit modulation is presented that shapes the spectral emissions of a hybrid power amplifier such that they are significantly and sufficiently attenuated in one or more desired frequency bands.

1459826113-70bb9f47-22de-4859-a860-6d799ae168c1

A valve shaft apparatus with a rotary valve includes a shaft having a first portion in an opening of a valve body and a second portion in a cavity of a closure member. A dedicated wireless telephone is provided to a subscriber as a benefit of subscription. A protrusion is disposed on the front surface of the body, with the protrusion extending above a plane defined by the front surface. The transmission member is mounted between the circuit board and the supporting surface, and includes two levers and a press member disposed between the levers and abutting against the press switch. The first opening extends from the inside to the outside of the torso portion.

1459826113-e95069f0-c23c-4fb0-af32-2d76a0e7e4da

Technologies are generally described for providing a notification to a player playing a gesture-based game of a potentially dangerous condition. The method includes receiving a request for spare capacity in the video and data network. An elongate glue applicator is mounted on the chassis and is positioned substantially at right angles to the feed direction.

1459826114-d266997d-3cca-4a8d-bfba-b76a8113a507

A decimation filter in which a coefficient word length of a last-stage FIR filter is shorter than that which attains a necessary attenuation rate, and an interpolation filter in which a coefficient word length of a first-stage FIR filter is the same. A second node has an access link connected to the first port group of the first customer and a first network link connected to a second router. A further hardmask is applied to the one or more encapsulating layers. The plasma etching process may be an oxygen plasma etching process. The converging nozzle provides a characteristic cross section necessary for the mixed flow to achieve characteristic speed as it moves through the nozzle, thereby producing a standing shock wave at the point of maximum convergence of the nozzle and creating sonic conditions at the inlet of the ramjet engine. The apparatus and method further determining the threshold or set-point temperature of the bimetallic actuator during transit between bi-stable states.

1459826114-ea5b7603-4329-44e7-b93f-ee01f237235b

A method and apparatus that includes processing for restricting usage of video signals in accordance with associated access restriction data begins by detecting the presence of the associated access restriction data as video signals are being received. The most significant bits of a sample of the digital signal are compressed and transported as a compressed transport sample. A value  $x_2$  is calculated in a first calculation circuit. The invention also relates to a scale

configuration produced using the aforementioned method. The electron beam direction is optimized by said X-ray source during said second pulse to focus X-rays towards said high density section based on said image data in said first pulse. The cable termination device including a plurality of adapters and a cable pathway exit having a curved surface that guides cables exiting from the overhead cable pathway structure to the adapters.

1459826115-1b33d6c2-8d6d-462c-a103-a72221e07b0e

The invention provides methods and apparatus for drying the backside of semiconductor wafers in a spin-coating environment. An abnormal voltage detection circuit including a varistor detects an abnormal voltage generated in the excitation winding of the resonant transformer, and when the abnormal voltage is detected, its signal is transmitted by a photocoupler to a control circuit, thereby causing the control circuit to stop its oscillation operation to stop a switching operation of the switching element. A feedback controller compares sensed current and sensed voltage to a reference signal and generates a feedback signal, which is processed by a power factor corrector to adjust the current flow through the transformer supplying current to the LEDs.

1459826115-61f55a32-cdc5-4323-9b55-4f7dd36b85af

An auto-operated dip switching mechanism includes a strong-light detector, a strong-light signal circuit, and a switching control circuit. Then, a gate insulating layer, an active layer and a data metal are sequentially formed on the base substrate to cover the gate part. 2octane-3-carboxylic acid -amides of formula 1and their use as inhibitors of Cathepsin C, pharmaceutical compositions containing the same, and methods of using the same as agents for treatment and/or prevention of diseases connected with dipeptidyl peptidase I activity, e. The fluid supply system enables the fluid bottle subsystem to be installed or uninstalled from the fluid supply subsystem without requiring bleeding off of the air or gas supplied to the fluid supply system and/or without requiring the fluid bottle subsystem to be rotated or twisted into place relative to the fluid supply subsystem. The synthesis is carried out by ball milling a mixture containing P205, pentaerythritol, an alkyl benzene having one or two C1-C5 alkyl groups, and a metal halide catalyst, in a ball mill as a reactor and at a temperature of 70-150 C. The gas conduit connects to a gas source to introduce gas from the gas source into the load lock chamber of semiconductor equipment.

1459826115-6efa7db3-c9dc-44a5-9092-5b08fde0cd77

A method and system for allowing a user to access a peer from a remote system are described. In order to enable the generation of information for this database, the method calculating at least one position of a mobile terminal in a cell of a cellular network. The assembly of modules is supported in and guided through a launch frame, with modules being added to the rear of the assembly and pushed through the frame until the gap is spanned. Each sequencer is comprised of a logic processor and the associated program memory for storing the executable code of the assigned Boolean logic equations and data memory for storing the results of processing of logic equations. The coated substrate advantageously shows photocatalytic and hydrophilic properties.

1459826115-7d3bdf0c-9f62-495a-9f6c-753b8a6dc5cd

A motorized bicycle gear shift device comprising a derailleur and an electric motor for controlling the derailleur, associated directly with the derailleur, and an electric transducer of absolute type, also associated with the derailleur and designed to produce an electric signal indicative of the absolute position of the movable body of the derailleur. The resulting metrics provide information useful for understanding human behavior; understanding various combinations of who uses the devices, when do they use the devices, and the purpose for which they use the devices; understanding resource consumption, and understanding device usage for the benefit of service providers. A new parameter, called \u201ccreated,\u201d is

described for the contact header in SIP 200 OK messages, which is used to trigger deregistrations by SIP proxy UAs that no longer serve a particular mobile. A fault signal is generated if the first or second control signal, or a part thereof, is not applied during the control time interval, or if the first or second signal, or a part thereof, is not detected during the control time interval. A removable cover assembly is configured to releasably engage the enclosure assembly. This allows N pairs of a VSA and VSG to test N DUTs with N $\times$ d7N MIMO in substantially the same time as a single VSA and VSG pair can test a single DUT, thereby allowing a substantial increase in testing throughput as compared to that possible with only a single VSA and VSG set.

1459826116-04880ac3-0f79-4e23-98ce-c857240feaa5

An image display device capable of controlling in a differentiated manner the signal-brightness characteristics of natural pictures and those of different image sources, such as texts, in the screen frame is to be provided. A boost converter control and driver circuit is connected with the main power source and the backup power source such that the boost converter control and driver circuit controls the charging of the backup power source with the main power source during normal operation. A cartridge assembly includes first and second members configured for releasable attachment to a medical instrument, and a holder configured to receive the first and second members and to be released from the first and second members upon action of the first and second members attaching to the medical instrument. The resulting resin particles each include a core particle including the acidic-group-containing thermoplastic resin or elastomer, and the filler particles immobilized on the outside of the core particle.

1459826116-1cf32bb2-5c77-4dc6-b213-66155102487d

A new method is provided for the creation of a barrier-free copper interconnect. The blood gas transducer unit is adapted for application to a patient's skin and administration of a local vacuum at the area of patient application. Upon receiving an indication of a perimeter break the base unit device alerts alarm signaling devices such as audible or visual alarm indicators.

1459826116-8e342e57-3891-48e1-9cfa-43f0d4b7183d

A system and method for querying, selection and ordering complex multi-component item packages using a personal computer communicating over a global communications network. The product chips and die include a pattern of features formed in a metallization level of a back-end-of-line wiring structure. The intermediate metal film is provided on the bonding portion and having a larger linear expansion coefficient than the first metal film.

1459826116-a38e3782-f54b-48a9-a444-ea26e4a7cd77

An amusement system includes a cartridge having memory for storing sound data, a processing system to process the sound data and programming executable by the processing system to produce electrical sound signals representative of sound from the sound data. Receptacles, which may be the final containers or intermediate receptacles, are continually fed by a conveyor into the pathway so that material flows into each receptacle opening. This takes place before the softened chips pass through a blow-valve arranged in the outlet line, across which blow-valve a pressure drop of at least 0.

1459826117-3d23cb91-5185-44f1-8e50-656ae5429fcd

The present invention relates to a planar antenna for excitation of the TE<sub>01</sub>-mode of an electromagnetic wave and adapted to be arranged in a waveguide tube. The invention is further directed to a method of producing stabilized TAFIa. A positive capacitive element is disposed in the second insulator and is separated from the negative capacitive element by the second insulator. With the particular reference to the mooring of a vessel, the mooring robot has attractive attachment element fixable to a ship's hull and includes a movement unit with active three-degree-of-

freedom translation, for controlling the position of the attachment element. The first and second patterned layers 20, 28 together define at least one ink ejection chamber having at least one ink ejection nozzle. The composition has phenylephrine stability suitable for a typical commercial product with a two year shelf life.

1459826117-41b41a2d-a066-4450-ae26-2d1e53913545

There is disclosed herein an additive composition including a compound of formula :wherein R1, R2, R3, R4, R5, R6, R7, R8, and R9are independently selected from the group consisting of hydrogen, cyano, and hydrocarbyl groups comprising from about 1 to about 30 carbon atoms. The slope detector determines when the ion current signal exhibits a slope indicative of a time period when knock is likely to occur, and de-asserts a knock reset signal. Finishing surfaces such as discrete finishing members can be comprised of a multiphase polymeric composition. Finally, the system constructs the electronic version of the document by, using the synthetic font to represent text regions of the document, and by using image-segments extracted from the pages-images to represent non-text regions of the document.

1459826117-60e3b414-b722-45cf-be03-12256078eac7

A system and method for performing real-time interventions in a vehicle based on dangerous conditions. The shield includes a needle guide which assures the needle tip is untouched by any part of the shield as the shield is displaced to cover and uncover the needle. The product layout is based a user-selected image, if any, and on the text elements having user-supplied text content. A diverter is provided within the downstream end portion of the incoming conveyor unit.

1459826118-544a5f49-ada8-4835-b80b-fdb8656e1362

A filtering apparatus of a hard disk drive which includes an actuator to move a readwrite head to a predetermined position over a disk and a flexible printed circuit bracket installed in a corner of the base member. A path is defined by the side portion and the support portions. The unique identifier is associated with the emergency information. The coating has a thickness of between about 5-50 \u03bcm.

1459826118-d060975a-753b-4c35-b98a-f0a01f1ccdb5

A micromixing apparatus includes a mixing microchannel formed in a top surface of a substrate having a channel length and a variable channel width defined by a first sidewall surface and an opposing second sidewall surface. The device includes a projection lens assembly and an array of micromirrors for fast and efficient color separation and projection. The first program code determines the route path by applying an algorithm to one or more numerical values associated with the address. A state change of the motor is then detected while increasing hydraulic pressure applied to the engine clutch at a set ratio and a torque transmission kiss point of the engine clutch is calculated based on the state change of the motor. The microprocessor sets an operating mode of the clutch based on the throttle operating parameter value or, optionally, the comparison of the throttle operating parameter value to a threshold value. The present invention includes a memory including an operating system having a scheduler configured to perform a second scheduling function on a plurality of tasks, each having a processing order first-scheduled in accordance with a first reference and a processor performing an operation related to the operating system, the processor processing a plurality of the tasks.

1459826118-d8e2e04d-b07b-4b00-9232-f6351601363b

A container, such as a drink container, comprises a body for accommodating fluids, a bottom, a side wall, a body opening, and a first connecting element. Proliferation or survival of hematopoietic stem cells or hematopoietic progenitor cells is supported by using stromal cells in which the isolated gene is expressed or a gene product of the isolated gene. The clearance surface is of varying width. The image forming apparatus is characterized by further including a detection means for detecting density information of an image to be formed by the image forming

means and a control means for variably changing a heat generating rate of the fixing apparatus depending on the image density information detected by the detection means. The spring piece of the shell can be made pliant even though the profile of the connector is low.

1459826119-06f73817-676d-4da9-b0c2-90cacf7b641e

A system for detecting noise in a signal received by a microphone array and a method for detecting noise in a signal received by a microphone array is disclosed. A pulse width modulator integrated circuit operating in conjunction with a field effect transistor induces energy in the secondary of a step-down transformer to provide a reduced pulsating DC current to a lamp load. The method further includes contacting the water or treated water with a living aquatic organism wherein the value of at least one property of the organism is correlated to the concentration of pollutants in the water.

1459826119-219f4ec9-f06d-4890-b460-86f3029cb888

A handle for a tire bead breaking tool is disclosed, comprising an elongate shaft having a gripping portion, a shield portion, and a working portion at a forward end. An exit table is provided to handle references with session memory that refer to locations in call memory, in which each entry in the exit table is associated with a corresponding reference in session memory and contains a pointer to the location in call memory. Automated highlighting or marking of measures or text assists the performer in keeping track of progress through the performance. The resulting construct retains comparable in vitro kinase activity to that of the wild-type KID, and more importantly, allows complete crystallization of the protein such that it may be characterized by X-ray crystallography. An apparatus for cleaning a microelectronic device is provided that includes a processing chamber; means for performing a SOGanti-reflective material curing process within the processing chamber, means for performing a cleaning process within the processing chamber and means for venting the processing chamber. The access point broadcasts a beacon message if the awake sub-state coincides with the beacon transmission time instant.

1459826119-a8a954b3-6d51-4656-a42b-7504ba3d4b36

A computer software system is provided, namely, An Object Process Graph Application Controller-Viewer system. In the compound, A is at least one of an alkali metal and hydrogen, M<sub>1</sub> is a first-row transition metal, X is at least one of phosphorus, sulfur, arsenic, molybdenum, and tungsten, M<sub>2</sub> any of a Group IIA, IIIA, IVA, VA, VIA, VIIA, VIIIA, IB, IIB, IIIB, IVB, VB, and VIB metal, D is at least one of oxygen, nitrogen, carbon, or a halogen, O. Thus, the structure prevents the shutter members from erroneously moving to a position in which the nozzle is allowed to enter from a blocking position. A multidimensional space is created, which optimizes the spatial separation between the HRTFs according to the classification thereof in the third database to obtain an optimized space. A hollow bridge spans between at least two adjacent item-receiving cavities of the container, a bottom edge of the hollow bridge being lower than a midheight of the frustoconical portion of the item-receiving cavities.

1459826119-fa1f3256-bae7-49f4-8ac1-9a52404f463f

Frame vehicle clamp adapters which allow a frame of a frame-type vehicle to be connected to a pinch weld-type clamp. The antenna circuit constituent body includes the base material made of resin film; and circuit pattern layers formed on each of both sides of the base material and made of aluminum foil. A determination is made as to whether items from the first set are in the second set of items, and the sets are divided into one or more subsets based on the determining. If yes, the base station determines whether to off-load only the user-plane data. To accomplish this, an information processing apparatus allocates, in order to execute an accepted job, a memory area for executing the job preferentially from a memory physically farthest from the SOC die among a plurality of memories, and then

executes the job. The handle is configured to impede an attachment of the fluid source to a water wash connection when the passageway is in a position to direct the flow of the fluid from the drain line to the fuel line.

1459826120-a61ea4a7-b53f-4c09-9550-fe8afa80dddb

A gas turbine engine includes a compressor, a combustor, a turbine, a power turbine shaft, and a gas producer shaft. The method inputs a graphical representation of the business process model using a graphical modeling language. The Queen Batt-Sheva cut with 128 facets makes an even more brilliant; sparkling and eye-pleasing gemstones.

1459826120-d694dd85-2aa4-4925-a7e7-e48e7ef920e6

A flexible display apparatus includes: a flexible substrate; a display unit on the flexible substrate; and a thin-film encapsulating layer on the display unit. In one embodiment, the composition comprises dispersions of micronized metal or metal compounds. The cam has a predefined profile and is able to rotate with the camshaft.

1459826121-0a953a23-bb06-4941-9a44-547f1accbfa4

A method, system, and computer program product are disclosed for generating a pattern signature to represent a pattern in an integrated circuit design. A second keyword group is obtained, by detecting phrases that match keywords of a first keyword group that represent organs or pathologies from within image observation reports. As an additional feature, the products of this invention are especially appreciated because of the ability to quickly and easily replace or change them. The data includes digital data communicated between the radio frequency processing unit and the baseband processing unit.  $\theta$  interface, comprises a protruded end, an elongated portion and a first pin and mounts on the insulated housing. The article may have a nominal profile generally in accordance with Cartesian coordinate values of X, Y and Z set forth in TABLE A.

1459826121-90a527a9-d189-4d67-b9c7-07e22fb522fc

Prior to searching a multidimensional feature space populated with data objects, each dimension in the feature space is divided into a number of intervals. In a preferred embodiment the agent is insulin. The active energy ray-curable coating composition can form a cured film excellent in weatherability, mar resistance, and adhesion to a base material. The second magnetization fixed region 12 is connected to a second boundary B2 of the magnetization switching region 13 and its magnetization direction is fixed to a second direction. It also provides for selecting objects to fit a desired total duration and coverage of relevant categories in the graph. The solenoid actuator is formed by a monolithic assembly obtained in a mould, in which there is injected, on a core and a coil coupled to one another, a plastic material, which defines, once it has solidified, a body for insulation of the core from the injector body and which forms, once it has solidified, a monolithic assembly with the core and the coil.

1459826121-f0e5cbdd-8e29-450e-8fc6-d6878b2409d7

An improved cooling design and method for cooling airfoils within a gas turbine engine is provided which includes a plenum longitudinally located within the leading edge of the airfoils. A magnetized field-shaping element is provided for shaping the magnetic field such that the magnetic field is substantially perpendicular to the direction of the electrical current for generating a force in a first degree of freedom. A separating layer 3 that is transparent to a wavelength of the light beam 7 is formed between the information layers 2 and 4. Before applying the aqueous dyeing solution the carpet is heat-set at 120 to 150\xb0 C. The invention also provides a reactor for bulk polymerization for polyester, which comprises an inner surface that enabling the resulting polyester to be released therefrom upon its volume shrinkage. A tessellated input triangle is divided into the multiple output triangles that are rendered in a computer graphic system.

1459826122-428114cd-0763-43e1-9439-ea509d97734e

Various methods and apparatus are described for archiving of an electronic document between multiple interconnected archive units of a distributed server network in geographically-dispersed locations in order to store identical copies of the electronic document at the same time. The at least two of the electrocardiogram signal, the hydration signal, the respiration signal or the activity signal are combined with an algorithm to detect the impending cardiac decompensation. In addition, connecting portions at the upper ends of the metal terminals engage with a case main body or a covering member to be retained at predetermined positions. The policy rule is then used to control operations involving the files and processes. The invention further relates to a circulating belt for use in a device according to the invention. The catalysts have high performance characteristics, including higher comonomer incorporation into ethyleneolefin copolymers, where such olefins are for example, 1-octene, propylene or styrene.

1459826122-756392e3-2cb5-4c03-8575-8ca3a87d2c75

A computer-implemented method computes the steady-state and control voltage of a voltage controlled oscillator, given a known frequency or a known period of oscillation of the voltage controlled oscillator. A wireless point of sale device may be configured to locate a payment system and transmit a payment authorization request from a remote location to at least one payment system, either directly, or via a payment system directory and/or a SSL Gateway. In another example of the fishing reel, an improved bail and spool system may facilitate retrieval of the fishing line. After that, a precursor pole portion layer is formed in the aperture of the photoresist pattern, and the precursor pole portion layer is polished so as to form an air bearing surface, thereby the pole portion layer is formed so that an exposed surface exposed to the air bearing surface has an asymmetrical inverted trapezoidal shape.

1459826123-338e9202-c492-4f0a-9a0a-57b768cb14bd

A high-resolution, per-packet measurement tool for analyzing a computer network that operates by sending a predetermined number of packets from a sender machine to a receiver machine with measurement information inserted into the packet. The roll screen includes a receiving case, a guide rail, a moveable shaft, a flexible net, and a tape. A plurality of elementary streams are statistically multiplexed to create the single data stream, wherein the single data stream is forward error correction encoded and demultiplexed into a plurality of transponder streams for transmission by the plurality of physical transponders. In one embodiment, the peripheral structure includes at least an inner peripheral structure and an outer peripheral structure. From the first to mth coarse adjustment delay signals, 2m fine adjustment delay signals are generated, where a jth fine adjustment delay signal leads a th fine adjustment delay signal in a phase by a time interval dtc, where time interval dtc is finer than the time interval dtc. The controller is configured to diagnose a responsiveness of the air-fuel ratio sensor on the basis of an output voltage of the air-fuel ratio sensor in a predefined period.

1459826123-9b9fa86c-80bd-4e59-919d-d2c21d01ecd2

Hydrophobic-core microcapsules and methods of their formation are provided. A parity check matrix corresponding to a specific coding rate is extracted from parity check matrix optimized at a coding rate in a desired range while a coding rate is lowered until the error of the reception data is completely corrected, an additional syndrome is generated, and error correction processing is repeatedly executed using the additional syndrome. The motor unit is attached to a valve handle by an adapter, and the sensor can communicate to activate the motor. In a conventional track width forming step, the IBE irradiates the Ar ion beam to the substrate all the time while the IBE is rotating the substrate.

1459826123-d989e0cf-6ade-4795-ab13-1be0d7d3d6ba

In the semiconductor device composing MOS transistor on which impurities are added from the surface of a P-type substrate, the region of immediate below a gate layer is the P-type substrate on which the impurities are not added, and first and second MOS devices, having an N-type diffusion layer are provided on the surface region of the P-type substrate circumscribing the gate layer. Each IGFET includes first and second output regions of a second opposite conductivity type and a gate which is separated from a surface of the semiconductor body by a gate dielectric layer. An apparatus is described that includes a driver that drives a first current through a line and a termination resistance so that a logical value on the line changes from a first logical value to a second logical value. The measuring transducer is suitable, especially, for measuring a density and/or a mass flow rate of a medium flowing in a pipeline, at least at times, with a mass flow rate of more than 2200 th. The method includes the steps of placing a sample in a heated furnace, heating the sample while measurements of sample weight are made, determining rate function from the sample weight measurements, producing a weight loss correction factor using the rate function and using the weight loss correction factor to obtain a corrected weight loss for the sample. The image output unit incorporates a portion of the first image that corresponds to a differential region for which a designation to output has been accepted into the second image and outputs the updated second image to the second display.

1459826124-6f1aaed5-a9e1-42c6-923c-ba9c85a6c122

An optical apparatus and method are provided for controlling the polarization of light. The information storage medium includes the graphic data, page composition information which defines page composition of the graphic data, and the presentation information indicating when graphic screen data, which is composed with reference to the page composition information of the graphic data, is output to a display screen. The invention also relates to methods for producing a soybean plant containing in its genetic material one or more transgenes and to the transgenic soybean plants and plant parts produced by those methods.

1459826124-a1262688-6388-4362-996b-fb60ccce7d66

Disclosed is a method for producing a package. The caller software method calls a software method in a CORBA stub sending a parameter which is created using a classloader of the caller application. The inter-system handoff control component can then implement tunneling between the source system and the target system, wherein signaling/packeting associated with the target system can be transferred over the source system. The face plate further includes an edge that is adapted to deform or otherwise embed a portion of itself into a boat when installed. Subsequent client service requests and responses are transmitted directly between the client device and the server device associated with service instance ID included in the first service response for the duration of the connection lease. The magnetoresistive sensors produce phase shifted output signals representing magnetic flux flowing through the magnetoresistive sensors such that the magnetoresistive sensors are reactive to gap and angular changes in the circular track of the ferrous target.

1459826124-c645861a-cdd1-4798-b3d5-6295bac40c21

Methods and apparatus to perform associated extensions for negotiated channel security protocols are disclosed. In one embodiment, the magnetic detacher may include magnet assembly to provide open access to a hard tag and a magnetic field sufficient to disengage a clamping mechanism of the hard tag. The annealing is carried out with the protective layer on the gate region. In some embodiments, the first cycle and the second cycle are subsequent cycles. For cooling or heating the interior of a motor vehicle, the system can have a cooling circuit with a compressor, a condenser, an expansion element, and a first evaporator and an APU or a fuel cell to electrically power the compressor, and a second cooling circuit a second evaporator, the second cooling circuit being connected to the first cooling circuit.

1459826125-272f4c82-3a9b-4df0-ab67-3aed5ee22340

A voltage control apparatus checks a battery voltage when an automotive generator gradually increases its output to be within a predetermined range after temporarily stopping the generator. A control device determine the mode of operation of the measurement or protective device, and the mode of operation can be changed from the outside using the terminal. Information is extracted from the personal financial disclosure statement, the personal financial records, and the other relevant financial data and input into a risk assessment algorithm. The detecting step may be performed by delivering a series of acoustic pulses at the free surface and detecting acoustic reflections from the free surface as the oscillating free surface relaxes. The increased destruction of cells brings about the improvement in the disintegration.

1459826125-b6583154-8191-4498-bc64-e0ba01e6dfa0

The object of this invention is to decrease a stress to accumulate in a resin layer while preventing any uncured portion from forming in a side surface of the resin layer. In one embodiment, the entropy of the patient's EEG signal data is determined as an indication of the depth of anesthesia. If a home network is identified as being available, the mobile station selects and operates with the home network.

1459826125-ed4c04ce-1f46-4526-8976-65c69736a774

A fabric treating appliance using steam to treat the fabrics and having an exhaust system for removing the steam from the appliance. A guide groove whose distance from the center of rotation of the rotary body is continuously changed is formed in a bottom surface of the rotary body. The secondary device includes a transceiving unit to receive the second signal and transmit a third signal, an internal clock to store the first internal time and to increment the internal time to produce a second internal time, and an event switch operable to execute the instruction when the second internal time matches the time element. In another embodiment, the supercritical etching composition includes a supercritical component, which is capable of etching the particular exposed inorganic material.

1459826125-ee382e82-53fa-41f7-b403-b90d8dae5d39

This invention relates to the reversible protection of hydroxy-silane functional groups by acid cleavable protecting groups. Unlike the \u2018Meipomolo\u2019 variety, the new variety forms golden-yellow blossoms instead of yellow-orange blossoms. The first communication apparatus moreover comprises training mechanisms for generating a training code to be sent to the second communication apparatus enabling a receiver to match a received signal to a corresponding transmitted signal. The notches are delimited upwardly by an upper surface that is not encompassed by the notches. The laser oscillating unit outputs a laser beam synchronized with a movement of a header unit.

1459826126-735b869c-c9e6-4778-958c-421eba7c47cc

A hybrid oxide capping layer is disclosed and used in a magnetic tunnel junction to enhance thermal stability and perpendicular magnetic anisotropy in an adjoining reference layer. The zoom lens includes, in order from the object side, a first lens group with a negative focal length, a second lens group with a positive focal length, a third lens group with a negative focal length, and a fourth lens group with a positive focal length. In addition, the feeding control of the paper leaves are accurately implemented by the over-press detection of the paper leaves or the thickness detection of the paper leaves. It has a sectional area of 4170 sq mm.

1459826127-4f2dce8e-0f4c-4deb-8674-e718c0bffc25

A node controller in a computer system includes a processor interface unit, a memory directory interface unit, and a local block unit. By maintaining the thickness of lubricant exposed at the ball-contacting surface to be less than 20

microns, the integrity of the lubricant layer is improved and the mechanical locking effect between the soft lubricant and the golf ball is minimized. The hinging axis thus able to assume at least two different angular positions relative to the longitudinal centre plane of the shoe, as required by the user. This configuration on the polyhedral structure forms a potential barrier for repelling the ions from each of the regular polygonal surfaces and containing them in the trap. In a second variant, the nib is constituted by sintered microbeads and blocking is obtained by localized hot-melting of the microbeads.

1459826128-1b2f51c4-cd01-44e0-9e61-20dde5980635

An electrical switch apparatus including a movement sensitive form is disclosed. The diphenol compound of formula is produced by polymerizing the diphenol compound of formula and a halogenated carbonyl compound by solution or interfacial polymerization. The substrate is fixed to the base using the second bonding layer. Hence, mobile routers automatically can form a directed acyclic graph relative to the clusterhead, and can distribute routing information with minimal overhead. The second layers have graded thicknesses with respect to distances from the p-doped semiconductor compound layer. A controller is coupled to the first sensor and the second sensor.

1459826129-28a11e12-6818-4176-b9e4-1aa94eba5bae

A digital still camera for receiving a optical tape cassette having optical tape including an image sensor for capturing an image; focusing an image of a subject onto the image sensor which in response thereto captures such image; a structure for receiving the optical tape cassette; an optical writer for effecting a change in the optical properties of the optical tape. Register storage requirements are reduced by producing the target value from a nominal voltage value and one of a plurality of margin offsets selected in accordance with control data. The acceleration device includes, a global arbitration module, a state machine module, and a matrix for connecting plural fibre channel devices. The point of transition is based upon the switching frequency and the lowest rated voltage of operation. One or more longitudinal filler strips are inserted into the at least one internal cavity, each filler strip comprising at least one longitudinal cavity for receiving one or more fasteners.

1459826129-42b7cf23-b3e8-4aea-a0e9-d2120e3ec1b0

The invention relates to an enhanced method of detecting and/or quantifying at least one analyte in a sample. The handle panel is connected to one of the side panels or the bottom. The hydrogen generation process can be started by feeding the hydrocarbon and air to initiate partial oxidation, before steam is added. A rendering mode, viewing orientation, and/or an area of interest associated with the surface can be prescribed and updated in real-time or quasi real-time. During OS runtime of the Guest OS, a VM switch is performed from the Guest VM to the Service VM without rebooting the computer system. An axial force applied to the actuation rod operates to slide the actuation rod relative to the housing and extend the cutter sets from a retracted position radially outward relative to the housing to form the cavity when the housing is rotated.

1459826129-62f3a14f-3a84-42cb-a711-11c97fca968c

A memory timing model is provided, which includes an address input, a multiple-bit data input, a multiple-bit data output, a capacity C and a width N. Pharmaceutical compositions containing the polypeptide and nucleic acids of the invention are also disclosed as well as methods useful in the treatment, prevention and diagnosis of N. An imaging device 56a detects reflected light of illumination light guided by an observation optical system 30.

1459826129-ba1ee014-5a83-4813-96eb-4006d17d7c35

A center beam car has a main deck structure extending laterally from a main center sill, a laterally extending top truss structure, and a central vertically oriented

web work structure for carrying vertical shear loads. A conductive pattern conforming to the at least one channel and exposed to a bottom surface of the semiconductor package is formed. The sharpener may include a pre-sharpening stage for metal blades and a further pre-sharpening stage for ceramic blades. Effectively, LISP provides a Layer 3 extension stretching a subnet across the first location and the second location ). A pumping-out device is in the cavity for pumping air out of the cavity portion and the intermediate space. The auxiliary guide member projects from the fixed guide member to lead the sheet bundle to the fixed guide member without touching a leading edge of the sheet bundle fed by the feeding device on an upstream edge of the fixed guide member in the sheet bundle feed direction.

1459826129-c2a70eab-8d2c-4950-8c9b-fbede2e5d847

An apparatus is provided for finding and defining a prescription for prism glasses for Diplopic patients and AMD patients whose Macula and Fovea are damaged enough that the patients have double vision, but, still have relatively good acuity. An installation computer begins execution of the script program, and before a line or stanza of the script program is executed to initiate installation of the computer program, the installation computer determines that the line or stanza is programmed to initiate installation of the computer program. The gate electrode has a spacer layer located adjoining a sidewall thereof. A measuring device measures an electrical characteristic between the electrode and the shielding film.

1459826130-507a9501-ee23-4d7c-9bd0-774842090090

A panel of a computer's main unit includes a display board, which is capable of showing colors responsive to electrical signals. The labels are used in specifying access control lists for content of the users. Further, the scanning line driving circuit 350 supplies each of scanning lines 312 in a non-display region with non-selection signals by inverting the polarity every one or more vertical scanning time periods. Microprocessor 105 provides validity criteria which changes depending on the grip status inputs. The technique includes determining, at the server, a status of the specific phone associated with the geo-fence based on a previous status of the specific phone and the position information.

1459826130-6fe39f35-85d1-490a-ac3e-f3374c055fc4

A wrench is configured to rotate a fastener. When a threshold value violation has occurred, judgement is performed from which use purpose the threshold value derives. The main body houses the memory for data storage as well as the encryptdecrypt device and ancillary circuitry. The first transmission gearwheel is connected to a second transmission gearwheel, on which the second butterfly valve element is connected by a one-way positive drive element.

1459826130-74ad7962-ef74-4240-86e7-ecd465ff6d25

A microelectromechanical systems device includes a substrate and a movable element adapted for motion relative to the substrate. The process includes estimating a cost of executing a live migration of a virtual machine, using a count value of an access counter for counting the number of accesses to a memory allocated to the virtual machine, a capacity of the memory, and a bandwidth of data transfer between physical machines relating to the live migration. The guide tube extends into the distal tube, and the proximal ends of the guide tube and the distal tube are joined to one another and at the distal end of the main tube. It also carries out data relocation between storage subsystems by shifting data stored in an origin LU to be relocated to a destination LU. The fresh gas distributor may have a housing flange securing the fresh gas distributor to the cylinder head. The compounds and pharmaceutical compositions thereof are useful for the prevention and treatment of a variety of conditions in mammals including humans, including by way of non-limiting example, pain, inflammation, cognitive disorders, anxiety, depression, and others.

1459826131-1e841c4b-746a-4deb-97be-059d71e226ee

A system that executes a long transaction in a system with limited transactional hardware resources. 5, and functionalities that react with one another to cross-link i and ii at cure to yield coatings with an excellent balance of hardness and mar resistance. The surfaces of fiber yarns of the knitted fabric are integrated with the molded product body by melting and solidifying. The bone is cut into first and second bone segments based on a position of the saw block.

1459826131-5cb8462f-8888-4c9a-bfde-173c42f6f48a

An optical semiconductor device includes a first light receiving region and a second light receiving region provided on a substrate and the first and second light receiving regions include light receiving elements, respectively. The fixture seals the lamp and heat generated by the same to a reflector interior. The systems also include an electronic or communications device, for example, such as a cell phone or smartphone, configured to communicate with the measurement device. The transom nose portion has extensions extending beyond opposed ends of the transom body portion received in the notches of the mullion body portions whereby the framing portion is formed for sealing receiving a panel to form an air barrier, with a gap being defined between the extensions of the transoms and the mullion nose portions. The node prevents re-flooding of the LSA, if the other nodes in the communication network are located outside of the predetermined range. In one example, an engine is started and idled before engine torque is required so that driveline torque response may be improved.

1459826131-b51e8f6b-e040-4168-b833-4412395d5cb3

Embodiments include a system for determining cardiovascular information for a patient. When a scanning utility identifies a data error on the mass-storage device, it writes structured information descriptive of the error to the scan buffer. Such a composite pipe may be made by selecting a polyetheretherketone pipe having an outer region having a crystallinity of less than 25%; overlaying the selected pipe with overwrap; and subjecting the combination to heat, thereby causing the crystallinity of the outer region of the polyetheretherketone pipe to increase. The device structure of the present invention facilitates the control of the rate of the carrier transport, and thus, leads to the formation of a light-emitting element with a well-controlled carrier balance, which contributes to the excellent characteristics of the light-emitting element of the present invention. The label may take the form of a flexible, disposable label that is typically powered by a small battery.

1459826132-30dc2701-4632-4926-a90f-f5eaad6dd43f

The invention relates to metathesis oligomers wherein one or more alkoxy ether groups are attached to the oligomer moiety. This configuration produces a very high quality analog-to-digital converter with a very low surface area requirement. This determination is made with one field being common to the first and second motion values, and taking the minimum of the first and second motion values to be the motion value at that position.

1459826132-3ead099e-90fc-4867-a0de-7f37ef13f504

The cartridge can include a mixing component for mixing different solutions so as to form a product solution. 7 and containing at least one cross-linkable functional group comprising a step of radically polymerizing a mixture of ethylenically unsaturated monomers comprising at least 50 mole % of methacrylate monomers to a polymer, in the presence of a) a radical precursor and b) I<sub>2</sub> or a sulfonyl iodide. A specific region is then defined through photo resistor mask, and the stress of the region is changed by ion implanting. The second semiconductor package may include a second package substrate and a logic chip on the second package substrate.

1459826132-7859130c-5e64-421e-99e0-7571b441fe71

A system and method for generating and utilizing a computer model of the craniofacial features of a patient is claimed. One or more layers of material may conformally coat the walls to a substantially uniform thickness. In particular, a display is provided to a user that indicates various events in a \u201cstacked\u201d format. The transition rules are stored in the first memory in a ranking order of generality. A virtual test environment is created emulating an actual test environment, and a virtual device emulating the actual device is created and is stimulated with an input test signal emulating an actual input signal. Thereafter, the method includes modifying uplink Modulation and Coding Scheme level of the one or more MSs.

1459826132-bda407ee-3179-4b25-8ceb-7ae9070900e6

A chassis with horizontal plugged frames includes an air inlet, a board area, a first air chamber, a second air chamber, and an air outlet. The projecting body has a reference surface facing a corresponding thrust surface of the main body and spaced from it, the connection section being configured so that its deformation makes it possible to move near each other and bring into contact the reference surface and the thrust surface when the fixing element is connected to the base element. The system includes a plurality of nodes.

1459826132-e87215ef-9ab6-4311-a58e-5c262720dab6

A method for removing defects from a semiconductor surface is disclosed. The combined communications device and ignitor device facilitate the ready availability of an ignitor device for lighting smokable items or for igniting emergency flammable items, such as flares or kindling. Solution studies demonstrated formation of monoprotonated and diprotonated species upon irradiation, each resulting in distinctly different absorption and fluorescence properties. Compensation for the timing offset in the first chain can then be performed.

1459826133-5cdc68b1-8668-43d3-9443-7e01402e0270

Some embodiments provide a configurable integrated circuit. At least one tooth is formed on one of the dose knob and the dosing ring, and at least one groove is formed on the other of the dose knob and the dosing ring, with the groove being formed to receive the tooth. The surface of the attachment layer has proper viscosity or suction property, and the attachment layer has its underside fixed on the circumferential portion of the positioning hole of the sheet body, having its surface range covering at least the circumferential portion of the CD carrying tray, which supports the CD. Local notification data defined by the recipient may also be evaluated. The semiconductor chip may thus act as a function switch.

1459826133-71399cf8-8d2e-4b36-b9a7-af899252970d

A system for adjusting the position of a load supported on a conveyor cart includes a driven lift mechanism for controlling height and a turntable for controlling rotational orientation. Various structured polymers are prepared and characterized. The housing has white LEDs and blue LEDs mounted thereon. Since the delay time may be a function of energy released, the delay from energy release to shunt initiation is optimally a function of the energy storage time of the inductor. Ramp generation circuitry may generate a ramp signal based on the counter value and apply the ramp signal to the pixel signal at the first input of the analog-to-digital converter circuitry. The control section, when the charge rate  $C_1$  exceeds a set value  $C_s$ , performs overcharge-prevention control of making assist power by the electric motor action of the generator-motor be greater than that when  $C_1 \leq C_s$ , the set value  $C_s$  predetermined as a charge rate at which receiving the regenerative electric power can overcharge the electrical storage device.

1459826133-93e5615f-9c1b-4b83-a0b4-2569d76b359c

A method and apparatus to attach multiple components to a common heat dissipation device. The imaging device includes pixel groups, each of which includes first pixels arrayed in the row direction and second pixels arrayed in the row direction

at positions adjacent, in the column direction, to the first pixels. The device can be used in WDM systems. Nonlinearity is corrected through adaptive region enlargement by using the maximum horizontal length and the maximum height of the divided character regions. Thereafter, another layer of the absorbing powder is formed on the intermediate transfer member, and the liquid is applied to the powder layer so as to form a second visible image.

1459826134-251e6778-7429-43fa-a839-4f720bf8f87b

A viewfinder of a small size and a small thickness is implemented to achieve a miniaturization and reduction in thickness of an image pickup apparatus. The active regions defined by isolation structures disposed in the substrate are extended in a first direction. These photovoltaic cells have large power generation capability per unit physical area over the conventional cells. A second path to the device is selected if the first path fails. In order to increase the tamperproofness of the image to be recorded and the identifiability of the said image, without adversely affecting the brilliance and colour fidelity of the image, the invention provides for a portion of the image information that is to be recorded to be additionally written to the substrate with the aid of radiation. At least a portion of the coating and intermediate material layers is removed at the weld notch so that certain constituents from such layers do not affect the integrity of a nearby weld joint when it is subsequently formed along the edge region.

1459826134-2f2f7af5-3c06-45d3-8dc4-1092830b7c37

A data storage device including a solid state memory comprising logical block addresses corresponding to boot data accessed by a host during a boot process, and a controller. The assay can monitor for the presence of antibodies in the patient which interfere specifically with the anticoagulant function of APC in an oxidation dependent or independent manner. In one embodiment, the invention employs a rotating optical switch to time multiplex an input signal through multiple bandpass filters and into a single optical detector which is electrically activated only when the filtered input light pulse is about to impact it. The second piezoelectric microactuator is electrically non-conductively attached to the load beam and the mount plate.

1459826134-5553b1d7-8017-4d80-9d1a-c72a3c6870f1

An inorganic coating material maintains the properties of high heat resistance and high electrical insulating characteristics of inorganic materials, while enhancing the degree of adhesion with respect to an object to be coated. The structure comprises a bolster frame having a base and a stanchion connected to the base. Regarding the easy and short process, a remarkable energy saving is possible. The contact surface contains abrasive particles while the metallic coating provides at least conductive qualities to the contact surface.

1459826135-6b328169-c7b4-4609-bba7-677008c23a0d

A preparation is disclosed for producing enhanced blood flow in tissue thus causing beneficial effects such as promoting hair growth on scalp tissue lacking sufficient hair, restoring normal sexual function in males with erectile dysfunction. The image data read by the reader is output to an image output device designated based on the read image output instruction data. The ear pieces fit over the ears, and are configured to receive the strap at a point proximate the anterior, center portion of the ear, causing pulling forces to be on the posterior center portion of the ear rather than on the top of the ear. The apparatus also includes a first harmonic reduction circuit selectively connected between the first band selection circuit and the circuit ground and configured to reduce 2nd harmonic frequencies associated with the first frequency band when the amplification band is set to the first frequency band. The modified structure is provided by attaching additional structural components or elements to the end or outside of the structural member or by modifying the shape of the structural member.

1459826135-c3f45ad7-5fd6-400e-a1d1-2dd923ae60d5

A semiconductor wafer is thinned to a predetermined thickness by grinding the backside thereof, and then a metal layer made of metal having a linear thermal expansion coefficient close to that of the semiconductor wafer is formed on the ground side. An appendage extending from the top of the module may include a handle and/or an adjustable support mount that allows the module to hang from a variety of surfaces. The invention can be used during dental occlusion operations, for example. The signal processing system also includes a data exchange capable of exchanging data signals modulated by a voiceband carrier on the switched circuit network with unmodulated data signal packets on the packet based network. The cooling system comprises a cooling means equipped at a back surface of the coating blade, interconnecting hoses for communicating coolant to the cooling means, a circulating unit, and a heat-exchanging unit.

1459826136-02a71c04-07d4-486b-a719-51267a5b02fc

A method and a device for applying large areas of glue used for a bottom film of an absorbent pad at the four corners of the bottom film of the absorbent pad of a health care article is described. The dispenser has a handle portion, a dispensing portion, and an elongated cylindrical tube extending between the handle portion and the dispensing portion. In an illustrative embodiment, skin containing acne bacteria is treated with a series of pulses of light from a light emitting diode. Greater privacy and control is provided to users over current and subsequent browsing sessions. In some embodiments, the crus muscles may be sutured together to reduce the hiatus size and a reverse stent may be deployed to reduce the annulus of the lower esophageal sphincter.

1459826136-7b29cedc-2b7e-477b-a60d-9586ce33f707

Methods, systems, and apparatus for magnetic resonance imaging are described. Each node implements a respective routing strategy for routing data through the network, the routing strategies not necessarily being the same in every node. Switching between power reception mode and data communication mode is detected. A plurality of flexible fins are mounted in tension between the outer ring and the central rotator bearing such that the fins are able to flex when contacted by wind at certain wind speeds. The controller can also receive from the current-sensing device a plurality of measurement values for the current through the actuation coil. The wave-inducing device is designed for arrangement in the casing and includes a movable element which, when the wave-inducing device is arranged in the casing, is designed to be moved by cement and/or another fluid flowing through the casing so that wave motions and/or vibrations are provided in the cement during the cementing of the casing.

1459826136-d47d2147-bd28-4739-ad25-4009e2efb9a5

Disclosed are a backlight unit capable of determining a deviated degree of a lamp grip by a guide line formed adjacent to the lamp grip a PCB that connects an electrode thereof with a lamp electrode, and a manufacturing method for the same. The system and method further provides a computerized mechanism for creating an inventory and marketplace for available properties for use in telecommunications networks, providing quality and/or performance monitoring and control for wireless communication systems based on data in the clearinghouse, and providing localized content over wireless networks using the clearinghouse. The first detector may obtain data from the second detector via the first SAP and use the obtained data to determine a location of the apparatus. First, whether an external energy storage device is connected is detected. The positive and negative capacitive elements form a capacitor.

1459826136-d4e5c456-008c-497e-b2b7-9d2458587ae4

Apparatus, process and article for treating a gas containing one or more of a chemical and/or biological contaminant. The composition of the present invention has superior effect to prevent and remove calculus, and removing interdental plaque.

However, non-adjacent STI regions, rather than adjacent STI region, receive the implant. The invention further relates to a combination of the two dipole structures such that together they act as a monopole to cover the low frequency spectrum. The indicator may be configured to generate an alert upon generation of the alert trigger.

1459826137-6492a99d-9e82-417a-8f2e-275d4a915c62

PKC V5 isozyme-specific peptides are described. A preferred formulation comprises 0. The photographic camera records an exposure opening position signal indicative of the size of the exposure opening on the photographic film, and the automatic printer automatically prints the photographic film using the exposure opening position signal detected from the photographic film.

1459826137-65908d03-b7aa-46d3-b95e-d332deb289b4

A liquid supply assembly for use with a printing system of a type in which a liquid is deposited from the liquid supply assembly in a receiving region on a plate and any excess of the liquid in the receiving region is scraped from the plate by the liquid supply assembly. In the gland packing 4, ends 1a, 1b in the width direction of each of the braiding yarns 3A to 3H constituting the gland packing are directed to the inner side in the width direction, and the reinforcing fibers 2A to 2H protruding from the ends 1a, 1b are confined to the inner side of the braiding yarns 3A to 3H. The X-ray source is configured to generate a vertical beam spot pattern and does not generate beams that move horizontally. At least one further compact unit is provided which comprises at least one communication arrangement with a short-travel drive, wherein this further compact unit is likewise provided on the snorkel tube. The porosity-controlling agent is selected from the group consisting of agents that change size as a function of temperature, agents that change size as a function of electrolyte concentration, and agents that change size as a function of temperature and electrolyte concentration to provide a change in an overall porosity of the separator. In one embodiment, a collimator may be used during a sputtering process to filter out charged particles from the material that may be deposited as a metal layer.

1459826137-94458226-f33c-40b7-87c6-aa4393f59f13

A radiation detecting cassette includes an IC card detector which detects insertion of an IC card in a slot, outputs a detection signal representing that the IC card is inserted in the slot, and reads ID information stored in the IC card. In executing the associated method, the controller determines whether continuous output torque is required through a torque exchange. ECU calculates a parameter fluctuation amount of an engine occurring in response to the valve lift switching operation, and corrects the valve lift switching characteristics when the calculated parameter fluctuation amount exceeds a predetermined judgment value.

1459826137-945e1a4f-a156-4a5a-b28a-976cc2625749

A yoke main body formed of an upper yoke and a lower yoke accommodates therein a magnetic substrate, a plurality of line conductors, a plurality of capacitor substrates, a magnetic member and a spacer member. A spring arm and a damping arm are connected fixedly to the front part. The accelerator column includes a plurality of accelerator electrodes. A conducting portion is mounted on the bottom surface of the insulating body. The device may also be installed in a window opening to serve as a window screen, if desired.

1459826138-5b927973-9475-4cd1-b57f-43a0d1427049

A joining assembly for joining a pair of structural members, comprises a bolt having a thread and a nut-like blind rivet adapted to be inserted into mounting holes of the structural members and to be threadingly engaged to each other. The water-impervious member 16 is formed into an upper opening vessel shape, and has a water reserving function. A wafer W to be subjected to plasma processing is mounted on the electrostatic chuck. In this way, the terminal has no knowledge of the

actual keys pressed and the secrecy of the alphanumeric data is ensured. Y is C, O, S, NH or a single bond.

1459826138-a4a7a4f3-9b67-4cd9-ad7e-a3a8db791363

A scanning mirror useful in laser projection devices is provided. One vehicle has a platform supporting two wheels in line along a central longitudinal vertical plane through the platform. The updating operations are performed while a connection to the remote network is left idle, to maximize usage of on-line connection time. The body includes at least one electrical outlet and one networking adapter. When the retainer portions are squeezed together and permanently connected, such as by weldment, projection is urged more firmly against lens bearing surface and lens abutment surface is urged against lens aperture.

1459826138-ea0032b9-18a9-4f6f-a846-2cbb593f4f57

A novel and improved method and system for paging a cellular telephone or other wireless terminal using two paging channels that reduces standby mode power consumption described. The stopper prevents a lid assembly from being rotated more than a maximum opening angle. Players enter the values from the playing cards into the control pads. In a first position, a first, smaller distance and in the second position, a second larger distance are provided between the bearing surface and/or the lower edge of the clamping element and the contact surface of the respective distancing element is determined by the held shelf base. , by looking for a paper and pen. Once the graft has been successfully placed on the glenoid, the loops are positioned in close proximity to the pre-drilled holes.

1459826139-26c82057-3fa0-4fb2-8fa0-f0f616c63bc5

An electronic load includes a current control circuit and an interface circuit. In accordance with the invention, the animal litter comprises discrete plural particles of a seed meal, which particles tend to agglomerate into clumps when wetted. The switch is coupled to a diagnostic tool to receive a power status signal from the diagnostic tool. A dielectric layer of the probe is disposed side by side with and connects to a dielectric layer of the signal cable. In one set of embodiments, populations of one or more tracking cells are associated with different logic levels of a multi-state memory. Thus, a user can adjust a setting angle of the comb head relative to the grip by means of the engagement of one of the first coupling portions of the grip with the second coupling portion of the comb head, thereby enhancing convenience of use.

1459826139-b907d55f-65c7-4662-97c5-11253bca2d6b

The invention provides sodium channel modulating compounds which are useful for treating diseases or conditions associated with sodium channel activity, such as neuropathic pain. The system utilizes a remote monitoring unit located on-site. For instance, reversibly protected silanes are of particular value in applications where room temperature cure and/or adhesion is of value, such as coatings, high resolution imaging, caulks, adhesives, sealants, gaskets, and silicones. A main pointer queue contains addresses that point to storage entries in the central buffer.

1459826139-c25d9b39-ce07-4b4c-b446-303ed094259e

Novel system for supplying power from multiple power sources to a powered device has first and second input power supplies for respectively providing power from first and second power sources. The method of providing secure access to content comprises determining an identification from a secure medium including content. Further, the at least one electrodeless plasma lamp generates light having a light power spectrum similar to a solar light in a region of UV light and short-wavelength visible light corresponding to a range of about 300-500 nm. The fibers can be cross-linked, if desired. The invention is preferably applied to render non-moving dither patterns invisible in a plasma display panel driving method in which the display signal is subjected to a dithering.

1459826139-f6a49fbb-42dd-481f-8e6d-839866cd2744

It is an object of the present invention to provide a communications system for communication between two remote terminals, where even at very long distances between these two terminals and/or at very small signal-to-noise ratios a robust communication is possible. The method includes receiving seismic data with regard to the P-waves, wherein the seismic data includes vertical and radial components recorded with a buried two-component receiver; calculating with a processor a primary component and a ghost component from the vertical and radial components; and computing an image of a subsurface based on the primary and ghost components. Data is transmitted using an N2 point inverse FFT within the bandwidth, BW1, wherein N2 is greater than N1; and subcarriers associated with the N2 point inverse FFT are employed to transmit the data. An optional energy attenuating liner can also be included as an inner layer that is disposed adjacent to the rigid liner and intermediate the head of the wearer to more safely distribute kinetic energy.

1459826140-3f5c104d-5b7d-4c82-b7f6-b2e1306d24fc

A pad backer is described, comprising a backing plate, an elastomer layer and a pad backing ring. The contacts have four conductive contacts and at least one pair of differential contacts for transferring high speed signals. An electronic device includes a molded product of the polyphenylene sulfide resin composition. Within the inner volume is a tray or cassette configured to be moveable within the inner volume. The first interface node has a configuration table to store structural information for the memory storage system and in response to the frame sent from the computer, analyzes the applicable frame, converts information relating to the transfer destination of that frame based on structural information held in the configuration table, and transfers that frame to the switch.

1459826140-ca849aa3-5684-4e1a-a430-6d3e1c2654d5

This invention provides a method for modulating the efficiency of translation termination of messenger RNA. The quartz crystal wafer is etched in a second etching process different from the first etching process to form a groove having stepped portions in at least one of opposite main surfaces of each of the quartz crystal tuning fork tines. In at least some embodiments, a key or keyboard element can be associated with comparatively little or no actuation force and/or travel distance.

1459826140-cf0bc90d-e971-4758-88ff-4663410ce9de

Wafer order is randomized in-situ by use of a separate wafer staging area and randomly shuffling wafers to and from this staging area to shuffle the processing order of the wafer lot. The original interface is not redefined nor is the real target object implementation modified. They are furthermore indicated for the treatment of benign and malignant prostate hyperplasias. The field plate is placed adjacent to the drift zone and is isolated from the drift zone.

1459826140-fbe33569-47c7-477e-ba39-f0487570a3c4

An elliptical exercise machine and methods for using the machine where the horizontal length of the stride of the ellipse can be adjusted by the user without the user having to alter the vertical dimension of the ellipse by an equivalent amount. Specifically, the method provides for molding a polyurethane coated sandwich structure comprising a honey comb core having fiber reinforcing layers to provide an environmentally friendly polyurethane molded article with a desired shape such as an automobile load floor. A pressurizing arrangement is provided to maintain a selected, predetermined pressure in the air bag system when the vehicle is at rest to thereby maintain a desired vehicle height. On the yolk layer, serving as the background, which has been formed by the coagulation of the yolk on the curved surface of the boiled egg, a pattern layer is formed by the coagulation of the albumen.

1459826141-0f343d12-8c14-462f-8528-5e0cb7119dc1

A method of and apparatus is disclosed for water desalination including steps of transferring water vapor from salt-water in a vaporization zone 7, via a water vapor transfer zone 12, to a condensation zone 11, and condensing the water vapor into fresh-water. The SIM uses the received updates as a list of available networks for a second subscriber identity and provides the second subscriber identity to the device. An MPU applies voltage having a predetermined waveform to the DC motor, and then detects a waveform of current flowing to the DC motor. The stiffeners may include apertures through which intermediate conductive elements or other structures secured to the connective structure may be exposed or protrude. The organic electroluminescent device has higher luminescent efficiency, a longer lifetime and a lower operating voltage than a conventional organic electroluminescent device, and can be easily manufactured. As a result, it is possible to realize a Braun Tube for projectors, in which an extended life cycle is achieved by constraining the degradation of the illuminant, constraining the browning phenomenon, as well as improving the spot size of the electron beam thereof.

1459826141-3779b27c-19a5-4625-b37f-08893a3fc4fc

In a two-stroke, opposed-piston internal combustion engine with optimized cooling and no engine block, the opposed pistons are coupled to a pair of crankshafts by connecting rods that are subject to substantially tensile forces acting between the pistons and the crankshafts. It is characterized in that it also includes an intermediate tube between the mother preform and the outer tube, the intermediate tube possessing viscosity at fiber-drawing temperature which is less than the viscosity at fiber-drawing temperature of the mother preform and of the outer tube. The slide block has a slot which is wider than the wire but narrower than the means for attachment, such that when the slide block is mounted on the machine, the wire end two can be slid into the slot such that pulling the slide block in the direction away from the wire forces the means for attachment against the slot, but does not allow the means for attachment to pass through.

1459826141-4ddd6532-ba37-4619-8c6d-68b45338eac7

In a transfer unit of an image forming apparatus, an auxiliary transfer roller and a main transfer roller are provided relative to a photosensitive drum, with a transfer belt interposed. When a first frame stored in a frame buffer and a plurality of second frames to be outputted by an audio and video source are the same, the AV source set a AV control signal corresponding to a self-refresh mode, and a timing controller controlled by the AV control signal accesses the first frame to output a display data. The platforms are suitable for providing a logic function, and include embedded programmable logic, memory and a reconfigurable core.

1459826141-97d14515-93e3-451b-97a8-7526ce4cefff

Methods for reducing the complexity of integration of nucleotide sequences into a plant are provided. The length of a burst may then be determined by subtracting starting locations of successive bursts. The receiving device responds by providing desired parameters including an overall file size to the sending device. The constrained shape recovery of the gasket and bolt cores is combined with inverse flexion flange design that constitutes original type of BFC with feature to inhibit flange rotation and creep of bolts and gasket under conditions of a variety of operational temperatures and internal pressures. The detected random access channel preamble is indicative of the best cell portion for communicating with the user.

1459826141-cac25e9b-2f6d-4fd2-b8c8-84cead3c1ad4

A system in an embodiment includes an image forming apparatus, an erasing apparatus, a first apparatus, and a display unit. A low k dielectric layer is formed over a substrate. The full metallic chassis devices may include a keyboard and/or trackpad that include a plastic keycap. The control circuit converts an

oscillator input signal into bias control signals that in turn control the effective resistance of the symmetric loads such that delays through the delay cells are a function of the input signal.

1459826142-20ac0fc4-01b0-4a53-9a9c-8414284cf81f

A bottle-type plastic container includes a container body and an opening at one end of the container body for allowing liquid contents to be charged into the container and discharged therefrom. Light from the light source is projected into a scan field external to the housing and onto a code symbol on an object located within the scan field. To those ends, the sensor system includes a base, a substrate, and a flexible member suspended from at least a portion of the substrate. By such an arrangement, the locking device between the lamp holder and socket is an inner structure.

1459826142-e2627a10-6205-4112-a3b8-0e2915f92592

A protection device includes a substrate capable of suppressing electromagnetic fields, with a channel formed therein, a current dependent circuit interrupter disposed inside the channel, and voltage management circuitry coupled to the substrate. The system can include a source of input that identifies a status of a driver of the motor vehicle. For example, a management infrastructure may create service distributions for the managed entities, which may include virtual machine images hosted on physical resources. The flexible element is used to prevent foreign objects or light from falling into the hollow shell. Communicatively coupling between qubits is realized through respective intra-cell and inter-cell coupling devices. Another evaporator has a refrigerant tube that is sandwiched between a pair of corrugated sheets that have ice forming surfaces.

1459826143-4c6e1f96-fb88-45b7-8a48-d9039cc49d71

An antenna radiation collimator structure is provided as including a number of resonator circuit boards oriented to form a block structure. The patterned metallization is segmented into a plurality of spaced apart metallization regions. The locking mechanism may also cooperate with the disc retaining hub to lock itself to the hub.  $\leq 10^{-10}$  pFm or less and a dielectric dissipation factor of 3. The clipped polygons can then be rendered, and a portion of the previously rendered frame can be copied, to provide the panned frame. The present invention uses a data mining agent that operates autonomously, proactively, reactively, deliberately, and cooperatively to allocate and reallocate data mining processing tasks among computer systems, and/or among processors.

1459826143-4e02c47c-4d81-4078-a548-797ebb952c7a

Methods of depositing a film on a substrate surface include surface mediated reactions in which a film is grown over one or more cycles of reactant adsorption and reaction. After demodulation of the compensated optical signal, error conditions of the signal are monitored and an error signal is output. The movements of the cable activate cam levers which rotate cams that move a pair of jaws towards or away from each other. The actuator assembly is unlatched by measuring the environmental element near the actuator assembly and applying an alternating current to a voice coil coupled to the actuator.

1459826143-927c6f62-2070-4441-adc0-32d8d8a6730e

A method of manufacturing a thin-film magnetic head may include forming a first magnetic layer, a thin-film coil, an insulating layer, a gap layer, and a second magnetic layer. The process steps are: thiophene extraction; thiophene oxidation; thiophene-oxide and -dioxide extraction; raffinate solvent recovery and polishing; extract solvent recovery; and recycle-solvent purification. An audiovisual output section 72 receives the signals and outputs images and voices. Further, an inverter may be provided to convert the DC voltage to an AC voltage for a customer load or for connection to the utility grid.

1459826143-caf26cf0-ed2f-4cec-b309-43f20cbe39fc

A product distribution apparatus, shown in the form of an agricultural air seeder is disclosed having sensors to measure the mass flow through the distribution system, sensors to weigh the tank and the product therein, and sensors to measure the quantity of product in the tank. The prosthesis has a preformed shape that conforms to the wall to facilitate placement and minimize shifting of the prosthesis when positioned on the wall. Thereafter, the exciter connects the first trace line to an excitation node to induce a charge change on the second trace line, and the sensor senses the charge change to detect the variation of the mutual capacitance between the two trace lines.

1459826143-e5cdb846-49d3-4ef8-bf6a-a707b3ff50ca

An ultra-wide band waveform generator and encoder for use in a UWB digital communication system. Each manifest contains a list of file records, where each record contains the name of a file stored on the storage device, and a SHA1 hash value derived from the contents of the file. By tapping intermediate values from one processor, and feeding them to the next, a significant emulation speedup is achieved.

1459826144-29664df2-f6e4-4ce2-b7a5-046bf35397bf

A spread illuminating apparatus having a light conductive plate made of a light transmissible material and a bar-like lamp disposed along and close to an end face of the light conductive plate. The sections can be folded into a transportstorage position or unfolded into a substantially horizontal deployed position. This charge-transporting varnish enables to form a uniform and smooth charge-transporting thin film by a spray method or an ink jet method on an exposed electrode portion such as ITO or IZO of a substrate on which a structure of a simple or complicated pattern is formed beforehand. Grain is discharged from the dryer when the target moisture content after cooling added to the expected moisture reduction in the grain as the grain cools meets the measured grain moisture content in the dryer.

1459826144-2c4a5978-5eaf-4bba-aead-4c55e7688eb1

A system and method that does trustworthy multi-objective structural synthesis of analog circuits, and extracts expert analog circuit knowledge from the resulting tradeoffs. The assembly further comprises a blood transfer guide housing that contains a first optional set of barbs that holds the cylindrical end of the syringe. The thus hexagonally formed lens holder has advantageous air chambers and an enlarged distance from the lens, and also an elastic support deviating from a parallel guide, which lead to a low degree of lens tilting, improved guidance properties and a natural resonance behaviour which is necessary for scanning at high speed. An output of the start-up control unit controls a switch and the transistor. Control data may be inserted within an inter-packet gap, a data packet preamble and/or a Q ordered set and/or may be sent via an out-of-band signal.

1459826144-3365facf-9b6d-4ff9-a460-bcada15f0483

In a system for thermal processing of a semiconductor substrate, an RTP system employs a reflector plate which is highly reflective of radiation in a target wavelength range, and less reflective of radiation outside that target wavelength range. The method offers advantages over existing systems for preparing recombinant proteins including high yield, low cost and compatibility with animal protection regulations. During sintering, the carbonaceous material causes residual porosity in the sintered PCA. Accordingly, the number of mask processes for forming a black matrix is reduced.

1459826144-82bed870-e9b5-42f6-9fb5-52ae12703104

Support matrices for semiconductors are often encapsulated in a region of the bonding leads, the so-called bonding channel. The ratio of detected optical energy in each of two detectors examining the wave intensity returned to a wavelength

discriminator coupled with the characteristic of the wavelength discriminator determines the wavelength returned by the grating. A second jacket encases each acoustic sensor and any electrical conductors coupled thereto. The cast iron coupler body is pivotally supported by the mounting bracket and the cast iron coupler support body. An overlay network uses nodes in partnership groups so that a target node can obtain segments from multiple sources.

1459826144-e948770b-f4e4-4d87-9c68-d002a3dd1060

The electronic device comprises a network of at least one thin-film capacitor and at least one inductor on a first side of a substrate of a semiconductor material. Both sets of blades assemblies are connected to a generator and are operable to rotate the stator and rotor thereof in opposite directions relative to one another due to the blade arrangement between assemblies. 03% or less of cleanliness as stipulated under JIS G 0555, has final annealed temper and a preferred orientation texture in terms of 50% or less of degree of preferred orientation of the plane in a central portion between the sheet surfaces which is expressed by the following formula:. A supported hybrid metallocene catalyst comprises a first metallocene compound represented by a first given formulae, a second metallocene compound represented by one of three given formulae, and a support. The bonding member is formed to cover a portion where the opening edge of the groove which becomes the recording liquid supply path, in the primary flow path forming member abuts on the arm portion of the second flow path forming member. The second indicia containing at least an indication of a value of the voucher.

1459826145-21941d51-ccc7-47bc-b279-38cde5c5430d

A soybean cultivar designated 17110882 is disclosed. In the fuel injection system, a fuel injection pressure applied to the upstream-side fuel injection valve is set at a higher value than a fuel injection pressure applied to the downstream-side fuel injection valve. The top edges 86 are compressed to a lesser degree than the body of the walls.

1459826145-ea8bfe5b-1dbd-4ba8-b1d0-050d2db7b89a

A system and method is provided that facilitates the uniform development of a pattern on a photoresist material layer using a developer. The broadcast receiving apparatus also determines whether the print information included in the broadcast signal that is being played back includes acquisition instructing information instructing acquisition of a print content item transmitted from an external server. The measurements to be fused are each acquired from its respective source and correspond to an associated sampling period within an acquisition interval.

1459826145-f5499f1a-2857-4288-a950-abe0a4c0e4b1

A process, machine, manufacture, composition of matter, and improvement thereof, and method of making and method of using the same, as well as necessary intermediates, generally relating to the field of semiconductor devices, the structure of transistors, and the structure of compound semiconductor heterojunction bipolar transistors. The super-oscillatory lens is arranged to receive a light beam from a light source, the lens having a pre-defined pattern to spatially modulate the light beam in amplitude and/or phase so that it focuses the light beam to a focus at a first focal point having a full width half maximum of less than half the wavelength. The drug conjugates of the invention may also be used as a prognostic tool or as a tool to deliver therapeutics to specific sites within a mammalian body. A series circuit composed of a diode D1 and a capacitor C4 is connected in parallel with a secondary winding 5b of the transformer T, to form a rectifying/smoothing circuit. The manufacturing process for an annealed wafer comprises: cleaning a silicon wafer; and loading the silicon wafer into a heat treatment furnace to heat-treat the silicon wafer in an Ar atmosphere, wherein an aqueous solution including hydrofluoric acid is used as a final cleaning liquid in the cleaning. Other embodiments may be dedicated GSM Prime receiving units.

1459826146-186ca980-48a8-42d1-8463-2a46bc5ff2e9

Protecting a FET from plasma damage during FEOL processing by forming a FET-like structure in conjunction with and adjacent to an FET, in a same well as the FET, but having a body doped opposite to the well polarity. Samples are irradiated in a chamber having a resonant cavity containing a plurality of affixed reflectors, where selective Stokes scattered radiation is transmitted to a detector for determination of sample identity. The module has a plurality of physical layer links. This invention also relates to methods for producing a maize plant containing in its genetic material one or more transgenes and to the transgenic maize plants produced by those methods. The detection section is formed above the vibration section for detecting an angular rate of rotation applied to the vibration section, and has a lower electrode, a piezoelectric layer formed above the lower electrode, and an upper electrode formed above the piezoelectric layer.

1459826146-7480d1ac-f1e4-4798-9801-8791875c1ed9

The invention provides improved security for stored-value instruments. In an embodiment, the AT can register its priorities for multiple physical-layer systems as well as contact information by which an application server can contact the AT over each system. An integrated circuit portion includes a circuit forming, together with the crystal unit of the crystal unit section, an oscillator circuit on the main surface of the IC chip unit, and IC terminals formed with a plurality of IC electrode terminals, and two connection terminals connecting the external terminals of the crystal unit section are provided.

1459826146-d5d264aa-8dc6-416f-97d6-246989dd2d67

A quick disconnect that enables a drummer to quickly remove and apply tension to a drumhead of a drum is provided. The audio input is then converted to a machine-readable representation for later audio playback. The cleaning pad also has a second set of grooves positioned parallel to one another and perpendicular to the first set. A determination is made, responsive to the time-shifting determination being affirmative, a delayed schedule for the data transmission in response to the request such that the data transmission is completed by a deadline. Elastic modulus of the metal compound film is larger than that of the metal oxide film. The plurality of underlayers include at least one crystalline underlayer including Mo as a main component thereof, and at least one of Si and C in a range of 1 mol % to 20 mol % and an oxide in a range of 1 vol % to 50 vol %.

1459826146-f2adcc9e-4fed-4868-908a-d639794af751

The reducing treatment of the negative electrode of which the battery capacity decreases slightly and the internal resistance increases slightly, does not affect the battery performance. Also decision making tools and computer implemented programs for performing the method. The openings extend through the respective regions to the organic insulating layer.

1459826147-9f48e40f-c488-4954-bfac-1a93d61425be

Refrigeration-cycle equipment wherein an oil separator is installed as a refrigerant vessel in a part of the high-pressure-side circuit. Each processor in the multiprocessor shares resources, and each shared resource has an associated lock within a locking device that provides support for synchronization between the multiple processors in the multiprocessor and the orderly sharing of the resources. The templates each include a collection of configurations that were made by the application during installation on a computing device executing the operating system. The necessary operating force of the left and right operating members can be reduced using the rotation of the drive source via the assist mechanism. One of the buses is connectable to a power supply source, while the other is connectable to a power supply ground.

1459826147-f45702d8-a583-4c11-a054-1a07f2ecce40

The present invention provides a device to weld metallic elements. The X-ray

imaging system includes an X-ray generating apparatus to generate and emit X-rays, a detector to detect the X-rays emitted from the X-ray generating apparatus, and at least one collimator disposed between the X-ray generating apparatus and the detector to prevent dispersion of the X-rays emitted from the X-ray generating apparatus. Magnetic toy vehicles are captivated in both capsules while a third magnetic toy vehicle is movable within the center tube between the closed ends. The torque restriction are enhanced or relaxed by moving the position of a torque axis relative to the graph along the angular acceleration axis while preserving a shape of the graph. Gatelines are formed on the steps and along lower regions of the walls.

1459826147-fb932aea-e90d-401a-bc31-31869a7f5ecd

An archery bow has upper and lower rotatable draw force modules. A first electrode is electrically connected to the first semiconductor layer, and a second electrode is electrically connected to the second semiconductor layer. The module further includes a heat sink plate underlying the circuit board to radiate heat generated from the LED chip. A voltage based on total inductor output current is summed with the regulator's reference voltage; this sum and  $V_{out}$  are applied to the voltage control error amplifier, the output of which is processed to operate the regulator's switches.

1459826148-38cd820d-054e-4b92-ae8a-67d66998ce75

A method and system are provided for a trackless autonomous crawling all-position arc welding robot with wheels and permanent magnet caterpillar belts. The driving substrate has a display region and a non-display region, and at least a first alignment mark is disposed on the non-display region. The o-nitrophenoxyketone is hydrogenated to form the corresponding benzoxazine, which is thereafter acylated with an acylhalide to produce the acylamide, such as 4-dichloroacetyl-3,4-dichloroacetyl-3,4-dihydro-3-methyl-2H-1,4-benzoxazine. The input measurement module may include a first outer casing and a second outer casing coupled together around a circuit board that interfaces with a backplane of the carrier through a backplane connector.

1459826148-4d8accb1-20b9-4a0d-b9e1-ea9c1eb89b99

Based on the time series data from multiple components, the systems administrator or other managing entity may desire to find the temporal dependencies between the different time series data over time. The differential noise generation circuit includes a pair of input nodes and a pair of output nodes, and is configured to receive noise signals at the pair of input nodes and to generate differential noise signals at the pair of output nodes. The stem and sliding carriage cooperate with arcuate guide rails in the compact base for positioning the window via pivoting the head about a horizontal axis. Priorities for the activities of the as are determined by motivations. The changed position is used for deriving the position information of the target. As a result of its inventive construction, the device exhibits low loss, large tuning range, low electrical consumption and is readily manufactured using standard processes.

1459826148-7e302e5c-2dc3-4798-8a77-bb61e7291164

A system, method and system are disclosed for using a variable frequency clock generator to synchronize an average data rate over intervals of time in a variable clock domain to make it equal to a fixed data rate in a fixed clock domain while reducing electromagnetic interference, among other things. Chips are attached to one surface of a continuous flexible substrate. The system also comprises a dedicated signal conditioner coupled to the power cell and to the radio frequency module, the signal conditioner conditioning the power signal for use by the radio frequency module. Compressed air is supplied to the gas sample extraction apparatus to maintain the fluid sample level within the sample canister at the desired fluid level. The priming algorithm is operable to activate an electrically powered fuel pump when a fuel system is in an unprimed state. The preferred grain size should be

in the sub-micron region with the grain width of from about 30 to about 300 nm.

1459826149-0d3c1fd6-ebae-4656-861f-38e2729dc8ba

At the transmitter side, carrier waves are modulated according to an input signal for producing relevant signal points in a signal space diagram. The method converts the page into a semantic thumbnail, which preserves the overall appearance of the page and displays readable text segments that enable a user to identify main areas of the page. When the control pressure is greater than 50% duty cycle the locking pin disengages and the VCT moves away from the mechanical stop. Examples of pullers and pulling systems also include constant force pulling which is desirable in particular for small diameter pipe replacement.

1459826149-2e39853e-c79d-45f9-8247-9fddbf116663

A cloud computing platform contains a structured storage subsystem the provides scalable queues. The image projection apparatus includes a facing member that faces an installation surface on which a main body of the apparatus is installed; and a foot that allows the facing member to support the image forming unit. Some embodiments include communicating, via the processor at the NOC, the data to a ReNAT virtual private network with packets wrapped in a private ReNAT defined protocol that includes the public source address and the public destination address. The relatively flexible wall segments may be installed within notches in the male body or be formed integral with the relatively rigid wall segments. Thus, the problems of the prior art could have been solved. The E-fuse cell has a fuse element with a fuse link extending from a first fuse terminal across a thick dielectric structure to a second fuse terminal.

1459826149-da4a798f-b593-42fa-9d27-c8976e7beea7

A method carried out by a first communications device for transmitting data packets, wherein the first communications device comprises a plurality of network interfaces. The components are mounted to a substrate and are protectively housed in an interior chamber of an environmentally sealed enclosure housing. If the program signal is received by the reference voltage generating circuit, the reference voltage has a positive temperature coefficient. As one of the final fabrication steps, the substrate is back-etched so as to form a thin membrane in the sensing area. The invention further comprises a transmitting device and a receiving device for executing, said method. If the comparison shows equality, then the zero detect result Z is true.

1459826150-063046cc-5b5c-457d-b173-8e51b709cb2b

PEG-LHRH analog conjugates, where a PEG moiety is covalently bound to a serine residue of a LHRH analog either directly or via a bifunctional linker molecule, such as an amino acid, and methods for producing these conjugates are provided in the present invention. The implement of the low NO<sub>x</sub> control makes it possible to compensate for the deterioration of the three-way catalyst with respect to NO<sub>x</sub> purification and to keep NO<sub>x</sub> emissions from the three-way catalyst equal to or less than the regulation value. The same measurement is conveyed to an adaptivity function at the receive end for use in the communications receiver to select demodulator variables such as gain control, and equalization of amplitude and phase, versus frequency. A basic test tube is utilized and a varied number of extenders may be added according to the energy influence of bullet under test. coli 0157:H7, in meat from food animals, and in other food stuffs. More specifically, the present invention provides according to an aspect thereof, an abrasive agent comprising abrasive particles, said particles being in the form of a composite material comprising more than one metal oxide material.

1459826150-28b98e8a-8cf2-463a-88d2-805bb80951f0

Systems, methods and apparatuses of establishing an IPsec VPN tunnel are disclosed. This ceramic material comprises a ZrO<sub>2</sub> phase composed of 90 vol % or more of tetragonal ZrO<sub>2</sub>, and containing 10 to 12 mol % of CeO<sub>2</sub> as a stabilizer, and an

Al2O3 phase. When a request to write the predetermined data to the page again is received, the predetermined data is written to an empty free page in the log block. The control gate is formed with a planarized upper surface.

1459826150-85d9f80c-a79f-4ee0-8eb1-a42d56920c74

A sample load and injection device includes sample introduction capillaries attached to a microfluidic device. The combination of zippers and hook-and-loop fasteners provides a dual fastener system that protects against freeze up and clogging of exposed zippers and may include alternate connections to provide two different tubular leg sizes. Each slot has a slot header relating to the slot and a data packet.

1459826150-88645463-0250-460e-a71c-9e83aa03c54d

Polymeric composite materials, particularly highly filled polyurethane composite materials are described herein. The watermark embedder encodes a watermark signal in a host signal to create a combined signal. The collar in the preferred form has eight conical gears that mate with corresponding teeth in the top.

1459826151-2989f629-04b8-4a6f-9df5-0bf013ceae63

The present invention relates to methods and arrangements for access control in a multicast system when data is distributed from a source VS on a common link L3 to at least two users U1-U12 via a node BN21 that comprises a request arbiter ARB21. The described apparatus configures the physical and virtual resources that run on the converged infrastructure to communicate with the rest of the data center. The second brake arm includes a second brake arm mounting portion for mounting the second brake arm to the bicycle frame member and a second brake pad mounting portion. The processor compares the text information to the known text formats and determines a text format of the text information. The contiguous emitter design provides an improved electrical emitter connection for the device, minimizing any unbalance that can potentially occur when using separate emitter fingers and improving the ability for the simultaneous turn on of the multiple emitter-base elements. The position at which the battery is disposed overlaps at least one of the motors in plan view.

1459826151-cd3c9e4f-54f2-4396-9a8e-e41eb02053e1

The present invention includes block molds and manufacturing processes as well as a composite masonry block comprising a block body having an irregular trapezoidal shape and comprising a front surface and a back surface, an upper surface and a lower surface, and first and second sidewalls. One or more variants are first defined through the use of a browser-based editor application that initially examines the webpage for a snippet of code. A perimeter edge channel encloses a perimeter edge of the laminate along the sides without enclosing corners of the laminate. Pre-characterization templates are created using FFT techniques to identify only those frequencies indicative of tool breakage.

1459826151-de864973-b5ca-4577-92cb-1b66ac3a38f2

Methods and systems for taking acoustic measurements related to subterranean formations. A vulnerability is acquired from the at least two scanners and stored in a data store. The apparatus further comprises at least one Servicing Organization communicating with the Requesting Organization and defining the credentials required for access to a service via the resource server by end users associated with each of the organizations.

1459826152-64024691-5b0f-497e-901c-98547d97ece9

According to one embodiment, a local proxy caches in a local stream store one or more streams of data transmitted over the WAN to a remote proxy. In accordance with exemplary embodiments of the present invention, the disk drive comprises a disk storage medium, a first bus connection, and a second bus connection. ; and forming a film made of a second electrode material on the other surface of the silicon

carbide substrate, and forming a Schottky electrode by performing heat treatment.

1459826152-71ab07bc-aa91-4a17-9232-d295d30e94f5

An easily and inexpensively producible surface-treated metal plate which uses a continuous coating facility for a surface-treated metal plate to provide at least two coating layers. The hook is U-shaped and defines a bight area into which the branch or limb can be guided and grasped for cutting. Such a system can detect irregularities in a roll or the mating structure that can cause undesired vibration. A sensor of the first transceiver device monitors the light signal reflected by the optical reflector to determine whether a power level of the reflected light signal is greater than a given threshold. The targeted bit allocation for a picture to be encoded is advantageously varied based on an occupancy level of a buffer model, such as a video buffer verifier buffer model. The column mixing module transforms groups of four bytes of a plurality of replacement bytes including the replacement byte.

1459826152-b3a6b749-1dff-4612-8240-f9ce2f55d6a0

An apparatus, method and system are provided for carrying and dispensing an ink into a printing system. The drill points are guided through the insertion rod and the flexible strand is held over the drill points as the transverse tunnels are formed. On one side of the electronic semiconductor device is a first, thermally-conductive, electrically-insulative substrate having a predetermined electrically-conductive wire pattern affixed thereto. A plurality of attachment devices are disposed on at least one of the first and second sides or the first and second ends.

1459826152-dcc710c4-15ec-446f-a4af-860b1d5a1cd8

A rubber composition, which comprises 100 parts by weight of a rubber mixture consisting of 70-95 wt. The camera may be assigned a second light source. A satellite transmissive panel 40 is coupled to the vehicle body 30 adjacent to the antenna 18. Hybrid sorghum seed, plant or plant part produced by crossing the sorghum variety PH017QMIT or a locus conversion of PH017QMIT with another sorghum variety.

1459826152-fcf7d105-f06b-4181-97be-b999d18c1336

A recording and/or playback apparatus using a disc cartridge that accommodates a recording medium such as an optical disc includes a holder, a recording and/or playback section, and a moving mechanism. In a preferred embodiment, a rotatable shutter with three positions is placed between a light source and a DMD. The switch cores are preferably located in the same physical area but the SCALs may be distributed in different physical areas.

1459826153-370a5753-bf8b-4443-b7e2-52d6a2ab5097

A method for producing a polyurethane resin which comprises reacting: a compound having an active hydrogen-containing group, containing: a compound having one spiro ring and active hydrogen-containing groups at both ends; and an aliphatic polycarbonate polyol; a polyisocyanate; and a chain-extending agent. Two crash boxes are fixed between the respective front end of the side members and the impact cross member structure. When switching from the first mode to the second mode, start of the synchronous parallel driving from a state where the FET on the low voltage side is turned on is inhibited on the high voltage side is turned on). Residual components are evacuated. An address generation module generates an address for interleaving based on the nominal input signal. The inner telescoping member is fixedly attached to the other of the outer sleeve and the outer tubular member.

1459826153-443d0f27-8b83-4945-a519-e497fb141f76

A digital circuit which can operate normally regardless of binary potentials of an input signal is provided. A broadcasting device transmits the programs and CMS via

separate channels. The internal display can be accessed with the aid of simple network management protocols via a management information base. The attachment also includes a windshield holding assembly having a suction device for holding the windshield via vacuum pressure. Associations of natural language artifacts may be learned from natural language artifacts in unstructured data sources, and semantic and syntactic relationships may be learned in structured data sources, using grouping based on a criteria of shared features that are dynamically determined without the use of a priori classifications, by employing conditional probability constraints.

1459826153-599d2273-5c37-419c-af12-e2bf2243e45f

A semiconductor structure provided with an insulation structure in a moving unit is manufactured easily. According to at least one embodiment, a computing device monitors one or more file system operations for a file stored in the computing device. A base station can also be configured to send an HS-SCCH order indicating de-activation of scheduled pilot channels to next-generation UEs scheduled for downlink transmission, and then stop transmitting the scheduled pilot channels after receiving ACK messages from each next-generation UE. A second transistor has a third terminal coupled to the second branch, a fourth terminal coupled to a reference voltage.

1459826153-b377c977-a10a-4027-9cb6-e56f2089be87

The invention concerns improved sugar-free products, their production and use, in particular, coated products, their production and use. A valve cartridge is sealingly disposed in the bore. In particular, the invention includes light deflection elements that are tilted with respect to one another and that are individually controlled to provide for the deflection of light in an improved manner.

1459826153-ba7087b9-5b9f-46b4-9deb-2d162b7c2450

Audio data is prevented from not synchronizing with video data when splicing. Backed by this, the effect of the local flare on the pattern exposed by photolithography can be quantitatively corrected in conformity with the respective exposure conditions, so that a desired pattern can be formed readily and accurately. The invention further relates to corn seeds and plants produced by crossing plants of variety CV723111 with plants of another variety, such as another inbred line. An economic dispatch module determines an optimum operating point for each DER and an Integrated Volt-VAR Control module controls distribution assets to maintain a voltage profile in the system.

1459826154-3eb89f5f-75f8-4e9f-a978-119fa538f738

For a first gear ratio, the flyweights engage the clutch and thus connect the input to the sun wheel, whilst the ring gear is immobilised by the free wheel. In one aspect, the present disclosure teaches a chassis component forming a part of a chassis including a panel having an aperture formed therein. In particular, a data rights management clearing house is provided that generates permits, permit classes, and enables content packaging across multiple data rights management architectures. by subtraction, of the received signals, disturbing signals received at practically the same level are eliminated while the difference of useful transponder signals is available.

1459826154-421bee86-e33d-43cb-b3b4-68e671e0911b

A wireless communication system for monitoring a communication service comprises a first set of communication devices located in a first set of geographic areas configured to receive the communication service and determine first performance data. The compounds represented by the general formula exhibit catalytic activity equal to or superior to that of organotin catalysts having been employed as catalysts for the production of polythiourethane optical materials from the past, and have high safety. In the metallic layer, a master-side surface on an exposed

surface side of a conductive master body is arranged on a light incident direction side. No personal identifiers are carried on the card to identify a cardholder, the card is impersonal. The decoding circuit includes a decoder decoding an input data packet and a control block detecting a stuffing byte section in the input data packet, converting the input data packet, and decoding a converted data packet when the decoder fails in error correction of the input data packet.

1459826154-54ab5132-4c6b-403e-9494-8e758affa058

An imaging system may include imaging pixels. In another particular embodiment, the method includes receiving a mute command at a mobile communication device while the mobile communication device is performing audio content processing. The article is made in a mold including a surface defining a mold cavity and having a first and second effect region.

1459826154-5f58c27c-3c67-44f0-8f4f-98b524f1edb8

In producing complementary sets of metal-oxide-semiconductor field effect transistors, including nFET and pFET), carrier mobility is enhanced or otherwise regulated through the reacting the material of the gate electrode with a metal to produce a stressed alloy within a transistor gate. The longitudinal element is eliminated in favor of front and back lateral tracks in which the opposing ends of the expansion arms are slideably received so as to allow expansion of the bounded areas in both a lateral and anterior-posterior direction by sliding within the channels. To determine if the requested data block is already in the buffer cache, aspects of the invention compare a fingerprint that identifies the requested data block against one or more fingerprints identifying a corresponding one or more sharable data blocks in the buffer cache. The operating gas for the stripping device is preheated in a partial area of the cooling zone of the heating furnace.

1459826155-0a5d9589-b06a-4e06-a8ea-914463a1bb22

An abrasive tool includes a superabrasive grain component, a filler component that comprises hollow bodies and a vitreous bond. The method involves automatically learning phrase features for classifying questions into different types, automatically generating candidate query transformations from a training set of questionanswer pairs, and automatically evaluating the candidate transforms on information retrieval systems. The transaction detail can be captured from many sources and can include third party data.

1459826155-154d852c-6888-4441-8f93-b7e2ceeb9d6d

The present invention relates to a container comprising opposing top and bottom walls and four side walls each having an upper and lower ends, the opposing top and bottom walls and the four side walls bridging the opposing top and bottom walls. Addition of surface active agents, such as C6 to C22 carboxylic acids, to a two phase liquid-liquid polymer solution downstream of a reactor system and upstream of a heat exchanger system can increase the efficiency of heat exchange by more than 10 %. A unique asymmetric source-drain field-effect transistor structure is formed by changing ion implantation tilt angles to control the locations of doped regions formed by two ion implantation processes. The method includes assembling the radiopharmaceutical pig so that the chamber of the radiopharmaceutical pig contains the syringe in the sharps container housing.

1459826155-c7709392-2d2c-4c54-b378-f1e1f85c98c7

Method and apparatus for processing transmitted data. Each step has a vertical riser portion, a horizontal tread portion, and a nosing on the forward or player-facing edges of the tread portions which protrudes over the riser portions. The input audio signals are mixed into a mixed audio signal. The physical communication link may be damaged for any number of reasons such as a loose connector, rodent chewing on the physical communication link, etc. A user identifies search attributes and the rule data structure is searched to locate entries in the rule data structure that match the identified search attributes.

1459826155-ebe9b149-7885-475c-86fe-29150725bd90

An article of clothing comprises a garment for covering at least partially the bust of the user wearing the garment. The delivery system includes a stented prosthetic valve having a balloon-expandable stent portion with a prosthetic valve disposed therein and at least one self-expanding stent portion. The fluorescence image may be directly measured, e. The damping assembly includes a biasing member extending between the cylinder housing and the head. User selection of a particular policy element via the interactive GUI causes a subset of the security policies to be identified, each security event in the subset based at least in part on a particular security policy represented by the particular policy element. The deposition source includes a furnace, a first heating unit surrounding the furnace to heat the furnace and a second heating unit spaced-apart from the first heating unit by an interval and surrounding the furnace to heat the furnace, wherein the second heating unit comprises a plurality of separate sub-heating units that surround the furnace.

1459826155-fd1dfbbe-b4b8-42ef-81ef-7cfb2e4a92b8

A support for a body of a stringed instrument includes a brace structure having a plurality of legs radially disposed about a central body. A signal path of the connecting member has predetermined impedance which is determined depending on a distance between the second wiring pad and the ground layer. Face coatings may also be applied to one or more of the faces extending in relatively narrow strips around the aperture of the base sheet.

1459826156-32473b9c-c66e-4bb6-a175-3f9e93c43d8f

An implant is disclosed for use in stabilization of one or more bones, for example, adjacent vertebrae. A first part of the active region covered with a first conversion element for converting the emission falling in the primary wavelength range to an emission falling in a second wavelength range. The indication module receives power from an indication power source separate from the telecommunication signal. The coil elements are disposed on a recess formed on the lower core layer. With its low background fluorescence, the cuvette cartridge is useful for high-throughput fluorescence measurements of biological samples. The annular body is made of a first metal with a specific density and the pins are made of a second metal having a lower density than that of the first metal.

1459826156-57d362db-bc16-4a6d-950c-6bd87454adb0

Systems and methods of computer aided engineering analysis using hybrid approach of finite element method and adaptive smoothed particle hydrodynamics are described. A fuel cutoff event is immediately implemented, along with electrical energy regeneration using vehicle kinetic energy. An endpoint data structure is used to store, for each on net endpoint of the call, a key and at least one of an Internet Protocol address of the end point, a phone number associated with the endpoint, and/or a display name associated with the endpoint.

1459826156-60146422-f0c9-4e08-a134-583b79f5721a

A vehicular battery mounting structure includes a floor panel, a battery frame arranged below the floor panel, and a bracket provided on both left and right sides of a vehicle, interposed between the floor panel and the battery frame. One constituent of the concentrate is copper sulphide, which is leached using an alkali chloride-copper chloride solution. The array of photosensors is arranged to view the examination region. The required road information can be acquired from digital maps or images.

1459826156-c68056c5-4843-462c-ab33-0d9e570020b0

Disclosed are pharmaceutical compositions, particularly oral dosage forms, which comprise two or more enteric coating materials, either as a coating or as part of a matrix dosage form, and methods of making and using the same. The clamp circuit

comprises a bidirectional switch having two FETs, and a gate feedback circuit is connected to a gate portion of the FET at a panel side. The length of tube that forms the pump may be connected to shunt inlet and outlet parts, and may also include a valve that is adjustable to prevent back draining of fluid. A cooling fan is located adjacent the inlet to augment cooling-air flow. An apparatus for making a nonwoven fabric comprises means for continuously extruding substantially endless polymer filaments of 0. The first row and the inner return row are parallel.

1459826157-01d57a08-2841-4226-a6bc-04c48d666498

An electron source has an electron emitter with an electron emission cathode, a high voltage unit provided for power supply of the electron emission cathode, and a low voltage unit provided to control the high voltage unit. The mechanical adapter includes shafts rotatably guided by different bearings and couplings for driving said different shafts. The media system further includes an interface program for receiving at least two desired media descriptions from the user, a goal seeking engine for selecting a number of suitable media clips from the media clips based upon the at least two desired media descriptions, and a media player for playing the suitable media clips. The method includes forming at least one hole in the substrate while the core is disposed within the respective interior space. The outer peripheral surfaces of the end-corresponding regions are finished so that a processing flaw depth becomes 10  $\mu\text{m}$  or less.

1459826157-720b7fc1-e6de-42d1-92fc-3324d60355a7

Method of manufacturing a semiconductor chip. Then, one electrode out of positive and negative electrodes is applied with such an amount of electrolyte as being exposed on a surface of the one electrode. Advantages can include fast lock-up time in moderately to severely noisy conditions, greater tolerance to noise and jitter when locked, and improved tolerance to clock asymmetries.

1459826157-9f8d9477-1eb0-42c6-b6d0-55516f4793cf

There is provided a method, system, and computer program product for extracting information related to a monitored device communicatively coupled to a network using an HTTP communication protocol. The system generally includes a media streaming system that is used with a video player in connection with the playback of at least one audiovideo work. As the bias potential is ramped across the electrodes the increase in tunneling current occurs as the carrier energy sequentially matches the conduction band energies of the translocating biopolymer. A thermal gradient can be applied to the electrically conducting material and a voltage applied to the substrate. In other such embodiments, the mind-control toy includes a track along which players can compete or cooperate. A control unit controls the table and the folding units.

1459826157-ba7647ac-5dff-4962-b988-d3384d7ad34c

A riveting tool including a magnet, a magnetically attractive housing, a non-magnetically attractive bucking bar received in the housing, the bucking bar being moveable relative to the housing along a bucking bar axis, and an actuation mechanism to move the bucking bar along the bucking bar axis. The plasma damage detection test structure includes a first antenna, a voltage source, a ground reference, a first transistor comprising a first source, a first gate, and a first drain. A power control strategy may use one power supply for the master DSP, a second power supply shared between the slave DSPs, and a third power supply shared between each of the SSPC channels.

1459826158-6a350587-437c-44ff-ae5a-5fdc23762cd7

A motor generator has a rotor directly coupled to a crankshaft and a stator disposed around the rotor. The housing includes a first hole and a second hole. Alternatively, a material possessing at least two distinct dielectric constants is interposed between the RFID tag and the substrate, such that there is a high dielectric constant at the interface with the substrate, and a low dielectric

constant at the interface with the RFID tag. The first processor may reset itself after providing the reset signal. In another embodiment, a water-reactive material may be used to provide gas to the bladder wherein the amount of gas generated by the water-reactive material may depend on the hydrostatic pressure of the bore hole fluid. The bypass sleeve is installed in the control valve bore and includes an axial bore, and a first and a second port.

1459826158-bb4787cd-85a6-4096-a164-ba327d4e747d

A semiconductor integrated circuit device includes a plurality of internal memories, a main processor, which constitutes a first processing unit having a codec function, and a video interface and graphics processor, which constitute a second processing unit for video display processing. In preferred embodiments, an active PDGF-D polypeptide, or a polynucleotide encoding an active PDGF-D is administered to the mammal, preferably at a location where angiogenesis modulation or stabilization is desired. The home node has no centralized directory for tracking states of the memory block in the plurality of nodes. Memory-access addresses are extracted from the serial packets by the AMB. This partition also permits a portion of the fluid to pass through the aperture to ensure that the sample under investigation does not reach the window.

1459826159-604667e6-ff6f-4e59-9be1-c20e3b1ae3a2

A channel-cut monochromator has at least two kinds of reflecting surface pairs processed on a common single crystal block. In a channel region of the nMISFET, a tensile stress is generated in the direction of movement of electrons due to the first-type internal stress film, so that the mobility of electrons is increased. The adapter assembly includes two probe plates, which hold a probe field. The sub-pixels are formed by the three light-emitting elements that form a pixel to thereby enable the display device to perform display. A surface of the first semiconductor layer connected with the lower electrode is a patterned surface including a number of grooves.

1459826159-6698d830-747a-4aa7-851b-65cddb6d496d

A self-cleaning system for delivering sanitized water to a workstation has a boiler which produces heat-sanitized water and steam. At least two sidewalls, including a first sidewall and a second sidewall, the first sidewall connected to the first edge of the floor, the second sidewall connected to the second edge of the floor. The IP-based node executes circuit selection at least based on a first message, received from one of the IP-based gateway devices via an IP connection and specifying circuit availability for at least a portion of the corresponding set of connected trunk groups.

1459826160-7cd066e3-6318-4e32-b1ad-4c3a09e616b0

A digital signal processor generates in-phase, quadrature-phase and amplitude signals from a baseband signal. In this formula, R1, R2 and R3 are different radicals, X is a bridge atom selected from the group consisting of oxygen and sulfur and Het is a saturated heterocyclic group which comprises oxygen and carbon atoms. The invention further relates to methods for generating a quarterwave foil for use in a liquid crystal display as defined above. A specified time after the animal leaves the box, the turret sweeps the rake through the litter, picks up the collected waste, and carries it to a waste bin, where the waste is dumped.

1459826161-0d595bfa-1496-430f-90c4-195dfe64e820

A method of fabricating an integrated circuit on a silicon carbide substrate is disclosed that eliminates wire bonding that can otherwise cause undesired inductance. the 3-pass serpentine circuits include a first channel positioned along the pressure side wall to provide near wall cooling, a third channel positioned along the suction side wall to provide near wall cooling, and a second or middle channel located between the two near wall channels in the cooler section of the airfoil. A detection component determines chroma values contained in the regions.

1459826161-a8bcbab2-b9f4-4679-abc7-79d46dc7579e

Heat-transfer fluids and lubricating fluids comprising deaggregated diamond nanoparticles are described herein. A plug-in intermeshing connection between the driving disc and the clutch basket is provided such that there is no torsional backlash and such that no rattling noises are produced. Following generation of the output video line, a further X lines are read from the framestore into the linestores to provide a further set of M lines in the linestores. The coating can be deposited on copper, tin-plated copper, tin alloy-plated copper or other metallic substrates, using any of several physical vapor deposition methods. This is applied to a word-document index to produce fast build and query times for document retrieval.

1459826161-b46fd124-6935-4b91-ab41-d09eef9db263

A kind of tetrahydro isoquinoline derivatives, their preparation methods, medicine compositions and medicinal uses thereof, especially their uses as  $\mu$ -opioid receptor excitant in pain relieving, which belongs to the medicine chemistry. A preferred embodiment computes a time slot or frame offset based on modulo function using a field unit identifier in order to distribute field unit maintenance transmissions among available slots or offsets. The diaphragm includes a portion for supporting a voice coil, and a sound emitting portion formed continuously to one end thereof.

1459826162-32e45929-8852-4f97-9734-de6659ad5ffd

A flame simulating device for a vehicle is disclosed. An image that depicts a device in contact with a user is obtained. 83, an Abbe's number of 45 to 55 and a glass transition temperature of 630\xb0 C. The inspection can be achieved as an in-line stage during the processing of wafers or in situ in combination with another processing tool or as a separate off-line analysis device.

1459826162-394b38ab-6e41-4513-b514-d99ccea1eb46

Methods and systems for selecting a language for text segmentation are disclosed. The apparatus and method reduce acoustic fatigue damage to aerospace vehicles that may be caused by the reflection of exhaust energy from landing and/or launch platforms. The light detector generate signals based on the intensity of reflected light detected and the signals are utilized to calculate the distance from the device to the object. The protective film includes a metal oxide film, and the metal oxide film has a film density of higher than or equal to 3.

1459826162-706d59ad-bdfd-4688-afb5-110eb54a019a

Methods for image segmentation are provided herein. The first insulating film is formed not to fill spaces between the plurality of first electrodes. A minimum area of the second discharge electrodes required for addressing protrudes towards the discharge cells. Each level contains information from different levels of slivers of the circular space. The different plates must be precisely aligned. The data series might be reversibly applied to one of the dimensions, allowing for complex geometries to be created with data represented in very flexibly ways.

1459826163-002d8d86-8b62-4c4b-a2d0-fb511bde711c

A method decodes a soft-input cost function for an error-correcting code. The example system includes a power amplifier, a switching component, and a duplexer. Another set or sets of cells include additional interferer cells within another offset range of the serving cell. The instant invention enables the personnel basket to be connected to the outer end of the jib boom at all times without the necessity of removing the personnel basket from the jib boom when the jib boom and the boom structure are in their stowed positions. In one embodiment, the invention relates to a method for mapping digital information indicative of input to a video game controller in a first form to information in a second form, the second form conforming to a protocol for inputs to a video game console executing a music based

multi-player video game. In one embodiment, the apparatus includes: a monitor configured to switch between a display mode and a reflecting mode and a camera located in front of the monitor, the camera positioned to face the monitor and synchronized with the monitor to capture a local image reflected therefrom during the reflecting mode.

1459826163-25ba840f-424b-472e-8b66-5b718f1a8dd1

An exchange blade knife includes a replaceable blade, a blade holder and a blade lock. The anchor is mechanically interlocked with at least one of the conductor and the insulator. User information is collected from one or more data repositories.

1459826163-3fa13173-7c66-4ebf-8335-889d70114857

The shifting of the parting line between split molds due to mold clamping force is prevented. One device includes a through-silicon via and a trench capacitor formed around the TSV. The method of the preferred embodiment can also include creating a signed authentication token in response to a successful user challenge, and transmitting the signed authentication token from the authentication server to the embeddable interface. This embodiment will simplify the process of using layer fonts to set type with multiple-color characters.

1459826164-5533d622-9883-49c1-ba63-4e0f3d117c51

A data storage system and a method of storing data are described including a cache with a variable number of levels. The microparticles also contain magnetic particles that can be heated by application of an external magnetic field and thus heated to a predetermined Curie temperature. There are light sources, such as LED's contained with the light source holes of the jack plate. In one embodiment, the image-recording device includes a high-speed digital camera, the wavelength-encoded light source includes a group of infrared light-emitting diodes and a pair of wavelength-encoded flashes located in two different meridians of the camera, and the control system includes a computer system.

1459826164-b105624c-891d-4fd2-905d-7e771e054715

A system management human-machine interface application for use in a process control system is described herein that enables users to view/monitor information regarding system status and performance and to initiate changes to the operation of system equipment, checkpoint control stations and execute diagnostics. The USB controller may have a host interface module configured to generate hardware logic signals for communication to a backend module having buffer memory. The intermediate portion has an average cross-sectional area less than one or both of the end portions. The memory requests may include a plurality of write requests and a plurality of read requests. A phase locked loop on a second die is coupled to receive the reference clock signal, the PLL to generate a local clock signal.

1459826164-ce0ebc54-97f2-4bbb-b933-e41efd447006

A data caching approach is provided for a distributed computing environment employing coherent data caching. The scanning device defines a form factor that conforms to that of a conventional laser-based point-of-sale scanning device using a housing having a plurality of mirrors, oriented generally at 45-degree angles with respect to the window's plane so as to fold the optical path, thereby allowing for an extended depth of field. Further, the display device has a second substrate opposed to the first substrate and having a resin black matrix. A unique shift buffer mechanism cooperates with the rear derailleur system to buffer and store up to the full range of available shift commands. In this manner, a plurality of meibomian gland secretion grades is obtained. After the entire measurement is repeated at least once, then from the first and second measurement values, the concentration change of the substance in the culture medium and the acidification or alkalinization of the culture medium is determined.

1459826165-0d4d875a-b4d9-4cec-8fe1-899c17d20b6c

In an image reading apparatus using a contact image sensor, an area light source for reading an image from a film original is provided. The handle of the driver includes the electromechanical driver and at least one processor element which controls the actions of the electromechanical driver, and therefore the application elements of the surgical attachment, based on information relayed between the processor element and remotely activatable sensor assemblies in the surgical instrument attachment. A method for producing a human sebum mimetic comprises mixing refined macadamia oil and refined jojoba oil, interesterifying the macadamia oil and the jojoba oil, adding a phytosterol, adding phytosteryl macadamiate, and adding phytosqualene after interesterification. To authenticate the user, the system compares the relative positions and sequence of the keys entered by the user against those stored in a database. Thus, abrupt changes in vehicle behavior are not caused by sudden starting of control, and it is possible to inhibit drive feeling from deteriorating. The electronic device includes: an acceleration sensor that detects acceleration in a gravity direction in a state where the swimmer stands erect; and a first communication unit that transmits acceleration data indicating the acceleration detected by the acceleration sensor to the analysis apparatus.

1459826165-3fa4e44c-1f26-40e4-bab9-209f6c3e972d

A portable linear fastener driving tool is provided that drive staples, nails, or other linearly driven fasteners. The storage node may include a memory resistor and a switching structure. The group of mating bumps is positioned such that if the alignment bump engages each of the mating bumps, the die is appropriately positioned relative to the substrate at that location where the alignment bump engages the group of mating bumps.

1459826165-4365dfd3-56e3-4ed0-98a4-fccd8217861f

\u2018Kakegawa S65\u2019 is a new variety of Calibrachoa plant. The optimized relationship matrix may be used to layout and render a graphical image that positions various elements with respect to the starting entity based on the relationships. Operational conditions of the ice-making machine, such as, for example, water quality, are used to establish service intervals and/or types of service, and the service intervals and/or types of service are indicated to the user with a lead-time to allow for timely obtaining the service. The actuator connects with at least one of the seat back and the seat base. A resulting substrate deposition pattern thus exhibits a density greater than a deposition mask aperture density while avoiding deposition pattern distortion. To read the device, sufficient gate voltage is applied to invert the channel and a sufficient drain voltage is applied to pull down the drain-side barrier.

1459826166-348a2e63-c5e0-4958-beb2-ce4785170551

The invention relates to consumer product packages having impact promotional items printed directly on the package and methods for manufacturing such product packages. The GPS device includes a GPS receiver or sensor operable for receiving GPS satellite signals from a plurality of GPS satellites and a transmitter coupled with the GPS receiver for wirelessly transmitting information corresponding to the GPS satellite signals. With this configuration, continuous and accurate perforation of inflation apertures is possible and automatic tube cutting can be achieved based on the printed tube cutting positions. The drive signal having voltage levels including a high level and a low level. The inner cross section of the second portion is smaller than the outer cross section of the assigned end of the supporting tube.

1459826166-bc52428a-5ddb-4e99-bf64-c2a68e432d6f

A disk drive is disclosed for connecting to a host, the host comprising loopback circuitry operable to loop a pattern received from the disk drive back to the disk drive. The process according to the invention consists of three steps: the fibers spun from the two plastic materials are drawn off uncurled and stretched in a first

step. One of the first or second shock profiles is selected based on which shock profile has the lesser amount of measured physical displacement. The DC\U2014DC converter including at least one power silicon die disposed on the top surface of the substrate. The invention also relates to an apparatus producing such signatures and commands by gesture recognition.

1459826166-c9a13b8c-a03b-4116-8cc3-a19002a158ea

Embodiments of the present disclosure relate to a radio frequency power amplifier module having a saturation corrected integration loop, which includes saturation detection and correction circuitry, an integrator, PA circuitry, and detector circuitry. The common waveguide is located between a first plural light deflection elements and a second plural light deflection elements, each including prisms made by electro-optic material. Methods of using these compounds for modulation of PTPN12 expression and for treatment of diseases associated with expression of PTPN12 are provided. Participants in future conversation may be selected based on their skill in answering questions and their entertainment value, with different future conversations using different weightings of skill scores and entertainment scores in determining who may participate in the conversation.

1459826167-077d1a77-bed5-46fe-832b-0ca99005315a

A method for detecting predetermined fault conditions associated with the supply of AC electrical power to a consumer, the supply having an active conductor and a neutral conductor with the neutral conductor being connected to earth. A satellite navigation system antenna and a tilt sensor are mounted on a range pole, with the sensor at the pole's bottom tip. The cavity of the can case is fitted with the supporting base portion of the stem with elastic deformation of the can case. The optical system further includes a first light redirecting film that is disposed proximate the first opening between the spatial light modulator and the light source. The moving member prevents ambient light, dust and dirt from entering the housing and impacting the sensor output signal.

1459826167-c517ae84-6564-440b-bcf0-b9db2a446c4d

Blue organic EL elements, which have a shorter lifetime and lower luminance characteristics than green and red ones, have had a problem: particularly when blue elements are used in a light-emitting device capable of modulating light emission colors, light significantly attenuates and characteristics further deteriorates. When the squeegee blade becomes dull or damaged, the spent blade is pulled from the handle, and a new blade can be positioned and magnetically pulled into the blade cradle ready for use. The first members and gaps form a primary heat exchange area. The cupped portion has an inner space for receiving the roll and a slot for feeding out a length of wrap from the roll.

1459826167-f973452a-cd8f-4229-b3a3-8ba1f96fbb7a

A multipurpose planting base includes a holding cover having an open window divided by a holding crosspiece, and a tray for supporting the opening side of the holding cover and for receiving a culture soil with which the holding cover is filled. A system can generate a set of index patterns based on a set of library patterns in a pattern library. Preferred embodiments fix the problem with default or limited random variable assignments or flagging the overflow and adjusting the frame encoding such as by limiting spectral components or changing quantization targets. The positioning mechanism holds the container therein while maintaining the given planar surface in position relative to the image forming apparatus when the deformable bag collapses as it discharges developer. In one embodiment, the signal integrity monitor includes: a signal interface configured to receive a signal from a parallel data bus for transmission over a plurality of signal paths and a victim signal identifier configured to dynamically determine a potential victim signal path of the plurality of signal paths.

1459826168-448c375d-b8be-4395-b6f8-9c3b4bf8735a

A conventional storage system immediately executes a received IO command because of importance of response time. An image analysis unit may calculate distances between representations of electrodes in an electronic image and identify groups based on the calculated distances. The third rotating element is coupled to a drive wheel. For being able to restrict adjustability to a forming device and to a sealing device, the bags are conveyed such that their open side opposite the one closed side and the corresponding seam keep a position that is independent of the format of the objects to be packaged at all stages of procedure, and the bags are secured in the region of this open side.

1459826168-94db1690-f5c7-4e16-aff7-903e832a5d37

The invention is a chain comprising a plurality of cage-shaped elements connected in succession, the cage-shaped element comprising a central body from which two or more lateral bodies branch off whose free ends are arranged opposite each other, slidably inserted in another cage-shaped element adjacent to the cage-shaped element and facing the corresponding central body. The homogeneous alumoxane-LCT-epoxy polymers comprise alumoxane-containing sub-structures evenly dispersed and essentially completely co-reacted with the LCT-epoxy sub-structures. The invention further relates to hybrid cotton seeds and plants produced by crossing the cultivar 02Z55 with another cotton cultivar. The phone calls correspond to directory entries, such as those that the user wishes to add to the phone devices. In response to a request to send electronic mail to one of said aliases, the entry of the key to decrypt the encrypted data is required to thereby provide the address of the addressee having said alias. According to the invention, the movement generating device is arranged outside the inner space of the airbag package.

1459826169-020b9b1b-cb06-42d4-aeb7-0782775b105a

A new and distinct Fern plant named NEVADA characterized by having dark leaves, long leaves, fast growth speed and compact plant shape. For a set of storage elements formed over a common well structure, all word-lines are initially charged with the same high voltage erase signal that charges the well to insure there is no net voltage difference between the well and word-lines. According to the invention, a mobile communications device has a non-directional antenna, a directional antenna, a transmitterreceiver section, a switch for switching states of connection between the non-directional and directional antennas and the transmitterreceiver section, and a control circuit for controlling the switch.

1459826169-022c5982-7da2-418c-ae51-dbec2c922f2f

A framing device, used for displaying items such as photographs, certificates and the like, includes a translucent sheet-like material having an outward side and an inward side, both having a common continuous edge. Downstream data to be communicated from a cable service provider head end system to a customer device may be received by a provider edge routing device. The mask has plural openings that expose selected portions of the plural conductor pads. At least one epidermis stop may be provided resulting in the formation of detritus troughs interposed between adjacent penetrator and epidermis stops. More particularly but not exclusively, it relates to compositions containing thaumatin having particular organoleptic properties, and to processes for their manufacture.

1459826169-1cd1ca1b-b90b-4df1-aed3-73873d5f9636

A heart assist device connection system comprises an inflow connector in fluid-tight communication with an inflow section of a heart assist device. The memory controller writes data held in a unit area which holds large amounts of write data, to the flash memories, in preference to data held in a unit area which holds small amounts of write data. On the control shank is displaceably mounted an actuating lever which can be pivoted up and down between a closed position and an open position in order thus to control the water flow. The damper includes a body defining a bore and a piston slidably received in the bore. If there exists a matching speculative load operation, the system replays the matching speculative

load operation so that the matching speculative load operation takes place after an event that caused the invalidation signal completes. A dome assembly is coupled to the first end of the combustor liner that extends downstream from the dome assembly.

1459826169-510fe7d2-923c-4016-ac18-50ca378acc4e

The liquid crystal display module comprises a bottom cover having a plurality of lamps installed thereon and at least one or more of guide projection formed thereon; and a reflection sheet for reflecting light generated from the lamps and having a guide hole in order to be inserted in the guide projection. Flow through the recirculation paths is controlled via respective valves and valve opening is adjusted based on a throttle mass flow so as to maintain a compressor flow rate at or above a surge constrained flow rate. A SPLIT operation splits rows at one partition across a plurality of other partitions. A light diverting member is disposed adjacent to the light source and receives light from the light source. In addition, forming the copper layer may comprise forming the copper layer to include at least one of calcium, cadmium, zinc, neodymium, tellurium, and ytterbium as a dopant.

1459826169-8b26816f-f851-4140-845f-6119b124816e

An optical disk drive includes an optical disk drive controller that can test the write channels between the controller and the laser diode driver. The second memory module comprises a base body made from plastic, by which the latter is fixed to the second guide rail. Data is duplicated by using a control logic to control the multiplexers allowing data to be copied from a source page buffer to one or more target page buffers via a second address bus and a second data bus. The capacitor is disposed in the depression formed near the outer peripheral portion of the imaging element, and stores electrical charges. Some voxel properties used to classify an object are location, brightness and volume.

1459826170-095acb14-24e8-408c-9baa-9521c9fb79e3

An image forming processor includes a generating unit and a correcting unit. The first and second portions are formed both in a cell area and in an edge area surrounding the cell area, wherein an on-state or forward current through the drift layer flows through the first portions in the cell area. A customized feed is generated which is designed to fulfill the nutritional requirements for the animal's diet.

1459826170-62e5614d-db5b-4aa1-b712-ad3c77f58ee4

An image reading device in which a processing time required for prescanning and fine-scanning of a film can be shortened. Depending on the interface between the valve or injector and the rocker arm, the rocker ratio of the rocker arm may be altered, giving a change in lift as well. The firearm includes a foldable butt stock assembly for quickly and easily converting the firearm from an extended operating configuration to a compact transport configuration, and vice-versa.

1459826170-a67d42cf-c28e-4602-9358-3c5da2d4fb19

A location space in an engine compartment is made smaller. Each of a plurality of transistors is formed at a position where the gate metal layer traverses the polysilicon layer, and a plurality of transistor groups are arranged in a zigzag pattern. The pair of electrode structures are arranged to generate a first electric field which is used to change aligning directions of the liquid crystal molecules to make the liquid crystal layer have a lens effect. The boot also includes a circular flange extending radially outwardly from the lower edge of the boot with threaded apertures around the flange.

1459826170-c3ce1e19-82f7-48c8-a275-c8f559c62c73

An access ladder for an access hole in a building includes a plurality of sections which telescope relative to each other between an extended position, where the

sections define a plane and a user can climb the sections, and a retracted position where the sections are folded on each other. The apparatus has a pivot frame located on a transportable base frame. The link mechanism 1 comprises a crank member 2 having a crank shaft 3 and an eccentric shaft portion 4, a pivoting link 5, a connecting rod 7, and a restraining link 8.

1459826170-d5cd289a-c116-420f-9bb5-0e77ba38fdb6

A method for interpolating an encoded signal of encoders is disclosed. processes for the preparation of these compounds. % or less, based on a total weight of the heterocycle. The selective replication region identification process can include identifying regions associated with temporary files. A threshold calculation unit calculates a threshold value used to determine presence or absence of the residual echo in the echo-canceled signal.

1459826171-4b6ad214-c00f-46f6-ae4d-27c28fa50304

Parts are provided which combine structural reinforcement of hollow profiles and light weight means of attachment. High aspect ratio clay nanoparticles are positioned in the substrate in overlapping layers with layers of the substrate interposed. An information flow request is received from a first element to authorize an information flow from the first element to a second element. The plurality of search keys are expanded such that each of the plurality of search keys has two lowest level search keys associated therewith that cover a lowest level of the tree structure.

1459826171-72c7d268-4208-4299-9980-6018c8ba9aff

Boron nitride coated fibers, and composite articles comprising such fibers, are described herein. A factor  $\Delta \mu$  is defined which is equal to whereby the solid-to-solid contact of the asperities is reduced by selecting such design parameters and operating conditions of the bearing that  $\Delta \mu$  is in the range from 8. If signal processing cannot be performed by a digital signal processing section on a camera main body side, a through image is displayed based on a through image signal supplied from the through image signal processing section on the camera head side. Whether a specific region in the third frame is inside or outside of the true ROI is judged based on values of pixels of regions that have been judged to be inside the region of interest in the second frame.

1459826171-ac623278-1721-48cf-b3d2-1e1587d7d9e6

Wood-type golf club heads include: a club head body member defining an interior chamber; a weight system engaged with a rear perimeter portion of the club head body member; and a connection system connecting the weight system with the club head body. Different value combinations for a plurality of weighting factors may be established for a plurality of selection regions. The slide block is disposed between the inner ends of the slide bars, and is movable between locking and unlocking positions that respectively prevents and permits inward movement of the slide bars. at a layer thickness of less than 100 nm. In addition, the method also takes care of QoS requirements for different services and hence every service is addressed to satisfy its QoS requirements.

1459826171-ec6284bc-be37-48aa-bafd-0b9f6c19b9f5

Disclosed herein is a sample supply device that alternates between the supply of samples from one sample line while cleaning a second sample line and then supplying a second sample from the second sample line while cleaning the first sample line. The AT applies power to its transmit chain with a low duty cycle while in the AH state, conserving battery power. The mixture has a has second temperature sufficient to achieve a change in the mixture selected from the group consisting of microbial change, chemical change, biochemical change, and enzymatic change, and combinations thereof.

1459826172-26110f77-40f3-4a36-bfa3-0f2afa43847d

The present invention provides methods and systems for implementing an improved electronic mail Internet appliance. The results disclosed herein indicate that several types of photonic crystal devices can be designed in which free carriers are used to vary dispersion curves, stop gaps in materials with photonic bandgaps to vary the bandgaps, reflection, transmission, absorption, gain, or phase. The light fiber comprises an elongate polymeric core having an input end for receiving light from a light source, an output end for emitting light transmitted through the core, and a lateral surface extending along a longitudinal axis of the core between the input end and the output end. This GRC algorithm can be performed for each possible bundle failure in the network, where a bundle failure is determined by the set of all links which may fail together due to common shared risk, such as a common conduit or DWDM fiber. The guide housing has a flexible elongated body, an internal elongated passage and friction reducing material lining the passage. In some embodiments, current consumption during reading of conductive states may be reduced by using a capacitor coupled across the cell.

1459826172-a1971a19-7512-42f4-97a3-f811489080cb

An injection molding apparatus is provided. More specifically, this invention comprises a valve plug incorporating a choke transfer trim that reduces the time of exposure of the plug head and/or seat to high velocity and high pressure drop at the interface of the plug head and seat when the valve is in the closed position. The RAM-based addressing structure is faster than the CAM based-addressing structure, and in cases of a hit on the first attempt, cache performance is based on RAM cycle time rather than CAM cycle time. A rotational lock is provided to prevent the tool attachment from inadvertently backing off or coming loose. Further, a semiconductor device includes a memory cell array formed by arranging a plurality of memory cells and a reset level switch circuit for selecting a first potential or a second potential and supplying the first potential or the second potential to the word line drive circuit.

1459826172-b031c638-faf7-40ef-8e95-cda38d3a61f5

A bar clamp connection connects an elongated bar member, such as the handle of a dumbbell to a bar clamp. A test port master and a test port slave are connected to an external testing apparatus. In this way, at least one depression results which leads to a reduced volume of the respiration bag.

1459826173-887391e7-f67d-4ea4-a564-40b46aa5fe8e

The present invention relates to compounds and methods for treating retroviral infections and/or Hepatitis B viral infections. The module communicates with a communication network that comprises various nodes configured by a network controller module and a network communication module. Mounted to the base are multiple reticle-support blocks providing three respective, equally spaced, reticle-contact surfaces that support a reticle in the peripheral \u201chandling zone\u201d of the reticle. The seat body further includes a plurality of projecting pivoting pieces, each being formed on a side wall of a respective slot seat. The termination region includes termination n pillars and termination p pillars alternately arranged around the edge p pillar. An optimal connection between rod and pedicle screw is thereby obtained.

1459826173-db7224b3-46be-43b6-b076-6f917421433d

A method of producing digital data, which comprises the steps of making first arrangements for 12-bit word digital data constituting a digital video signal, which include a frame rate of 24 Hz, 25 Hz, 30 Hz, 50 Hz or 60 Hz, 1125 lines per frame, 1080 active lines per frame, a sampling frequency of 74. A first of the anchor fixtures is mountable proximate the peripheral edge of the vessel with the tube oriented to extend in a generally horizontal direction. A first spool and a second spool are contained in at least in part in the cartridge and have a ribbon extending therebetween. A support channel extends at least partially into the rear support member, and is configured to removably receive and capture the rear edge of

the shelf panel to inhibit removal of the shelf panel from the frame in the direction of the horizontal plane. The first device is operable to determine an offset in the position of the microfabricated cantilever, and the second device is operable to reposition the microfabricated cantilever based on an offset detected by the first device. A terminal region of the second conductivity type is disposed in the voltage sustaining layer proximate the highly doped active zone.

1459826174-1d05a93e-f22e-4ba8-b05d-2fbc9d475d24

A one-piece frame is provided for a corecoil assembly of a transformer. The insulating material defines one of a plurality of individual exposed portions along the length of the helix having a plurality of different configurations, e. The high resistance region is formed deeper than the well regions of the p-channel and n-channel MOS transistors, thus preventing induction of an eddy current by the magnetic flux generated from the inductor element. In one aspect of the invention, the rings are provided with inflection points on some portions of the rings which extend in a generally circumferential direction for a short distance.

1459826174-21372dd2-c703-4443-b2af-1ebfba9a6e0a

To reduce the number of simultaneously driven printing elements so that the instantaneously flowing current is restricted in a printing system for completing an image by repeating the printing scan a plurality of times in the same printing area while applying random mask thereto. The plurality of light sources are turned on with a first level of brightness during a white turn-on period, and turned on with a second level of brightness during a gray turn-on period. An information message is then received from the neighboring network, wherein the information message comprises an information element associated with whether the neighboring network is capable of communicating with the heterogeneous network handover module of the mobile terminal.

1459826174-6e2e7557-b871-4a9b-983a-6b75b0531775

A non-destructive method for chemical imaging with  $\sim 1$  nm to  $10 \mu\text{m}$  spatial resolution without sample preparation and in a non-contact manner. The stamp marker includes a liquid-permeating member and a container containing an application liquid, the liquid-permeating member including a distal member, a base, and a fixing member. A fold formed in the spirally wound flexible member allows for increased distance between the two side edges and an increased maximum extended length.

1459826174-8b28b768-bd57-4d9f-b1f5-46a77220ec55

A synthetic board is made from a plastic film ply 4, 6 adhered or welded to a parallel array of thin-walled plastic tubes 2. First and second apertures are defined through the first and second panels in alignment, and a fastener extends through the first and second apertures. One assembly includes a solution reservoir, a solution receptacle feeder and a computer to control the delivery of solution to a solution receptacle. Included in the request is a check signed with data identifying the first resource.

1459826175-0b8effe7-57a4-4287-9651-99852f5b7e7f

A method and a structure for stabilizing a formation of natural substrate having a substantially vertical face. The system starts by receiving an encrypted list of checksums from a server, wherein each checksum in the list is associated with a corresponding block of the content. When the movement is an inter-network movement, the gateway receives the binding acknowledgement message from a home agent and establishes a bidirectional tunnel with the home agent. The detection of protocol events by the protocol sensors is non-invasive in that it does not require recoding or recompilation of software components or redesign or modification of hardware components.

1459826175-b6730f2f-deea-4d79-8237-cf0b4d83e6e7

An indirect light fixture is described wherein the fixture is comprised of a reflector housing and a ballast housing connected together by a support arm. A control unit controls so that a predetermined command is output multiple times to a storage device and each piece of data sent by the storage device in response to the multiple predetermined commands is received in accordance with the timing signal having a different delay amount for each of the multiple predetermined commands. Ultrasonic vibration is applied to the first cable conductor portion and the first connector terminal and the first cable conductor portion and the first connector terminal are pressed, and thereby to be welded to each other. The LCD 60 receives a byte number of a word for every word from the word division circuit 21, and highlights it for every byte number. Objects A and B in each local memory are disclosed which each include primitive fields. A second tamper-evident structure may be disposed between the zipper construction and the package interior.

1459826175-dabfa067-2dfd-402a-87e8-e99122ed72a9

A tandem time-of-flight mass spectrometer is described. More particularly, embodiments described herein relate to virtualizing interconnective paths between two or more electronic devices residing in an electronic network. Then, a nitric acid concentration in the solution is adjusted and a valence of Pu in the solution is adjusted to tetravalence. In the final approximate 60 degrees of the turn, the coil is sloped down to the next turn. Hard or soft decisions corresponding to the search results may then be passed to a decoder. 5% or less in a stress range of from 2.

1459826176-2e3b6c13-4372-486c-98a0-271a6d2d3fcc

A programming system for a robot or similar apparatus comprises a portable programming terminal having a display device, a plurality of jog keys for controlling the robot movements and a plurality of teaching keys. A second variable delay circuit delays the input signal, introduces a second delay into a second edge, and generates a second delay signal. In addition to the measurements of the final time ranges, the intermediate samples are available for purposes of digital signal processing.

1459826176-3e3a6c10-f7ba-47be-8f8d-d47f9abc0ecf

A control system for multiple sterilization chambers for the sterilization of medical and other instruments interact with a common vacuum pump, steam generator and ozone generator via a common controller. The plate member hole can have a spherically shaped sidewall. As a result of this arrangement, the sensor can undergo a back-and-forth sweeping motion coupled with motion along the spar radius.

1459826176-4805bf48-9fea-4ddb-b40f-4ab1cfe86c33

A method reduces noise resulting from a current surge in a circuit. The braking power of the braking system is substantially independent from the elasticity of the tires. The discrimination medium 100 has an adhesion strength XA between the adhesive layer 102 and the partial peeling layer 103, an adhesion strength XB between the partial peeling layer 103 and the cholesteric liquid crystal layer 104, and an adhesion strength XC between the cholesteric liquid crystal layer 104 and the substrate layer 105.

1459826176-ce73157a-cfda-4b24-9342-cef6070a971c

A shock-absorbing apparatus disposed between a binding and a board has a bottom plate for coupling to the board, a top plate or binding platform to receive the binding, and bearing-biasing assemblies coupled between the bottom plate and the top plate. A thickness and a composition of the metal silicide layer are controlled by an amount of the impurities in the metal layer. The method also includes vacuum attaching the slider body to a reference flat surface. A thread-safe or unique search query is generated in response to the fields.

1459826176-d761131c-1d6a-4abf-95fc-63b608ecd1cf

An apparatus may include a connection component configured to connect the apparatus to any one of a plurality of different apparatuses. Embodiments may send display information to a user in response to a user request for display information for one or more items offered on a network-based site. The glycoprotein matrix can be formed by permitting the growth of glycoprotein producing bacteria in the presence of the active ingredient. A beam steering element is embedded in the second dielectric layer and electromagnetically coupled to the radiating element. , wherein the paper product contains from about 5 lb starch to about 500 lb starch per ton of substrate. The polymer of the present invention is a blend of high crystalline polypropylene homopolymer and a high ethylene ethylenepropylene random copolymer.

1459826177-295d9b4f-a32c-4583-a704-b0d9fccfe7af

An MPEG video decoding method and an MPEG video decoder are provided. The design of this instrument reduces traction upon sensitive neural elements, allows controlled removal of the medial portion of the vertebral pedicle, distracts the intervertebral disc space, and allows safe passage of reaming, tapping, and spinal implant insertion devices through the expanded bore of the spinal implant insertion instrument. At least portions of one of the conductive structures have oppositely facing, exposed outer surfaces. If there is a device driver for a device belonging to the sub-area managed by the management server which has responded, one of the devices belonging to the other sub-area is selected as a default device. The inactive memory cell programming pattern identifies all, or a selected plurality, of the memory cells in the inactive column in which a charge is to be stored for the purpose of periodically storing a charge in the memory cells first inactive column to prevent over erasure, during bulk erase, and leakage from the inactive cells to adjacent active cells.

1459826177-8809f034-0d89-453f-ad08-819dc3ae854f

A design structure for an impedance matcher that automatically matches impedance between a driver and a receiver. In order to maintain a high data rate impervious to sudden phase changes, a communication system uses an efficient constellation having multiple rings with different sizes and modulationdemodulation schemes utilizing this constellation. The invention provides a photoresist stripper characterized in containing a tertiary amine compound, an alkaline compound, a fluoro compound, and an anionic surfactant; and a process for preparation of semiconductor devices using the stripper of the invention. The switching signal generator for the -modulation type switching power supply has an improved direct-current transmission linearity characteristic relative to direct-current input, and that is stably controllable and of high efficiency. In the header reduction technique, the audio encoder selectively modifies the quantization step size of zeroed quantization bands so as to encode in fewer frame header bits. An NC data service provider company transmits a home page relating to the data service via a communication line, through a dialog with an NC data service user company via the home page, provides data service relating to the NC data requested by the user company and receives payment of the consideration for the service.

1459826177-cfadcdfe-d35f-4d09-b56e-132a414f1f60

This invention relates to a method of making optical fiber having low polarization dependence. The formulation includes a carrier base of fractionated coconut oil, and an effective amount of at least one essential oil with insect repellent capabilities. The base station may attempt to hand over the mobile device to the wrong base station based on its outdated neighbor list. Furthermore, blocking mechanisms are provided which allow the halves to be blocked in the folded state. A pixel-value-generating section newly generates pixel values for processing from the pixel values extracted by the pixel-value-extracting section corresponding to the motion direction and generates pixel values corresponding to the target pixel based on the pixel values for processing and the specific motion-blur-removing-processing coefficients.

1459826178-0534348d-5e58-419f-9d1e-f7146390f367

The present invention provides a surgical device including an elongate body defining a fluid flow path therethrough. The travel assembly is provided with a cooling circuit for cooling lube oil. The APIs makes the management agent portable across multiple operating systems. An outlet fluidly communicates with the last of the flow zones. The conductive coating provides an external ground plane for the printed circuit board.

1459826178-56fab4a5-b263-430b-8a25-26f6c3daecf3

A semiconductor memory device having a self refresh mode may enter the self refresh mode in response to a self refresh set command and may be released from the self-refresh mode in response to a self refresh release command. The images are generated using acquired 19F magnetic resonance image signal data associated with the perfluorinated gas and oxygen mixture. The receiver may receive a data stream from the selected transmitting stations.

1459826178-6534e66a-6179-4f53-b20e-66e23b3e85d4

Disclosed is a method for testing a memory device, which can test a memory cell block while testing another memory cell block, so as to catch a process defect of the memory device within a short time period, thereby reducing the test time. Crossbar and/or barrel shifter circuitry may replace one or more rows, one or more columns, one or more rectangles, or any combination thereof of programmable logic regions on a programmable logic resource. At least one of the registered users in the directory is associated with an iconic image that is automatically enlarged when the user selected.

1459826178-c27417f2-bb2e-41d6-8154-9eb65fbff054

Methods for ischemic conditioning treatments of a chronic medical condition are provided. The catalyst comprises rhenium metal on a solid-acid support such as mordenite, which has been treated with a sulfur-based agent. The method further includes the steps of subjecting the hollow fiber membrane to a flow of flue gas, removing one or more gas species from the flue gas with the hollow fiber membrane, and regenerating the sorbent contained in the hollow fiber membrane.

1459826178-cf37fdce-ed37-429b-8385-a7c9d578d3dc

A needle safety apparatus comprises a hollow needle having a sharpened distal end and a proximal end. The spacer includes two rings seated on the substrate and spaced apart from each other at a longitudinal axial distance, a tube section supported on the rings and a second ring disposed on the tube section. A hopper is mounted in the housing and above the bottom plate for receiving food particles. Other embodiments include the use of predictive models to predict thermally-induced effects on the fields and thermographic imaging to determine temperature variations across a substrate.

1459826178-cf3c64a9-ed09-4dd9-a53f-40e2cba15bc1

A method and apparatus for reducing intermodulation distortion is disclosed. The electric connecting terminal is connected to a flat circuit body by inverting the tip of the piercing portion penetrating through a coating and a conductor in the flat circuit body toward the plane portion side to pierce the conductor again and superposing the tip of the piercing portion on the tip of the piercing portion to be energized in the direction of the plane portion. A further inventive aspect comprises a multiplexer apparatus and process whereby dynamic bit rate adjustment is applied to eliminate the need to recalculate timebase information for altered streams. The hardware is uniquely configured to allow the L shaped leaves to be attached in two different orientations providing for a work surface that is adjustable in size. To further reduce frictional contact with the snow, the bottom surface of the runner is preferably dimpled.

1459826179-4563ab99-1f86-4fec-be0a-83b215e10d4e

A preferred method for identifying at least one of a grammatical, linguistic and/or conceptual integrity of a data corpus is disclosed. The circuit protection system includes a transistor connected in a channel of a power panel, the transistor connected between return connections of a load and a return path, and the power panel including a plurality of channels connected to the load. Since the substrate is supported by abutment of the projections with an end of the substrate, the occurrence of cracking in the substrate can be prevented or the durability of the supporting member main body can be increased.

1459826179-a144d6cc-ddd7-41c3-ab4c-3d4baa322511

The present invention is directed to a method for reducing monomer loss during curing of a high internal phase emulsion. The single synchronous data packet stream is then transmitted by a high speed statistical multiplexer over a composite link to a second site using a modified high-level synchronous data link control protocol with an overlay of an advanced priority statistical multiplexing algorithm. A floor is located above the bottom platform, forming a space therebetween. The processing function is configured to operate on raw data to produce process data, according to instructions determined by a solution algorithm of the distributed computing system.

1459826179-de7e65e5-e3c0-4f07-8295-b0f742146297

Disclosed is an LED bulb having many advantages over previous bulbs. Herein are described methods and assays to predict and evaluate the cellular effects of nanomaterial exposure. Once a sufficient number and variety of average actual cache memory performance values are measured, a predicted average cache memory performance value is calculated for the proposed cache memory size. Further, the one end of the electromagnet coil is common with respect to each of the electromagnets, and the common node R is controlled by an intermediate-voltage maintaining circuit so as to maintain an intermediate voltage.

1459826179-e0b7b1a7-01c9-4449-8762-96e8e5f62712

The invention provides a mobile phone that effectively meets user needs to a high degree. At least one signal processing evaluates a sensor signal of a sensor in a first operating mode for generating an activation signal for a functional unit. 0.02% or more of solute N in the steel and has a chemical composition which is appropriately adjusted and satisfies a relationship of the following expression :  $0.02267150$ . A matching of individual measured particles is made against individual known particles by means of selected known parameters thereof. The invention also relates to selecting an appropriate oxidation rate from a family of reference oxidation rate data and estimating the oxidation of the coated turbine blade or vane.

1459826180-2e548c1f-6e15-4dc1-a913-946b3b6a3418

A method for producing a nanostructured austenitic sheet by consecutive martensite and austenite phase transformations, in which the coarse grained austenite sheet transforms to nanocrystalline martensite by strain-induced transformation, and then generates reverse transformation to nanostructured austenite by warm rolling due to dynamic recrystallization. The system provides immediate processing of the data input streams from various strike sources, the key stroke depth data, the key strike speed data, the key strike acceleration data. The peripheral edges of the upper lid constituent member and the lower lid constituent member are, respectively, provided with a peripheral wall standing upright along an outer peripheral surface of the side constituent member, and the side constituent member is inserted into a space surrounded by the peripheral wall.

1459826180-a8ceb8e0-6e92-4fc4-9b82-2daf7f7a895e

The invention relates to squeeze pressing of a laid-up veneer assembly having glue applied as glue stripes. The method is applicable to large systems such as trucks,

ships, cranes and locomotives utilizing diesel engines, gas turbine engines, other types of internal combustion engines, fuel cells or combinations of these that require substantial power and low emissions utilizing multiple power plant combinations. The method further determines context data of the plurality of notifications based, at least in part, on their association with at least one remote device.

1459826180-bc8fd5fa-8ce1-4ec5-ae27-9601d2ae3809

A route setup server has a storage unit, an IP routing unit and a flow management unit. These large DNA targeting vectors for eukaryotic cells, termed LTVECs, are derived from fragments of cloned genomic DNA larger than those typically used by other approaches intended to perform homologous targeting in eukaryotic cells. A method of fabricating such a semiconductor device is also provided.

1459826180-d2f5f292-f520-40d9-b47d-8ebd97232862

Previously configured state machines may accept an input string, and for each of the regular expression, check for a match between the input string accepted and the given regular expression using the configured nodes of the state machine corresponding to the given regular expression. An authentication verifying chip in which authentication verifying information is stored is mounted non-removably on a certificate. The vehicle is also equipped with compressed air to power the staplers. Exception handling and hardware initialization can be controlled by a system processor.

1459826180-eac5538b-aa90-43e0-b30b-7fffd6908d88d

A magnetic scrubber assembly and its design method for cleaning the wall-glass of an aquarium are provided. Each bit has opposite side surfaces forming boundaries of surfaces defining projections extending in different directions from the fastening bits, at least one of the opposite side surfaces being non-planar, and each projection has an overhanging head. To achieve reduced losses the design incorporates the use of high electrical resistivity, low thermal conductivity materials for construction of the filament posts and the filaments. The polar coordinate system position of the respective group is then converted to a position in the display window coordinates. After use, the bag can be removed and disposed of, and a new sampling container is inserted for the next extraction. The arrangement of the trays is asymmetrical in such a way that a plurality of trays can be placed in closer proximity to a person or object, but do not upset the overall balance of the tray.

1459826181-5fbdb2e8-138b-45d2-9eae-d5a647f5b742

An electrical charging system having a rectifier which is supplied with energy via an input. The network can also include a defined set of differentiated service classes, each differentiated service class associated with the set of per hop behaviors, indicated in the set of priority bits. The score engine compares the correct key sequence with a recorded key sequence of the performance data set to determine if the assigned task is successfully accomplished. If the measured charging voltage is above the cell pack voltage and the set voltage value, the BMU considers the charging current detection to be a positive failure indication. For example, plural authentication levels are set for the fingerprint authentication in accordance with the importance level of each of the plural functions provided to the portable communication equipment.

1459826181-abfe9826-c1be-410d-9981-b5f564099c9d

A skin antiseptics composition comprising a comprising an alcohol and water in a ratio of at least 60:40, a hydroxycarboxylic acid, a cationic film-forming polymer, and at least one antimicrobial agent; and methods of using the composition are provided. An acceleration sensor is mounted on the sub-circuit board for detecting a walk of a user and outputting a walk signal corresponding to the walk. Also provided is a flexicircuit that electrically interconnects the actuated probes to

external circuitry and mechanically couples them to the instrument actuator. After baseband filtering, the signals are digitized then processed in a digital block BNM which includes a channel decoding module. The method includes: establishing a short-range communication link with a counterpart electronic device using a first short-range communication network; generating an emergency signal when the short-range communication link with the counterpart electronic device is cut off; and broadcasting the emergency signal using a second short-range communication network.

1459826181-c787b8b5-70bd-4bea-bd49-ed509bee7862

A method of decompressing a set of subsampled image data is disclosed. The display units display information from communication channels and images taken in by the camera. The two straight slots maintain attachment to, but allow the clip to slide vertically on, the webbing that runs over the left shoulder of the child. With the multilayer structure, the object of the invention can be accomplished. The conveyor guidance system can have the guide assemblies combined in a wide variety of configurations that best suits a particular application.

1459826181-edd01f53-a6bb-40d0-985d-7e2a1bcb679a

The present invention controls supply of power to a storage device on the basis of an access status, moves a logical storage device between physical storage devices having different power supply modes, reduces energization time, and improves the reliability. Initially, data is stored in a first portion of the main memory of the system. By this technique, static electricity generated at the time when the protective film is peeled off is uniformly distributed on the surface of the polarizing plate, thereby not generating non-uniform electrification of the static electricity. The magnetic forced active surface changes to a magnetic force inactive surface as the feeding roll rotates. A system may also provide an output signal that has less third harmonic distortion than the amplifier output signal. The second pocket may reduce a local substrate concentration without changing the conductivity type of the channel region.

1459826182-8dd7198f-20c1-49ee-8c31-fe4e8813d21c

There are provided a multilayer ceramic electronic component and a manufacturing method thereof, such that a high capacitance multilayer ceramic electronic component having excellent reliability through the suppression of crack generation due to a step portion and an increase in an overlapped area may be provided. A setting part is provided for setting a remote vehicle either in a valid state or in an invalid state, such that only a remote vehicle position transmitted from a remote vehicle set in the valid state is displayed on a display together with an own vehicle position. Mounted on the horizontal extension arm is an articulated arm provided at the end with a manipulator gripper. In a fully implantable hearing aid, an audio input device including the interface system is provided for use when sound from a wireless or wireline source is desired. Moreover, a vibration level switch for measuring the level in containers for carrying out the inventive method is provided.

1459826182-a95f3714-00bf-4cb7-a5e9-a240def109d0

The present invention relates to a device and a method for detaching a fibrous casing from the surface of a cured processed meat product, preferably a sausage, especially when the outer surface of the fibrous casing has been provided with a substantially inextensible net with a view to form protuberances on the surface of the processed meat mixture. The base and deck are provided with posts each projecting in a direction towards the other and able to be coupled to each other in order to form hollow columns. The domain name is configured to include click-through information as a subdomain, and wherein a URL associated with the domain name provides content. The cover extends over the upper and outboard surface of the running board body to provide the desired appearance characteristics. As a result, the beam hitting the specimen is prevented from defocusing if a voltage is applied to the specimen. A boss extends from the body and provides a first feature.

1459826182-caa83996-8cf0-4237-a741-a6c237f6ceb3

To oscillate and output multiphased triangular waves with a designed waveform shape, wave crest value, and phase relationship. A high concentration region is disposed on one section of the oxide semiconductor layer, whereby said region has a maximum In concentration 30 at %; or higher than other regions on the oxide semiconductor layer. Therefore, the voltage command calculated based on the torque command exhibits a waveform absent of variation. The angular position of the valve determines the amount of hydraulic fluid flowing through the valve.

1459826183-33467351-5b96-42f5-b35d-c6e0bf4edb8f

In various embodiments, the invention provides a discrete clock generator and/or a timing and frequency reference using an LC-oscillator topology, having a frequency controller to control and provide a stable resonant frequency, which may then be provided to other, second circuitry such as a processor or controller. One embodiment for a weight assembly, for example, comprises a mass element having a first end, a second end and a sidewall extending between the first end and the second end. An antenna that arches away from the body of a phone, but connects at both ends to the body of the phone has improved performance over an internal antenna, and yet retains the advantages of an internal antenna. The threaded ring will be fastened in place with a stop screw so as to facilitate the later replacement of another punch assembly in a pre-set position without further adjustment of distance. Each of N objects is then assigned an Object Request Value, the N objects determined by taking the N objects utilizing the most bandwidth.

1459826183-4a42e9ec-42aa-44d9-8431-87e557d1f1cc

A new technique for recording a series of images of a high-speed event is presented. A device may be employed to both playback audible content and provide monitored performance information to a user. For diagnostic purposes, utilizing a reference database, a query sample tissue based on the gene expression data of the tissue. During use the memory circuit allows to the control circuit to interrogate it to verify that the ink in the refill unit is suitable for the printer. A combined positron emission tomography and CT scanner is also provided.

1459826183-73fe5d1b-d5fc-4990-b324-f4cd80fb7212

Apparatus and method for producing and metering dry ice pellets and particles selectively from the same apparatus without modification, by appropriate reversal of a production wheel and accompanying selection of dry ice in the form of block or of pellets for a supply to the production wheel. A compact, flat-bed scanner having a light-tight enclosure, one or more detector bars of linear charge-coupled device or complementary metal oxide semiconductor imaging chips, and high working numerical aperture optics scans closely over a sample in one direction and then the opposite direction. The intensifying apparatus includes a cylindrical chamber having an inlet end and an outlet end. The method also includes utilizing a configuration tool to cause the tire pressure monitoring sensor to generate a signal including an identifier.

1459826184-001d6247-4848-4c57-b9b9-2ebf3ed5ef61

Systems and techniques relating to writing servo information on a machine-readable medium. A bobbin that includes a coil holding part for an induction coil and a vessel mounting part with a second coupling member is formed as a single piece. A connecting portion pivotally connects the two plates to each other so that they can be folded to overlap each other.

1459826184-14a99037-eb3a-48b3-8044-ef79c0d78d7c

A vacuum packaged electromechanical micromirror array comprises a 1st packaging substrate, a 2nd packaging substrate, a device substrate with a 1st surface and a 2nd surface, control circuitry on said 1st surface, and micromirrors on said 2nd surface. These peptides can impart photoreactivity to a protein by binding to a

non-heme iron. When a travel condition advisory message is received and the vehicle is in the affected area, an audible signal is delivered within the transportation vehicle.

1459826184-962b2c7e-86c5-4a3f-9372-a4e0d9036ed8

A computer system including wireless terminals which transmit information, a business application server which performs a predetermined operation based on information received from the wireless terminals, and a base transceiver station which relays communications between the wireless terminals and the business application server, are provided. The device comprises a balance, a clamping device for keeping the standard and the porous sample in contact containing wetting liquid inside their pores), an automatic manipulator for moving the sample frames, several drying stations for drying a number of samples simultaneously, automatic flow-meter valves for the drying gas, electric and pneumatic drives for the manipulator and the valves. The fast release of the antimicrobial agents is effectuated by encapsulation or coating of the oral cavity delivery agent. The generated feedback signal may be inserted at one or more insertion points in a receiver.

1459826184-d77c3287-f0e3-4aa0-b17a-3e6d0e46611f

An automatic verification system for automatically verifying a winner of an on-line game is disclosed. and here identify those impurities and provide processes for the removal of such impurities. Systems for implanting pulmonary devices are also provided.

1459826184-eec45e99-d3ae-45b3-920f-6e6e046e58a9

A tool for manipulating and mobilizing the patella and patellar tendon following injury to the knee or surgery thereon to reduce pain, reduce the formation of scar tissue about the patella and eliminate stiffness and loss of range of motion of the knee, is formed by an elongated, rigid bar having a first end, a second end and an elongated portion extending between the ends. In this way, the wear on the shrouds is reduced simply and automatically. The exhaust gas is supplied by an exhaust gas supply line and can be returned by an exhaust return line. The user interface is updatable from the first state to a second state in which a second view of the page of content different from the first view is displayed. The invention relates to the wheat plant 33391, the progeny thereof and to methods for the detection of wheat plant 33391 and its progeny and compositions thereof. The measurements of the input signal and the local oscillator signal are then utilized to enhance the heterodyne signal to noise ratio by removing the intensity noise contributed by the input signal and the local oscillator signal.

1459826185-35605a0c-7a1e-40b7-a275-16d7ba331c03

Database performance assessment typically entails logging and capturing utilities which tend to gather large quantities of unwieldy data leading to a cumbersome and indefinite analysis. A deinterlacer selectively interpolates the selectively filtered pictures into selectively deinterlaced pictures, based on deinterlace motion data. Then the serial of data bits can be transformed into a serial data stream for transmission. The system also provides for display to the user, using the one or more computing devices, information about the one or more messages including the content item previously posted on the social networking site to the user, where the information is provided for display before the request to post the message is received. In addition, the system includes a variety of features enhancing the performance of the apheresis system, including the interrelationship between the blood processing vessel and the blood processing vessel and the utilization of high packing factors for the procedure. When 60i moving image data is generated from 24p moving image data, the phase of the top frame within a pull down cycle is recorded.

1459826185-3a30ba01-6c28-4d01-ab00-83c32cfbbd9e

Fabric conditioning compositions comprising a fabric care active and a hueing dye,

wherein the hueing dye exhibits a hueing efficiency of at least about 20 according to the Hueing Efficiency Test method; and a Wash Removal Value from about 50% to about 98%, are useful in mitigating the discoloration of white and other light colored fabrics. An electrocoating process that includes such a process or based system and methods of using the system are also disclosed. The NATr cookie comprises a set of network-wide activity tracking parameters for each registered user.

1459826185-d2eb74e1-824c-46f2-916e-1b532af71418

According to one embodiment, a communication apparatus comprises a close proximity wireless transfer device, a closeness detection module and a device control module. An isolation material layer is formed abutting the first activated area. In yet another embodiment, intrinsic locations are used to select a storage location for newly written data based on an address of the data. The memory controller comprises a compression map cache.

1459826185-fc5d5d0d-0c2f-44dc-bd09-e349fc35fa48

According to some embodiments, an enhanced heat exchanger may be provided. During the further treatment of the powder over the course of the process preceding the sintering operation, a dopant that contains at least 100 ppm of an iron oxide compound is added to the powder. The first operational data set can comprise information representative of one or more characteristics of an agricultural crop during production.

1459826186-18298369-7af3-468c-9ddf-9adb2c307c1a

The present invention provides for the operation of a downhole flow control device using a snorkel tube. The system also includes a control unit that can acquire an image from in front of the controlled vehicle. The electrodes are connected to amplifiers in adjacent amplifying wells. The digital circuits analyze the signal and use the necessary information to form a series of phased driving signals. The plurality of ceramic layers form a bulge and a cavity having such a shape that an opening area of the cavity gradually becomes smaller toward a bottom of the cavity.

1459826186-dd3da348-fcb9-470d-8967-ad84a691befa

A solar collector system is for support in a building opening to furnish heated air to the interior of the building. A consistent hash key for the backup data is generated based at least in part on the set of metadata. The portion of the print data that has been stored is concurrently read from the storage device, and sent to the print engine, thereby allowing the print job to be printed as the print job is being stored onto the storage device. The flow rate ratios for the silicon oxynitride layer are: silane-to-dinitrogen monoxide between 1:2 and 25:4 and silane-to-nitrogen between 1:100 and 1:10. A strap on which the IC chip is mounted is connected and fastened to the substrate in the position and orientation in which the IC chip is housed in the recess.

1459826186-f7c039f3-496e-4ffb-929b-2ece13e49ded

A magnetoresistive sensor having bias stabilization tabs includes a protective cap layer. An automated dispatch fueling system comprises a fuel management server populated with airport profile and dispatcher configurations. The second opposed electrode unit includes a third electrode and a fourth electrode spaced away from and facing the third electrode, and provides a second capacitance. A support bracket connecting the tube to a seat back frame includes a pair of aligned passages having the tube passing there through and the tube includes a plurality of notches for engagement with a height adjustment structure.

1459826187-13e2a2a6-aba3-4591-860d-45363f9faa21

The invention relates to a formulation comprising a polypeptide selected from at least one of insulin, an insulin metabolite, an insulin analog, and an insulin derivative; at least one surfactant; optionally at least one preservative; and

optionally at least one of an isotonicizing agent, a buffer or an excipient, wherein the formulation is free from or low in zinc. For one embodiment, the portable unit comprises a casing, an antenna and logic employed within the casing. The mold frame receives the display unit and the back-light assembly. An adjacent cell list and sub-femtocell priority selection setting information are set as system information of the broker femtocell, the adjacent cell list including a PSC of a macro cell, and a sub PSC of an adjacent femtocell, the sub-femtocell priority selection setting information being the information for preferentially selecting the sub-femtocell base station. The jumbo source symbols can be of constant size and are suitably aligned along size boundaries that make processing efficient.

1459826187-2d3a35d6-aaec-4c51-b9b1-f765a4155b72

The portable basketball system allows a basketball goal to be positioned in a desired location and readily moved to another location. The toner is conveyed by the first conveying unit to pass through the connecting unit, and conveyed by the second conveying unit. The NMOS channels stop implant mask is modified not to be a reverse of the N well mask in order to block the channels stop implant from an N contact region used for DNW biasing. A polymer-continuous liquid phase may be formed at a selected location in the wellbore, usually near perforations, before the polymer phase is pressured into a formation to form a hydraulic fracture. Each of the possible characters is provided with a probability value, continuously redefined according to the specific keyboard area activated by the keystroke. And a pair of switch terminals mounted in the locating grooves and soldered to the printed circuit board.

1459826187-5ef00859-00c1-4836-bdb1-0a98be61ed59

An internal impedance of an electrical storage device is measured by using a signal of a frequency which ions in the electrical storage device are difficult to follow, and an internal temperature of the electrical storage device is calculated from a measured value of the internal impedance. The device restrictively engages each of a subject's hands so that neither is free to insert a false specimen into a container. In the slave ECU, a signal separation circuit individually receives a CAN communication signal and a serial communication signal transmitted to the CAN bus, while an input/output control circuit to which the serial communication signal is input as the power supply control signal outputs a signal to the power supply circuit to control power-on/off of the microcomputer. The first stage gain circuit has a first input port, which is coupled to the primary coil. The battery recess connector is fixed in a battery recess of the notebook computer.

1459826187-cfcedb1a-a7cf-4196-8c99-3617c82b6690

Compositions, articles and methods for making such articles are disclosed. The basic rack has a U-shaped construction and is fitted with at least a front or rear rack wall connected releasably to the basic rack, as seen by a user who is loading the dish rack with items which are to be washed. Varying the flow rate of the thermal management fluid may include varying the overall supply rate of the thermal management fluid within the fuel cell system and/or providing an alternative flow path for the thermal management fluid such that a portion of the thermal management fluid supplied by the fuel cell system does not come into contact with the fuel cell stack.

1459826187-fde616a4-aae4-48fc-9aa0-0424cb8c4b40

Methods and apparatus are provided for plasma-assisted processing multiple work pieces in a manufacturing line. A proposal for utilizing an interface to transmit core status among multiple cores in a multi-die microprocessor is discussed. The lower stud has a flattened head and protrudes at an angle downwardly, and is attached to the elastic band by means of a leather wrap having holes in each end to place over the lower stud. The first power management routine has computer code that saves state information of the computer system in the memory and that places the system controller into an idle state. The message attachment link provides

access to the message attachment independent of an electronic message that included the message attachment.

1459826188-3fce423a-be9c-4faa-91c9-1d41b72a2a20

The present invention is directed to a method and system for collecting contemporaneous information relating to a critical event. A hybrid drum includes a multilayer drum head with a built-in FSR sensor such that the FSR drum head replaces the drum head of the acoustic drum and can be used to perform acoustically and or electronically. The active device sequentially drives the at least two light emitting elements in the certain section per a certain period of time in response to the power source signals transmitted through the power source control part, and the at least two light emitting elements are sequentially emitted. The business objects communicate with a database to obtain the data needed for the business logic and include all the business logic needed for the system.

1459826188-7371f55b-ca7d-4b00-b11b-96900ec2f5d3

A sensor device for measuring frequency and amplitude of a varying force signal is provided. The method uses a detection composition that includes: a buffered solution comprising NADH; naphthalene dioxygenase, naphthalene 1,2-dihydroxy-1,2-dihydronaphthalene dehydrogenase, and 1,2-dihydroxynaphthalene dioxygenase. The block wall has an inner surface, an outer surface, and a breakable section.

1459826188-96d73796-9e30-4138-9294-dec833bb9102

A method and apparatus for sharing data between processors within first and second discrete clusters of processors. So, according to the present invention of a macular region visual defect index calculation apparatus, a ratio of visual defect region to macular region can be calculated as an index, and the degree of visual defect against macular region can be numerically grasped. The quadrature low noise amplifier may be implemented as a differential class AB cascade arrangement of MOST or FET semiconductors. Thus, the method of the present invention provides a less costly, simplified way to prepare internal mailings.

1459826188-b13da40c-c068-421d-b28d-debb2f3b8dc5

A method for authentication in a computer system includes registering a biometric template in the computer system, thereafter, verifying the authenticity of the registered biometric template and then comparing the biometric template with a biometric image of a user if the biometric template is authentic. The instructions accept a command enabling an IC floor-plan including a first module and a second module. Each game processor plays a game initiated by the player, where the game is one of a plurality of games available on the gaming machine and selectable by the player. There is a further implementation associated with each displayed indicator enabling a user to select the indicator to collapse the hidden category represented by said indicator and thereby enable the display of the collapsed category within said window. The method comprises: transmitting a first signal generated using a first cell identifier from the plurality of nodes; and transmitting a second signal generated using a second cell ID from at least one of the plurality of nodes, wherein the first cell ID is identical with a cell ID used by the BS, and the second cell ID is different from the first cell ID. The optical disc is configured to obtain a reliable reproduction signal, and the grooves and lands are formed on a lead-in area, a user data area and a lead-out area of the optical disc.

1459826188-e9ee1711-396c-4856-92b2-00be0f62c324

A hammer assembly for a grand piano comprising: a hammer, a hammer shank, a tubular lever interface, and a moveable knuckle. Relevant information for a user may be automatically determined based on a determined context of the user and/or on a request for that information from the user. The magnetic field source provides a magnetic holding field having a field strength of greater than 2 kiloGauss. The method and apparatus improves analysis of both high-resolution images of biometrics of friction ridge containing skin that include resolved pores and lower resolution

images of biometrics without resolved pores.

1459826189-1da1d3c5-5b34-4a67-9aae-598e0a183b5b

A direct sequence CDMA receiver is disclosed that includes an interpolative delay profile production unit. The vial includes a cylinder having an inner surface defining a cavity, and a material molded around the cylinder. The tracking means is substantially contained between the sidewalls of the conveyor and laterally inward of the outer and inner ends of the rollers. The multipath signal may be placed in or towards the null, while the direct path signal may be placed on one of the halves of the main beam adjacent the null, such that the signal strength of the multipath signal is attenuated as compared to the signal strength of the direct path signal.

1459826189-3f0d154a-e7c1-4a92-9861-a9b76aff28b6

Several embodiments are described that increase processing gain. The invention further relates to a wax particle obtained by the method and to the use of such wax particles in water-based protection systems. In addition, because the cooling performance of the water-cooling type cooler is improved without extending the cooling pin, an increase in the weight of the water-cooling type cooler can be reduced and a fabrication cost of the water-cooling type cooler can be reduced. Thus, new users are admitted or blocked based on the penalty incurred.

1459826189-6c504cdb-04b2-45b7-ab06-90bee23cd52d

In a method of manufacturing a substrate having a transparent conductive film in which sputtering is carried out on a transparent insulating substrate using an indium oxidetin oxide target under an atmosphere of a mixed gas containing argon and oxygen, when the ratio of oxygen to argon in the mixed gas is in a suitable range of 0. Wherein an intermediate layer having the heat ray shielding performance is obtained by being cured by irradiation of ultraviolet ray, after a dispersion of composite tungsten oxide particles is dissolved into an ultraviolet ray curing resin precursor and thereafter is filled in a gap between the opposed two plate glasses. Additional embodiments include pulse stretchers, memory devices, substrates, computer systems and methods incorporating the skewed logic devices of the present invention. Also, a favorable reflection characteristic can be obtained in a wide band because of the Wilkinson distribution circuit. Each first partition and each second partition create globalized lists which can then be combined to generate respective first and second compiled lists. The drawing pattern is constructed in such a manner that when the drawing pattern is displayed on the 3D display device, the drawing pattern exhibits a pseudo color which is identical to a color which would be exhibited when the 2D image data is displayed by a 2D display device.

1459826190-69beca4f-b95a-40d3-a783-dff61a948e92

The present invention provides an image recording material support which contains a paper, wherein the paper contains at least a pulp; and the content ratio of long fiber pulp having a fiber length of 0. The LCD includes a first plate, a second plate opposite to the first plate and a liquid crystal layer between the first plate and the second plate. The functional layer includes a material radiating an infrared light. In accordance with one aspect of the invention, the system includes a plurality of downhole components, such as sections of pipe in a drill string, drill collars, heavy weight drill pipe, and jars.

1459826190-8eaeafcc-925f-44db-ae86-f7aa5b43193d

A player inputs the first and second instructions utilizing an input device, to move an object toward a target in a virtual field. The cannula is mounted to a needle holder so that the non-patient end projects into the holder. A second terminal is operative to output a second output signal during the first mode, and to output a second diagnostic signal during the second mode. The ballast processor is operative to receive a serial data that has a portion defining whether the

message is in a first or a second format, the first format comprising a DALI standard format and the second format comprising a format providing extended functionality. 2% based on the dry weight of said cationically bulked kaolin of a condensed naphthalene sulfonate complex having a molecular weight of 2000 to 10,000 and a sodium polyacrylate salt having a molecular weight of 2000 to 5000, said dispersant being free from lignosulfonate. Selected sheet position information from sensors and/or from models maintained by the actuator controllers may be relayed by the coordinators to selected actuator controllers as appropriate to the sheet transportation tasks.

1459826190-9583774e-fc84-41e0-a45c-1a7b5c1a9d38

A boat boarding apparatus for boarding animals onto a boat and methods of using the apparatus. An azimuth and range interpolation generates an interpolated sequence having samples oriented in range and azimuth frequency with uniform spacing. When it is desired to transmit data a higher rate than was used previously, an attempt is made to increase the number transmission slots being used. Then, the umbrella ratio depending on the weather condition is used to correct the respective recognition scores based on the pattern recognition using the no-umbrella model and the recognition score based on the pattern recognition using the umbrella-hold model; the corrected recognition scores are output as a final detection result.

1459826191-8f6b1961-ee63-469d-8499-cbc063fa4a85

The present disclosure relates to identifying stale failure reports in a cellular communications network. The drive transmitting gear is arranged so that a direction of a drive reaction force of the drive transmitting gear with respect to the drive gear substantially coincides with an ingress direction of the image bearing member toward the drive roller. According to embodiments, frequency spectrum and modulation scheme allocation techniques are provided to optimize power utilization and enable lower upstream transmission power by cable modems while maintaining similar signal strength of received signals or lower signal strength with reduced SNR requirements using lower capacity modulation at the headend. If the representation includes three axes, the shape of the boundary may be substantially triangular.

1459826192-37f4cbe5-2fe4-4b6c-bf1c-f72576c8beb6

First and second ridge type photonic waveguides are provided. The method determines whether the print head at the print position is too close to the imaging member to identify the gap distance without damage to the print head. The arm can have two arm components coupled at a joint. Accordingly, the recording sensitivity and the readout characteristics of optical storage mediums are improved without additional signal-amplifying structures or materials. The alleviation area is provided between an intersection of a second axis perpendicular to the first axis and passing through the center of the mirror reflecting surface and an edge of the mirror reflecting surface, and at least one of the torsion bars. The method may include applying a first voltage level to non-selected word lines and a second voltage level to selected word lines during a normal operational mode, and placing the word lines in a floating state during a standby operational mode.

1459826192-e69af124-f175-42f7-a941-3e3228fc52a4

A system and method for controlling access in an interactive grid environment is disclosed. The partition mount is couplable to the rack proximate the first battery and the second battery. Each positioning hole is sized so that the press-fit terminal is placed in position by inserting a guide portion of the press-fit terminal therein. It can also be used to adapt the automobiles for use in racing environments that require quick release steering wheels for safety reasons, yet maintain a visually pleasing appearance when the OEM wheel is attached.

1459826194-10801770-066e-46e7-9750-eb4d8109db7b

Blood collection systems include an integral flexible filter to remove leukocytes

from blood components. The signals are added together to render a \u201csum\u201d signal and are also subtracted one from the other to render a \u201cdifference\u201d signal, and a moving object is indicated only when the \u201csum\u201d signal has a frequency different than the frequency of the \u201cdifference\u201d signal. The first capacitor portion includes first and second internal electrodes as the internal electrodes. Based on the MPM, work units may be partitioned between the client and the cloud. The system, method and device provide a more efficient and intuitive method for planning and programming a navigational path with special emphasis on facilitating the planning and programming of a phase of arrival for the flight path of an aircraft.

1459826194-73575f44-2b2c-4c39-94b2-bfea192eecd5

An optical metrology apparatus for measuring nanoimprint structures using Vacuum Ultra-Violet light is described. The conveyor device includes a conveyor belt that conveys a recording medium. A tuning assembly is operatively coupled to the tunable element and detector and is configured to position the tunable element according to the error signal generated by the detector. An optional slurry distribution layer may be disposed on the upper surface of the guide plate, in which case the polishing elements extend through the slurry distribution layer and the transparent window extends beyond a top surface thereof. The method further comprises receiving the message in the wireless device and modifying a data transfer rate of the wireless communications from the wireless device based on the reverse noise ratio indicated by the message.

1459826194-ae3e0ab8-121f-4db8-ae52-71f1968d9c1a

A Subscriber Identity Module that stores the logic and data for providing advanced voice services including Push-to-Talk, Push-to-Conference, Upgrade to Conference, Push-to-Message and group SMS, on wireless handsets and networks. In accordance with one aspect of the invention, the adapter comprises a plug unit, a power converter, a primary connector, and an identification subsystem. The opening is then closed to retain the liquid and the source in the container. A flexible substrate is attached on the display device.

1459826195-6d1ca48c-f1bf-4f7f-96a3-590ff77a3bfe

An electrically controlled, decentralized control system in a vehicle includes at least two energy sources which are independent of one another and at least two control units. Through a table of rights, access rights to the resource can be associated with an application identifier. The intermediate layer can be made from a highly neutralized polymer, which can be thermoset or thermoplastic. The inverted vehicle may further include position detecting means for detecting a position of a foot of the rider, and contact determining means for determining whether the foot is to contact the vehicle, based on the position of the foot detected by the position detecting means. A dead time compensation logic circuit calculates a final dead time compensation voltage based on a change rate of the voltage command value, a gain, and a polarity of a current, the gain being calculated from a DC voltage value supplied to the electric power converter, a dead time, and a switching frequency. An output device is configured to print the printable representation of multimedia information on a paper medium to generate a multimedia paper document.

1459826195-bc4193a3-152d-4be3-ba84-ba0f840c41d8

Microchannel devices and method of use are disclosed wherein a reaction microchamber 52 is in thermal contact with a heat exchange channel 61. The valve pin guiding element has a sliding surface for sliding within a channel, and first and second engagement surfaces. In a contact portion between the wiring and the semiconductor film, the diffusion prevention film and the impurity region are in contact with each other. The resilient polymeric base layer, the metalized layer, and the conductive plating have an aggregate spring constant sufficient to maintain distal portions of the contact members in a cantilevered configuration and to form a stable electrical connection between the distal portions and the first circuit

member solely by compressive engagement. The mapping module is configured to map procedures identified in the source code to the defined requirements. For read instructions the selected normal or inverted data is compared with data read from a memory.

1459826196-2d72734c-d9a0-46c1-a75e-6dd482def4bc

A filament circuit resistance adjusting apparatus, for a filament circuit having a filament with a first resistance is provided. In addition the present invention provides methods of making the telomeric copolymers comprising aqueous solution copolymerizing a monomer mixture comprising acrylic acid and methacrylic acid in the presence of a phosphorus acid group containing reactant having a phosphorus atom in the +1 oxidation state, and thermally treating the resulting telomeric copolymer at 175°C. Still further, a calibration loop may be coupled between the output of the ADC and the phase detector to generate and provide a phase adjust signal to reduce or eliminate phase offsets. In such case, the first processing circuitry and the second processing circuitry operate between a packet network interface and a switch fabric of the packet switching device. The camera photographs the golf ball.

1459826196-5a5ef2a4-48d1-4229-851a-0213128ef41f

The invention relates to a device which is used to film, record and reproduce video images in real time with a three dimensional appearance, using a video camera and a sonar system in order to obtain the depth information. A mounting bracket connects the steering column to a vehicle frame. As a second aspect of the present invention, it is desired that the SNR be estimated within 22123 dB of the actual channel SNR. The post aperture extends from a top surface of the base to the recess of the base.

1459826197-1fe66445-2bd4-4b8f-881a-4acbb4aa2baf

An organic semiconductor thin film exhibiting high mobility and a method for preparing the same, and a material for preparing the organic semiconductor thin film by a wet process and a method for preparing the same are provided. The link mechanism includes the rotary unit arranged around the axis of the operating member body and our movable members arranged equidistantly around the axis of the operating member body inside the rotary unit on the surface of the base unit and having rear ends coupled rotatably to the rotary unit. Thus, a method is provided for forming a group III-V compound semiconductor layer containing a group III-V compound semiconductor containing arsenic as a group V element and also containing nitrogen mix-crystallized therewith, which has superb light emission characteristics. Thus, the desired portion of the map can be enlarged/contracted, while maintaining connections of roads. The power of harmonic radiation generated by the apparatus is selectively varied by selectively rotating the plane of polarization of fundamental radiation entering the optically nonlinear crystal. , small fluid channels) in a small polymer block wherein one or more of the channels can be filled with a biologically relevant gel, such as collagen, which is held in place by posts.

1459826197-60f41633-1c45-420c-8cd6-f5d3e8fe1847

A real-time reproduction determination unit determines whether or not AV data recorded in recording areas on an optical disc can be reproduced in a real-time manner. The system encompasses the prior art and new user specific mass media. In a second instance, complementary codes can be used for the radar pulses such that each radar system operates with a unique code for substantially reducing the cross-talk between the radar systems. Portions of the body that carry weight are supported by the frame by a sub-frame that encircles the head pipe. The fullerenes range from about C60 to about C100. The use of the table in a table assembly is also described.

1459826197-e8c611bb-aad4-4c1d-9313-d73eb72eabdc

A semiconductor die package having an elastomeric substrate with a first support frame and a second support frame. Also included is a deflection limiting element coupled to said leaf spring element at an intermediate location thereof, wherein said deflection limiting element comprises a J-shaped spring element. The protocol adaptation level is provided which, prior to a data transfer process, evaluates the protocol for exchanging data between the computer and the remote maintenance computer in terms of the compatibility of the protocol with the upcoming data transfer process. A fourth generating unit generates a capillary vessel image data set by performing three-dimensional image processing for the capillary vessel volume data set. After heating the coated surface is left with a protective oxyfluoride film that prevents blistering and hydrogen pickup and promotes hydrogen degassing from the article.

1459826198-0f68c92e-d49b-4acf-9c61-e52d3cbb7c65

The present invention relates to a transport device having a transport module including a helicoidal conduit actuated in vibration by a vibration module having a support with a rigid connecting piece supporting a plurality of n pairs of vibrating motors. A pressurization system is arranged for providing a constant and controllable gas pressure to the housing in order to obtain a controllable delivery of the drug solution. Curving lightpaths made on a silicon bench for reconciling the chip size with current ribbonfibers causes bending power loss, optical crosstalk and difficulty of production.

1459826198-352d9dc8-6451-4c21-b5c7-6409c2b4509d

A golf ball comprising a core comprising an inner core center and an outer core layer disposed over the inner core center. The three sub-pixels correspond to red, green and blue, respectively. The stuffer plug precursor then forms a stuffer plug within the hollow section. A second portion of the damaged tissue region may be similarly positioned within or along the channel and one or more additional lengths of suture may be secured to the second portion via the device. The ratchet spring is arranged between the intermediate sleeve and the coupling sleeve and the clutch spring is arranged between the intermediate sleeve and the tool spindle.

1459826198-8a69e88f-61ef-44f0-963c-b8f50e6d93ff

The invention relates to a waterproof housing of an apparatus, for example an electrically rechargeable shaving device, which housing is provided with at least one opening in a wall, which opening is sealed off by means of a foil permitting the equalization of a pressure difference between the inside of the housing and the outer atmosphere. In an example, a geodesic forest engine determines geodesic shortest-path distances between each image element and a seed region specified in the image in order to form a geodesic forest data structure. Protection films laminated on upper surfaces of the respective color filters are formed. Other mechanical devices could also be used to cause the laser heads to move above the surface of the lawn.

1459826199-cde7b0ca-1b42-4005-9f45-bf67c623c360

The present invention relates to an improved protective composition and method. This method comprises driving the desired bit line pair to emulate the normal bit line pair during a read cycle. The incomplete print job envelope is transmitted to a printing device. The access point detects congested/uncongested status of the uplink channel by using a wireless transmitter module and notifies the nodes of the congested/uncongested status of the channel by means for transmitting onto the downlink channel. Flexor assembly includes flexor arm, and conductor having actuator contact.

1459826199-f17efb48-378a-4663-a803-f95ce0c592d7

The present invention provides polypeptides that include an O-linked glycoconjugate in which a species such as a water-soluble polymer, a therapeutic agent of a biomolecule is covalently linked through an intact O-linked glycosyl residue to the

polypeptide. The method may also include matching the model degraded performance pattern to the data transmission performance patterns to form matched performance patterns, and identifying a root-cause component from the network components based on the matched performance pattern. The device may optionally include at least one additional second inlet port into the second chamber.

1459826200-acb9b4f2-362a-4bc1-8c2e-a99d894d418e

A method of communicating with a network in a wireless communication system is disclosed. Each of the haptic devices converts a signal from a signal producing unit into force or tactile pattern. The active shutter glasses comprise a right temple, a left temple, a right-eye lens, and a left-eye lens.

1459826201-250bb2dd-d255-4f57-b680-cae46b36cc73

A system for disposing of medical waste is generally configured to sort waste items into a plurality of disposable containers according to applicable rules and regulations governing the handling and/or disposal of such items. The perovskite can be lanthanum strontium manganite. The tibial component may comprise a tibial tray and stem. Also, statistical data of antennas for a long term can be obtained according to the present invention. The condition detecting unit is a temperature detector 27 or a power detector 51. The allocated processing cost for a computation is an allocated time period between receipt of the input sample and generation of the output for the computation.

1459826201-493801c2-9fe4-4fc6-bee0-50958d25c2ba

Embodiments of the present invention provide a method and an apparatus for managing and transmitting fine granularity services. At least one downlink channel of each neighbor cell of the current cell is monitored. With reference to the image provided with a chapter mark, a still image generating circuit displays reduced still images, for example, so that a target image can be specified.

1459826201-7795d2d8-ce60-4797-bdf3-d7df85a076a1

Methods of converting cellulose or related biorenewable carbohydrate materials into high-value chemical compounds. Various embodiments include receiving in a first computer process a conditions input that includes at least one member of a set including departure airport conditions, arrival airport conditions, and fleet conditions; and estimating in a second computer process the amount of delay based on the conditions input. In the routing table, information about the relay of the received packet to one of the transmission path ports connected to a relay transmission path is stored, correlated with both a port identifier of each the transmission path port and the source address of the transmitter that transmitted the packet. These compatibilized products are stable in the liquid phase at temperatures ranging from about 40°C.

1459826201-89612077-6eea-4ea1-b536-e1188c32945b

A stent arrangement which has at least a first ring and zig zag struts extending axially from the periphery of the ring. Furthermore, this invention provides a method of preparing and using hLRTM4 protein and its polynucleotides. Suitable business objects are also described. The ink cartridge also includes a resilient member having a first end which is coupled to the front face of the case and a second end which is coupled to the movable member, and the resilient member is configured to expand and to contract to move the movable member relative to the case between the first position and the second position.

1459826201-9bade1b3-7739-4d47-8b80-decb3f74e0b9

The invention relates to a process for the preparation of an aqueous dispersion of halogenated vinyl polymers by polymerization, according to which, after polymerization, a basic agent is added in an amount such that the pH of the aqueous dispersion is less than approximately 5. An ice dispenser is provided for delivering ice from a lower to an upper end. The panels may comprise one or more

covering layers pre-installed on a frame.

1459826202-5aadc6aa-90c6-473d-a559-5e4806a9dde1

Apparatus and methods for fabricating materials by die-forming that may be implemented to form a joggle in a bendable workpiece by securing the workpiece to each of at least two respective adjacent working areas, and then by displacing at least one of the at least two working areas relative to an adjacent working area in order to induce the joggle within the workpiece. The contacting leads to the direct production of neohexene, in particular in a single stage and with a high molar selectivity for neohexene. These structures can be written in straight lines or around curves, and can be accurately overwritten, so that complex optical devices can be produced in a single fabrication step. The apparatus includes a controller.

1459826202-c463da8c-619f-4116-a036-305ff1c3e7bf

An extreme low resistivity light attenuation anti-reflection coating structure in order to increase transmittance of blue light, includes a substrate and a coating module. The stretching portion is stretched into the large intestine of the animal and transmits the liquid so as to soften the feces, and the feces is then sucked out from the large intestine through the feces suction channel by the suction force. The resonant coil is formed such that an anti-node of the resonant coil that is an area of an anti-node of AC current flowing through the resonant coil, is located at the extension when electromagnetic field resonant coupling is established between the external resonant coil and the resonant coil. When at least two disks are provided, a middle air damper forming member disposed between the two disks is provided.

1459826202-e9dd1622-39fe-476d-9512-6579fa7c4670

A suture retainer for use with a surgical instrument comprises a slot defined in the surgical instrument, the slot having a bottom and lateral slot ends. A pedal lock is movable to a locking position wherein the left and right brake pedals operate in unison. A second functional block provides a second address, a second column address strobe signal, and a second readwrite signal associated with a second memory access. A control circuit generates an error signal representative of a comparison of the converter output voltage to a reference voltage. Methods of making and using fluorinated silylethynyl pentacenes and compositions containing fluorinated silylethynyl pentacenes are also disclosed.

1459826203-11116771-fcec-466f-a034-3c0fa4e3e865

A manually operated vehicle blow-drying device having a swingable overhead boom and an air supply hose extending down from a distal end of the boom. The method further including electrodepositing a first protection layer on the magnetic recording layer, removing the mask layer, and depositing a second protection layer above the first protection layer. At least one electronic valve can be used to deliver a desired flow to the patient interface device. Once the cutting blade passes along the length of the bobbin drum in one direction, the cutting blade may be rotated such that the sharp edge may engage and penetrate the remnant material in the reverse direction. Accordingly, the number of virtual machines exposed to the forwarding table of Ethernet switches can be effectively reduced.

1459826203-266308ba-4e2d-44a7-a401-dc56c1938846

The decision to prefetch inodes is based upon the detecting of access patterns that would benefit from such a prefetch. To cool the disk multi-brake even in slip operation phases and in the engaged condition, it is provided that depending on the operating condition of the brake, the cooling oil can be passed over and/or through the disk set in radially different directions. The detected data packets are read by the apparatus, combined into application messages, and further combined into user centric events. A mechanical switch may be used to select a SPRAY or CLEAN mode for the operation of the paint regulator to allow flushing of the paint regulator. An active catalyst composition is thereby formed.

1459826204-39c3752e-6a1d-49eb-9129-1394b24a0c92

The invention relates to a UV-lamp sterilizing appliance that is used to destroy bacteria. The fixation members are integral with a cantilevered arm that extends radially outward from the optic. The position of the softness region in colour-space is adjusted so as to reduce relative amplitudes of variations within the identified portion. The device determines whether the feature is disabled, whether the feature can be enabled with authorization and whether a requester is authorized to enable the feature of the device.

1459826204-6e49f3eb-68be-47f6-b152-0ba78b971081

A multivariate control method and system to control torque output from a powertrain system to a driveline is provided, to reduce driveline oscillations. The metal shield casing is received and held in the casing receiving recess. The flag generation circuit 11 generates a flag indicating whether bit inversion has occurred in consecutive bits in each of the bit sequences to be transferred through the buses and transmits the generated flag to the receive unit 20.

1459826204-9d1b2b8d-246c-4d06-84ed-ff3c782613ae

A disposable diaper is provided, including an absorber, a top sheet arranged to cover the top surface of the absorber, a back sheet arranged to cover the bottom surface of the absorber, and a skin-contact sheet arranged over the top sheet. In the method, a gate electrode and a lower electrode of a capacitor are formed at the transistor area and the capacitor area of an insulating substrate, respectively. This channel is connected to an exhaust gas system and is provided with a means for example a constriction for reducing the pressure gradient during the start of the opening of the gas exhaust valve. Plus, the combination can enable reading tag codes during tag manufacturing that are not otherwise readily available to read in the field. This stabilizer composition is useful in many food and non-food applications. The shoulder zones include a plurality of second transverse recesses inclined relative to the circumferential direction.

1459826204-a46f0634-2b42-42ef-b676-80bc69c72534

A micromachined pellicle beam splitter and method of manufacture thereof are disclosed. The opening patterns or the protrusions have a pattern which controls the direction of the liquid crystal molecules. A second lifting structure and/or step is configured to have an inner surface configured to lift an outer surface of the molded plastic preform from the injection mold in the lifting direction for a second period of time, the outer surface of the molded plastic preform including structure lying in a plane substantially parallel with the lifting direction. The first primary winding includes a first terminal and a second terminal capable of being grounded via the storage capacitor. The at least one base-fastener orifice, the at least one clamp-fastener orifice, and the at least one strap-fastener orifice are positioned to collectively receive a securing fastener. The lateral spacing between a cell plate and a transistor gate is minimized, resulting in reduced overall area.

1459826205-110c21bf-0b1d-4483-be84-3b6bf1e90120

An article comprising a polyvinyl alcohol film encapsulating a fabric care composition is useful for conditioning laundry. At least one first expandable bone graft is disposable within the second cavity. The image file is transmitted, together with at least one of the sender identifier, the subject identifier and the scan condition, through the network to one of the external stations indicated by the stored destination identifier. A stable laser beam is produced because changes in thermally sensitive light-generating parameters of the semiconductor laser are compensated. Articles of manufacture comprise a container or substrate, a wrinkle controlling composition, and a set of instructions.

1459826205-368a8595-7a69-4c7d-9a7a-663f1508e244

There is disclosed a method and a gas actuated retarder system for railway cars to control the rolling speed of a railway car along a first and second running rails of a track section. The coaxial via structure comprises a central conductive track and an external conductive track separated by a dielectric material and is positioned in a core of the electronic device carrier or in the full thickness of the electronic device. A load ring is disposed within the circumferential groove of each slip element, the load ring comprising at least one securing element which is engaged by one of the plurality of axially aligned inserts to secure the load ring within the circumferential groove.

1459826205-810f0027-20ae-4a8f-a8fd-52f5d8ad6227

In a detector device 10 of the invention, a wave detection module 20 receives and detects radio wave in a predetermined frequency band, which is used by a target wireless communication device for telecommunication. The planar antenna comprises a radiator having a feeding point, a first short point and a second short point. The surfaces of the microparticles have adsorbed thereon a complex of biologically active macromolecules, such as nucleic acids, polypeptides, antigens, and adjuvants, and a detergent. The cap and peg are engaged by at least one post mechanism extending from the peg. There is a similar second body with a connector between the first body and the second body and together these form the appliance for the user.

1459826205-9567e522-b44a-41aa-a637-2038d08c5236

White light emitted from a first light source is sequentially converted into green light, blue light, and red light by a first wheel. The temperature indicator is configured to vary an optical property in response to changes in temperature at the surface of the media heater. Attachment ears extend outwardly from the box, and an adapter attachable to a front surface of the box has attachment ears aligned with the box ears. The user checks the displayed data, and enters data for changing the signal level so that the remote control transmits the entered data to the television set. Each of the layer portions includes a semiconductor chip, and a plurality of electrodes that are electrically connected to the wires.

1459826206-3f065d9e-6cc5-48ec-9faf-79859c610828

A multi-capillary type electrophoresis analysis apparatus has a sample tray for containing a plurality of samples, wherein part of the sample tray is made from a conductive material. Thus, the strength of the piston is increased by the crown reinforcing portions, and also, heat distortion of the crown portion is inhibited since the crown reinforcing portions integrally connected to each other by the connecting portion are formed so as to serve as a rigid member extending along the piston pin axis. Portions of the lead frame extending from the die paddle are folded around sides of the encapsulated integrated circuit die and over, or adjacent to and level with, a peripheral upper surface of the encapsulated integrated circuit die to form an electrostatic discharge ring. The video signal generator also generates at least one additional video signal and transmits this at least one additional video signal alternatively to or in combination with the first video signal to the telecommunications terminal. Other embodiments of the invention provide for arrangements of vias in via arrays where diagonal wiring paths are facilitated near the edges of the via arrays.

1459826206-569ba5e5-8e33-4fd1-941a-395c5aaf2d9e

The invention relates to a device for axially conveying body fluids. The present disclosure also generally relates to a pharmaceutical composition comprising a crystalline form, as well of methods of using a crystalline form in the treatment of Hepatitis C and methods for obtaining such crystalline form. The HNIW is subsequently obtained directly, in a single reaction stage, by nitration of the hexasubstituted hexaazaisowurtzitane derivative. The bottom side is oblique to the plane so that the front end of the bottom side is higher than the rear end thereof, thereby shifting the center of gravity of the case body rearwardly. The clamps are

arranged in such a way that all clamping and voltage control is realised by a clamp connected in parallel with the corresponding semiconductor switch. When the headlight is switched on, the light emitting devices along at least one direction of the headlight are switched on sequentially.

1459826206-5f19c2c3-1206-41e4-bf81-319b32999b22

A mechanism is provided for protecting storage fabrics from an errant device causing a single point of failure. The polymer solution is deposited onto the surface of the substrate in the housing and the substrate is then spun. A plurality of modular pods are secured to the frame to form the customized mattress that relates directly to the height and weight distribution of an individual's body parts to provide the maximum quality sleep environment unique to that individual.

1459826207-98839a75-ec6b-4696-9e41-96bef24b525b

To control the positioning of a spacer more accurately in a liquid crystal display device to prevent display defects due to incorrect positioning in a display region. In this ink, the mildew resistant properties are not impaired. These methods are particularly useful for identifying individuals with gene mutations indicative of early colorectal cancer. The display module may have glass layers such as a color filter glass layer and a thin-film transistor substrate. For this purpose, a first camera is used in an identification station to obtain digitized images of optically visible separating section-specific and strand section-specific surface features on an identification surface and the images are stored in a database. A signal detector within the receiver is connected to a serial interface port of the device to detect the presence of an input signal.

1459826207-f29e6259-5fa9-4797-a61b-36fdd7ab1155

A fuel processor apparatus comprising a catalytic tubular reactor is heated using an infrared radiant burner to provide the endothermic heat of reaction needed to reform a mixture of hydrocarbon and steam for the production of a hydrogen-rich gas stream. With the configuration, an erroneous operation of the refresh executing circuit can be prevented. The edible film is peelably released from the substrate to provide decorations for the foodstuff. This eliminates the need for receiving write data again from the outside when the additional write operation is to be retried. Accordingly the present invention can measure a quantity of usage of a CPU easily without lowering a performance of the operating system. The method can determine which UHF television broadcast channels are available for use by the user device and determine a maximum allowed transmission power for a given channel based on signal strength for the given channel and on adjacent channels before transmitting the maximum allowed transmission power and location by the user device to a remote server for sharing information.

1459826207-fb487dce-4fb5-45d0-b08b-7ee88ddee398

A technique is described that reduces parasitic losses in circuits used to drive current through a load. The system includes a drawbar assembly adapted to be releasably attached to opposite corner connectors provided on the container. A reservoir is provided within the upper cap and has a breakable bottom; the reservoir also internally includes a cutter. The M-M<sub>2</sub> support catalyst comprises a first metal M selected from Cu, Ag, Au, or combination thereof, a second metal M<sub>2</sub> selected from Pt, Pd, Rh, Ru, Ir, Os, Fe, Ni, Re, Mo, W, V, Cr, Co or combinations thereof, and a support selected from activated carbon, alumina, alumite, zirconia, silica or combination thereof. A transmission input shaft is connected to a prime mover such as a vehicle engine crankshaft by a drive belt.

1459826208-036971d3-d477-467a-bd99-1a660073e768

Systems and method for sharing a file presented during a meeting are described. The banks may be formed of an organic material on a bank formation surface configured of an inorganic material, plasma treatment is performed under conditions that the

induction gas is fluorine-based and that fluorine is present excessively, and the areas enclosed by the banks subjected to surface treatment are filled with the liquid thin film material to form the thin film layer or layers. Thus, a memory cell and its neighbors are programmed together and the field environment for each memory cell relative to its neighbors during programming and subsequent reading is less varying.

1459826208-1b0ee0cf-b522-4e61-8a0d-adf6660943db

A digital camera is mounted on a camera mounting unit of a cradle, and supported as swayable. An identification function is disposed in the band, along with an Electronic Article Surveillance function, that may be selected to be at least one of an electro-magnetic or acousto-magnetic segment. This results in a sandwich-like contact structure achieved in a self-aligned deposition process and having improved source-drain contact for all-additive printed circuits.

1459826208-1facb3a6-6faf-4e8f-90a9-784eb0725d79

In certain embodiments, the invention relates to systems and methods for altering an image to compensate for variation in one or more physical and/or supervenient properties in heterogeneous, diffuse tissue, thereby attenuating the effects of tissue waveguiding. The backlight unit includes a light source emitting light; and optical fiber surrounding the circumference of the light source so as to concentrate and emit the light emitted from the light source. The selection involves selecting a type of alert to receive, a level of severity of alerts to receive, and a geographic scope. The removable locking device is then reattached to the suspension support structure locking the support structure and suspension into a new fixed position relative to the trailer body. Based on the correlation coefficient K, whether knocking is present or absent is determined.

1459826208-309bca90-0fc2-4b02-82af-4a8828f467e4

A method of transmitting control information in a WLAN system using a multi-channel obtained by aggregating a first sub-channel and a second sub-channel is provided. The system and method provides a user with the ability to create a list of items that the user would like others to purchase for the user as a gift or as a list of items that the user would like to retain for a later purchase. The first mode clutch is operable to engage the speed changing unit for reducing the rotary speed of the second axleshaft relative to the rotary speed of the first axleshaft. The layer and the resist pattern of the dummy sample are etched in an etching device so that the layer and the resist pattern of the dummy device are simultaneously slimmed.

1459826208-8bd9ade2-906a-4c8a-af48-6fadcd0c6272

A disposable food cutting utensil, oval or circular in construction with an integrated handle area, packaging support legs and slots, and a removable marketing element. A flashback chamber is provided in the housing at or near the distal end of the housing. Also provided are pharmaceutical kits designed to facilitate compliance with the regimen. The central attachment can also be used to diminish the package temperature gradients on the periphery of the die, if the thermal conductivity of the central disc attachment material is higher than the package substrate.

1459826208-e44f6b56-1de1-48a5-ab77-cdc64e2b9326

A flat-panel lamp having a light-emitting surface with an integral contact sensitive layer located over the light-emitting surface that controls the activation and deactivation of the lamp and a controller for supplying power to the lamp and responsive to a signal provided by the integral contact sensitive layer for controlling the supply of the power to the flat panel lamp. The intelligent icons are visually coded to represent the emergent data. In one embodiment, the web portion is arcuate or dome shaped. The segment is then assigned to one of the plurality of signal classes by reference to the probabilities. An initial amount of

the target is calculated according to a calibration equation using an initial amount of the standard, and the target and standard growth curve values, where the calibration equation is a nonlinear equation. The technique is uniquely available only in digital holography and has applications in holographic microscopy.

1459826209-2baedbe1-092e-43dd-b9e9-0e6d312d007e

A convertible message sign for indicating the docking status of a vehicle. In this context, the following operations are provided: comparing a guide voltage specified for setting the constant voltage to at least one stored switch-off value determined as a function of the boundary value, and ending the charging when the guide voltage reaches the switch-off value. The door can be secured to the vehicle in the open position so that the passengers have the option of riding in the vehicle while the door remains open. The surface opening area of the partitions attributable to pores having a surface opening diameter of 10 m or less is 20% or less of the total surface opening area ratio. The illuminative device is installed in the space for emitting light.

1459826209-8a9bd1a9-4a79-4b13-b240-744ca3d518f2

An adjustable Formwork climber apparatus is described which may be used for casting walls having an overhanging portion. When the downlink has more subframes than the uplink, special treatment on user equipment ACKNACK feedback is needed. This support member has a first end mounted at or near the bottom of the container, a second end terminating a predetermined distance above the opening in the top, and an exterior surface over which liquid flows. A pivoting cradle is attached to the base.

1459826209-d89da64a-0c51-4b91-b5d9-78e00f5bd73b

A hair highlighting applicator nozzle comprises a cap adapted to be removably mounted to an open end of a flexible container for holding a hair coloring fluid therein. It is intended to minimize the risk of a leakage. The output signals of the integrator circuit are periodically compared, and based on the comparison, output signals having a voltage representative of a value are generated. When a size of the sheet is undetermined, and the length of the sheet is not detected by the time the sheet reaches the conveying flapper, the conveying flapper is controlled so as to convey the sheet with an image formed on a first side thereof to the second conveying path. The new variety is particularly well suited for forming attractive ornamentation in the landscape.

1459826209-e0d7ea6a-97e7-4a07-8f36-fe9a9ad866aa

The present invention relates to antithrombotic compounds 2-alkyl aryl sulphonyl-1,2,3,4-tetrahydro-9H-pyridoindole-3-carboxylic acid estersamides, pharmaceutically acceptable salts and compositions thereof to be used in the treatment of intravascular thrombosis such as myocardial ischemia and stroke. The system includes a network device controller and a transmit unit coupled to the network device controller. An IC die, resides within the opening in the substrate. The received IP Multicast packet for an IP Multicast group is stored in memory, a pointer to the location of the packet in memory is stored for each port to which a copy of the packet is to be forwarded.

1459826209-f3914a7d-8bd4-4607-a9e2-fb8e798a6470

In this process for producing ethanol by enzymatic treatment of a must of a starchy plant material with yeasts of the genus *Saccharomyces*, all the old yeasts are replaced with fresh yeasts in order to keep the fermentation time between 20 and 24 hours. The illumination apparatus includes a light source connected to a power supply. Depending on the choice of thermally expanded beam, the deflection can be either in or out of the plane parallel to the substrate.

1459826210-ce9861df-24a3-4d4c-a194-85d61fda2940

An immersion lithographic apparatus is disclosed in which a gas knife is shaped and

a liquid removal device is positioned to improve removal of liquid from the surface of the substrate. Actuation means extends between said distal and proximal members whereby any deflection of said control handle with respect to said elongated instrument shaft causes a corresponding bending of said distal motion member for control of said working member. The flexible wall is adapted for undergoing deformation as the result of a displacement of the load or force receiving part through an action of the lever, and the sensor means are adapted for measuring the deformation of the flexible wall or the strain in the flexible wall. Blood component measurement can be easily performed without collecting blood by analyzing the transflected light with a high optical power containing much information about a blood component.

1459826210-cec8a3c7-656a-4329-ae80-b40923eca512

The invention features a photopolymerizable composition that comprises a cationically polymerizable resin, and a photoinitiator system comprising an iodonium salt, a visible light sensitizer, and one or more anthracene-based compounds as electron donors. The chair includes a pedestal mounted on a bottom of the tiltable seat. To increase user satisfaction with the product, a plurality of mixing tubes are extended in the same direction on one side of the burner pot in the burner system. In another embodiment, changing lights and shadows are used to create animated objects out of otherwise inanimate objects.

1459826210-fb8a001e-f07e-4216-8c16-a04d09142991

A computer implemented method presents a personalized multimedia message to a user. The combustion chamber insert contains a solid propellant, has a first and a second axial end and is held in the outer housing. The duct is pivotally assembled about a pivoting axis to the conduit for pivoting the outlet between the operative position and the cleaning position. The first modulation scheme has a first amount of energy associated therewith, and the second modulation scheme has a second amount of energy associated therewith. A first interconnection is coupled to the conductive line of a stair step, the first interconnection extending in a second direction substantially perpendicular to a first surface of the stair step.

1459826211-30af347f-ba6a-4e14-a3d9-28a036e4d541

A codeword synthesizing system and a correlation system for use with a spread spectrum communications system. The output of a master device's programming may be used to verify the programming of one or more slave devices. An algorithm uses the data to determine potential alignments between different 3D scenes via coordinate transformations. The power management system further includes a generator controller that is mounted to the engine-driven generator. The operations include receiving file access requests from the data repositories.

1459826211-4ec47230-dc75-41cd-83ba-821ee2bae23c

The present invention relates to a solid pharmaceutical composition comprising a delivery agent and wetted heparin. The classification system comprises a criteria table for storing predetermined criteria for items included in the electronic documents and a score counter provided corresponding to each of the electronic documents. The bridge member is positionable adjacent the appliques to activate the system and impart a dilating force onto the user's nose. Thus, moving the rotor bearings away from areas of high amplitude vibration of the rotor.

1459826212-919e5ae7-4a36-4aca-808c-14f38803cdb8

An image scanner uses optical targets within the scanner to characterize imperfections of a lens system and to partially compensate for the imperfections using digital image processing. A pliable webbing surrounded the keys such that there are no gaps between the keys or between the keys and the top enclosure, the pliable webbing creating a generally impenetrable seal between the keys and between the keys and the top enclosure, the seal edge having a rib. In another embodiment, a rotary drill bit is also disclosed including a bit body and at least one cutting

element including a substrate and a superabrasive table bonded to the substrate. After estimating the cylinder location, a number of skipped defective sectors that have occurred prior to a cylinder start is determined.

1459826212-9d7f923a-3674-4e4f-b17c-738b1c7b7e97

Disclosed herein is an electroluminescent display that includes a first substrate, a second substrate, a light-emitting element array, a sealing member, and a supporting structure. The fingers can be either be fixed along the conveyor path or move with the containers along a portion of the conveyor path. Extending approximately perpendicularly from the top wall are first and second side walls. By statistical outliers, what is meant is observations that fall statistically outside of the other remaining observations in the sample. The water takes on a property enhancing the separation by the device by the action of a medium.

1459826212-dbab9795-ad5e-4fdb-b1b3-810eda48a89b

The system and method presented provides a multi-phase, end-to-end integrated process for testing application software using a standard software testing tool. The system may provide analysis of the interior energy system and recommend improvements. The first set of memory addresses may be associated with non-volatile memory cells having wider cell threshold voltage distributions compared to cell threshold voltage distributions for non-volatile memory cells associated with the second set of memory addresses. The pre-stressing of the elastic elements are variably adjusted via a first adjusting device and one of the damper parts is adjustable relative to one of the fastening devices via a second adjusting device. The shared remote signal processing system decompresses these signals; assigns the decompressed signal to one of several shared, software configurable signal processing devices that processes these signals and transmits the signals onwards via the internet, switched telephone, or other networks. Additionally, the first surface has a plurality of prisms for totally reflecting portions of ambient light beams that have passed through the liquid crystal display panel to irradiate the liquid crystal display panel.

1459826213-2f92f53b-ea05-4284-9ecc-f3c529a46f0c

Navigational systems and methods are disclosed herein to provide accurate processing of two-dimensional sensor images for navigation and determination of position in three-dimensions. A command dictionary and dynamic grammars are used in processing speech input to identify, disambiguate and extract commands. Then the outer panel is stitched to an outer side of said lofted assembly. In an alternate embodiment, solar cells provide all of the energy for the drive motor. The bias voltage generation circuit generates bias voltages for biasing the MOS capacitors of the MOS variable capacitor cells. The method comprises providing a first tubular ; locating the first tubular in the bore ; providing an expandable, second tubular ; locating the second tubular in the bore overlapping the first tubular ; expanding a portion of the second tubular to create a coupling including a flow passage between the first tubular and the second tubular.

1459826214-3c2d1b0c-e6a3-41f8-b0c1-aacf59c802ba

One or more systems, devices, methods, and/or processes described can determine a maximum cache command rate of a processor unit. Vacuum chamber 1 is provided with subchamber 3 that is less evacuable than coating chamber 2. Upon activation of the drill, the collecting drum rotates retracting the pool cover.

1459826214-463ff304-f159-4cd7-8351-f9cf25cd4441

Disclosed is the discovery that the transcription elongation factor termed P-TEFb has a central role in transcription elongation control. The network interface has access to the associated target computer's processor and memory. The first threshold voltage of the first channel region is different from the second threshold voltage of the second channel region. Tests may be periodically issued to the clients and to the intermediate nodes to measure and track performance and

quality of the network connections.

1459826214-da10e25f-d32f-416f-911a-73c2cfe0dc52

A power generation system includes at least one generator having at least two sets of stator windings, an active rectifier comprising power cell based modular converters associated with each set of generator windings. A wire grid is made by attaching the wire-grid metal sheet to a frame. The optical switch also includes a phase modulating section that applies electric fields to one or both of the two optical waveguides. During a remainder of the time segment value, at least one turn-on time period is provided when the supply voltage is coupled to the motor. In response to the remaining time alert signal, the warning module is enabled to issue the warning signal. According to one aspect of the invention, an introducer having an inner lumen with a diameter that is smaller than that of the compressible member may be used to disengage the stiffening member from the compressible member.

1459826214-f64f1d40-39f8-4b03-95fd-0becd6c0fe34

A combination housing of a notebook computer having a display housing and a main frame housing. These peptides possess a charge motif of positive-positive-hydrophobic which is important in determining the specificity of binding to tumor-derived endothelium. The connection between the first and second connectors may be solidly magnetic, solely mechanical, or a combination thereof. The hashing units are configured to operate in parallel. A processor determining the particular deformable region to be location of the input force based upon the detected fluid pressure changes. The coupling includes at least one vehicle-side coupling part and at least one battery-side coupling part, each coupling part having at least one electrical contact site.

1459826215-33ec9ec6-0156-4710-a885-9793311c82cc

An x-ray tube includes a frame, an anode for generating x-rays disposed within the frame, a cathode disposed within the frame, where the cathode is configured to selectively emit an electron beam toward the anode, and at least one heating element disposed within the frame and configured to heat a portion of the anode. The injector device includes a body defining a space for receiving a pharmaceutical cartridge. The tarpaulin system may be installed onto and removed from the cross supports of a tarpaulin support and retraction system without requiring the user to disconnect the cross supports from the drive cables. Finally, the radii of curvature in the area of the transitions from the outer part into the inner part of the tube are greater than in known tubes. , monocyte-derived dendritic cells.

1459826215-87d92c3a-b5d9-4fffb-bdda-97a3319f99e1

A chip package includes an optical integrated circuit and an integrated circuit that are adjacent to each other on the same side of a substrate in the chip package. The traverse rod is designed to improve the functionality of the rod, while minimizing the risk of damaging the aesthetic features of the traverse rod as the hanging object is manipulated. In said exemplary embodiment, the STP trading platform includes computer software modules including at least an account management module and an electronic trading module to handle the various stages of executing a trade, confirming the trade, and facilitating settlement of the trade. Similarly, the base plate has one or more removable sections to correspond to the configuration of the bottom ends of the tubes.

1459826215-b2a5ba95-00f9-4668-9ee4-8b8270ee2151

A smart card reader and transaction system which uses the voice path of a switched telephone network to effect smart card transactions are described. The use of a digitally controlled phase locked loop allows the stepsize of the synthesizer output frequency to be controlled in very small increments. The differential pressure considerably decreases or considerably increases due to breakage or plugging of the DPF in an exhaust emission control device. The power amplifier device is capable of selective operation within one of multiple different

frequencies or frequency bands. The aforementioned fire-resistant container meets Underwriters Laboratories Standard 72 and is suitable for storage of paper documents, firearms, and other valuables. The multiplexer conducts one of source output signals into to red sub-pixels under control of control signals.

1459826216-2f7f37d9-9672-43b5-a248-86655ceb198c

A tone hole pad to close a tone hole of a musical wind instrument is mounted in a cup having a bottom portion and a wall portion. Each adjustment circuit may be connected across a standard voltage divider circuit used to create a reference voltage for operating a voltage pump. Upon exiting the painted area, the graphical pointer speed is preferably restored to its prior setting. The track are provided with a predetermined region that provides for controlled deformation of the vehicle body in case of a collision. In one embodiment there is an additional substrate layer that house components that are not sensitive to temperature with interconnects electrically connecting the heated substrate and the additional substrates. A vacuum system is positioned to generate a reduced pressure condition along a lower surface of the slide coating die.

1459826216-3c08f154-6b70-4105-8a25-1914d8bce37e

Architecture removes the limitation of a fixed set of roles and scopes, allows more effective permission auditing, and provides a convenient delegation model. In one embodiment, a system includes a computing device connected to an access server that controls the ability of the computing device to access to a computing resource, such as the Internet. The method, system, and computer program product may determine whether a first processing element has additional processing capacity.

1459826216-8ff9820f-b5cb-45cd-851b-584b6be5a28e

Information related to activity of a user may be provided using a method or a data processing system program product to perform the method. The first region of the base portion is capable of being folded back towards a second region of the base portion that includes the first edge, and the engaging portion of the second reinforcing member is capable of being engaged with the first reinforcing member. The force is applied by a force dosimeter assembly that draws an incrementally adjustable amount of force on cables connected to the bracing member. The grip unit and the motor unit are connected to one another by at least one antivibration element. Adjustments are then made to the last in accordance with the adjustment factors to provide custom width sizing. Graft strength has been found to be greater than 1,000 N, which is desirable for ACL reconstruction systems.

1459826216-bb2a4a97-f708-4ed4-863d-91f7e07249ad

An FCC process and apparatus that blends spent and regenerated catalyst before the catalyst contacts the feed in a reaction zone. The object is placed in a chamber and supported between inlet and outlet apertures in the walls of the chamber. Each measure is obtained from the output of the camera of the corresponding cameraencoder combination. Using this criterion, observed and output signals are used to control a filtering matrix. By rotation of the balance beam and flexing of the elastic hinges 30, 31, 32 an appropriate bearing load share is achieved. The handle is connectable to a pressurized fluid source.

1459826217-07c58ca8-78ec-402b-b5e2-735849ef83c6

A power amplifier system uses adaptive distribution of signals through an amplifier architecture of parallel amplifier stages. In one embodiment, a method is provided for encrypting hierarchically structured information. The driving lobes have upper surfaces that are depressed a distance into the counterbore. In operation, fuel gas is injected into the first passageway and recirculated flue gas is thereby drawn into the first passageway so that it mixes with the fuel gas.

1459826217-402368be-09c6-466a-8024-a5b986897bd8

Power supply equipment is provided for supplying an appropriate power adapter

identification signal, as well as DC power, to various types, brand and models of electronic devices. The speaker or the cap is configured to move relative to the other for opening and closing the acoustic port in one embodiment and a movable seal is provided in another embodiment. The controller operates on separately settable odd-even wordline erase voltages, which are adjusted to affect offset. A desired slip calculator is operable to transmit a desired slip signal based on the ground condition signal.

1459826217-69ca6835-d5a6-46e8-9624-216f1ba8e71c

A honeycomb structure includes a honeycomb block which includes at least one honeycomb fired body having a first end face side and a second end face side in a longitudinal direction of the honeycomb fired body. The system's sequence of operation is can thus be described as follows:a. The computer additionally includes device management client software.

1459826217-6e94ebe8-b861-4c40-80de-b1fd053efd98

A covering for protecting handbags, suitcases and other containers from damage due to inclement weather conditions, such as rain, and methods for making and using same. Upon compiling a semiconductor memory instance based on its configuration data, a default access margin value is passed to a wrapper interface associated with the memory instance. The rotation shafts are engaged with each other by a single adjusting device. A valve, to allow flow from an interior of the assembly to a reservoir if needed, is provided. The bi have a direct effect on the gain of a dynamic model. Following that, a polysilicon layer is formed to fill the collector opening and the emitter opening.

1459826217-b89b23ed-167d-4db2-b09d-b05defb51c9f

The disclosure relates to a sense amplifier comprising a cascode transistor and means for biasing the cascode transistor, supplying a control voltage to a gate terminal of the cascode transistor. The F-BER is correlated to the BER of a disk. The plural round keys are output to a round calculation executing unit sequentially executing in the encryption processing part such that a constant sequence is not repeated. Particular products include external wall insulation or cladding and pipe sections. In response to receiving the text-message, the application on the mobile phone device initiates retrieval of appropriate configuration information associated with the user from the application server.

1459826217-bbacf15a-e353-4b7e-adcb-8761cdc2fa5b

A system for estimating a crop characteristic comprises a database, a plant growth model correlator, and a crop characteristic estimator. A method for forming the coated tablet is also provided. Each thread assigned to a particular instance of the shared resource has a unique ordering index.

1459826217-c936361d-0a7d-46d3-9900-d83aaba7ed60

A process of producing an asymmetric membrane of multicomponent polyimide. An electron-beam apparatus adopts line-sequential driving of allowing a plurality of electron-emitting devices to simultaneously emit electrons in an arrangement in which an accelerating potential for accelerating electrons includes a ripple. After optical alignment, the receptacle is fastened to the opto-electronic unit by welding.

1459826218-2189ad5f-c8ea-4c9a-b407-04bb9ed51c60

A laser processing method where laser beam for processing is irradiated on a processing object and the laser beam for processing directly removes a part of the processing object. A plurality of the modular heat radiating units may be sequentially stacked and connected through engagement of the ridge portions and the grooves on a first modular heat radiating unit with the channels and the flanges on a second modular heat radiating unit, respectively, and thereby form a sectional modular heat sink. Only damage to the enamel coating leads to a destruction of the

coating, preferably under the influence of a catalytic material, so that the encased fluid enamel can emerge. The hole portion is located within an outlet projected area that is provided by projecting an open area of the outlet in straight and toward upstream in the flow direction of the main flow on a projection surface perpendicular to the flow direction of the main flow. The complexed first immiscible basic extractant is separated from the aqueous stream, thereby producing a first effluent stream that comprises product organic acid and that has a greater ratio of molar product organic acid to molar strong contaminant than the aqueous feed stream did.

1459826218-8221bf19-1618-4a60-8371-9210cae69b29

The present invention provides a novel compound having a kininogenase-inhibitory action and its pharmaceutical use. Preferably, such fluorescent zebrafish are fertile and used to establish a population of transgenic zebrafish and to provide to the ornamental fish industry for the purpose of marketing. The drive rod guiding member can be positioned adjacent to the drive rod. In another embodiment, the defects define a depth-of-interaction boundary that varies longitudinally to vary the amount of light shared by neighboring portions of the crystal.

1459826218-9a284aef-6a65-4099-8e71-c07a4dda8d5c

A two-ended ink stamper has at least one handle with at least two ends. A call associated with a first party to be surveilled is verified, on a per-call basis. As the initially longer sidewall of the standard waveguide is unchanged, the fundamental mode is not affected but the electric field is uniformly distributed along the width of the board traversing the electric field and the cavity.

1459826218-b4308983-0d22-4b73-a55a-8951c0e38cf2

Disclosed is a blade including a blade body including a leading edge and a trailing edge, and at least one trailing edge cavity defined by a blade area disposed in at least partial alignment with the trailing edge, the at least one cavity extending a desired depth into said blade body in a direction of the leading edge. The acoustic frequency at each fiber Bragg grating is calculated to determine an acoustic distribution along a longitudinal direction of the fiber. The first annular band is partially reflective to the frequency band.

1459826219-1f683c0b-5934-4e65-a564-fd321bbe6396

The invention is directed to a guide tube assembly for a portable handheld work apparatus with a drive motor mounted at one end of the guide tube. A permanent antireflective coating is deposited over the source region, drain region and gate electrode, and an interlevel dielectric layer is formed over the permanent antireflective coating. , over stressing, short channel length devices during voltage stress test screening.

1459826219-65c0b976-dcdf-448c-889e-7b92939acd13

A power distribution system is provided for an automobile mirror assembly or the like, and includes a flexible membrane having electrical traces electrically connected to the vehicle electrical system, and connecting sites for electrically connecting to various power consumers in the mirror assembly. Also a multi-band temporal amplitude coding technique, useful as an enhancement to any coding/decoding technique, helps with accurate reconstruction of the temporal envelope and employs a utility filterbank. The at least second radio communication device may send any sequence of data or control signals to a remote flash device which may be representative of the desired light emission intensity or power emission level. The target printer then runs the storage commands and locally stores the logo data. less than a seal initiation temperature of the polypropylene absent the PLA and a hot tack range of at least 20°C.

1459826219-afc05982-8be3-4d92-a71a-f69d1a9d8086

A rain monitoring system includes a rain monitor configured to measure fluid

precipitation. An agitator mixes the water and the foaming agent into the stream of compressed air to generate the foam. The user is able to remain physically removed from the switch site obviating need for protective equipment. The contents sensor unit is configured to send a signal communicating a state of the contents in a container.

1459826219-b7c83de0-b40e-4db7-9e9a-a883e6cd2307

The method and apparatus for cancelling a pending notify command of the present invention includes a mechanism which allows a controlling device to cancel a pending notify command. The first end of the suture is secured to the first elongated rod at a location that is approximately halfway between the first and second ends, and the second end of the suture is secured to the second elongated rod at a location that is approximately halfway between the first and second ends. The vehicles may include a noise-suppression device that is adapted to reduce electromagnetic noise, a cutoff device that is adapted to selectively restrict operation of the motor assembly, or both devices. \u2014Receiving by the exchange LE-C, a call message SETUP; IAM in Virtual Private Network context comprising an identification field identifying the defined Corporate Network CN-A. The insulation also preferably includes a metallic coagent cross-linker, which when used in combination with the hydrophobic silica particles increases the tear strength and the elasticity of the insulation, while at the same time not adversely affecting the bonding characteristics of the insulation. The fixing portion includes a through hole through which the elongated metallic support core axially passes.

1459826220-0dab90fe-3620-4bfa-9ed4-d512803d1714

Two or more defect maps may be provided for the same sample surface at different detection sensitivities and/or processing thresholds. A substrate having an array of thin film transistors thereon is provided. The particles are preferably washed, dried, and screened before being used as impact abrasive material. A second connection hole penetrates the second insulating layer and exposes a connection region of each of the upper layers of the upper electrode above the lower layer. In certain embodiments, the blades may be a translucent material capable of transmitting light from a proximal portion of the blade to a distal portion. The invention further provides methods for measuring aromatase activity and for screening test agents which modulate aromatase activity.

1459826220-8dd7c31a-b271-4553-944a-ed178fb20cc

A snowboard binding and hold-down device that may flex or move with the snowboard when ridden to minimize any impact on flex characteristics. The light-emitting device may comprise a green light source configured to emit green light. 2-octan-2-one compounds of the formula ; which may subsequently be further transformed to compounds of the formula :The present invention further relates to novel compounds as such, which compounds are useful intermediates in the above process. A computer controls the entire progress of the transaction, and thus controls the collaborative space occupied by the participants to the transaction.

1459826220-afe78e3e-67ac-4940-9565-3e0e0b501e22

A clutch lever for a centrifugal clutch applies axial pressure on one or more clutch disc assemblies as a function of the rotational speed of the engine. In one embodiment, the system includes an integrated device and an authentication unit. The barrel support structure holds the drum at a fixed angle while water is sprayed from the spray head onto interior surfaces of the drum. \u2014 Thus, the average speech spectral shape estimate adapts over time to changes in the acoustic characteristics of the voice path or any changes in the electrical audio path that may affect the frequency response of the system. The video fragments with the attached priority identifier are sent to a content delivery network.

1459826220-cd491259-7ce6-4d85-bed7-a9a9663c001c

A main control unit determines whether or not a previous version with which

comparison is to be made exists regarding a document stored in a session storage unit. The shank has a first threaded portion having a predetermined thread angle and a predetermined hardness, and a second threaded portion having a predetermined thread angle and a predetermined hardness. The object includes a front portion that is secured to the lid of a mailbox and a rear portion that is secured to the back of a mailbox. The at least one section includes a grinding head, a radial positioning system supporting the grinding head for radial movement with respect to the tire, and a tilt adjuster provided adjacent the grinding head to provide for pivotal movement thereof. By providing a size-adjustable system, the article of footwear is capable of receiving multiple foot sizes, such as that of a growing child.

1459826221-2d88ca13-2993-42b3-a3f9-836b921259b9

A CO<sub>2</sub> gas discharge laser includes elongated planar live and ground electrodes vertically spaced and electrically insulated from each. A charge storage insulator covers substantially the entire top surface of the cell region. The cross members are arranged at intervals at least about five times greater than those of the longitudinal members.

1459826221-2e88e739-698f-4a96-ba19-2dc990ded90d

A compound comprising a disazo chromophore and an optionally substituted acyl group linked together through a SO<sub>2</sub>NH group, inks comprising these compounds, ink jet printer cartridges containing these inks and their use in ink jet printing. In one embodiment, the method comprises identifying a plurality of processes; initializing each of the processes; executing with a single thread of control among the processes; and continuously cycling among the processes to obtain status information. A triangulation-based sensor head is supported at the imaging station. In some configurations, these methods comprise co-culturing, in a first stage, CD8<sup>+</sup> T cells from a donor with antigen presenting cells comprising an MHC antigen peptide, and co-culturing, in a second stage, the CD8<sup>+</sup> T cells with cells comprising an SCT which has an MHC antigen peptide sequence identical to the sequence of the antigen peptide in the first stage.

1459826221-7899e29a-e099-47c5-8534-6c948b22a1a5

An electronic device comprises an IC provided with an array of pads a preselected number of which define inspection pads of the IC. Two arched pieces are arranged about the area of the ends of the boom where the working track and return track meet. A second electronically controlled switch is further connected in series with the LED string, arranged to receive a PWM signal, thereby pulsing current through the LED string. The pivoting connector pivots within a defined range of movement thereby limiting the range of movement the attachment makes with respect to a front end loader of a tractor. On the touchpad, several key patterns may be provided or one or more regions may be arranged, to provide various input functions of key mode, mouse mode, scroll mode or graphic mode.

1459826221-8a101a31-c26e-4050-bb88-39b75a7e7782

An inter-symbol-interference coder with mapper and linear filter and a technique of channel encoding deliberately inserts inter-symbol-interference into the signal using a non-linear precoder to map map input symbol sequences into sequences of extended symbols. The disclosed reception method comprises a step for extracting second program table information which indicates the association properties between a plurality of programs, the programs being obtained by using a broadcast stream which comprises at least one program, program table information which indicates the broadcast stream, and at least one broadcast service, from a received broadcast signal. A magnetic layer is formed on a substrate. The field contactlessly drives an endlessly circulating runner element which is arranged on the container and which in turn is coupled in terms of gearing to the supporting belt. On the other hand, in the case of a merged result of OK, an ink cartridge OK state notification is issued to a mechanical controller.

1459826221-9378fa38-6a66-4cf3-ab1b-86d4685c9b88

The solid state drive device includes a memory device including a plurality of flash memories and a memory controller connected with a host and configured to control the memory device. Advantageously, the locking mechanism may be integrated into a container such that each container may be interlocked with an underlying and/or overlying container. Player devices include a processing environment, which plays content by interpreting its processing operations. A database stores a policy directory in a hierarchical format that is separate from a policy store for devices in a flat format.

1459826222-0f6f35f2-87f7-4aa9-9332-77f85a92a331

A universal attachment flange to connect equipment utilized to perform a task to various connection arrangements. For each pixel intensity of pixels in the image, a plurality of pixel groups are created comprising contiguous pixels of intensity equal to or less than the current pixel intensity. The component is to be powered by an auxiliary power rail and determines the setting based on the value at auxiliary power good. The contact element is locked in the housing for each pole at a locking step arranged in the interior of the housing such that a motion of the contact element against the plugging direction is limited by the locking, wherein said locking step is formed by an irreversible deformation of housing. Therefore, signal-adaptive filter smoothing is introduced in the second encoding process or a corresponding decoding process.

1459826222-37c77833-5829-43fc-9835-8dbf729fb0cf

Assertions of sentinel nodes within a device may be used to calculate device power consumption at runtime. According to the invention, in order to pick up the supplementary product, holding elements driven along a circulation path have at least one suction element. In another embodiment, a server initiates requests the user of an electronic device to input data and the data then transmitted to the server. When the cleaner-equipped cartridge is attached to the first- to fourth-stage image forming sections, an image forming operation is controlled under an image formation condition for a cleaner-equipped process.

1459826222-449a13ca-6a94-4aaf-8616-0618048dfaba

A computing device prompts a user to supply installation parameters for joint installation of an operating system and core software on a server device, and stores, in a memory, the installation parameters received from the user. An expandable hinge at the interface of the door panels allows the lower panel to move vertically when the door is in the lowered position with the upper end of the lower door panel is spaced from the lower end of the upper door panel. The drive unit is gearlessly constructed and has an electronically commutated multipole motor.

1459826222-480c9a56-462f-4516-a260-33c947558504

A method for coating the tip of a mechanical resonator for use in magnetic force microscopy and magnetic resonance force microscopy in which the tip is coated with a ferromagnetic material and the cantilever is not, and the product resulting from the method. The edge trim protects the film from damage during a stretching operation, wherein clamps, clips or hooks of a tenter frame are attached to the edge regions of the film and the film is stretched in the transverse direction. As a result, various video information and functions provided with Presentation Language data by a recording medium can be realized at a digital television set being able to accept Presentation Language data. These internal pegs are electrically connected to the bonding pads on the die via conductive medium. A confectionery product containing oils of the invention is also described. However, when conventional game consoles are connected over a local area network, they somehow inhibit audio communications.

1459826223-354e8812-fa61-4d0d-832e-ea082a98944d

The invention relates to an image-formation optical system capable of achieving wide-angle arrangement and compactness at the same time and an imaging system that incorporates the same. The parameterization is based on information in the received signals. The second side is shaped to attach to a bottom part of the climbing tree stand. The microprocessor determines first and second filtered voltage values based on the first and second plurality of voltage values, respectively. The DC voltage input stage includes at least two current-carrying lines and an EMC filter including interference suppressing capacitors and interference suppressing inductors, and surge arrestors configured to divert overvoltages with respect to ground are connected to the current-carrying lines after the EMC filter, from a point of view of the DC voltage source. The first magnetic portion is opposite to the second magnetic portion.

1459826223-59d0186a-3c2e-46f5-99e4-01c0c8b0954e

A metal sheet includes a surface and a tubular extension projecting from the surface of the sheet. The first information holding unit holds process identification information and authentication information which are associated with each other. The front forked portion of the valve-core engaging member includes a recess formed therein for accommodating a plunger of a Schrader-type valve therein to allow the forked portion to be positioned over the plunger in the valve to provide for engagement of the cooperating forked portion of the valve core. When performing ray tracing, the image processing system may only need to traverse rays issued into the three-dimensional scene through the combined spatial index to determine if the ray intersects either static objects or dynamic objects within the three-dimensional scene.

1459826223-7aa7ae0f-32de-4878-839c-73e897970e03

An assembly for vehicle deceleration and buoyancy comprises a pair of doors enclosing flotation bags inflatable for buoyant recovery of the torpedo. Such a light engine produces color stripes which maintain stable colors during scrolling, without the use of splitting and recombining filters with low angle sensitivities. The material in raw form is capable of being solidified by photo-polymerization, in particular by means of a light source comprising a laser, or else by sintering, in particular by means of a heat source comprising a laser.

1459826223-8d630f75-8108-4aac-9138-5936010014ec

A system, method and computer program product are provided for equivalency checking between a first design and a second design having sequential differences. % starch selected from one or more potato and non-potato starches wherein said starch comprises at least 28% amylose as determined by size exclusion chromatography if less than 50% of said starch is potato starch or at least 20% amylose as determined by size exclusion chromatography if greater than or equal to 50% of said starch is potato starch; from 5 to 25 wt. A comparator is configured to compare a threshold level and the servo signal, and generate a control level if a level of the servo signal against the threshold level when the OPU is controlled. The guiding part is disposed in the depression portion to be capable of driving the depression portion and driving the link by the depression portion to reciprocate in a first direction. A locking mechanism enables the cargo pallet to be coupled to another cargo pallet. The apparatus includes a tray, mountable to the recording apparatus, for stacking a recording material, a portion to be detected, provided on the tray to permit detection of a position of the tray, and a tray position detecting portion for detecting the portion to be detected.

1459826224-9c3f366a-cfd9-4eca-bcdf-913dc58fb297

The invention provides a symmetric hyperbranched silicone-modified polymerizable compound comprises a compound represented by the general formula. A group can include at least one group leader application server node and at least one group member server nodes. Upon receiving the ID, a comparison is made between the ID of the vehicle and a list of suspect vehicle IDs. In more detail, the mirror

structures comprise a substrate; a first mirror is deposited on the substrate, with an index matching coating between the substrate and the first mirror.

1459826224-b75b7878-514e-410f-b44c-9750cdddca9a

The present invention provides a shear thinning, transparent gel laundry detergent composition, comprising a surfactant system containing surfactant material selected from an anionic surfactant, a nonionic surfactant or a mixture thereof, and from 0. The surgical tools are designed to be customizable or highly selectable by patient to increase the speed, accuracy and simplicity of performing total or partial arthroplasty. The illuminated skateboard also includes a pair of trucks each having a pair of wheels for supporting the deck, and a driver circuit coupled between an electrical power source and the light string.

1459826225-053e34f0-1559-4350-8b81-7ecd9ae7d5b3

A digital television receiving system includes a first known data detector, a second known data detector, and a selector. The delivery system includes a delivery mechanism for delivering the contents of both syringes to a site of application. While operating in a first \u201cinstant on\u201d mode, the dual form computing device provides functionality similar to that of a handheld device, whereby a lengthy bootstrap process and operating system load is not required.

1459826227-5a047cfd-f10e-4284-8989-6d784d99c634

A system and method for performing domain-specific knowledge based metasearches. The file can contain one or more links, each link referring to a target file. The BIN along with a prepaid account number is loaded onto a prepaid card corresponding to the prepaid account. An adapted timing of dedicated data signals is produced based on the first and/or second differences, and the adapted timing is used to receive dedicated data signals. Alternatively, a micro-controller is used to detect the polarity of the sync signals and accordingly provide a reference voltage in order to set the triggering point at the leading edge of the sync signals.

1459826227-c2e65b4f-36bc-4eca-a80d-3a2159df2579

Systems and methods for automating and increasing the efficiency of business processes using inheritance of access/approval rules within an organization based upon the relationship of positions within the organization and the roles associated with the positions. The MgAu alloy forming the electron injecting electrode may contain not more than 85 atom % of Au. The output logic signal varies between the first voltage level and a third voltage level. The control system includes decision aids in a series of knowledge bases that contain the expertise in appropriate fields to provide intelligent behavior to the control system. A metal structure may be welded to the peripheral conductive housing member.

1459826227-db6655b5-44d8-4685-b173-4e33475cac85

The invention relates to oligomer-aryloxy-substituted propanamine conjugates and related compounds. The resonator operates in a zeroth-order mode on a composite right/left-handed transmission line. A printing system is provided having means for printing pixels in the region having the first spot size and means for printing border pixels having spot sizes smaller than the first spot size. The produced wallpaper is delivered to the user who gave out the order by, for example, a door-to-door delivery service. The method includes receiving one or more images included in a predefined area; receiving one or more parameters associated with the image; and integrating the images and parameters into a map of the predefined area to enable mapping the visual path through the predefined area in response to one or more input path parameters. Link support discs are set within a gap between outer surface of the central ball and inner surface of the hollow spherical body and fixed to each end of the lower link, and all the axes of the lower links and the upper link are coincident with a center point of the ball.

1459826228-11c743b9-5e7e-428e-b069-2677993f6f77

Disclosed is a stereo image matching method for re-creating 3-dimensional spatial information from a pair of 2-dimensional images. In addition to identifying and outputting representations of language objects that are stored in the memory and that correspond with a text input, the device provides a learning function which facilitates providing proposed corrected output by the device in certain circumstances of erroneous input. The structure further includes a second FET having a channel of a second compound semiconductor of second atomic proportions resulting in a second band structure and a first type. The present invention simplifies content repurposing, after it has been bridged to a secondary DRM system, but still under the control of the original DRM system. The method comprises AC coupling a fundamental frequency AC-ground of the first differential oscillator with a fundamental frequency AC-ground of the second differential oscillator. Then the amorphous silicon film is further heat treated.

1459826228-91b9886d-f4c4-4ea2-9c9d-6a9d04655bba

An artistic color gamut display is generated by obtaining maximum and minimum values for an RGB signal. The end of the anchoring rod, which is screwed into the coupling sleeve, comprises a section which has a reduced diameter in comparison with the outer diameter of the anchoring rod. The method further includes a step of separating at the level of the embrittled zone the superficial part of the block from a remaining part of the block from the separation initiator, wherein the separation step includes at least one of a thermal treatment and the application of mechanical forces acting between the superficial part and the embrittled zone. The mass flow rate is determined from the quadrature component. The apparatus then performs screen processing on the image data including the edge that has undergone the density correction, and performs smoothing processing on the edge in screen data obtained through the screen processing.

1459826228-c9127952-e526-4030-bf5d-99263e27ae02

Disclosed is a light sensitive photographic element comprising a support, a convergent micro-lens array, and an interposed light sensitive silver halide emulsion layer unit. At least some of the illustrative embodiments may be a method comprising a computer system performing an operation on an electronic file and determining that the computer system is proximate to a first mobile telephony device. This can prevent the lower end of the coil spring of the vehicular suspension system from lifting from the spring seat when the coil spring is elongated, thus preventing any degradation in the turning performance. The moving element is in contact with the rail. For example, the carrier gas flows inward over the film precursor, and vertically upward through a flow channel within the stackable trays and through an outlet in the solid precursor evaporation system.

1459826229-243298b7-b18c-423d-8b43-b4417cff0e49

A method and apparatus for moving a gate a distance in a predetermined period of time. The nozzle includes a nozzle body, a heater, a tip, a tip surrounding piece. First and second axial ends of the compression ring are chamfered to facilitate compression. The mold assembly includes a seam-forming wall extending between the inner and exterior surfaces. After printing, the cards are transported to a gluing system which applies adhesive to one side of the cards. A piezoelectric actuator with the bracing element is also disclosed.

1459826229-6c44c08b-c365-42e3-956b-ea0f912f307d

A laser includes a first region with a first waveguide having a first diffraction grating, a second region with a second waveguide having a second diffraction grating, and a phase controlling region with a third waveguide and a phase control unit for controlling an effective refractive index of the third waveguide. The device comprises a mechanism for moving the light source array; a light source driver circuit for turning on each of the light emitting diode elements within the light emitting diode element array; and a control circuit for controlling the lighting of each light emitting diode element. The case and scanner are removable

from the main compartment for easy transport.

1459826229-75990905-ddb3-4aaa-80b4-7f954c663287

A method and system is provided for distributing and reusing object identifiers in a distributed database system. The die also includes a first ferromagnetic layer positioned above the MRAM cell array, a second ferromagnetic layer positioned below the MRAM cell array, and several vias positioned around at least one MRAM cell. The first edge device may add a start time to the test data indicating a start of a measurement instance using the test data, transmit the test data to the second edge device over the interface, receive the test data with a receive time added by the second edge device, and store at least the start time and the receive time as handoff performance data. In another embodiment, a current collector material is simultaneously deposited on an anode and a cathode to form an anode current collector and a cathode current collector. The apparatus for use in this method preferably comprises: a pure culture of autotrophic, hydrogen-oxidizing denitrifying bacteria; a hydrogen generator; a flow-through bioreactor; and a filtration unit.

1459826229-ab74b89d-494d-493b-b47a-5ee28d11aa25

The present invention relates to soluble aqueous compositions comprising metal salts of selected polyitaconic acid resins. A method for protecting a room from fire. A plurality of pin receptacles pass through the top surface to receive a corresponding plurality of microchip pins of the microchip. Then, the via is filled with conductive material that selectively electrically contacts the wiring. The diamond monocrystals may also be used as seed crystals and diamond monocrystals provided by vapor phase synthesis on the surface thereof.

1459826230-0dcfa42e-542d-47b7-a873-ef89622e2ae8

A method for forming a metal-insulator-metal capacitor is provided. The system also may include a rotor having a first end positioned within the cavity of the housing and a second end, a plurality of bearings, positioned to contact the rotor, for providing radial support to the rotor, and a turbine connected to the second end of the rotor. A message can be transmitted to multiple destinations regardless of whether the receiver terminals are able to receive LMS format messages and regardless of whether the receiver terminals are manufactured by different mobile communication providers. The bottom side of the second condensate pan is configured to receive the first side of the first condensate pan. Various described techniques may provide nanocomposite dielectric materials with superior nanoparticle dispersion which may result in improved dielectric properties. The shell has a shorter side wall and a longer side wall opposite to the shorter side wall, a card room defined by the shell for receiving a card.

1459826230-4e6bec59-2a06-4c62-834f-f71cbcd365c2

Related arts have failed to realize a data recordingreproducing apparatus having the ability to, while video-audio data is being recorded in a first recording medium, notify a user of the number of second recording media to which the recorded video-audio data is equivalent. The method includes determining a first input based upon at least one entropy source related to operation of the processing device. Any one of a plurality of fixtures, such as a solar lamp or a decorative design element, is removably mounted on the upper end of the sleeve. Compared to a conventional transmitter, transmission line, and receiver system, the end result of amplitude encoded pre-emphasis is superior reconstructed fidelity and quality of the PCM waveform, i. A lip extends downwardly perpendicularly from the proximal edge to cushion the edge of the table.

1459826230-6f2a53f1-8671-46f7-be8d-2df177ecf5cc

An aircraft entertainment system employing a hybrid video distribution system that permits distribution of direct broadcast satellite television programming to passengers of the aircraft. The imprint stamp includes a plurality of layers of

material that are deposited in a deposition order. The invention is suitable for an automotive door. The PC stores the file for production in the corresponding region of the flash memory using the production-processing program. The CMC layer is cured while the blanket is under compression such that the resulting CMC layer has a smooth surface.

1459826231-17a61f35-6460-4a5b-a084-fdd642e587d1

The present invention provides a technique for manufacturing a low cost device that provides a true die to external fiber optic connection. The user selects an option to claim ownership of the public listing offered by an online service provider. An optical fiber is used as a cylindrical lens in order to partially collimate in the vertical axis the optical signals entering and leaving branches of a waveguide. Part of the convex lens portion 8 surrounding the circular flat portion 11 is a convex-lens side face. Therefore, the plate is provided in a vicinity of the light emitting point in order to limit the light beam in the vicinity of the light emitting point, i.

1459826231-37749ae8-f65a-4459-96b9-1f639ff72745

A multimode interference device and a method of configuring the same comprises a multimode interference region having a major axis; and a plurality of ports connected to a side portion of the multimode interference region, wherein the side portion is positioned in a direction other than perpendicular to the major axis. The new and distinct variety has high ornamental value, cold tolerance for short periods of time, and disease resistance. A first portion of the thermoelectric elements are positioned on the child safety seat such that a child sitting therein is positioned thereover.

1459826231-68c91742-8761-4b34-9fd1-370520e2e129

In a system, called an application manager, portable devices can be connected in various kinds of local area networks. In response, the server generates a link to the content for use by the second user. The constituent members are laminated and formed such that a partial passage of the liquid supply passage permitting the first unidirectional valve to communicate with the supply pump and a partial passage thereof permitting the supply pump to communicate with the second unidirectional valve are formed in the laminated state.

1459826231-e71e011b-d9e2-49eb-bb64-facadf8653a1

An image forming device includes a main casing, a unit, a side plate, a positioning member, and a fixing member. The MEMS element is implemented in a layered structure on a semiconductor substrate. A conductive material is supplied through the opening to the through hole provided with the insulating layer so as to form a conductive portion inside the insulating layer. Semiconductor structures including such ternary III-nitride material layers are fabricated using such methods.

1459826232-7c458deb-10e6-42b4-aac8-2bae3b1b20c8

The present invention provides a transceiver for receiving and transmitting data over a network, and a method for testing the same. The output of the compensated clock is used when computing a position of the satellite signal receiver. At least one cable support extends from the frame assembly to the first end assembly and is adapted to support a length of cable wound around the collapsible cable reel.

1459826232-9849786b-8eec-4585-9a07-350d9072f1e1

Apparatus, methods, and computer-readable media are provided for segmentation, processing, and/or feature extraction from tissue images such as, for example, images of nuclei and/or cytoplasm. The method also includes identifying the one or more in-focus regions with highest resolution from the one or more gradient images and selecting one or more corresponding in-focus intensities from the frames to combine into a plenoptic multifocal image with a higher resolution than the eye images, the frames and the one or more eye image sets. The slidable button is

slidably received in the receiving groove, and includes a seal ring for sealing the plurality of ports. The linkage assembly is adjusted between an engaging position and a separating position. The chemical solution is formed in a solution tank from a combination of at least one chemical product and at least one rinse agent. 5\03bc, and weight average wall thickness of about a quarter of one micron.

1459826232-ba27b19a-ee19-4ed3-ace7-ec58fb873ff2

A vehicle operating condition profile can be determined over a given route while also considering imposed constraints such as deviation from time targets, deviation from maximum governed speed limits, etc. The method includes identifying an existing transit point of a transit system and receiving location information including geo-location paths of a plurality of mobile devices. The computing host itself; that is, its hardware and software, is relieved of the duty of network access redundancy and returned to the simple, simplex networking operating mode. 1 to 0, and a polymer block comprising ethylene and an \03b1-olefin of 3 to 20 carbon atoms, having a molar ratio of ethylene units to \03b1-olefin units of from 7030 to 8515, a Mw of 10,000 to 400,000, and having a slope of an intramolecular composition distribution of absolute value of 0. By providing a transponder including an RFID device in or on each of the blades and providing a readerreceiver in or on the tower support of the wind turbine, the readerreceiver can detect the operative RFID devices and/or read data from the RFID devices as the blades pass the tower. Main data recorded in a main data area and linking data recorded in a linking area in each block are scrambled by identical scrambling data.

1459826233-26ae8a50-f58e-4999-a579-3ef3d632e31c

A radio opaque container for communication devices upon a vehicle has a bottom joined to four walls, a pivoting lid sealing upon the walls, a connector from the container to a vehicle, a locking mechanism keeping the lid closed, and circuitry between the locking mechanism and the vehicle that engages the locking mechanism only when the vehicle's electrical system is on. The PCB further comprises electronic circuitry configured to detect the presence or absence of a connector positioned between adjacent PCB fingers. The DC power supply and the output amplifier may be powered by the input current, where the input current is no greater than about 6 mA. The arm members are designed for being positioned in one of the garments to allow the garment to be suspended from the hanging member. Such present invention allows the operators of the operation terminal devices to readily recognize the correlation between the operation terminal devices and information operable therethrough among information handled on an information processing devices. Strands of the rope have indicator fibers or indicator yarn that have a high probability of losing electrical conductivity and thereby indicate a worn cable.

1459826233-5175ae68-49df-452e-879a-5c175321ad55

A system to provide enhanced computational efficiency in a simulation of particle transport through a medium, program product, and related methods are provided. The beam splitter provides a portion of the radiation to a lens system that magnifies any deviation from a best focus position by at least 2\7. The articulation allows the tool and the traction unit to follow undulations in the terrain separately and allows the mobile object to turn by yawing the traction member in relation to the tool.

1459826233-a95f94eb-eb30-4150-82bc-b886e4503c7c

The disclosure provides a zinc oxide anti-reflection layer having a syringe-like structure and method for fabricating the same. A processor executes a computer program to generate a series of database transactions to be carried out at the fault-tolerant node. The output section outputs a data signal into the data communication path, and has a buffer amplifier section for compensating the data signal. Subsequently, the lattice-matched substrate is removed from the composite formed of the substrate layer and the transparent substrate.

1459826233-af968ea0-d256-488d-a9e7-c74b73926971

A power transmission belt comprising cord, elastomeric undercord, at least one pair of opposing v-shaped pulley contact surfaces, and having discontinuous fiber embedded in the undercord, some of which protrude from a contact surface. The polyurethane-polymer hybrid dispersion of the invention can be prepared in solvent-free or low-solvent fashion and with high solids content and requires only a very low level of stabilizing groups. The contact of the surfaces overlaid with metal coating is sufficient to join the first and second substrates to one another.

1459826233-b5c2d82b-e0bd-4a6b-86a2-24f60628127b

A structure and method of forming a capacitor is described. The apparatus checks if character data which is to undergo speech conversion includes character data which is not registered in the dictionary. This construction makes it easy to dispose a mechanical seal device and with this mechanical seal device, the sealed process fluid is securely sealed. A secure run-time platform data checker and a secure run-time checker check the system firmware during operation of the computing platform to ensure that the system firmware or information in the manufacturer certificate has not been altered.

1459826233-cf045ac9-9700-44ad-8cd5-6811210f6a6e

An optical fiber laser has an output that is stabilized to adapt to changes in laser operating temperature. In consequence, a user may log on to the web page server from any web page-enabled device and the server will be able to differentiate for the user links the user has visited from links that have yet to be visited. In an alternative embodiment, the sidewalls each have an upward taper in its rearward area which alleviates the need for a spreader bar. When used, the polymer film includes materials based on polyurethanes, silicones, or materials that biodegrade or erode in the body.

1459826234-60370017-eb23-4f7e-9bcb-cae43a645ccd

An electronic component includes a printed conductor structure on a substrate, as well as a film which contacts the printed conductor structure. The plurality of radiating fins may be arranged at intervals each of which is narrow in comparison with a thickness of each of the plurality of radiating fins. The second repeater also has a plurality of network ports. A controllable drive is disposed in the region of the inlet of the removal element whose drive shaft has a terminal coupling element which can be connected to the coupling element of the screw for secure mutual rotation therewith, and also having a closing piece sealing the outlet of the supply container.

1459826234-9e571b62-acd7-48cc-856c-c7c22f2f6f80

A flexible edge seal is provided for a vacuum insulating glazing unit having a first glass pane and a second glass pane spaced-apart from the first. Multiple arrays of data values are interleaved into a combined array of data that simulates a frame of data for input to a data port such as a video port. The UEs select a code identifier from a plurality of identifiers, such as midambles. By such detection, the vehicle position with respect to the indicator line is determined, the result of which is incorporated into control operation of an automatic transmission, for example. The moving mechanism includes a pair of arms pivotally mounted at one end to the second housing and at the other end to the printhead, and further comprising an extension return spring extending between the other end of the arms and the first housing.

1459826234-d85e653b-a7de-45a4-814b-eeffcceccfb01

Methods, apparatus, systems and articles of manufacture are disclosed to characterize households with media meter data. Subsequently, code words of the second set are written into the data stream pursuant to a predetermined assignment rule, wherein each code word of the second set is assigned to a different segment.

Each of two adjacent side faces has a corner surface therebetween which forms corner edges on the borders to the top and bottom faces.

1459826235-002dd6b7-686e-4e3a-a94e-3a0c14ae3609

A toner includes a polyol-based resin having multiple hydroxyl groups in a molecular chain thereof in which a ratio of epoxy group to hydroxyl group is from 0. A local oscillator supplies signals via a bandswitch which switches the local oscillator frequency range in synchronism with the selection of inputs by the multiplexer. A pocket-like container, for housing useful objects, such as printed products and traveling utensils 15 is arranged on the support structure. The first information element indicates that the wireless access point is capable of providing a plurality of wireless application services.

1459826235-c05f1e4e-8c57-4e00-a89f-563e3abc8a01

A floating chassis support mechanism is provided which can thin a disc reproduction apparatus. A corotron having a corotron element and a corotron shield is provided. The composite element is a separator comprising at least two components and more particularly an elastic portion and a plug member. A rear portion of the seat proper is mounted to pivot relative to the seat back. An attachment base is integrally molded by two-color extrusion molding using a first resin material that forms a base main portion and a second resin material that forms a support portion and is softer than the first resin material. Wherein the list of services provided to a user at the rental space is selected from the group consisting of: laundry pick-up and delivery, propane gas delivery, grocery delivery, pharmaceutical delivery, pizza delivery, and a mobile mechanic repair service.

1459826236-7fcd3151-1187-4573-a0f3-5294f766966d

A writing instrument has a tubular member having a longitudinal axis and an aperture at an end thereof. The plurality of fluid outlets include a first fluid outlet and at least one second fluid outlet. A reference current source is coupled to the first, transconductor, and a feedback loop is coupled to the first transconductor and the reference current source. The writeable control register preferably includes a mode bit selecting the first or second modes. The lower frame rail is formed with an S-bend to correspond to the shape of the unitized automotive frame and includes a bracket attached thereto at the S-bend to increase the section properties of the lower frame rail as required to maintain the section properties of the replaced frame structure.

1459826236-eba66898-e586-40da-9406-e73a52d9be1a

A boat has one or more jet pumps with appropriate water intakes and jet nozzles to drive the boat and one or more outboard motors to drive the boat. Especially, by causing various data transfer to occur at random timing by a plurality of models, it is easy to cause severer than actual conditions to take place easily, enabling to enhance efficiency of checking. The stabilizing rollers are effectively larger in diameter; i. A flashlight beam is cast with a first lamp and reflector assembly, an alternative second lamp and reflector assembly is substituted for that first lamp and reflector assembly and a second light beam of a different configuration is cast with that alternative second lamp and reflector assembly. Further, an operating bolt is provided in the hammer case to be inserted into a concave groove of the connecting sleeve through a guide groove formed in the hammer case. A fraud audit mode is provided on the subscriber data of the HLR in the UE and the core network, and detect, verifies, and stops illegal use in the wireless communications depending on the mode.

1459826236-ec37ea86-980a-49e2-9ec9-aa89a2df84d9

A method is provided that includes pattern-matching portions of a block diagram model as being equivalent, and creation of a common set of instructions in place of the occurrences of the pattern-matched portions to enhance the efficiency of simulation or generated code for the block diagram model, such as by a reduced

image size. The piezoelectric plate may have a conductive coating on one side which is photo-etched to produce an electrode pattern corresponding to the pattern of the pressure chambers in the carbon plate. The invention provides nanocarriers that comprise an immunofeature surface having a plurality of nicotine moieties.

1459826236-ec663fb0-2210-4f77-b485-53d7cd7f217e

In example embodiments, particle collection efficiency in aerosol analyzers and other particle measuring instruments is improved by a particle capture device that employs multiple collisions to decrease momentum of particles until the particles are collected. Subsequently, a destination service server is selected. Toothpaste from the toothbrush tube is discharged into a channel contained within the toothbrush portion and exits between the toothbrush bristles through a non-return valve positioned close to a bristle exit aperture.

1459826237-1f92b998-fd8b-41dd-a647-77548e1c2109

Components suitable for use in an evaporative light scattering detector and other devices are disclosed. The method involves generating a GUID for the file, generating a location identifier that defines a unique location of the file when the GUID was generated, and storing the location identifier in association with the GUID. The reflected beams of light from the disc DSC caused by the radiation with the light spots Pc, Psa, Psb are detected to generate push-pull signals each corresponding to the light spots Pc, Psa, Psb, respectively, in accordance with each of the detected signals. The elongated body portion may have a base surface configured to contact a table surface.

1459826237-975a673f-23c7-4bd2-93c5-5e7c526e83cf

A method and apparatus are disclosed for determining a time to failure for an electronic device. The primary penetrometer is formed as an outer shell having the secondary penetrometer received in telescoping fashion within, which is ejected by a spring ejection mechanism upon impact of the outer shell. An ultra-wideband receiver is structured to receive the training set of ultra-wideband pulses from the wire medium. The integrated circuit die is positioned over the substrate surface and a first surface of the integrated circuit die is placed in contact with the package substrate. An asymmetrical bias on the drainsource areas causes the drainsource area with the higher voltage to inject an asymmetric distribution hole by gate induced drain leakage injection into the trapping layer substantially adjacent that drainsource area. The controller may be applied to control a positioning device in a lithographic apparatus.

1459826237-a03382d0-2224-46ae-a67f-accf77873ac8

A method and apparatus for supporting a closed subscriber group service is provided. A status error indicator is generated within a receive FIFO memory indicative of a frame overflow within the receive FIFO memory. The compressible mattress portion has an integral construction extending from a head end of the bed to a foot end of the bed. The invention can be used in environments to store configuration data for programmable logic devices, field programmable arrays, and many other applications.

1459826237-a96d6a50-6202-4fda-a297-03a6550782c2

A system for determining a high resolution output image that includes receiving a low resolution image and determining an intermediate high resolution image. The system further comprises a controller that is reconfigurable according to the one or more instruction sets received by the system interface. Systems and methods are provided for adaptable provisioning of an application program on a runtime environment of a terminal. The data entry device provide for numerous advantages including allowing the pager to transmit original, non-responsive messages to any of a variety of addresses either selected from a stored address list or input by the user. A thermally conductive strip may be installed within a package by an adhesive or other mechanically means. Elongate tubing is disposed over the polymer

component and is secured with the polymer component.

1459826238-2b2b8adf-8d81-48c2-bf03-6cbdd728e0ba

A bracketing system is provided having two brackets joined by an adhesive material that allows a bridge backing member to be mounted between vertical studs to enhance stability of the wall construction. Since the chip includes a resistor having such a resistance that a dvdt breakdown of the IGBT can be prevented, the IGBT can be prevented from being broken by an increase in dvdt at a site to which the chip is supplied. The seat mounts on the base and supports a child or infant for travel in the vehicle above the base. For each test packet received, the base station passes a signal to the test controller. The dispenser may include an applicator with a hydrophilic foam.

1459826238-8489e96e-5d61-4382-91e3-0f0cdaf7bd9c

An image forming apparatus and an address book process request processing method are disclosed to improve access security to an address book. The system includes a reference database including at least one reference datum. The frame member is integrally provided with resilient leg pieces, and which are retained to hole edges of the mounting hole. The switch is configured to operate with a switching frequency fsw. The thermoplastic compositions of the present invention exhibit improved molding properties, high dimensional stability, high temperature resistance, and are particularly useful in food-grade applications such as dual-ovenable containers. When the gate winding voltage becomes equal to the reference voltage, the feedback circuit is stable and the gate winding current is set to a desired zero current operating point.

1459826239-0e417cc0-6021-40f7-bfe9-96714fdc701a

System for reception, demodulation and processing of location finder modulated signals to demodulated processed location finder baseband signals and processing a voice or data signal with demodulated location finder signal. Before compacting the tires, the tire can be marked with a unique identifier assigned to every tire generator. This construction allows the peripheral control circuits to clock out data stored in page buffers of a first sub-page into output buffers while latching bit line data into page buffers of a second sub-page.

1459826239-5050f973-535a-4eb9-9d88-9867679b7d9e

Disclosed is a film-forming method wherein a manganese-containing film is formed on a substrate having a surface to which an insulating film and a copper wiring line are exposed. The data receiving section periodically receives action data showing an action of a user. Embodiments can include measuring the magnetic field vector and the local gravity vector using quaternion coordinates. A collapsible seat has an L-shaped frame sized to fit within the vertical uprights of the climbing aid and a securing nut positions a pivotable frame of the collapsible seat in either a first stored position or a second erect position. An instrument according to the invention precisely limits the depth of incision, and creates a circular incision around a hair, follicular unit, or follicular cluster in a manner such that no damage occurs to any of the hair shafts. In particular, it has excellent transparency and elastic characteristics.

1459826239-5b50b947-4592-4dbd-b5f7-ee4908492c1b

A foot, toe, and ankle exercise device provides variable resistance to movements in multiple directions. In one aspect, the welding gun has a variable profile insulating boot disposed over the torch barrel of the gun. The liquid crystal display panel is configured to drive the liquid crystal by generating an electric field using a difference in potential between the first electrode and the second electrode.

1459826239-c9f93ee2-1514-4c00-817e-5620959fb9a7

A fiberboard panel is formed from at least one corrugated sheet of molded cellulose

fiber material having alternating ribs and grooves. An electrostatic capacitance of a fiber impregnated with resin is measured, and an amount of resin impregnated in the fiber is measured based on the measurement result. The disk surface has spiral servo information written thereon. The combined non-linear capacitances of the amplifier MOSFET and predistorter MOSFET provide predistortion that promotes cancellation of the distortion or nonlinearity contributed by the amplifier MOSFET alone. Then a forklift is used to lift a fully loaded rack and load it onto a trailer or other carrier vehicle. The moving member is dislocated in conjunction with an operation of the operation portion in such a way as to move the openingclosing member from the closing position to the opening position.

1459826239-cea62f42-1484-4d7c-9447-09a003fc00b3

Techniques for securing transmit opening help enhance the operation of a station that employs the technique. The instrument comprises a proximal end including a handle for the surgeon and supplied with fittings for connection to a source of irrigation fluid and a source of suction. Furthermore, long-term reliability equal to those of regular resin packages is ensured because those portions of an acceleration sensor device which are not used for acceleration sensing are sealed with a resin part.

1459826240-71819c99-26ea-4cf4-bd8a-74835b4707fd

To provide a retroreflective article formed of many triangular-pyramidal cube-corner retroreflective element pairs. A life insurance policy chassis is provided by an insurance company to an asset manager. A second insulating layer is conformally formed on a sidewall and a bottom of the recess. The damping device also includes an impeller member having a mast with a first end configured to operatively attach to the other of the vehicle body and the end gate assembly, and a second end having one or more blades projecting outward therefrom.

1459826240-8e416900-2631-4e54-bd0a-7088b0e5a2d2

A method and apparatus is described for providing a consistent visual appearance of pixels of a display screen with respect to a viewing position. The measurement tool may have a registration interface designed to be registered to a first bony landmark, and a contact feature shaped to contact a second bony landmark. Each of a plurality of interface circuits couples one of the plurality of cable modem circuits with a corresponding one of the plurality of telephones via the POTS interface.

1459826240-cd1ff661-4e4a-480e-b7d4-a80ad82eefc8

Disclosed is a cleaning article to be used while being attached to a holder. An integrated circuit is mounted in the support assembly and corresponding to the circuit board. Transmission succeeds without requiring special treatment of the video signals beyond RF conversion, despite signal attenuation inherent in transmission over the telephone line media.

1459826240-e2a4f8d1-2a44-4e7d-bef4-0f0429bfdc88

Audio signals, such as a music clip, are inserted with detectable watermarks. One of the lower end-effector or the upper end-effector is movably coupled to the arm at a distal end of the arm, and the other end-effector is fixed to the movably coupled end-effector. The expansion joint includes, a section of metal tubing having a sealing surface thereon and a metal-to-metal seal slidably sealingly engaged with the sealing surface.

1459826241-71954fc8-a5b4-461d-b363-ef17fe4227f5

A method for implementing a noise suppressor in a speech recognition system comprises a filter bank for separating source speech data into discrete frequency sub-bands to generate filtered channel energy, and a noise suppressor for weighting the frequency sub-bands to improve the signal-to-noise ratio of the resultant noise-suppressed channel energy. A small software agent, or a low power mode core,

operates so that, while the electronic device is in sleep mode, the low power mode core may be kept alive. Chrysopogon zizanioides Roberty; family Poaceae, named \u2018CIMAP-KHUS 40\u2019 characterised by somatic chromosome number  $4x=40$ , larger stomata, fast growing deep penetrating roots, and seed infertility disabling its spread as a weed. The barrier walls group together resistive heater elements in pairs and form barriers between different pairs of resistive heater elements.

1459826241-9c06abe7-1b60-4509-bec5-34beea138a9e

A seismic communication system suitable to communicate information to an underground device is disclosed. The direct-type backlight unit includes a plurality of lamps installed within a housing. 51 wherein R stands for a monovalent hydrocarbon group and is substantially free of alkenyl groups, a resinous copolymer composed mainly of R\u2083SiO\u2082 units and SiO\u2082 units in a molar ratio between 0.

1459826241-e9a645d0-77b2-4cc8-8171-c5699d04723a

Systems and methods for transforming a logical data object for storage in a storage device operable with at least one storage protocol, creating, reading, writing, optimization and restoring thereof. The primary pump includes an impeller in an impeller chamber, with the impeller chamber adapted to receive fluid from the inlet line. Also provided is a program storage device readable by machine, tangibly embodying a program of instructions executable by the machine to perform the method steps of the present invention and a computer program product embodied in a computer-readable medium for carrying out the methods of the present invention. The roof ties are pitched to conform to a variety of framing applications. The context data is presented to the user via the wireless device such that the user can make decisions as to where to go, for example. For example, a network service provider may configure a network device, such as a router, to belong to one or more VPNs.

1459826242-a6960e10-8bb7-4cfd-a379-59f7fca8b484

A resid fuel additive is provided that includes a plant oil extract, \u03b2-carotene, and jojoba oil. Each mechanism includes puck secured to an insulator secured in turn to a fixed conductor, an inner ring and a base plate. The buried plate is self aligned to the shaped upper portion of the trench. There is no need for a complex computer control system since the Z-axis displacement is substantially independent of horizontal movement over a coverage area serviced by the platform. A greatest value in the central region of the 2D matrix is found to function as an anchor value according to the anchor matrix, thereby find a fiducial point in the gray-level image. In one aspect, pixels in a block of image pixels are segmented into first and second pixel classes.

1459826242-e1567f2a-2801-4dd4-b783-0ae9a7442ba1

It is possible to provide an SC-FDMA transmission device and an SC-FDMA transmission signal formation method which improve the transmission efficiency of the SC-FDMA transmission signal. An overvoltage suppression system for construction equipment may have a communication network that includes nodes. The retaining member is positioned adjacent to the eccentric assembly such that a portion of the eccentric assembly is within the opening. The instrument IO assistant may provide code generation so that the parsing of an instrument response performed in the instrument IO assistant can be reused. The steering mechanism receives steering inputs from a child steering the vehicle. The flip-flop circuit is for generating a first status signal defining a first relationship between the first output signal and the second output signal.

1459826243-0e401bba-b0ef-4826-b882-b10fcec9af2d

Techniques for puncturing symbols in a communications system are disclosed. A dielectric capping layer having residual compressive stress is formed on the salicide layer by depositing a plurality of PECVD dielectric sublayers and plasma-treating each sublayer. Each input-output circuit has associated features such as a weak pull-up feature, a voltage clamp diode feature, a bus hold feature, an open-

drain feature, a differential input termination resistance feature, and a single-ended differential mode selection feature.

1459826243-77658f74-445c-4f0a-8b7d-2d2c10f0c760

A method for fabricating an active device array substrate is provided. Components or devices are held within the compartments of the carrier portion by a low tack adhesive level layer while a high tack adhesive layer is affixed to the carrier portion to provide means for high speed, low cost automated handling of the packaged components. The grommet bracket includes a groove having a width equivalent to the thickness of the shield cover disposed circumferentially between two flange portions of the grommet bracket. A handle is provided which has a crossbar interconnecting first and second arms. The first and second radio nodes may be using device-to-device communications or a femto network. The synthesis gas is used in exothermic carbon-carbon bond-forming reactions, such as Fischer-Tropsch, methanol, or dimethylether syntheses.

1459826243-b98f7f53-a31d-4375-8f01-a35905459473

A packet data load generator system, and method for testing the PDLG system, includes a Linux-based computer terminal having multiple 1x-EVDO wireless interface cards, e. In the base configuration, a top section, mid section and lower section each have a pair of ladder structures which share a middle flange. An outer or inner reinforcement 5, 8 intended only for ensuring the necessary bending stiffness is provided on the outer and/or inner circumferential surface of the metal tube 3, 9 and made from a fiber-composite layer 13, 13' with fibers oriented in the longitudinal direction of the drive shaft.

1459826243-ec130d7a-8396-4a02-8503-15ae3ae120a4

A run-time executive of an object management system for managing execution of software components in an object execution environment uses a component context object to store intrinsic context properties related to an associated component. A tactile stimulation device, according to one of several implementations, comprises a sensing layer, an actuating layer, and an adhesive layer. The data processing control unit controls the flash memory unit and encrypts, decrypts and stores smart card security data.

1459826244-110013fc-f117-4ff4-8ebe-e829aac06e9f

A semiconductor device exhibiting interband tunneling with a first layer with a first conduction band edge with an energy above a first valence band edge, with the difference a first band-gap. The knotless suture system provides the ability to construct a suture bridge for soft tissue repair and fixation across a medial and lateral row bone fixation anchor configuration while passing the suture system in a simplified method of suture management. The apparel has one or more secondary inductive power coils. A microprocessor is connected to the sensing electrodes and includes a program for determining whether antifreeze is dispersed in the engine oil.

1459826244-1f91bac3-a656-4871-9162-4c7c0371a529

The present invention discloses a security confirmation system which can achieve efficient communication by optimizing an amount of transmitted data, and a method thereof. Next, by a superposition of an infrared transmission image and a CAD data, the processing observation object area and the laser mark are registered onto the CAD data. At another time independent of the execution points 10, 12, the response code 26, 28, 30 is executed to read the event data from the event data store 24 and generate power control predictions and control signals therefrom. The shadow tags are updated on all level one cache allocates and all dirty and invalidate modifications to data stored in L2 SRAM. The ultrasonic image construction unit converts the 3-dimensional ultrasonic image data obtained at the second position into a 3-dimensional ultrasonic image at the first position according to the positional relationship, thereby constructing the 3-dimensional ultrasonic image at

the first position.

1459826244-9e3afe03-ab30-4ac2-ae6c-7fb9433abc21

A reference measuring machine previously calibrated and an object measuring machine to be calibrated are positioned in such a manner that a measurement space by the reference measuring machine is superimposed on a measurement space by the object measuring machine. The gateway is configured to be organized into at least a kernel space and an application space during operation. Movement of each piston is controlled so that combustion energy is transmitted to the rotatable member by the cylinder moving away from the piston. The amplitude control unit may also be configured to generate a bias voltage based on the amplitude of the VCO output signal and a target voltage. At the same time, a drive signal that is output from the driver circuit is excited centered at the midpoint voltage with a small amplitude.

1459826244-f9200094-ea33-4ead-9766-f574190e4135

An inkjet recording medium includes a substrate, a base layer, and a porous ink receiving layer. The plurality of types of electric power tools comprise a plurality of types of battery packs having different rated output voltages and a plurality of types of tool bodies, the housings of which are equipped with an attached part on which each of the battery packs is mounted in a freely removable manner. They are rigidly assembled to one another.

1459826245-87ef097b-5f83-4b7f-ac12-d169a33241b8

The present invention is a method, apparatus and program storage device for providing data path optimization for redundant data paths. The light emitting elements are mounted on the lead frames. Agglomerates of the particles contain gas and so have a bulk density lower than the density of the particles. One or more attachment devices are provided for releasably mounting one or more articles of face protection equipment to the base plate in the space.

1459826245-88890ac0-952a-4b97-b560-1557331879c7

Techniques and systems for centralized access to multimedia content stored on or available to a computing device are disclosed. The substrate includes a base and a wiring pattern formed on the base. The motor is supported by the housing and driven by alternate-current power. The sequence of binarized vectors is derived from the sequence of continuous vectors by utilizing thresholds for determining binary values for each spatial-dynamic relationship. Various other systems, methods, and computer-readable media are also disclosed.

1459826245-a05d2e25-551f-4c86-86e9-9398748cb4f2

A substrate processing method which can reduce the number of particles to be left on each substrate is provided. The wrench's wheel defines an axially aligned through hole extending through the wheel for receiving an insertable end of the socket through the front side of the wheel. The plug is prebricatable in any size, shape, and contour and may be utilized either singly or in a plurality to fill any size void for any application. The modulation frequency is continually adjusted to account for shifts in the probe resonant frequency due to sample or other variations. The third container includes filters for particulate matter and oil products. A plurality of electrodes are carried by the generally circular main region of the mapping assembly.

1459826245-fad08372-fbba-4b00-9a0b-e21e9c361493

A covering device for the load space of a motor vehicle, having a flexible surface structure, is held, in a rollable or extendable manner, on a winding shaft supported solidly with the loading space. The images are stored by utilizing semiconductor fabrication techniques. The chamber may be adapted to store fluid therein. Methods disclosed herein can be used to alter donor genomes from intractable donor cells in more tractable host cells. Cameras are included focussed

on the robotic arm and end effector and images are transmitted to the operator to allow the operator to direct and control the refueling procedure.

1459826246-32573552-aa2f-4139-918f-215132c16f65

Determining a policy parameter for an entity of a supply chain includes establishing attributes of the entities of the supply chain. An inflatable raft is arranged within an interior portion of the hollow shell. A second mesh is arranged to receive the charged particles on a second side and pass the charged particles to a first side, and a second electrode is arranged such that a second cavity is formed between the first side of the second mesh and the second electrode. The operator can easily analyze the cause of the generated error.

1459826246-4e2e92f0-8393-459e-a6fa-e82e4884d99a

Customizing a conferencing system based on proximity of a participant. Such out-of-plane suspension scheme helps such MEMS mass-spring-damper systems achieve inertial grade performance. Each of said elements of said first level list includes said son elements each of which composed of a foreground object and a background object in said second level lists. Additional control logic is configured to determine whether a clock signal is enabled in output control logic circuitry according to the multiple-cycle command and logic level generated in the output logic circuitry. Connection assemblies may further comprise a wringer cup configured to be mounted on the elongate member.

1459826246-508a916a-df80-4b75-8fcb-9d41a2dfb23a

A compressed article of hygiene is formed by a compressed cloth that has been compressed by dehydration or vacuum pressure into a coin shape and that is expandable upon contact with a liquid, and a plurality of microencapsulated beads containing a material. The underwater wide-band electroacoustic transducer comprises of several groups of piezoelectric ceramic units and acoustic window material. The cartridge-supporting body supports the process cartridges and is movable between an internal position inside the main frame and an external position outside of the main frame. The at least one second thread section is formed between the first thread sections to form at least one loosen-proofing section between the first thread sections and has a major radius, a minor radius and a pitch.

1459826246-ca451953-4d25-4ae5-b377-1e1ee80b1421

A video display includes a light signal generator that generates modulated light signals containing video information propagating along an optical guideway. The methods include the steps of forming a mixture of raw material containing CaO, MgO, Al<sub>2</sub>O<sub>3</sub>, Fe<sub>2</sub>O<sub>3</sub>, TiO<sub>2</sub>, Mn<sub>2</sub>O<sub>3</sub>, SiO<sub>2</sub>, SO<sub>3</sub>, Na<sub>2</sub>O, K<sub>2</sub>O, P<sub>2</sub>O<sub>5</sub> and F, respectively designated C, M, A, F, T, Mn, S, {overscore }, N, K, P and f, and heating said mixture to an elevated temperature between 900° C. The drill bits have a tapered point along the longitudinal axis at the distal end of the cutting head for guiding the drill bit or are cannulated to receive a guide wire.

1459826246-d60b8ff0-9805-4af5-82bb-56a7ebafad66

The invention is a pop-up device adapted to allow for a number of triggering means and a number of special effects upon triggering of the device. A method for producing a non-oriented electrical steel with low core loss and high magnetic permeability provides a steel that is produced from a steel melt which is cast as a thin strip or sheet, cooled, hot rolled and/or cold rolled into a finished strip. The ink jet recording apparatus may include an attraction device including first and second electrodes facing a surface opposite the conveying surface and configured to apply a voltage between the first and second electrodes.

1459826247-0de7d26b-be1f-45ca-b951-5feae4f91900

An information retrieval system is provided for processing queries for video content. The unloading system can have a sump configuration that includes a foundation having a floor and a foundation footing. The correction value

calculating unit calculates correction values for a plurality of frequency components of the image signal, the correction values corresponding to an aperture value acquired when the object is imaged through the photographing lens. A second conduit extends from within the cabinet to an end exterior of the cabinet and within the endcap.

1459826247-189aa4c3-0c93-4cea-b0da-e6516238e66e

The present invention is directed towards a multilayer golf ball which comprises a core, an inner cover layer and an outer cover layer, wherein the outer cover layer comprises a castable reactive liquid material having a shore D hardness less than the shore D hardness of the material forming the inner cover layer. This configuration allows for the master and slave side managers of the power disconnect unit to be placed physically far apart on the chip, relieving the need to route long power rail signals on the chip. The Group III nitride support substrate has electrical conductivity.

1459826247-215aa65f-6612-40e3-bf42-75147350c4e7

A two-wire serial bus allows bus mastering by any device on the bus utilizing bus pull-ups. In an embodiment, the access requests from the two ports are processed in a single memory clock cycle. The supporting member 30 is supported to be movable in a Z-axis direction between a first and a second spindle headstock 3, 4, and the turret 31 is supported to be movable in an X-axis direction by turret guide rails 33, 33 which are disposed on front faces of the left and right leg parts 30a, 30a. The user gives a response by using a provider response function that inserts messages into a service-side outbound processing chain.

1459826247-c7948615-f896-4662-96e2-9b9e321767fe

A fluid treatment device, system, and process are described that provide a filtered, metal-depleted fluid. The method includes the steps of generating a computer model of desired shape and dividing the model into layers of thickness equal to the thickness of the layers each defining an area of resin to be cured. The tear stitching exhibits a comparatively high rupture strength in response to tension forces applied to the interconnected portions that act on the end portions of the tear stitching. If there is a short circuit between the scan line and the data line, the short circuit can be repaired by cutting the connections to one of the branching subsidiary lines. Unwanted parasitic transistor formation, which can occur underlying the gate structure via the body contact region and the sourcedrain region, is prevented by the presence of the separating STI region.

1459826247-ecf7f8f5-8a4f-4d4e-b47f-85921d702e2c

A foam dispenser includes a refill unit and a dispenser housing. The second paint layer structure is in electrical contact with the first paint layer structure. A chip having an active surface and bonding pads disposed on the active surface is provided. A metal layer is deposited overlying the insulating layer and within the trench and via opening. The second metal wiring layer includes power supply lines each configured to supply a power supply voltage to the amplification transistors of at least two pixel columns, and the amplification transistor of a pixel column having no power supply line receives the power supply voltage from the power supply line via the first metal wiring layer. When any one of the plurality of transaction records within a file is not within the desired category of transaction records, a second flag is set to indicate an erroneous transaction record within the file.

1459826248-6696ed09-fb96-4121-8d20-13b8a0f8372c

A medicated electrochemical oxidation process is used for sterilization/disinfection of contaminated instruments and infectious waste. The electrical connector comprises a unitary structure. Accordingly, a user can actively control the gamma characteristic and the viewing angle of an output image to be suitable for a user's preference and environment. Such attributes may include the position of the subject on the plate, distance traveled over a defined period, the angle and direction of

rotation of movement, spatial statistic, stereotypy score, tremor, wall rearing and rhythmic behaviors.

1459826248-e90d3593-2840-4766-9301-93d6aa5387fe

A fiber optic connector assembly includes an outer housing having an interior cavity. The adaptable filter is connected in at least one of the transmitter path and the receiver path of the transceiver to separate signals from adjacent spectrum blocks to permit use of all of the channels in the adjacent spectrum blocks and to separate signals in adjacent or nearby channels in a shared-channel block. With at least one implementation, described herein, a determination may be made about whether two or more of such sets are unaltered duplicates by comparing integrity signatures of such sets.

1459826249-4d2ca229-6a6e-4d2f-86d5-bc97348e381c

Apparatus is disclosed for viewing computer generated images and for tracking the positions of the user's head and hand. Thus, the performance of the tires on the front wheels can be used to almost maximum potential, providing effective prevention of understeering. Therefore, a user or a player of his own apparatus looks at the game name of the parent device list, for example, and operates a cross key included in an operation key so as to select one desired parent device.

1459826249-7be48ceb-5f05-44a7-9ae7-116e23dcf7aa

A vacuum cleaner is provided including a housing, a nozzle inlet, a suction generator carried on the housing and a dirt cup. At least one abrasive substance is contained in the metal matrix of the other sintered material of the reinforcing element. Electrodes are releasably attached to the inside of the cover of a defibrillator, so that when the cover is removed the electrodes remain with the cover. The present invention has a controllable ratio for mixing  $\text{Ca}_{14}\text{Al}_{14}\text{CO}_3$  with a release agent and a binder. When a STA detects a CSI transmission from another STA preceding the STA in the order of transmission as indicated by the AP index and GrpID, the STA transmits its CSI.

1459826249-bb2eee10-6c90-4f64-8164-3b3fb2dbb3ae

This invention relates to a blend of biodegradable polymers comprising: about 70% to about 80% by weight of at least one flexible biodegradable polymer having a glass transition less than about  $0^{\circ}\text{C}$ . The polysaccharide solution is finely divided by mechanical means into spherical droplets which are allowed to pass through a humid atmosphere and transferred to a capturing medium while controlling the temperature and humidity of humid atmosphere. The catheter includes an insertion depth control mechanism that acts as a stop and provides a tactile indication to the person inserting the catheter tube that a predetermined position has been reached. An interprocess communication manager that allows thread affinity and reentrancy is able to correctly keep track of the logical thread of execution so calls are not blocked in unmanaged hosts.

1459826249-becb2bb1-e708-4c33-9c69-759f8c5e616f

One embodiment having features of the invention is directed to a guide block for an MRI device which has a block body with a proximal face, a distal face, and four parallel passageways extending between the two faces. Reduced fluence rate PDT decreases the likelihood of molecular oxygen being the limiting factor in the photodynamic reaction so that the concentration of either photons or photosensitizer in the target tissue controls the photodynamic reaction. The method can include receiving an activation instruction from an entity remote from the unmanned vehicle; determining whether or not the received activation instruction is valid by performing a validation process; and in response to determining that the received activation instruction is valid, activating the payload. The control unit sets a value of the threshold in accordance with the number of times the write unit has performed writing of the information data.

1459826249-c50ec418-028b-4606-bd39-234aab4ea722

The syringe comprises a detachable syringe barrel connected to a housing. The covering side and end portion lower edges may join one another to form a continuous lower edge of the covering. The 193P1E1B gene or fragment thereof, or its encoded protein, or variants thereof, or a fragment thereof, can be used to elicit a humoral or cellular immune response; antibodies or T cells reactive with 193P1E1B can be used in active or passive immunization.

1459826250-16295e9a-eeb5-416a-94f8-9d0a5283ca08

A battery module includes a plurality of cells accommodating an electrode plate group and an electrolyte, and a single integrated battery case for accommodating the plurality of cells. An alert system according to a preferred embodiment of the invention comprises a telecommunications service network, one or more wireless sensor modules and a control center. An electronic control unit provides speed reducing commands to the left or right rear wheels based on the sensed steering position and sensed wheel speed. The reusable handpiece incorporates a probe oscillation mode to assist when inserting the distal piercing tip into tissue. The operator is then able to remove the ripped lumber from the conveyor. Other embodiments are disclosed.

1459826250-862a1939-99af-4d1c-a83d-3dba1f7ea4bc

The method of making an optical body includes coating a mixture that includes a plurality of cholesteric liquid crystal compositions, and a solvent on a substrate. A fixing member includes features that allow it to be rigidly coupled to surrounding bone and thus hold the stopper member in a cavity within the bone. The junction of the recesses defines an aperture running through the accommodating board.

1459826250-c33bc333-dfc3-42e8-97df-453cbc6db2b7

A luminaire has a concave reflector with an optical center on an optical main axis in an optical main plane. Beneath the conveyor belt is at least one suction chamber by means of which ambient air can be sucked through the perforation holes to retain blanks on the conveyor belt. Because the antibodies or antibody fragments act only at the sites of thrombus formation and do not interfere with the normal activity of circulating platelets, they are particularly well suited for use as antithrombotic agents in a wide variety of applications. Subsequently, the film-shaped optical waveguides are separated from the substrate. The nozzle plate production method as such includes polishing with a polishing agent a surface of the nozzle base; removing Fe in a surface layer area of the stainless material by etching using a polishing agent; and combining chrome with oxygen. The mobile client device associates with the preferred access point to gain desired access to the wireless network.

1459826251-a583c4a9-4134-4614-8d07-4aa025220560

A reliable semiconductor device having a multilayer wiring structure formed of copper as a main component material, which constrains occurrence of voids caused by stress migration. An adhesion force between the rare metal layer and insulating layer can be increased. Furthermore, a method is proposed using series resistance welding for sealing seams in the layers making up the well screen. The trapping layer is disposed on the tunneling layer.

1459826251-b0e1c932-5516-4f72-9d34-b4bdce0be76d

A conventional optical signal processing device had a disadvantage where the temperature dependency of the spectroscopic characteristics of a spectroscopic element causes a deteriorated performance. The driver includes two anchors for managing the tasks, a dispatcher and an agent. The invention furthermore relates to oligonucleotides, compositions, solid phases and kits which may be used for carrying out the method of the invention. The particles of the layered oxide have an average particle diameter of 2  $\mu\text{m}$  or less, and the percentage content

thereof in the positive electrode active material is 5 mass % or less. Such polymers can be used in fabricating light emitting diodes to achieve some of the best device performance to date including high efficiency and blue color purity. Moreover, this invention tolerates inaccurate inputs so that even less skilled people can hum to the system with inaccurate melody and find the target song.

1459826251-f1ab2846-ea75-417d-9246-25f25b6a5c84

The invention provides a system and apparatus by which a workpiece pad is supplied to support workpieces being implanted in a rotating or spinning batch implanter process disk. The rule engine process has access to user-defined conditions indicating whether to generate respective rule message information when applying one or more rules in the maintained set of rules. A driver circuit which is coupled between the drive circuit and a control input of the semiconductor switch is configured to receive the driver signal and to generate, on the basis of the driver signal, a control signal which drives the semiconductor switch. The externally operable trip button includes a handle exposed through the penetration hole and a pusher in one piece with the handle. The base is attached to a body of a magnetic tape data storage drive. The first grid pattern is printed using the first mask.

1459826252-65d29699-a901-462c-9264-709575ddc809

A mixer for an exhaust aftertreatment system, such as a diesel engine exhaust aftertreatment system, is disclosed. The packet scheduler schedules data packets for a given duration, termed a scheduling window. The second part extends from the surface to the first part. A signal conditioner, which can be located up to 15 km away, then uses the detector signal to determine the displacement of the diaphragm, which is indicative of pressure exerted against the diaphragm. The cushion includes an inflatable air bag in, for example, a lumbar-support device. The value of a thermal expansion coefficient of the first supporting member is between those of the optical element and the second supporting member.

1459826252-76503cc7-28cf-4da6-85fa-4ab4b99ad400

An image forming apparatus which is capable of bringing processing devices, such as sheet feed devices and post-processing devices connected respectively to the image forming apparatus, into operable states in timing optimal for carrying out an image forming job, thereby improving productivity and operation rate of the image forming apparatus as well as saving energy. The cab is attached to pivot about a fulcrum between a covered position and an uncovered position. As the cleaning method, one or more of a combination selected from the group consisting of SC-1 cleaning, SC-1 cleaning+SC-2 cleaning, HF03 cleaning, and HF cleaning+03 cleaning, can be used. The surface is subjected to at least two different wavelengths of illuminating light at a particular angle to the surface and the intensity of the light reflected and/or scattered light from the surface is determined using photodiodes. By blasting the substrate with particles, recesses are put into the surface of the substrate in those areas not covered by photoresist. A magnetic field is then generated whose magnetic field strength varies in space in such a manner that a first sub-region of low magnetic field strength and a second sub-region which encloses the first sub-region and has a higher magnetic field strength are formed in the target region.

1459826252-b18dde1-20a3-46cf-8bbd-55febbf9e4c9

A polymeric fluorescent substance exhibiting strong visible fluorescence in solid state. This new technique embodies systematic temperature elevation applied to subsurface formation allowing recoverable hydrocarbons to reach a Newtonian fluid viscosity suitable for extraction. The transgenic knockout mouse with a homozygous FcRn disruption is also unable to absorb maternal IgG in the prenatal or neonatal stage of development. The logic gate includes a high-k dielectric layer and a metal layer. Any one of the field emitters adjacent in one of the first and second directions to another field emitter is at a predetermined distance from the another field emitter in the other of the first and second directions. The computing device is configured to disperse the plurality of first datasets into multiple data blocks

to form  $t$  volumes as part of a plurality of second bit streams such that  $m$  number of volumes contain a complete data set, wherein  $m \leq t$ .

1459826253-00f35594-132d-46e4-8cae-c80b3c33099f

The invention concerns a composition capable of being hydrolyzed by a cutaneous enzyme, glucocerebrosidase. In particular, the frequency selector is a low frequency bandpass filter for free-fall acceleration wave frequencies. The resulting golf ball has high coefficient of restitution at high and low impact speeds and low compression for controlled greenside play. The method can additionally include the step of quantitating the amount of the identified polypeptide in a sample containing the polypeptide. A rechargeable battery system is used to power the operation of both the pump and the fan through separate switches. With generation of the quantization rule taking into account a psycho acoustic approach, the size of an encoded representation of the multi-channel signal can be decreased by coarser quantization without significantly disturbing the perceptual quality of the multi-channel signal when reconstructed from the encoded representation.

1459826253-0480c06b-7263-4510-b5b1-469c35111642

Apparatus, systems and methods for search filtering are disclosed. The tubular retainer has a retainer top, a retainer bottom, a longitudinal axis, and an inner passageway formed along the longitudinal axis and defined by an inner surface. Processing the image could include segmenting the image into multiple segments and using the segments to identify a non-linearity in the image.

1459826254-20a5f251-920c-4d65-bfa1-631ef120dd6b

A modification to musical wind instruments is provided which utilizes placement of interface inserts between sections of the instrument which come into contact with each other during normal operation of the instrument thus eliminating wear on the sections of the instrument. Thus, the one facet and the other facet are respectively a Ga polar plane and an N polar plane. According to the resin composition of the present invention, a reflective board having high reflectance and high heat resistance can be obtained. In either case, the electronic VIN request causes the vehicle hardware to query one or more vehicle electronic module for electronic VIN stored therein, so that output related to the electronic VIN can be provided. Thus, using the method, a flat display device can be conveniently manufactured at low cost.

1459826254-33eb3b85-22cb-478d-8525-0a7d0827fdc0

A base of an optoelectronic device is disclosed. When diagnosing degradation of the ternary catalyst, the downstream air-fuel ratio feedback control unit is stopped or its control constant is set at a smaller value. The outer layers are preferably comprised of open cell foam of a thickness about equal to one inch or so. Both boron and boron carbide thin films were fabricated from single source borane cage molecules using plasma enhanced chemical vapor deposition. A sealing process is applied to the combined web of valve bag material, forming a valve bag section.

1459826254-734712b2-a3fc-4b3e-83e9-b5dd13a99c31

A subscriber characterization system with filters in which the subscriber's selections are monitored, including monitoring of the time duration programming is watched, the volume at which the programming is listened to, and any available information regarding the type of programming, including category and sub-category of the programming. A plurality of semiconductor elements are stacked on a circuit substrate. The black glass aperture element removes diffracted and stray light from the beam without damage to the sample chamber. The bracket has a first window support, and the retainer has a second window support. When an external power is supplied to a heating resistance member of a fusing unit in the image forming apparatus that is in a standby mode, a power supply unit supplies an internal power to a different load in one or more time sections so as to supply the internal power

to the load at a continuously changing operating frequency.

1459826254-f0735bfa-e96c-4365-bb85-421f33775b80

Crystalline forms of imatinib mesylate and their respective characterization are disclosed. In response to increased pressure in the container, the head of the self-closing valve to flatten and partially invert, thereby opening the dispensing aperture. Multiple transmitting and receiving components are available on the vessel for communicating with a variety of different communications systems at the remote sites. A plurality of microspaces is formed on the surface of the substrate.

1459826255-72f6431c-dacb-4c2d-82ce-b0fae4aa3afd

The invention relates to a deformable endoscope that has one or more lightimage transmission passages and in which at least one additional instrument is provided, wherein the unit of endoscope and additional instrument has a non-round cross-section along a longitudinal section to be inserted into a human or animal body orifice. Each of the upper panels includes a circular groove for use in the engagement of a crossbar of the cowl crossmember, inner and outer flanges formed at opposite lateral side edges thereof, and a coupling hole formed at the front portion thereof for the fixing of a steering column. The rails include support legs and further include front rails that are deployed generally parallel to the sides of the fuel truck to provide a physical and visual barrier when the fuel truck is dispensing its load. The measured intensities reflect the energy distribution of the radiation beam incident upon the moderator. A via etching process using the second photoresist as a mask is performed to form a via hole passing through the dielectric layer. Additionally, the installation location of the particular smart hazard detector may play a central role in how various settings of the smart hazard detector are defined and adjusted over time.

1459826255-caefef70-9c99-4934-9355-c4da48f8b349

Provided herein is a self-adhesive radiant heat underlayment that may be utilized in flooring and/or outdoor applications. The coordinates of at least one of the feature points are adjusted to increase an accuracy in determining the dimension of the reference object. Then, three-dimensional processing is performed on a plurality of images such that the parallax of the determined main object is the minimum, thereby generating an image for three-dimensional display. An agenda item included in the previously-created meeting agenda is retrieved, as a result of starting the meeting timer. O-rings line inner circumferences of the support grommets to seal between the support grommets and fasteners. This compound exhibits excellent photochromic properties, such as small initial color, a large fading rate, excellent resistance and developing a color tone of a neutral tint.

1459826255-eb93c7e6-d658-4c59-b6e7-0a39f6be9c4d

A message flow environment permits a developer to define a debug session in which nodes in a defined message flow have a debug function. The reception state of the received signals is detected, and when the reception state meets a prescribed condition, the range of delay time in which a search of arrived radiowaves is performed is modified. The transducers can have the ability to interchange their functions from emitting to sensing.

1459826256-2aa3379e-8030-416e-9353-77ff03cc6e53

A method and apparatus to detect and filter out redundant cache line addresses in a prefetch input queue, and to adjust the detector window size dynamically according to the number of detector entries in the queue for the cache-to-memory controller bus. A bad block identifier module identifies one or more data blocks on a solid-state storage element as bad blocks. This embodiment analyzes the executing computer program to determine whether enough information is presented for assistive technologies to work properly with the computer program. The air diffuser has a central opening facing the tamping end of the bellows and at least one side opening.

1459826256-51afa7d7-a2a8-43c5-815b-d13bb584ff6e

A method and system for providing a fluidic interface to slides bearing microarrays of biomolecules or other samples immobilized thereon to perform a variety of chemical reactions or processing steps on the slide. The ultrasonic flow meter includes a first ultrasonic transducer disposed about a fluid flow path, and a pressure balancing system configured to pressure balance the first ultrasonic transducer relative to a fluid flow along the fluid flow path. When directed perpendicularly upon tops of the plant leaves, 10% light transmission occurred through the leaves for the 30\xb0 LEDs, and 80% light transmission for the 15\xb0 LEDs.

1459826256-dca2b9fe-34c5-4854-8113-f68eabf4e511

Apparatus for localizing production errors in a photovoltaic element which is formed substantially by a semiconductor substrate in the form of a wafer, on opposite main surfaces of which are arranged electrical conductors for transporting electrical charge carriers. In an embodiment, ground traces may be coupled to a common or ground plane via dampening elements such as resistors a predetermined distance from a non-dampened coupling. The deployment tool includes a handle, a contacting section, and an extension that extends between the handle and the contacting section. For arrhythmias with no therapy delivered, observation of arrhythmia behavior at the point of termination may lead to improved classification. The condensing condition output couples to the inhibit input to inhibit the motion as a function of the sensor outputs. The printing apparatus provided with three different color inks, cyan, magenta yellow, as the multiple chromatic color inks, enables color images to be printed.

1459826257-58e6c5a4-fe8e-42d1-9d07-874fd054956e

A damping arrangement for guide vanes, in particular for guide vanes of a gas turbine or an aircraft engine, is disclosed. An initiating terminal receives input of a customer's request to purchase a specified amount of prepaid telephone services and receives input of the customer's designation of a financial account from which to electronically debit the price of such purchase. The second RF device is configured to operate by changing channels within the frequency band. Also disclosed is a golf cup including a cylindrical housing and a golf cup bell as described above. The threshold state of the floating gate of the memory transistor determines the logic output of the memory cell.

1459826257-be3b0c74-2438-4585-a5a5-0db09f03c120

A large mode area optical fiber includes a large diameter core, and a first cladding wherein the difference between refractive index in the core and the first cladding is very small, thus providing a very low numerical aperture core. The panel also includes multiple spaced-apart vertical members extending between and interconnecting the upper and lower horizontal rails. Then, a heat treatment is performed for a stack, and thereby direct bonding via an atom is formed between the buffer layers. The self expanding segment expands to conform to the flared ostial and aortic regions of the vessel. The primer is located inboard of the second end and the base seal to reduce the likelihood of accidental activation. The object of the invention is to insert windows in exactly predetermined parts abovebelow individualall flat conductors of a multiconductor flat cable, which windows are distinguished by clean and accurate contours and furthermore ensure good positional stability of the conductors.

1459826258-b9a5d941-7cc2-4c91-8b92-20c5152fd78c

A user conducts a telephone conversation without speaking. The piston engine is equipped with a valve actuator permitting variable opening and closing times. The characteristics include modified bristle length, material characteristics, angle, grouping and grouping shape. Ports between the cavity and the reservoir and the reservoir and the exterior of the hydrophone allow static pressure communication

between the cavity and the exterior of the hydrophone.

1459826258-d309f4f5-07bb-4452-a7f2-335e00e038c1

The present invention relates to new rifaximin forms kappa, theta, rifaximin:piperazine cocrystal 1 and rifaximin:piperazine cocrystal 2, methods of making same and to their use in medicinal preparations and therapeutic methods. The integrated circuit comprises power management logic operable to receive notification of a dynamically set power limit value and operable to dynamically regulate the integrated circuit's power consumption to comply with the dynamically set power limit value. The buoyant body, which is attached to the sensor system or which can optionally house one or more elements of the sensor system, keeps the sensor system essentially floating in a body lumen liquid. Regions of the impurity implant may comprise boundaries that are related to the outline of the silicide formed thereover. This reduces or eliminates delays in processing attributable to having to wait for the network device to transition to the active operational state.

1459826259-8c8793cd-daac-4498-bc49-f7dfe7b419ff

The present invention relates to an apparatus, method and computer program for workload balancing in an asynchronous messaging system. The first and second structures are spaced-apart from and in superimposition with the first structure. The compactor cleat also includes a cap member secured to the base member and positioned thereover so as to cover at least a portion of the base member, with the cap member having an arrangement of openings configured to receive the center flange therein. By straining the silicon islands, the hole mobility is increased resulting in increased device gain. The LED device includes a metal substrate, a p-type semiconductor coupled to the metal substrate, an active region coupled to the p-type semiconductor, an n-type semiconductor coupled to the active region, and a wavelength-converting layer coupled to the n-type semiconductor. The vehicle controller deletes the first security data and writes the new security data into the rewritable memory.

1459826260-fda9bc01-c091-4f28-a6dd-7b5486a04620

A mounting apparatus for mounting a data storage device, which has a protrusion thereon, includes a bracket, a fixing member movably mounted to the bracket, a resilient member connected between the bracket and the fixing member, and a latching member mounted to the fixing member. Signals are amplified before they are switched, after they are switched, or both before and after they are switched. The dynamic programming paths are propagated by processing the reference patterns on the active list, and a new active list is generated for the succeeding input pattern. 0 to 75% by weight of at least one reinforcing fiber, andd) up to 10. The nonconductive coating may comprise a medical grade silicone of a specified thickness.

1459826261-4fc69773-57ff-4936-86e2-c0e2a23f4e9f

Embodiments of hybrid microfluidic assemblies comprise at least one microstructure that is formed of transparent material and is substantially free of non-transparent material and further comprise at least one microstructure that is formed of non-transparent material and is substantially free of transparent material. To compensate for this voltage reduction, the voltage applied to the charge storage capacitor in the pixel is increased from  $V_{com}$  to  $V_{com1}$  after the gate line signal has passed. The printhead is driven in a fast scan direction to print marks on the medium along a swath, and the medium and the printhead are movable relative to each other in a slow scan direction to print further swaths. Also provided are high-throughput methods for either confirming methylation-dependent gene silencing, or identifying therapeutically effective demethylating agents, using the ECIST array panels to identify hypermethylated loci, and measure expression levels thereof after cellular exposure to demethylating agents. The abstract is submitted with the understanding that it will not be used to interpret or limit the scope or meaning

of the claims. The housing is grasped and the thumbwheel rotated with a single hand.

1459826261-5de3d30d-c9db-41e8-91ce-6ec6735dd1df

In accordance with the non-aqueous electrolyte secondary battery of the invention and the process for the preparation thereof, charging is carried out with a combination of a positive electrode provided with excess lithium and a negative electrode in order to cause lithium to be deposited on the negative electrode. A thread translation table maintains physical-to-virtual thread translation information in order to provide such information to structures within a processor that utilize virtual thread information. The switch further includes a traffic management mechanism and a control mechanism. An open frame insert is slid into the two side channels, and a plurality of opposing pairs of walls deflect the open frame insert into bearing engagement with the glass insert.

1459826261-ced10ef3-8df9-4c6f-a737-bc6f342c3ebf

A coil for an electric rotary machine includes a substantially flat bundle of insulated wires wound around a winding axis so as to form a plurality of superposed turns, the cross-section of the bundle in the superposed turns having a long dimension that extends substantially perpendicularly to the winding axis of the coil. The buyer places zero or more items in the online shopping basket before they are given to at least one shopper by the online store. The buckle bodies respectively include: frames; ejectors; hook members making engagement with engagement holes formed at the tongue plates; and release buttons. This invention provides methods of screening molecules that can inhibit the DES enzyme activity of purified DES protein, in order to identify antibiotic molecules that are capable of inhibiting the growth or survival of mycobacteria.

1459826262-68cb310d-c53b-480c-84c9-e8ddaaf9e2e3

The invention intends to provide a method of manufacturing an optical disc capable of efficiently manufacturing a high quality optical disc by a consecutive product line, and to improve productivity in an injection molding step. The holder comprises a frame having an inner periphery defining a first opening for receiving the substrate, and a shoulder projecting laterally inward from the inner periphery of the frame for supporting the substrate in the first frame opening. An embodiment allows a user to specify, either at the time of image capture or at the time the composite image is created, a range of distances that the user wishes to have in focus within the composite image. The first and second pole assemblies are arranged such that the pole face of the first pole opposes the pole face of the second pole. The clock signal generation unit continuously generates the boosting clock signal during a predetermined period in which the imaging operation starts and, after the predetermined period, generates the boosting clock signal during at least part of a blanking period of the vertical synchronization signal and the horizontal synchronization signal.

1459826262-a3195a4c-1b4a-412a-a820-896953499b22

This invention is an information processing device such as a computer, as a host device, and a memory card as an external connection device to be connected to the host device. A drivable vehicle includes a wheel module operatively connected to a vehicle chassis. Metal salts of these compounds are useful as lubricant additives. The price quote is then displayed automatically. Service provider performance data is stored in computer-readable storage media and is accessed by a computing system. A polarization direction of light incident on the spatial light modulator is rotated depending on the magnetization direction of each pixel.

1459826262-a57f9057-b209-4979-ba2e-aaf9c6296583

Methods and systems of establishing a network-based system for purchase and sale of at least one of an option contract and a futures contract to acquire an item or to attend an event, wherein the contract is exercisable upon the occurrence of a

contingency. The inner wall has a number of apertures. The memory system is configured to utilize at least one read threshold value to determine a read data value stored in the memory cell when performing a data read operation on the memory cell. The remaining portion of the result is revealed to the player in an online portion of the game.

1459826262-a87f558b-0cdd-4e20-92c6-23fb528d6ffd

A triarylamine derivative represented by a general formula given below is provided. A stream containing ammonia is contacted with oxygen to form a first product stream in low dissolved oxygen conditions. A controllable actuator is coupled to the pilot valve and enables selective control over the pilot valve which, in turn, controls the state of the main valve. The grill assembly may include a grill body and a plurality of passages disposed therein. In order to devise an improved lowered position, it is provided that the wind deflector has a rest position which is located under the fixed roof part of the motor vehicle roof which borders the rear of the roof opening.

1459826263-1f11d2f8-47f6-45a3-b749-51c96d179c8e

When InP DHBTS are located in parallel to a crystallographical direction of  $\langle 011 \rangle$ , there are several advantages in the aspect of device property such as reliability. The foaming component includes an air sparging element, a mixing chamber, and an air chamber. In addition, the preforms can be plastically deformed to more closely correspond with the desired dimensions of the structural member.

1459826263-282116c7-0e1b-4c88-ba8b-3d69614a412e

A system and method for providing location information and other information about a calling telephone to the caller during a telephone connection in a data network telephony system. The device is inserted by a driving mechanism through both sides of the torn meniscus, compressing the tear in the meniscus between the fins near the head and the wide rear portion, holding the tear together. The processor selects an executable command comprising subcommands. The fifth multiplexer and the sixth multiplexer are used for modulating a signal receiving range of the ADC and thus the touch sensing circuit is easily judge a correctness of a sensing signal. Method includes, if query includes indicia of only single access point, facilitating providing low resolution version of location of device.

1459826263-68dcc025-cdc7-4448-baab-965e936280ec

An imaging system includes a projector, a camera and a filter set of polarization filters. The semiconductor structure comprises a shaped-modified isolation region that is formed in a trench generally between two doped wells of the substrate in which the bulk CMOS devices are fabricated. A set of branch statistics fields is allocated to associate with a branch instruction. The rolling element retainer is further provided with a rolling element rolling channel in each of two external end surfaces thereof. In turn this could reduce hospitalizations for aspiration pneumonia in patients with acute or chronic injury. To achieve comfortable support with easy operation, the footrest has a footplate that may be folded out and that is located in the stowed position approximately parallel, and in the utilization position approximately perpendicular, to the lower-leg support, and coacts with an energy storage device.

1459826263-742c1c3b-1a1f-46ac-8281-26d396bbb75f

Method of processing a transmitted encoded media data stream is received. These seat belt parameters are measured and applied to a predefined decision matrix to detect the presence of a rear-facing infant seat. The method includes representing an arc tangent function in a table that describes elements of the function and employing the arc tangent function to compute phase information for a wireless device.

1459826264-86d4206d-151d-4b6b-9c8e-9a3beb2ea491

1st to nth pairs of transistors are connected in parallel, and each pair of transistors has an upper transistor and a lower transistor connected in series. The processing container can contain an object to be processed therein. The pressure sensing module is located under the pins of the first connector, to sense whether there is pressure applied on each pin of the first connector by a corresponding pin of the second connector, and to output sensed results. Other processing methods to selectively remove non-desired components include distillation to remove polar low boiling point components, filtration through adsorbents selective for sulfur compounds, countercurrent extraction and column chromatography. Embodiments also include flat surfaced claw jaws which may be used to grip a work-piece for secondary machining to remove indentations from the work-piece.

1459826264-93aa45a2-8171-4ac4-81a2-7ffe147f688c

A system for estimating vehicle side-slip in the linear vehicle operating region that includes updating front and rear cornering stiffness signals. The memory circuit comprises a lower metallization layer defining first conducting lines. Based upon the application's or device's behavior, the adaptive flow control protocol transfers the data in a mode that is best suited for the application. Accordingly, a system and method in accordance with the present invention utilizes an at least one extra device on the same die as the first stage to provide an impedance match. The chamber is fluidly continuous with the apertures formed in the matrix plate. The sleeve controls, defines and confines the index matching adhesive and/or fluid between fiber end and connection point by defining the areas and volume actually in contact with the adhesive or fluid.

1459826264-c1a9cac4-4483-4ac2-9004-7789ce9fab76

A process for cooling a hot reaction gas, as formed, in the preparation of phthalic anhydride by oxidation of o-xylene with hot air in a reactor, to a predetermined inlet temperature for introduction into a separator, in which the separation into crude phthalic anhydride and air is then effected, is described. In another embodiment of the present invention, the connector assembly comprises a body member and a ferrule disposed therein, and additionally a guide pin holder comprising at least two open members disposed within the body member and in a cooperating relationship with the ferrule. The output ends of a plurality of fuel cell converter devices are connected in series by the series connection unit. A controller is communicatively coupled to the first data transfer route, the second data transfer route, the third data transfer route and the memory.

1459826265-3d4da059-6ac4-405c-9d15-fbaf13e685ae

A cable port protection apparatus includes a frame that is configured to be secured to a housing of an electronic device, and a cable retention mechanism attached to the frame that is configured to prevent unintentional removal of a cable from a cable port of the electronic device. Alarm systems operations may be facilitated so that Residential Gateway components may simulate traditional telephone network systems that run on 48 VDC powered telephone lines. In accordance with one illustrative embodiment of the present invention a Generalized Probabilistic Descent algorithm may be advantageously employed to provide the improved discrimination. In various embodiments the parameter may be an explicit indication, or it may be implicit. If the device is unable to be charged during a certain period, or the rate of power consumption exceeds at least one set value, the device can adjust functionality of various components and/or applications in order to conserve power until the device is able to be charged. The client-side application running at the remote site receives the same inputs as the operational site application, allowing application problems and behavior to be reproduced at the remote site.

1459826265-7149c801-8fb8-4bf7-96f7-cbb048b7d12d

A new and distinct *Impatiens* plant named HGI-1033-3 characterized by having a typical compact growth, small flowers and a clear white flower color. In one

aspect, the RAN broadcasts an indicator that it accepts traffic volume measurements from access terminals and an associated TVM threshold. At the receiving computer, the source key values are compared with reference key values computed for each predetermined number of contiguous data units in the reference file to determine matches between source key values and reference key values.

1459826265-b3e33db4-df44-476b-b112-32919b29c5db

The present invention relates to a sensor apparatus having a structure capable of obtaining digital values of signal components with a high accuracy using an AD converting circuit with the outputted digital value thereof having a small number of expressive bits. M-Scan, for meandering scan, is synthesized by iterative application of a simple primitive pattern, and analyzed by iterative partitioning. A layer with catalytic activity permeable to protons is between the electrodes.

1459826266-46c3afeb-e637-48b0-92cd-3c508538a870

A test configuration for double sided probing of a device under test includes a holder to secure the device under test in a first orientation, a calibration substrate secured in a second orientation and a probe capable of calibration using the calibration substrate and probing the device under test. When it is determined in step S221 that a network connection request is received, in step S222, a dialog box for confirming a dial-up connection is displayed. The power supply members are disposed in the connecting holes, respectively, and each of the power supply members includes a plurality of lamp connecting parts and an inverter connecting part. Then, a HPM stripping process is performed on the silicon substrate in order to strip the remnant metal. The methods include using biopolymers or their synthetic equivalents combined with a stable source of reactive oxygen species that when applied to or combined with a separate source of oxido-reducing enzyme or catalyst will cause the formation of an activated biopolymer with increased protein binding affinity and microbial control activities. The length of the first suture loop can then be tensioned to re-approximate the torn or damaged tissue toward the anchoring tissue, thereby securely attached the torn tissue to the anchoring tissue.

1459826266-9036207c-c2a4-4d9f-b743-1df87f6fca15

An actuator for an aerosol container having a valve with a projecting valve stem includes an actuator button having an outlet for coupling to the valve stem. The caked sludge on the membranes is removed by intense coherent water sprays directed into the spaces between cartridges of a cassette, without removing the cartridges from the cassette. The back guard article preferably includes an absorbent material and optional elastic. The main plate, the reinforcement plate, and the rim cooperate to provide a weld groove. The first quantity is determined by the camera and a tag number is set to an integer value equal to or less than the difference between the image capacity, in units of space for individual ones of the electronic images, and the first quantity.

1459826266-db5db149-7750-424a-81ee-10c6ac1f4b70

A system and method are disclosed for switching contexts within a spoken dialog between a user and a spoken dialog system. A heat transfer solution is introduced through a supply lumen of the catheter to inflate the balloon in a selected blood vessel; this allows blood to flow through the blood flow passageways of the balloon, from one exterior face of the balloon to another exterior face. A system for displaying patient ECG data is also disclosed. The liquid crystal display is constructed so that when an arrangement pitch of the irregularities of the optical sheet is  $P \times 10^{-3} \text{ cm}$ , a haze value of the diffuser sheet is  $H \%$ , a total light transmittance of the diffuser sheet is  $T_t \%$ , and a pixel pitch of the liquid crystal display panel is  $P_p \times 10^{-3} \text{ cm}$ , the following relationship is satisfied:  $\frac{P}{P_p} \times \frac{H}{T_t} \times 10^3 \geq 1$ .

1459826266-fc806317-18e3-4989-be07-4e6347e58a03

A method, implementable on a multiple-input, multiple-output symbol receiver, includes selecting a hypothesis for a second symbol value U2 from among the set of fixed constellation points, calculating a hypothesis for a first symbol value U1 from the resultant selected U2 value, and generating a first half of counter-hypotheses from interim results of calculating the hypotheses values. In operation without a jacket, the lamp may have a color temperature of about 5300K to 6000K, a color rendering index of at least about 92 and an efficacy of at least about 85 LPW. A second pulse converter receives the synchronization signal in the second clock domain from the first pulse converter and converts the synchronization signal into an acknowledgment signal in the first clock domain.

1459826267-3be8698b-2f46-40e0-9ade-45120b84aaf0

A method, apparatus and system for supporting multiple diagnostic sessions include receiving multiple diagnostic session requests, verifying identification information for each requester, establishing a communications channel for each verified requester, and communicating the requested information to all of the verified requesters via the established communications channels. The back electrode is axially moveable a limited distance by the cylinder. Each station can identify an item of waste, determine the most appropriate container for the item, and facilitate disposal of the item in the appropriate container. Dual augers at each end of the wide pickup provide the force to direct the forage into a narrower path, to enter the bale-forming chamber. The rotary member is pivotal about the fixing member.

1459826267-48329c26-1f46-4372-8dcf-352254b0d08d

Ophthalmic lenses for correcting astigmatism having a posterior surface with a central optic zone, a peripheral zone, and a blending zone therebetween. In one embodiment, a plurality of non-volatile elements are used in providing selective disabling and re-enabling of at least a portion of the debug circuitry. The video telephone is connected with the PSTN, and under circumstances that a receiving party and a calling party are simultaneously using the video telephone, when a receiving party user dials telephone number of the receiving party where by the control module unit is activated to send a signal. The unsoluble sewer sludge and the salts such as ammonium sulfate, nitrogen containing compounds and urea from the aqueous solution left after the ethanol is distilled off are mixed, dried and utilized as fertilizer. Thereafter, the outer duct is positioned about the stacked inner ducts so that two different flow paths are formed. A management server manages the history of configuration change operations it performs for storage apparatuses while a storage apparatus manages the history of configuration changes it makes in itself in accordance with the configuration change operations performed by the management server.

1459826267-55076823-c741-4017-9740-1d5410627c76

A radio receiving apparatus wherein the interference can be minimized and the power and bands can be effectively used in the process of receiving a signal comprising a combination of an impulse signal and an OFDM signal. In certain embodiments, the present invention relates to compounds, compositions thereof, and methods that enhance the ability of mammalian red blood cells to deliver oxygen, by delivering IHP to the cytoplasm of the red blood cells. In response, the banner interface region is rendered with video content. Also, a second fuse couples to a first circuit.

1459826267-e2eada05-54f7-4c04-8616-47a3566b4436

Techniques are provided for representation of designs using a basic design which is then modified by a transformation function. The heat recovery tubes are connected by an inlet chamber to an inlet tube and by an outlet chamber to an outlet tube, which form, together with a heater, a liquid cycle in which a liquid heat exchange medium is recirculated by a pump. Spatial isolation between the high frequency circuits is ensured by an inexpensive and simple configuration using the single

cavity.

1459826267-f6afa55a-4885-4c78-b43d-ed1810550cad

Disclosed are compounds of the formula: . The actuator is provided above a substrate. Application: assistance with decision-making in discrimination, shape recognition. A method for managing an enablement state of an energy consuming load, including assigning an assigned duty cycle to the load, determining a load enabled utilization value for the load, and adjusting the assigned duty cycle using the load enabled utilization value. The displays defined by the display data may include one or more visual elements that graphically indicate an event that includes the transfer of an asset between a source entity and a destination entity.

1459826268-165cd152-e47e-4aa3-a7ac-4e78d1055b92

A telecommunications system is provided that includes a unit for communicating channelized digital baseband signals with remotely located units. A first stopping device is associated with at least one elevator sheave. A flexible wiper for cleaning toner detection windows is attached to an agitator for stirring toner in the toner-accommodating chamber via a fixing member. Standard HTTP servers may be used without modification, leveraging standard media players embedded in mobile devices for seamless media delivery over wireless networks with high bandwidth fluctuations.

1459826268-6cc0079e-4685-464a-bdde-f775c03c8d3d

The object of the invention is a communications system that increases successful call setups, improves resource utilization, and reduces overhead. The systems comprise reactors comprising biomass for degrading perchlorate, and the operation of the systems can be controlled according to novel logic specifications. Methods for producing a maize plant that comprises crossing hybrid maize variety X03B505 with another maize plant. A sensor array may be connected to a monitoring device that may select an optimal sensor element or combination of sensor elements and one or more physiological parameters to be determined. A storage mass is coupled to the announcement service node for storing recorded announcements.

1459826268-8a56f091-556d-40da-9134-b257920f65dc

A computer program of the type commonly known as a \u201cwizard\u201d is disclosed that initializes user interface software for controlling an audio conferencing device. The noise filtering device defines a fuel passage configured to direct fuel from the fuel supply rail into the fuel injector. A side door communications pathway is set up to handle the communal locks separately from the ordinary data transfer pathways through which ordinary software locks get handled. Then, an inter-enclosure link may be enabled between the failed virtual enclosure and another virtual enclosure. 0\xd71017cm3, and a resonator length is not less than 1500 \u03bcm.

1459826269-531c65cc-1a3b-42a3-9694-af7648e5475b

A leaning post seat assembly includes a D-ring having a D-shape and a cross tube disposed in the D-ring for defining a rectangular boundary having long sides and short sides. The user interface receives a data search request. The tube has an open mouth extending through a hole in the balloon, defining an inflation port. The method further includes modifying the request if required to meet the security constraints. Then, the first structure precursor is separated from the substrate, and thermally treated. Methods of chelation of iron and other metals in a human or animal subject are also provided for the treatment of metal overload and toxicity.

1459826269-9aa8a912-8959-4294-ab93-c9ce0d99fa00

In one embodiment, the present invention includes a method for depositing a barrier layer on a substrate having a trench, depositing a liner layer on the barrier layer that includes a surface oxide, electrolessly depositing a copper seed layer on the liner layer, where the surface oxide is reduced in-situ in an electroless bath,

depositing a bulk metal layer on the copper seed layer. Each pixel includes a photoelectric conversion unit, and a semiconductor region arranged below an element isolation region having an insulation film to isolate the photoelectric conversion unit from an adjacent pixel. The total number of matches during all of these accumulation rounds is used to determine if the entry is a winner. In another aspect, multiple eNBs may coordinate transmission of DL resources to minimize collisions of control signaling resources. The dynamic web portal is updated to contain component resources from visited web pages, each having a respective universal resource locator or portion of code with which it is associated.

1459826269-fc1d1a9b-a379-4fcf-9eca-a17690644192

A clipboard is defined by a planar support having a back surface that retains at least one magnet, thereby permitting releasable attachment of the clipboard to a metallic supporting surface. By providing MBMS status information to a controller in the area from which the device moved, the controller in the area from which the device moved can either establish an additional channel to provide the MBMS to the device or initiate a relocation of control of the device to a controller in the area into which the device has moved. The layer has high etching selectivity for the InP cladding layer and remains on the BJ section even after mesa etching. A first logic is used wherein if the circulation of blend stages is equal to a number of blend stages, then a color saturation is performed, and a second logic that if the circulation number of blend stages does not equal the number of blend stages then at least one operand is selected for another texture compositing operation. Inbred maize lines derived from inbred maize line PH5WA, methods for producing other inbred maize lines derived from inbred maize line PH5WA and the inbred maize lines and their parts derived by the use of those methods.

1459826270-14c73b77-c348-4677-aef1-3a6882412f04

A vehicle can be controlled in a first autonomous mode of operation by at least navigating the vehicle based on map data. A pattern of the unit block pattern has a symmetrical shape with respect to a symmetry line perpendicular to the position measuring direction. Transmission of torque to the output spindle can be interrupted based in part on the slope of the current measures.

1459826270-cc4a7388-57dd-4e82-b5f1-95f555982ca1

Various methods and devices are provided for a graft fixation device for fixing a graft member within a bone tunnel. The method includes driving the MEM device in a first polarity, determining when an offset passes a first threshold, and switching from the first polarity to a second polarity when the offset passes the first threshold. The base pad is solid in design with a raised padded section. The retrieved documents are then combined and ranked.

1459826270-d6635837-7c5a-4fef-8264-f5da3f01bfff6

A method of synchronizing first and second streams of a multimedia content program is operable for determining a temporal difference indicative of a relative timing between first and second streams of the program, the first stream being provided to a first multimedia processing resource and the second stream being provided to a second MPR. In general, the effects of any in-camera sharpening are reversed by applying a blurring kernel. This fuel transfer is designed for use during normal operation of the motorcycle without disruption of use or adversely affecting the operation. A pulsed driving scheme enables minimization of heating effects while providing significant therapeutic treatment.

1459826270-f5563d3b-b179-4ce8-9eea-927cfd868fea

A moving bed reactor system is provided. Only two diametrically opposed supports are needed to react the high axial and torsional loads produced or received by the MRI apparatus. An auxiliary printed circuit board containing additional electronic components may be included to accommodate especially sensitive test points. If the command signal is identified as a first command signal, the processor outputs a

first control signal. The optical disk drive apparatus includes a measuring arrangement that measures the frequency of the clock signal, and a setting arrangement for setting the gain in the phase synchronization system proportionally with the frequency.

1459826270-fa05d33b-31c1-487a-99a0-f38f158ba701

A new and distinct variety of blueberry plant, which is denominated varietally as 'EB 8-1' and which produces a large fruit, which is mature for harvesting and shipment in the early season under the ecological conditions prevailing in Yanchep Springs, Western Australia. A series of independent charging and discharging circuits are provided that produce power waveforms having duty cycles that vary from a highest duty cycle to a lowest duty cycle. A method of assembling a wellbore servicing tool, comprising assembling a cement head without using torque to join components of the cement head, and passing a fluid through the cement head into a wellbore. A surface of the structure is positioned for formation of a channel along the curved shape.

1459826271-247b8685-6d1c-4e7c-a6f8-c8c299ce7940

A physical layer device provides both timestamp processing and security processing. For example, the joint context model may be shared between transform units having a first size of 32x732 and transform units having a second size of 16x716. The replaced processor settings are written to memory.

1459826271-5bdf04d8-6708-4bf0-95ce-d4fb966b2302

A medical device includes a catheter shaft including inner and outer catheter shafts, and an expandable balloon carried by the catheter shaft. A determination may be made as to whether the tail skid assembly is to be deployed for takeoff or landing. This method can be coupled with selection to identify B cell clones that produce, for example, antibodies of high affinity or specificity. A controllable oscillator output signal from a CO in the PLL is divided by an N divider in the PLL to provide a divided CO signal. The stope fill barrier is installed and positioned in the stope void from below the adjacent ore.

1459826271-76d199c4-f8c2-4a5d-ab45-16873ff5a9b3

A caster device for attachment to a first and a second member of a frame is disclosed, the members being disposed angularly relative to each other to define a corner of the frame. The DC power unit outputs DC power to the control unit, the bank of LEDs, and the backup power unit. The page-turning mechanism is disposed at the end of the loading mechanism.

1459826271-9cbf7fd6-1bd9-4b94-b529-021540786148

A manufacturing method for a boundary acoustic wave device is provided which includes, an IDT electrode, a first dielectric layer, and a second dielectric layer on a piezoelectric substrate. The computer is further programmed to generate an estimate of a reconstructed image, compensate the partial MR data set for the missing data, and reconstruct an MR image by iteratively minimizing the total squared difference between the k-space data of the estimate of the reconstructed image and the measured k-space data of the compensated partial MR data set. The valve has a first state wherein fluid can flow through the valve as the latch member is moved out of its latching state, and a second state, wherein fluid is prevented from flowing through the valve thus preventing operation of the actuator to move the latch member out of its latching state. The circuit also has an FDD transmit path including a narrowband passband filter. In a specific embodiment the socket has longitudinal slits, a ribbed inner surface, and a threaded outside surface adapted to be received by a collar.

1459826272-73180302-f390-4a3b-891d-a0b5569f0d9b

A system, method and apparatus for monitoring uterine and/or cervical activity indicative of labor in a patient. The image collection system is configured to

collect at least two sets of image data, where one set of image data includes a stronger indication of the reflector than the other set of image data. The first hardware description information corresponds to a first sensor and the changed hardware description information corresponding to a second sensor. Also disclosed is a rotor for an electrical machine, the rotor having permanent magnets fitted into a corresponding module. Alternately, the imaging layer can comprise a substantial monolayer of isolated domains of liquid-crystal material comprising a population of domains comprising a liquid-crystal material having a  $\lambda_{\text{max}}$  between 700 and 800 and having a half-peak width that extends into both the visible spectrum region and the infrared spectral region. 1 to 40 percent by weight of a polycarboxylic acid or a polycarboxylate.

1459826272-c780ad40-0eb6-4b7b-8259-5f5e0b6fb193

This invention provides compositions and devices having structurally ordered nanostructures, as well as methods for producing structurally ordered nanostructures. In a state where the light emitting device is ON, the system controller turns the light emitting device OFF when the system controller drives the light quantity controller to capture an object image. Responsive to a determination of whether transmission of the application may be accelerated, an appliance, intercepting the plurality of files, may accelerate transmission of the application program by applying one or more transport layer transmission acceleration techniques to the plurality of files. A conductive material having a relatively high resistivity may be used to form the active and/or ground electrode plates of the capacitor. The flange face of the wheel hub has a brake rotor secured thereto. The database configuration information is applicable to tune the database to operate on the target system.

1459826273-2f88d7b1-aa40-4fdd-95fd-8da533417ae5

This invention relates to a method for etching an organic insulating film used in the production of semiconductor devices. Accordingly, during a boot-up process, a storage system, upon detecting a system failure event of the storage system, conditions its system memory to reflect a state of the system memory at a time of the failure by processing client requests or commands stored in a non-volatile operations log. The control algorithm and method provides an effective stabilization of the gas discharge lamp's arc throughout the entire operating range of the lighting system. The system will then periodically determine if the conditions have changed, and will initiate the purge if a freeze condition subsequently becomes probable. In this fashion, light rays which cannot be outputted due to being in the shadow of the spherical light source lamp can be outputted as light rays parallel to the optical axis. More particularly, the present invention relates to a tassel protector accommodating at least one tassel, particularly when undergoing high wear operations, such as, but not limited to, machine laundry.

1459826273-5dc4a686-4441-483b-be5f-ff51912a59b7

A control apparatus for an electric power steering system is provided, which controls a motor for applying assist steering torque to a steering line of a vehicle at least according to steering torque signal of the steering line, vehicle velocity signal and motor current signal. The single precursor can be a single photosensitive element or a single laser-engravable print element having a reinforced elastomeric layer. A drive unit contains a driving motor and a step-down gear. Further, steps are provided on inner walls of the cutouts disposed on the sides of the thin plate sections. In this arrangement, local focus and/or magnification errors can be substantially reduced or eliminated.

1459826273-83ffc5e0-9bfe-4543-8f07-7b4cfce050bb

A method of warewashing for the removal of starch is described herein. Each abrasive roller includes an elongate body portion having an abrasive outer surface and may have a pair of mounting stubs permanently affixed to respective opposing

ends of the elongate body portion. Tin compounds may include  $\text{SnBr}_4$ ,  $\text{SnBr}_2$  and  $\text{SnH}_4$ . A lightspot-by-lightspot basis is used in the yellow ring elimination task. Consequently, the present invention relies on the use of a large number of micromechanical links in SSI networks to implement signal processing functions with basically zero DC power consumption.

1459826274-359bb865-a368-4e38-b0a5-dc6dd5c46de0

The invention involves a temperature regulated heated PizzaFood delivery system that can provide a continuous warming solution for pizza and food from the store, to the car and to the customer, in a vehicle, including the ability to be battery-powered, should an electrical outlet not be available. In order to compensate for the uneven amount in the diffracted color components in the exit beam, the exit pupil extender, comprises a plurality of layers having additional diffraction gratings so as to increase the amount of diffracted light for those color components with a lower amount. or higher but lower than  $160^\circ\text{C}$ . Meanwhile, a transfer-managing unit sequentially transfers printing jobs to the printing devices within the number of connections less than the number of printing devices. Related mobile communication devices, telephone switches, and recipient phone call devices are also described. 899% by weight of fillers, thixotropy assistants, retardants and other auxiliaries, and component II comprises: from 0.

1459826274-5cf1eb34-35b0-419f-8fcc-1f7e83480771

An extra-flexible insulated electric wire includes a conductor portion and an insulating cover. In particular the invention relates to devices having a volume element having a larger diameter than the nanoelement arranged in epitaxial connection to the nanoelement. The computing system generates a first hash for the user password. The new instance of the decision network is executed responsive to the command. Two or more jetstreams may also be utilized to direct their jetstreams around a central horizontal axis to provide the cyclonic mixing region.

1459826274-720da7b6-821c-4b59-8040-bff58009dc77

System and method for determining the distance between a radio beacon and a vehicle device passing in the radio beacon, in a road toll system. The distance from a user's reference point to each pixel through the gas is determined. The wing can be rolled up around the fuselage into a small package when deflated for easy transportation, such as by being carried in a duffle bag. The equalizer may receive and perform equalization on a serial input signal to produce the equalized serial input signal, and the eye viewer circuitry may determine horizontal and vertical boundaries of the eye diagram associated with the equalized serial input signal.

1459826274-79324ea3-1938-437c-b176-388bd7432030

A method of performing energy calculations in a power distribution system is provided. A noise-reducing filter is applied to the image frames to generate filtered frames. The basket mounts a stack of screen assemblies provided with respective flow directing trays for receiving filtrates from the screen assemblies. In one embodiment, the printed branches are quarter wavelength transmission lines in a frequency range of 1. The patient bed has a number of height-adjustable elements arranged like a matrix that are individually adjustable in terms of height.

1459826275-1fd781c2-8a55-4ba8-99fe-e7683d07c1be

The seat cover with adjustable cushion apparatus provides for removable fit to a variety of seats. The method includes introducing a volume of the combustible material into a plasma zone of a gliding electric arc oxidation system. The device is designed in such a way that each plate can be recorded with two camera images, wherein a camera image is produced through the arrangement of several mirrors of the mirror means in such a way that one image half represents the right edge and the other image half represents the left edge of the plate over a predetermined length. A mechanism is coupled to the cylinder block which modulates the axial

position of the cylinder block within the housing, varying the size of the bypass flowpath.

1459826275-3a2631a6-da0e-4992-b031-45dc1eebfdd0

An inhibitor composition of *Helicobacter pylori* adhesion in the stomach comprises anti-urease antibodies obtained from eggs laid by hens which have been immunized against H. The apparatus includes a tube fluidly connected to a source of conductive fluid. The first and second phase modulators are driven by the regenerated first and second drive signals.

1459826275-4378dc96-a7bc-4f5c-88b6-ba171491341b

The present subject matter relates to systems and methods for sealing one or more MEMS devices within an encapsulated cavity. The laminate is disposed in a hollow portion in a metal body. The substrates are placed opposite to each other to form a discharge space in between, and electrodes are provided to the substrate. The method also includes altering at least one of sensitivity and the predefined time interval if number of times the searching is performed without detecting the signal exceeds a threshold. The processor is operable to calculate a stiffness estimate for an area of an environment based on an environment model of tool-environment interaction data, create a composite image comprising a stiffness map of the stiffness estimate overlaid on an environment image from the at least one camera, and output the composite image on the visual display.

1459826275-66e12d19-f68c-44d2-ae7b-2027dff5d3a1

A memory array including a conductive line adapted to simultaneously conduct current in at least two distinct directions relative and adjacent to a magnetic junction is provided. A treatment delivery control system is used to directly control multiple subsystems of the cancer therapy system without direct communication between selected subsystems, which enhances safety, simplifies quality assurance and quality control, and facilitates programming. The invention also provides lettuce plants produced from such a crossing as well as plant parts, seed, and tissue culture therefrom. Furthermore, the present invention also provides a semiconductor process to form said semiconductor structure. The work function of a microelectronic transistor can be varied or \u201ctuned\u201d depending on the precise definition and control of the metal types, layer sequence, individual layer thickness and total number of layers. PPE provides approximately twice the refractive power of water and exhibits better absorption/evaporation properties than water.

1459826276-0697be9e-8d64-467b-bdc1-1b838267cc5e

A fixing device includes an elastic rotator and a cooler disposed opposite the rotator to cool the rotator with cooling air. Also disclosed are a system and a method utilizing this apparatus. A signal strength indicator ) is determined for each reading. The gain stage includes a gain stage switch, and is coupled to control circuitry.

1459826276-076914d1-58e9-4130-a81c-fce97ff0f92e

Conferencing between two-way radio devices and telephone devices is achieved using a conference server that has a radio interface coupled to a radio network including one or more two-way radio devices and a telephone interface coupled to a telephone network including one or more telephone devices. To minimize or prevent leakage flow across the chordal hinge seal, a generally U-shaped portion seals between radially opposed surfaces of the nozzle support ring and inner band, the legs of the U-shaped portion engaging those surfaces. An optical RZ signal is obtained as an output because the EA modulator is energized by the provided clock component.

1459826276-42891dc6-763e-4121-ba2d-22099ad5ea3f

One embodiment of the present invention provides a system for processing a request directed to a secondary storage system. The container handling device includes

features that improve safe handling of the container when emptying. Split electrodes extend in the longitudinal direction on another side surface opposite to the side surface on which the common electrode is formed, and are spaced from each other in the width direction of the side surface on which the split electrodes are formed.

1459826276-470a03d9-7d25-421f-aecc-cd9c68716e7b

Various components are provided to manage a clustered environment. The further spring biased fluid control valve affords the shock absorber a firmness vis-a-vis roll stability to the vehicle steering yet provides the consumer a desired boulevard or soft cushioned ride. Upon receiving the statement, the database server executes the statement that invokes the referenced function.

1459826276-5f4b572b-e6e2-4702-a3c6-22646827323b

The present invention relates to novel tablet dosage forms and methods of preparing these forms, which can be used for different classes of pharmaceutical active ingredients posing stability issues in a single unit system. Two peers with knowledge of a common Diffie-Hellman permanent key, Kperm, and the identity and public key of the other peer. The sensors can be pre-installed on new risers, or post-installed sub-sea on existing risers, using a variety of methods.

1459826276-8e0bf6c0-af3a-4d11-ad30-081d5ac68978

A method and apparatus for reducing group delay and/or amplitude errors applied to a transmission signal by one or more transmission filters is described herein. Each ventilation module comprises a fan directed to suction air present below the ventilation structure and blow it vertically through heat exchange elements. The cannula is inserted through a first valve into a heart chamber and through a second valve out of the heart chamber. The invention provides an alternative to the chemical synthesis of the molecule in question {B}.

1459826277-0267d08e-9c03-4503-a5b1-fe5cfddeebc6

A method and system for operating a bus according to a plurality of bus protocols, including a legacy bus protocol. Devices of the present invention comprise a means for inducing a pressure differential on a sample to direct the sample to a test surface. The devices can be used to attach a heart valve ring to a biological annulus. A capacitor electric component acting as a countermeasure against the noise attributed to the electric motor is mounted on the substrate so as to provide a connection between the positive and negative side conductive lines. Segments that are not common are separately filtered.

1459826277-16b86eb7-db2d-445e-bc41-92664a1f5902

First document image data is printed onto a sequence of sheets that includes sheets of a given size, and sheet of a size that in at least one dimension is larger than the sheets of the given size. A small random nudge of the center of the acquisition spiral is used to prevent a link from being established before proper alignment is attained or to correct the alignment of an established link which does not have sufficient alignment to maintain a high bandwidth link. The method further includes the steps of determining an environment of the geographic source of the public safety call, identifying a resource to handle the public safety call based upon the determined environment and forwarding the call to the identified resource. Subsequently, one or more layers are deposited on the cluster of particles with the one or more layers comprising graphene.

1459826277-cc00210a-ffa2-4c27-97c3-055620aa3b19

A solenoid cover includes a solenoid valve housing chamber housing solenoids of solenoid valves that project outwards from a hydraulic unit and a lower space therebelow. A Cold Adder function provides a further component to the data output, that further component having a data value that is based on engine temperature and on elapsed engine running time since the engine was last started. The array may be

used in a number of applications including electronics, optics, and filtration, including desalination. The recording of the rights-managed content is performed according to the digital rights information. The tool is threaded through the guide instrument working lumen.

1459826278-87fceb9c-da8a-4fc4-95bd-9bf09e07d589

An energy management system and method providing a holistic premise energy optimization and energy efficiency reclamation system comprised of an interconnected system of software, analytics and automated process that optimizes the energy generation and storage technologies, energy consumption, energy demand and energy utilization of energy consuming assets within a premise. The advantage of the invention is that a conveyor beam of any desired shape can be obtained in an easy and fast way. The user must still utilize a ladder or scaffold to reach all point on the antenna. In some embodiments, two different networks relay media content of two different types among multiple computing devices. A connection mechanism cooperates between the elongated housing and the body that secures the body to the elongated housing of the instrument upon passing at least a portion of the elongated housing through the passthrough of the body in an assembled position. The memory further includes a protection register comprising storage elements configured to store configuration data of the memory device.

1459826278-9355e1d6-9397-4400-bf8a-c122dc552365

A system and method allow for overriding of a strapping option. The present invention relates to an agent including iodinated organic compound. When a program rewrite unit outputs the rewrite program for the microcomputer B, the microcomputer A executes the transfer routine to transfer the rewrite program for the microcomputer B. Then, the trading system directs the bids and offers to the appropriate exchange where the bids and offers may be automatically matched in the corresponding market. The system also provides for compensation of any QT interval which is calculated following ventricular pacing, so that the QT sensor is operative at all times and throughout the entire rate range experienced by the patient. A further embodiment of the invention is a golf ball having a core, and a cover with a Shore D hardness of at least 58, the ball having a mechanical impedance with a primary minimum value in the frequency range of 2600 Hz after the ball has been maintained at 21.

1459826279-5a9ff1ab-4681-410e-9f97-845bcfe904b3

Disclosed is a pallet loading and unloading sling, termed a SlingBag device, for efficiently transporting burlap bags and deploying them to secure and protect underwater pipelines. Present invention is characterized in that the outer conductor is made of an elongated tubular compartment having an elongated opening along one side of the compartment, and that the inner conductor is suspended within the tubular compartment by means of dielectric support means. According to one embodiment, a plurality of inner support arms extend between the central member and the inertia mass and a plurality of outer support arms extend between the inertia mass and the outer member to support the mass over the cavity.

1459826279-66118e4c-a201-4588-8e6b-48242f73a5a8

A process is managed by creating a future revision of a base. The identity of the external user can then be switched to an internal system user identity, such as by pushing new user information on the user stack or by adding internal user context. To design the differential pressure sensor to be resistant to overloading, the carrier plate is arranged between a first and a second diaphragm plate and has congruent concave depressions on opposite sides in the plane of the plate. In parallel with the operation, the recognition image data generation unit generates recognition image data adapted to a recognition unit in accordance with the drawing command.

1459826279-68c71d6b-514e-4060-bb52-479c28550df9

A reclining chair has a control switch and a control device. In the organic light emitting diode display, an organic light emitting diode device is formed at a front surface of a transparent substrate to radiate a light via the transparent substrate. A corresponding ventilator system is also disclosed. The second auger is positioned between the first and third augers and rotates in the opposite direction and has flighting that is the opposite of the flighting of the first and third augers. The channel state information may be a matrix  $V$  and the cost function may be defined by the following relationship:  $f = \sum_{i,j} a_{ij} v_{ij}$  where  $A$  is a matrix of size  $N$  by  $N$  and  $a_{ij}$  is element of matrix  $A$ .

1459826279-6ca5af1c-a7c5-4821-8262-454ea8b533c7

A cleaning device removing residual toner from a photoreceptor. If the current monitored does not match the current for energizing any of the solenoids, the microcomputer determines that the corresponding solenoid valve is at fault. The method makes it possible to produce adhesive-free three-dimensional structures.

1459826279-7c5444a3-15df-4f19-ae7d-7b5a665ea530

A lithographic projection apparatus including at least one of a radiation system and a projection system having at least one optical member, wherein the optical member is supported by and connected to a mounting frame which at least partially encloses the optical member and which is connected to at least one other component of at least one of the radiation system and the projection system. In particular embodiments, this is achieved by a flare disposed toward the rear of the projectile. A second electrode is formed as a cathode on the electron injection layer.

1459826279-d4591319-6842-48f6-a69a-fd70f5fde5d9

Disclosed is a neutralizing agent for a clostridium bacterial neurotoxin and a preparation method thereof. The composite member has longitudinally extending fibers in a matrix material. Furthermore, in the case where a grid operates abnormally and the energy storage system functions as an uninterruptible power supply, power stored in a battery may be selectively provided to loads according to power remaining in a battery, and thus stored power may be used stably. The patterns for the multi-layer transmission scheme include first and second patterns based on the same cyclic shifts, but where some, but not all, of the cyclic shifts in the first pattern are associated with the same corresponding orthogonal cover codes in the second pattern. The reclining mechanism includes an actuating unit that enables the backrest to move to and remain in any partially reclined position between the upright and fully reclined positions.

1459826279-e05d211e-0a7d-4b3b-a7e5-3c53ea6d9cda

An X-ray inspection system is provided comprising an X-ray source which includes an electron gun and beam steering means for alternately directing the electron beam from the gun in a first direction wherein the beam strikes the anode to produce a beam of X-rays which exits the X-ray source, and in a second direction wherein no significant X-ray flux exits the X-ray source. The eviction engine is configured to move the cache line from the lower-level memory to the higher-level memory. Portions of the connector interact with the casing to provide a seal therebetween to prevent the water and dirt infiltration inside the casing.

1459826280-10b526f3-2101-45f3-9c00-024906c10cfa

The invention relates to a brake application device for vehicles, in particular rail vehicles, comprising a unit for emergency release and a unit for auxiliary release. The chamber is connected to a valve positioned outside the enclosed chamber through which fluid can be dispensed from the chamber. A first terminal array on the first principal surface side includes two types of terminals, functioning either as power source terminals or ground terminals, and a signal terminal. Preferably, the poles have substantially identical pole locations. In one form, an overlying dielectric layer is positioned on the multiple layer ARC to

increase light interference.

1459826280-23d8ae5e-955f-4d98-8164-a5a7cc2cd00a

The present invention discloses processes for generating a hydrocarbon feedstock for biofuels synthesis from lignin via hydroprocessing. The system permits packet switching of voice calls and data calls through a data network from and to any of a LEC, a customer facility or a direct IP connection on the data network. The circuitry may also supply the switch with a control signal in response to the detection of the preselected condition.

1459826280-a2c4985d-281f-4e75-a5a6-62972195ce5f

In one embodiment, an apparatus cascades groups of serialized data streams through devices, and performs operations based on information communicated therein. The zoom lens includes, in sequence from an object side to an image side, a first lens group with positive refraction power, a second lens group with negative refraction power, a third lens group with positive refraction power, a fourth lens group with positive refraction power, a fifth lens group with positive refraction power and a sixth lens group with positive refraction power. The slider is slidably attached to the first sidewall and includes two pairs of slideways, and a pair of resilient arms. If the updated IP address received from the server is the same as the expired IP address, the client device may request the web site information from the previously established connection.

1459826281-00cbcf47-7e98-4adf-8648-759bd42e40b7

A method, system and computer program product for collecting information from a remote application unit and/or diagnosing or controlling the remote application unit. In the method, a substrate has been treated by SAM is firstly provided. 5 or more and, in the case of further catalyst zones between the first and last catalyst zones, the molar ratio of sulfur to nickel in each catalyst zone is not less than that in the immediately preceding catalyst zone, based on the main flow direction of the feed stream.

1459826281-0c734b61-30e1-4b66-9b93-7adab439feb2

A graphical user interface system for a thermal comfort controller. New behaviors are defined for a CSG femtocell base station, and for a base station gateway that couples the HNB to a Core Network. Motion fields are determined from these 3D images and are used during the final 3D image reconstruction for motion correction.

1459826281-2fdb130a-7778-44fe-a582-0f2522bb9cd0

A light source unit capable of considerably reducing the size of a vehicular lamp. The wireless access system includes a wireless access control system configured to maintain an available pool of Media Access Control Identifiers for subsequent use by a base station, remove a portion of the MAC IDs from the available pool, and use the portion of the MAC IDs for wireless communications between a wireless transceiver of the base station and a plurality of user devices. Proximal movement of the slide causes the plurality of segments to contract in a configuration forming a shield about a proximal end of the double ended needle. Also, since the optical information storage medium provides standards for the transition area, it is compatible with existing optical information storage media.

1459826281-d656ff19-b713-46e7-917f-b0ab98a9035a

A guiding catheter for use in medical procedures includes a flexible shaft with one or more audio transducers and a distal tip. When the content to be shared is matched to reference content in the database, sharing may be simply rejected, or rights associated with the reference content may be inspected to facilitate determining authorization. A shielding device, which may be formed on a printed circuit board, protects a magnetic field generated by the inductive sensor from external electromagnetic interference. The inner surfaces of the recesses preferably comprise a groove-shaped and/or stair-shaped structure.

1459826281-ef55cb7e-06bd-426b-8729-7b801b57b068

A bridge device electrically connected to a first AGP bus, a second AGP bus, and a PCI bus is provided. The system may, in different embodiments, be implemented in programming of the implantable device and an external programmer in communication therewith or in the programming of the implantable device by itself. Each of the image patch pairs contains a natural image and a corresponding downscaled lower-resolution image. The dedicated address memory system, in response to the user completing an activation sequence, sends to the first computer a dedicated code indicative of information corresponding to a particular remote location. This causes the oil 12 to be injected into the one-sided-bag-shaped fluid dynamic pressure bearing 10 through an oil injection passage including the injection tube 36.

1459826281-f7f8469b-69d6-43b4-b4fd-7a793f0c904f

A plurality of framework supporting decorative panels. The wafer-prober wafer holder of the invention is constituted by a chuck top having a chuck top conducting layer on its surface, and a support member for supporting the chuck top, and has a cavity in a portion between the chuck top and the support member. The arrival at the probe of a flow instance of interest is detected based on the configuration information. A compensator is connected to the humidity sensor, the temperature sensor and/or the pressure sensor.

1459826282-1df87227-3e58-4e7d-bb46-33d9073a26b2

A plasma sputter reactor including a target with an annular vault formed in its surface facing the wafer to be sputter coated and having inner and outer sidewalls and a roof thereover. The plug can including an anhydrous boron compound, whereby the predetermined period of time is determined by a length of the anhydrous boron compound. The accelerating unit has an acceleration passage for spraying the mixture onto a substrate surface. A heater is connected to the refrigerant source for raising the temperature of refrigerant within the refrigerant source. In addition, a method of producing this structure and a method of forming a useful layer of semiconductor material on the structure. When a packet is placed in the buffer, a timer is initiated for the missing packet.

1459826282-8188dd56-2677-4adf-bb16-77b87e90cb44

A recuperator and turbine support adapter for securing a recuperator to a combustor case is provided. Each 2D layer is displayed at a dynamic mask via micro-mirror deflections projected onto a photoresist to form a layer, which is lowered and the process is repeated to build the object layer by layer. The additional information indicates how many programs are contained in the selected MPEG encoded transport stream; indicates an error in the MPEG encoded transport stream; and indicates a transition point representing a beginning of a program in the MPEG encoded transport stream. Drive signals from the controller to the motor are such that a current flowing in any of the three windings follows a generally sinusoidal waveform.

1459826282-d2fd373b-6664-4153-a6de-f84e91d6bc5f

A flotation device includes an elongate buoyant body and an outwardly extending seat disposed intermediate first and second longitudinal ends of the buoyant body. Data in the dataset is stored in a tuple format including a subject along with at least one other entity associated to the subject. , for sensing physical and/or physiological characteristics associated with use of the clothing or athletic equipment or for performing other functions.

1459826282-e61bdeab-8b59-42d6-93e1-87e4b87967eb

A vacuum lifting device with a contractible and extensible suction tube and a suction cup, which device is provided with a valve house having an interior that is communicating with the interior of the suction tube. A controller generates a probe

enable signal in the presence of the detected connection to the instrument that is coupled to a switching circuit. The address conversion table stores the effective address to which an area in a memory of a processor unit 10 is allocated to each peripheral device 30 and identification information of an access source to which access permission is given, in association with each other.

1459826283-17991660-03a8-4676-892f-c7d83d699043

A display device with a power interruption delay function, comprising a power interruption delay charging circuit for gradually lowering an input voltage to an horizontalvertical processor constant voltage circuit when power supply to the display device is interrupted. A step-up converter configured as a switching converter is provided. The method of the invention involves the steps of fractionating the serum or urine of a denning black bear to produce fractions of varying potency.

1459826283-238cd3a6-ac23-4e75-abf3-ba4e88b89ae6

A transdermal device such as a patch can include a drug source, a porator, and an energy storage device on-board the patch. Carbon-doped semiconductor material portions can be formed by selective epitaxy of a carbon-containing semiconductor material layer or by shallow implantation of carbon atoms into surface portions of the underlying semiconductor surfaces. The knuckles are joined to one another about a third axis of rotation, perpendicular to the first two axes by means of a splined pin which passes through splined holes in the two knuckles. Furthermore, an anti-diffusion dielectric layer is prepared between the low-k dielectric material and the phase change material, which can be used to prevent the elements of the phase change material from diffusing to low-k dielectric material.

1459826283-27ab6187-5a48-4652-93e8-80c8d3dacfbfbb

A registration device for use in combination with an array of print head nozzles and operative to deposit ink on a substrate material. Improved CMA performance is obtained by using a partial trellis decoder to predict 1 bit or 2 bits of the corresponding 3-bit transmitted symbol. A silicon containing layer is formed over the metal layer. The dongle can provide cross-transport authentication for accessories that do not include authentication controllers.

1459826283-2b0ce86e-a022-457c-b198-1ac19d118827

Methods and apparatus for intelligent cache eviction at storage gateways are disclosed. In an alternative embodiment, a booster wheel is positioned above the trackway so as to engage the horizontal surfaces such as the roof of the toy vehicles. In a case of an occupant of small build whose inertia load at the time of collision is small, loads from the upper cylinders and the lower cylinders are exerted on the occupant in appropriate proportions according to physical size of the occupant to fulfill impact absorption at the time of collision.

1459826284-10e143a2-f03a-4e35-8b5e-f7969ed0fd18

The control system establishes an engine warm-up protocol based, at least in part, on elapsed time from engine start. The apparatus is arranged to generate a tag element for each data element, the configuration of the tag element corresponding to the position of the respective data element within the detected data frame. The looping specification may include instructions to repeatedly execute one or more entries in the scan list. The first and second FPGAs are further operative to dispatch and retrieve packets to and from the first and second memory structures. The coarse powder may be added to a cement grinding process or returned to cement material grinding process after the desaltation through washing.

1459826284-2bfe90b4-e970-48a8-a34e-faa694ba0993

A workflow, enterprise, and mail-enabled application server and platform supports distributed computing and remote execution of web applications. In one embodiment, the MEMS device includes a torsion arm that supports an oscillatory body. In this

case, the black layer is formed together with the black matrix in one.

1459826284-5289b746-f0b4-46c0-8bfb-733c02a3553d

A telescopic rail device is provided that includes a first rail, a second rail, and an adapter. A sense resistor is formed in a well region disposed in an area of the substrate between the HVFET and the sense FET. The method also includes filtering, by the processor, the audio signal to generate a band-limited audio signal.

1459826284-544ec494-d667-4ab3-a9ec-3f5097840581

A method of reducing at least one atmospheric oxidizing pollutant, such as ozone, with a reducing agent comprises contacting the reducing agent with the at least one atmospheric oxidizing pollutant, wherein the reducing agent comprises a precious metal-free trap material, such as a zeolite, including at least one trapped atmospheric reducing pollutant, e. The method is adapted to be used for dithering in an image processing system or a computer graphic system. The portable computer processes the time domain digital signal according to the measurement parameters associated with a selected machine identification, and produces a frequency domain digital signal by performing a Fast Fourier Transform and other digital signal processing operations. In the valve open position the inner sleeve is moved relative to the flow control sleeve so that the radial outlet passages are no longer blocked. The outlet port of the first static mixing device is connected to a first inlet port of an interconnecting manifold. To this end, the aircraft wing turbine engine includes a hot flow generator with a turbine engine rotating about a first central axis, a cold flow blower rotating about a second central axis, and a pod surrounding the hot flow generator and cold flow blower.

1459826284-f8c379e0-dc31-4478-b545-3e178cc0593c

Some embodiments include apparatus and methods having an amplifier, a capacitor network coupled to the amplifier, and switching circuitry coupled to the amplifier and the capacitor network. The variable volume chamber may be in the form of a rigid-walled expandable bellows structure or a nonstretchable flexible bag and is attached to the housing so as not to obstruct the entry port for introduction of infusate. More precisely, said method consists in forming said fog treatment mist in the outlet of the cylindrical channel by injecting, at the intake of said channel, said composition into a hot air jet sprayed at high speed into said channel intake, the hot air jet temperature before injection being between 550 and 750 C. A first line of virtualized visible content that corresponds to the anchor value is realized by loading the line into memory from another source. The first transistor is not positioned between a base of the pnp BJT and the first power supply node.

1459826285-12b02a12-ee37-47a3-babf-8a1bcfb7f6b2

A specimen holding device has a plurality of electrodes, and a moving mechanism for moving upward and downward a part of the plurality of electrodes. The printhead includes a substrate and a plurality of heaters arranged on the substrate for heating ink in the printhead to generate bubbles in the ink and eject the ink through corresponding nozzles. A control unit checks the identity of card identification information attached to the time card. In one embodiment, the composite sub-block is not stored, but rather used for computational purposes only. At least one of the first data port and the second data port transmit an alert to the other of the first and second data port when data for communication is detected. The system includes apparatus for circulating a refrigerant in a path, further having apparatus for compressing the refrigerant and generating heat in the refrigerant.

1459826285-5bbe6c47-bebc-4ca0-b42a-0e9bdeedf44e

A unitized component assembly includes a component having an aperture, and a plurality of discrete projections extending into the aperture and spaced apart from one another about the perimeter of the aperture, and a fastener having a head and a

shank extending from the head. In combination these traits set Devon Octavia apart from all other existing varieties of Dianthus known to the inventor. By detecting if the signal generated by the sensor is blocked by the first connecting rod, the thickness estimating device can judge if the thickness of the sheets exceeds a predetermined value.

1459826285-aaf8296f-616b-44e9-b822-16ba77e99e07

A call admission control method which operates under a variety of conditions. Dependence information is maintained in a relatively small map table, with potential loss of information when dependence information exceeds available space in the map table. In one embodiment, the inflatable member is configured as an inflatable ring with a concave outer surface for engaging and spreading apart two adjacent ribs when the ring is inflated. The baffle reduces or eliminates vortices that adversely affect air flow into the segmented debris removal device. Since the transistor ratio can be selected easily, the degree of designing flexibility increases and the speed enhancement is achieved. An adder is coupled to the output of the aligner bypass and the multiplier bypass.

1459826285-b42bb353-808b-4b52-9bb8-a02bd70f6798

The present invention involves selectively breaking down or altering a blocking tissue by irradiating the blocking tissue with a laser irradiation. In order to ensure that the slices are cut in a uniform manner, particularly when using universal slicers that have a simple configuration and are inexpensive to produce, the universal slicer is provided with a tensioning device, by which the positioning plate can be prestressed free from play counter to the mechanism regulating the width of cut. A supporting clip bent from the panel. The cranial band can be worn from anterior to posterior on an infant's head, or side-to-side and the eye guard selectively fitted to the lateral band interior lateral loop.

1459826286-304815fd-48ff-4464-9a6c-cb675702bb22

Methods and compositions for detecting and localizing light originating from a mammal are disclosed. Features are generated from the respective iris images that belong to the aggregation, and a predetermined number of registration features are selected from the features, using authentication performance as an evaluation index. The method determines whether the misfire occurred in the first cylinder based on the first engine speed and the second engine speed. A signal receiver is disposed on the front end of the tray.

1459826286-c65e149f-fabc-4722-bd9a-b49ffa366454

A system for transferring data between asynchronous domains in an SOC includes a slave request generation and data latch circuit, a busy signal generator, a positive edge detector, and a cascaded synchronizer. A first prefetch operation is executed to prefetch and store a first selected set of data units. In one embodiment, side links and a center link can have cooperating members forming a maze-like debris trap and can include a lubricant and/or other barrier material. In addition, a portion of the airbag body 22 expanded toward approximately the outer side in the lateral direction contacts a curved portion 30F expanded toward the inner side in the lateral direction, which is in a deployment portion 30A of a garnish panel 30.

1459826286-e87ed428-1c91-437c-8209-a5cdaa0f1c9d

A variable speed transmission having a plurality of tilting balls and opposing input and output discs is illustrated and described that provides an infinite number of speed combinations over its transmission ratio range. The logic simulation system may create and manage linkable sub-programs for execution by a simulation engine. The TaCrRh leads can be used with hard bias structures formed on a PtMn layer without having increased resistance. Finally, the method and system includes oxidizing the slot except at the bottom of the slot and providing a metal within the slot. The controller controls the driver in either one of a first

operation mode for enabling the zoom lens to stop at an arbitrary position according to the operation of the operation unit and a second operation mode for enabling the zoom lens to stop at one of discrete predetermined stop positions according to the operation of the operation unit. The control center responds to the violation status and other data signals, from one or a plurality of theaters, and provides for reporting of information to one or multiple reporting sites.

1459826286-feba7b25-9845-4780-9b3b-ab1b33b01c2b

A method and apparatus for compressing and transmitting both video and graphics portions of an interactive program guide. The method includes: grouping the physical unit groups into a first and second areas, setting the physical unit groups of the first area in a first program mode indicating that all physical units are programmable, and setting the physical unit groups of the second area in a second program mode indicating that only the first physical units are programmable. In accordance with an alternative embodiment, the reflecting surface is separated from the underlying hinge by a gap formed in an intervening layer, such as oxide.

1459826287-184d545c-5b26-4ddc-896c-b8c27673c59f

A method and system that provides for execution of a first calibration sequence, such as upon initialization of a system, to establish an operation value, which utilizes an algorithm intended to be exhaustive, and executing a second calibration sequence from time to time, to measure drift in the parameter, and to update the operation value in response to the measured drift. The rotational lock includes one of a locking teeth arrangement, friction elements, and a catch spring and spring latch arrangement. The air box also has two dampers, a thermostatically controlled first damper providing controlled access to an updraft exhaust pipe connected to the smoke stack.

1459826287-1bd24e68-ad80-48d4-ab14-b34df8dfd503

A leg support is adapted to be secured to a leg. The spinal fixation device includes a plurality of arm assemblies. The lamps have different PWM onoff periods so that overshoot of a power supply circuit can be reduced so as to keep the entire system power stable. The strong adhesion at the copper-manganese silicate and manganese silicon nitride interfaces also protect against failure by electromigration of the copper during use of the devices. The apparatus further includes a monitor apparatus. The trim mask containing gray-tone features may have regions with different transmissivities or generate varying illumination intensities.

1459826287-56f3d0d7-a03c-4d15-a379-d98ef397afcd

A device for testing a test specimen for surface faults is equipped for delivering a magnetic flux into the specimen and has induction probes measurement sensors. A slope for raising a locking pawl of an automatic or a semi-automatic stop mechanism provided on a slider when the insert pin is inserted into an inverse-opening type slider or an ordinary slider is provided obliquely so as to extend from a front end of the surface of an insert pin to a proximal end thereof. A stab tool cooperates with a valve to unseat a ball from a ball seat so as to bypass the ball and pass through the ball seat. In addition, this receptor is selectively expressed in hematopoietic progenitor cells with long-term repopulating potential.

1459826287-c4fa1ada-b872-4134-8dcf-a38f6e4e13a6

Disclosed is a method for fabricating a thin film transistor. The present invention is also related to a polymer comprising crosslinking units derived from chain-extended polysiloxane crosslinker of the invention and to ophthalmic lenses comprising such a polymer. 0% in terms of parallel transmittance; and the cover has a transparency which is at least 50% in terms of total transmittance and at least 1.

1459826288-22ff93e3-409f-4381-a908-144b1bca1ca1

A countermeasure device includes an emitter having a surface. The onboard computer is capable of communicating to a remote control center by way of telecommunications link. A room temperature curable two-part epoxy adhesive is used to lock the inner and outer door panels together. And, availability of WLANs through which to communicate is ascertained by detecting signals broadcast by the WLANs.

1459826288-3541faf5-4083-407a-9ba4-a8560edd754f

A graphic printing machine and method for a card-type storage medium employs a jet printing head and a controller to perform ink jet printing on the medium. A disk surface has a write head associated therewith. In another embodiment, the universal control signal is transmitted through a wireless interface. The switching circuitry opens when the amount of RF energy reaches a threshold level.

1459826289-a920d543-f359-4ddc-9518-0b3828fa1f56

A gaming system configured to operate a game associated with a plurality of symbols. The protective device cuts off circuit operation when total circuit is overloaded and overheated to ensure safely use of the heater. A pressure chamber provided between the plunger and the plunger body is configured to store hydraulic oil supplied from an oil pump. Additionally, the pointing device has a circuit in communication with the sensor, the circuit disposed within the central housing, the circuit capable of transmitting data to a computer regarding the movement of the sleeve.

1459826289-e92e591d-480f-4118-9cd4-2cf54c824477

An invention that uses a convex shaped tool in the application and smoothing of concrete, but also can be used in other fields where needed where there is a concave surface. A register writing control unit 431 outputs information to the selectors 4321 and 4322 on the registers and the locations in which data is written by the instructions that have issued in one cycle. The matter is removed by discharging from near the tank orifice rim a plurality of jets of the fluid towards the fluid surface center. 5 to 3070, as agent for preventing degradation and/or enabling to protect the colors of said articles and/or providing said articles with crease-resistant and/or softening properties. The URL is displayed according to the user profile record. The motor-driving circuit includes a plurality of H-bridge circuits for outputting driving signals to the motors, a controller for controlling the plurality of H-bridge circuits, a setting section for setting up the controller, and terminals for inputting setting data.

1459826290-63c1970c-c971-4341-88aa-81cf96cd172d

A venipuncture site protector that includes a securement and a cover mounted to said securement. The method also includes determining, for each of the downlink control messages, whether that message includes scheduling information for the primary carrier or for a secondary carrier. The memory device delays the start of the second series of events until the first series of events completes. Thereafter, a connection wiring for connecting discontinuous wirings is formed of the same film as that for forming an electrode provided on the insulating film. The next time a call comes in for the mobile station, the table is traversed to determine if the HLR has been updated for the mobile station. The method can include receiving configuration data in encrypted form within a first die of the multiple dies of the integrated circuit and decrypting the configuration data within the first die to generate configuration data in unencrypted form.

1459826290-b80752b7-ac4b-467d-8bc6-56482e6882d7

The present invention relates to a method of separating multipotential neural progenitor cells from a mixed population of cell types. The invention includes a mold for creating the sweep fittings of the invention. 5 weight percent to about 10 weight percent of the total weight of the polymeric composition. The breakdown voltage in the edge areas of the active regions is increased by increasing the gate length in the edge areas, by increasing the width of the active region below the

gate electrode, or by increasing the non-silicided length of the source and drain diffusion layers in the edge areas. The integrating is based upon predetermined gain coefficients and produces integrated I and Q components in accordance with the predetermined gain coefficients. The cordless curling iron heating system includes a housing which includes a plurality of curling iron sockets, each one of a plurality of heating elements coupled to an associated one of the plurality of curling iron sockets for heating the associated curling iron socket, and a plurality of cordless curling irons which are insertable into a desired one of the curling iron sockets for heating.

1459826292-9b4c49f6-09cf-42c2-82b2-9de92c6a8642

The invention relates to continuous ink jet printing of an aqueous pigmented ink composition recycled from a main ink supply reservoir, employing a printer with a fluid delivery system capable of measuring the ink electrical resistivity, and providing needed quantities of either vehicle replenisher fluid or fresh ink to maintain the desired recycled ink concentration. Ordinarily, components are replaced after they experience a certain number of thermal cycles, or a certain operating temperature limit is exceeded. The computer system includes a region-growing system, an appending disjointed regions system, and an automatic reseeding system, which are configured to accurately and efficiently extract all regions within the input image that closely resemble the desired geospatial feature. The main body weight portion is cast around a portion of the handle to thereby secure the handle to the cast main body portion. One end of each constriction groove section communicates with the corresponding recessed portion, and the other end of the constriction groove section communicates with a circumferential groove. The method comprises that electrodeposition coating is conducted by using an electrodeposition coating composition containing an aminopolyether modified epoxy having a polyether chain of specific structure as an additive.

1459826292-df990487-7767-4042-8952-01fe0c0d22cd

The present disclosure provides a method of manufacturing film member for laser-driven ion acceleration, a film target, and a method of manufacturing the same, so that only the film member exists at a laser focusing point on the film target, allowing repeated ion acceleration from the film member by focusing high power laser beams thereon. The cam switch comprises a holder for at least one switch that is attached to the member. this is mostly due to deep sub-micron effects where coupling capacitances between bus lines are in the same order of magnitude as the base capacitances. This printed circuit end has contacts in the form of an electrical plug at one end of this module. The first identifier is manipulated or altered to produce a second identifier.

1459826293-2c37aff2-d0a6-43ec-8578-c106cea11c40

A polymerization process with elevated productivity using a coordination catalyst, wherein electromagnetic radiation is applied during polymerization. Each pile cap also includes an upper and lower xy plane surface, each of the upper surfaces including y-axis channels and each of the lower surfaces including several recesses. The power for driving the brush driving motor is controlled to provide oscillatory motion subject to operator controlled frequency, amplitude and oscillatory wave shape. Simultaneously, the control device actuates the demodulator for demodulating the modulated sensor signals prior to their transmission to the information display device. The tool then selects a function equivalent to the identified routine from a pool of functions to replace the identified routine.

1459826293-d7022a80-df03-43e9-8c23-9c753475e3be

The present invention provides a media storage case that is configured to resiliently hold up to six media discs on a single hub. In some aspects, a method of wireless communication includes transmitting a first message for reserving a communication medium utilizing a first transmission characteristic such that the first message is decodable by at least a first subset of a plurality of wireless

devices. A plurality of rows of stacked gate structures crossing over the isolation structures are formed on the substrate. The system is further capable of heating an electric heating element thermally coupled to the optical element sufficiently to remove accumulated debris from the exposed face in response to the amount of debris exceeding a threshold. 5% or more and a standard deviation from the average of 35% or less, wherein Mc stands for the chromatographic area ratio of the components having molecular weight of 1,000,000 or more calculated on the basis of the above measurement; and having a W30 in CFC measurement of 1 or less; and a film thereof. The carbon member having the asymmetrical coefficient of thermal expansion also has either a male tang or a female socket with an elliptical cross section selectively oriented to the asymmetrical coefficient of thermal expansion.

1459826294-0f2289e8-dd5a-4609-9c48-3909955bb059

A method of compressing digital ink input including a sequence of strokes is provided. A text to be summarized is segmented. Therefore, the users may utilize the identical tuner, sound demodulation circuit and audio amplifier to receive the FM broadcast programs they want to listen to.

1459826294-1a2c1945-6ef1-4746-b79a-4e7eebb8c236

A system for repairing a pipe including a tool, a programmable logic controller and a patch. A thick first soft underlayer, disposed on the medium substrate, is made of material which provides a low magnitude of magnetization saturation and high permeability. In one method, a realm list of the user device can be used to direct the login to the appropriate home realm of the user. A method for producing a coating, to a structured hard chromium layer, a coating and an electrolyte. Because the remaining first metal layer is removed, etching and/or other damage to the conductive plug and/or the interlayer insulating layer during a subsequent wet etching process may be reduced and/or prevented. The diffusion layer covers the at least one LED and the base layer in such a way that light emitted from the at least one LED passes through the diffusion layer.

1459826294-4076f61b-1c1d-4436-b937-6360c032b7c4

An integrated circuit die is described that includes an array of tiles arranged in columns. The device comprises a signal generating unit that generates high-frequency measuring signals, an injection unit and a surface waveguide, wherein the measuring signals are injected into the surface waveguide by means of the injection unit and directed toward the filling product via the surface waveguide. When the securing clasp is locked together by connecting the male connector of the first portion with the female connector of the second portion, and vice versa, it provides for the securement of an adjoining wristband. The finisher panel is connected to the audio panel such that a lateral edge of the finisher panel is adjacent to the base portion of the audio panel, a side edge of the finisher panel is adjacent to the accent portion of the audio panel, and the support portion is concealed by the finisher panel. The resorbable screw fastener is 100% resorbed in vivo during a period of time ranging from about 14 days to about one year after implantation.

1459826295-ebdb5d86-04a8-44f9-a28c-ed19eb0ded0e

A call center is configured to determine which of a number of designated service states is associated with a particular skill or type of communication supported by one or more agents of the call center. The optical sensor includes an optical emitter and an optical detector configured to be operated cooperatively to output a detection signal indicating a presence or absence of a vial at the predetermined location of the output chute. The URLs used for comparison to the URL input may be collected through multiple channels or from multiple sources, which may be dynamically updated sources, including URLs commonly or newly found on the Web, users' favorite URLs and the like, as well as URLs from a standard URL list or database, all of which may be from one or more multi-lingual domain.

1459826295-f350cc3b-cd3b-4d48-a6b6-3cda0f5de330

A cutting balloon catheter and method of making and using the same. Memory management scripts associated with a wireless application are stored in a registry accessible through a data network for on-demand download and execution. A dry access door and a wet access door are removably attached about the dry chamber and the wet chamber respectively for providing access to the same. The electrical signals are preprocessed by filtering and amplification. Thus, motion blurring may be suppressed and manufacturing cost may be reduced because it is unnecessary to generate the black data voltage separately.

1459826296-09bbdabe-e0de-40ca-97bc-7e9eb241e983

A negotiation-based mechanism enables a user to share personally identifiable information with a requesting website, for example, a third party website such as an aggregator website that might be gathering information about the user. Receivers can be woven, non-woven, knitted or not knitted, or any combination of these, or any other factors, and are contemplated to include fabrics used for clothing, banners, flags, carpets, wall hangings, and so on. The cryptographic key may be used for encrypting the unencrypted information, generating the encrypted information. The invention further relates to a method for producing K2 vitamin, to a method for preparing food products, including fermented products and/or fresh dairy products, enriched with K2 vitamin, and to the food products thus obtained.

1459826296-6fdb309-7638-43a0-9797-7f5cc6dc1713

A process for the preparation of a toner by mixing a colorant, a latex, optionally a wax and a polyamine salt coagulant to form toner size aggregates, wherein the polyamine salt is then neutralized or converted to an amide or hydrolyzed to an acid by the introduction of a base followed by a pH reduction with an acid to enable rapid coalescence or fusion of the aggregates. The printer includes a printer module provided in the door of the first storage compartment and a collector provided in the door of the second storage compartment, the collector being positioned so as to receive a printed document generated by the printer module. The output device includes at least a display device with a substantially rigid display screen. A bank employee at the teller tower performs transactions for a customer, such as depositing cash, performing account inquiries, etc. According to an embodiment, the lens body comprises at least one portion of electroactive material. The service system includes a monitoring center which has the customer database, an operation information database for storing operation information of air conditioners for each customer, and a device information database having device information on the air conditioners related with each customer of the customer database.

1459826297-5767fb5a-752c-45b8-99e8-6ef6ff8d6fab

A display device which can ensure a sufficient adhesive strength on an adhering surface between each of a pair of substrates of a liquid crystal display panel and a sealing material is provided. The universal valve mounting device includes a mounting plate and a valve actuator fastener provided on the mounting plate. The actuator structure has a pair of actuators, and each actuator includes an actuator arm having an actuator element thereon, wherein the actuator arm is movable so that the actuator element may be controllably contacted to at least one of the ramp structures, and a controllable actuator drive operable to move the actuator arm. The frame is clamped at the clamping area while the electronic devices are located in the molding cavities for molding with an encapsulant. The controller monitors the parameter while the condition is varied.

1459826297-cf97c6ac-8d90-4a38-b85c-60698ca3d5a3

A speaker set configured for a portable electronic device includes a hollow shell, a back cover, and a loudspeaker sandwiched between the shell of the back cover. Robotic devices travel on rails within the data storage library accessing data storage devices such as cartridges, cassettes, media packages, media access

equipment, identification devices, access ports and the like. The motion of the pins can be hindered with unwarranted material becoming lodged between the pins and the respective aperture. The usage right includes plural usage rights respectively associated with each of the plural parts of digital content.

1459826299-b9ec44e9-6da9-4273-8cb3-9ce41afde629

The application is directed to compounds of Formula I-A and pharmaceutically acceptable salts and solvates thereof, wherein R1a-R3a, R4, Y, and Z are defined as set forth in the specification. The light guide plate includes a light incident surface. Stacks of sheets may include sheets such as notes, checks or other documents. A remainder of the set of data points represents a compressed set of data points.

1459826300-d3108941-aea7-4902-94fe-eb81468a0a98

A device is used to meter a gaseous medium, in particular air, by means of a plurality of metering valves, into a plurality of components of a fuel cell system used in a motor vehicle. The present method for auto-setting configuration may set a TV configuration based on a TV installation type input via a GUI which receives a TV installation type. The second differential amplifier is configured to amplify the differential input signal and to output second positive and inversion phase output signals. The method receives a lens item. Thus, the DC lighting time is designed to be not changed and stable lighting can be achieved. An end cap assembly is coupled to the end of a shaft to secure a portion of the heating strip.

1459826301-128c4417-5fe2-4bc5-b598-0bbfca0f07ec

A slide rail structure of relative slide assembly includes two slide guide members disposed on a slide member. The impact-attenuating elements may be included in the footwear or other foot-receiving devices in a selectively removable manner so that a user, retailer, or another can customize and freely select an appropriate element, e. The method further includes creating a temperature calibration curve for the substrate, the temperature calibration curve being created by measuring at least a first substrate temperature with an electromagnetic measuring device, and measuring a first chuck temperature with a physical measuring device during a first isothermal state. The automotive additive composition may be in the form of a capsule, a gel capsule, or a tablet.

1459826301-cc5b3875-8caf-40fd-bc87-ff2d94b5ee92

A patient monitoring system is disclosed herein. This method is preferably implemented as a software package which takes chromatographic data generated by varying fluorescence levels in a sample. The method also includes determining a first state of the first form of the license and a second state of the second form of the license, synchronizing the first state and the second state to form a combined license state, and adjusting conditions of the license based on the combined license state. The sample times may be changed manually by a user. The buckle engages each belt separately and includes a single action release. A plurality of carbon nanocapsules are electroplated on a substrate, and the carbon nanocapsule thin film is thereby formed.

1459826302-89f584aa-c380-4a73-8af5-0f99933ab181

A scheduler and method for use in packet communication systems apply a generalized discrete-rate scheduling technique which removes the limitation of the linear increase in sorting complexity with the number of supported service rates. The four VVVF main circuit inverters are configured as a 4-in-1 inverter unit which shares a cooling mechanism for radiating heat generated due to power supply operation for the permanent-magnet synchronous motors to outside. A change in vertical wheel travel of the rear wheel is related to a change in the length of the shock absorber, providing a shock rate. The pusher system includes a trigger system to actuate the pusher.

1459826302-a6c2cd08-344b-487e-a094-7e7d7a0fd6dd

Embodiments of the invention provide a method and an apparatus for automatic, secure, and confidential distribution of an asymmetric key security credential in a utility computing environment. The substrate defines a first surface and includes an account identifier linking the transaction card to at least one of an account and a record. First, low-concentration impurity regions are formed in the island-shaped silicon film by using rotation-tilt ion implantation to effect ion doping from an oblique direction relative to the substrate. The composition is represented by the following chemical formula:. Cleaning fluid may enter the conduit such that the valve assembly is cleaned by the cleaning fluid.

1459826302-d1e5473a-c444-4609-95f3-e24b38c88820

Techniques for designing optical couplers are disclosed. A tubular conduit is mounted on the mower so as to extend through the deck of the mower. The base station is operative to obtain channel vectors for respective ones of the terminals, to select a subset of the terminals based on magnitudes of the respective channel vectors, to compute a precoding matrix using the channel vectors of the selected subset of terminals, and to utilize the preceding matrix to control transmission to the selected subset of terminals. At least one of the first and second magnetic layer is a Heusler layer.

1459826303-688f247f-3f73-4995-8ba9-b86914545729

In a solder that realizes high-temperature-side solder bonding in temperature-hierarchical bonding, a connection portion between a semiconductor device and a substrate is formed of metal balls made of Cu or the like and compounds formed of metal balls and Sn, and the metal balls are bonded together by the compounds. The active ingredient is selected from a class of N-hydrocarboyl phosphoroamidothioate and phosphoroamidodithioate compounds as described in the specification. A CoNiFeBM layer may be formed by co-sputtering CoB with CoNiFeM. A PTO adapter is connected to the pump assembly and is operably connectable to a PTO shaft of a vehicle transmission for operating the pump modules. The genes encode a group polypeptides referred to as Protein Cluster V which are predicted to be useful in the diagnosis of metabolic diseases, such as obesity and diabetes, as well as in the identification of agents useful in the treatment of the said diseases.

1459826304-0fcb03ac-a596-4220-8f87-2498aacf3bab

The present invention presents a novel system and method of damping rolling, pitching, or yawing motions, or longitudinal oscillations superposed on their normal forward or backward velocity of a moving levitated system. Various additional features of an exemplary embodiment are also disclosed. The transceiver is configured to transmit and receive messages. Selected portions of the flowable conductive material are then removed to define, at least in part, electrically-isolated sidewall conductors electrically coupled to different ones of the package edge conductors. A phase-locked loop then generates an RF drive signal that is based upon a phase relationship between the reference phase signal and the coil phase signal.

1459826304-2f4e839b-e36e-4368-95ef-0bb55637673a

A protective headgear specifically for rodeo rough stock riding competition that protect the riders from serious injuries to the head and neck area. Two or more of the memory modules are combined to represent the number of logical ranks at the memory controller such that there is a one-to-one mapping between the logical ranks and the physical ranks. Interfering signal processing circuitry employs the further spreading code identified by the received code information to reduce the interference effect of that interfering signal on the derived wanted signal. Information exchange instructions are executed by the implantable pulse generator to take data from one or more application programs being executed by the implantable pulse generator, divide the data into packets, and add the transport control information, and network routing information if desired, for outgoing

packets.

1459826304-63d375d1-15b8-4243-a8e1-9a475ce43f4e

There is disclosed a reinforced structural assembly and a method of using the assembly for reinforcing components of an automotive vehicle. Ascochlorin and its homologues are usable in treating and/or preventing a disease or condition which can be relieved by the retinoid X receptor ligand-dependent gene transcriptional regulation. The snap shot is then used for assisting in the creation of at least one of the method steps of the recipe. The control includes a first circuit assembly and a second circuit assembly interconnected by at least one wire between the first and second circuit assemblies. The additional washing steps can be performed using existing equipment at conventional pulp mills.

1459826304-76521ca1-7218-46d3-96c8-394ddad69c57

A mobile node MN registers a care-of address CoA of a destination with a home agent HA. In one embodiment, the methods and devices of the present invention include a small intestinalduodenal insert comprising an elongated member with at least one flow reduction element that can cause the stimulation of one or more biological signals of satiety. The valve body includes a pair of tubular conduits spaced apart to extend through passages in the sink deck and a cross conduit connecting the tubular conduits. The moisture chamber may also be opaque to act as a blackout mask for sleeping. Examples of fluid machinery applications include: wind turbine, water turbine or propulsion turbine arrangements. Light irradiated from a second main surface side is detected by a detector disposed on a first main surface side, thereby detecting the positions of first and second inner electrodes, and a conductive layer is formed in a portion on a first main surface, determined based on the detection result by the detector, thereby forming first portions of individual first and second outer electrodes.

1459826305-3ab2489b-6a33-42a4-bed3-e3429c8c9649

A key-board type input mechanism suitable for inputting large quantity of data is provided to a portable information technology device having a pen-input type display device. Production is carried out by condensation of silicon suboxide onto a carrier passing by way of the vaporisers. The light diffusing sheet includes a transparent base film, and a light diffusing layer coated on a surface of the transparent base film. The organization of media content and information into halos enables an effective contextual paradigm that cuts across strict hierarchical structures to allow the user experience to be much more seamless and free-flowing.

1459826305-8bec176d-2e0a-461c-a1dd-6690531f293b

A trocar has a projection portion which is a part of a tube projecting from a distal end portion of an outer tube in the state in which the tube is inserted in the outer tube, an amount of projection of the projection portion from the distal end portion of the outer tube varying in accordance with relative movement of the tube and the outer tube. That is, the bumps on the scribe lines and the bumps on the neighbor chips are in the status of electrical connections, therefore the electrical characteristics of the bumps on the neighboring chips could be verified by utilizing a probe to touch the bumps on the scribe lines. A control unit controls the parameters of the electric field provided by signal delivery electrodes to prevent the generation of a propagation action potential in the tissue. Due to the use of a heat-generating element, the heating device is protected from electric flashovers and leakage currents with a higher degree of certainty.

1459826306-1d54d6a2-321f-4bba-a960-32a6f0959440

An amorphous carbon layer is implanted with one or more dopants that enhance the etch resistivity of the amorphous carbon to etchants such as chlorine and HBr that are typically used to etch polysilicon. The door frame includes a door frame movable member having a backing plate and a leg portion projecting from the backing

plate; and a door frame fixed member having a flange portion and a leg portion projecting from the flange portion. Existing advanced intelligent network infrastructure may be adapted to provide the location ID service, such as by providing location data queries from a signal switching point to a signal control point. The method further includes outputting to a customer, by the first service provider, second information determined in response to the first information. The methodology of the present invention is capable of implementation on a wide variety of existing semiconductor etch equipment. In order to increase the measurement accuracy and reduce measurement errors, the measurement beam distance can be extended, but without causing problems in terms of manufacture, assembly, and/or alignment.

1459826306-58d7511c-33f7-4918-8b18-e2dd3693b218

Various chromanone, flavanone and abyssinone compounds as can be prepared enantioselectively using a chiral thiourea catalyst. 0.1 to 9 parts by weight of silica, 0. The solar cell and the interferometric modulator may be formed above the same substrate. The retractable lens retaining frame moves the retractable lens group between the photographing position and the retracted position by a driving force to drive the movable lens barrel relative to the fixed cylinder portion. A digital signature storage request is communicated to the authentication server using the identifier for the authentication server. The tunable optical detector detects the optical channel monitoring signal selected by the control signal and generates an electrical signal related to a power of the detected optical channel monitoring signal.

1459826307-72e2b1fb-1646-4316-a5fd-d9045991d5a9

A tool securing device capable of clamping a tool to a machine spindle as well as assisting in the removal of a tool from a machine spindle, all in a tool-less manner. When the braking intention value is determined from the actuation parameter, its direction of change is taken into account. Tobacco flavoring can be incorporated in the film strip by casting or extruding a mixture or the tobacco component may be added to a film strip after formation of the film. At least one cooling fin is operatively connected to the outer peripheral surface and extends in a direction substantially normal to the core member first surface. The melt supplied enters the permanent mold at a speed whose relationship with respect to the strand withdrawal speed is:.

1459826307-b37b7a16-9bdd-4070-b1ed-36352f9c041d

A particle beam system 1 for cleaning itself comprises an irradiation system to direct electromagnetic radiation onto the surfaces to be cleaned and a supply system 61 to supply a precursor gas to the interior of the vacuum chamber 11 of the particle beam system 1. The invention is mounted on a pallet support on a pallet conveyance, and has an RFID interrogator connected to at least one antenna mounted on a vertically movable antenna mount. The scanner also has an optical member provided on the rotatable member that allows the scanning light beam to pass therethrough to be incident upon the incident surface of the photo-detector, and a device for adjusting rotational position of said rotatable member about said rotational axis. When the print data has the image data format, the second memory is set as the transfer destination in the descriptor. Thus, the electrical connector effectively seals the interface between the connector and the end connectors of electrical cables or wires, such that moisture and other debris are prevented and/or substantially deterred from migrating into the interior of the cable or wire.

1459826308-5557e01b-cc80-42eb-bf90-0fc67ab3b5b7

The present disclosure relates to an energy reclaiming system for an electric forklift truck. The active stylus also includes an electrode for wirelessly receiving or transmitting signals through the touch sensor of the device to enable the communication, wherein the electrode is disposed at or near a tip of the active

stylus. The sheet metal frame is stretched between the arms of the body, and cooperate with the body to form a card insertion space. A map of the design surface specifying the design elevation of the milled surface over the area to be milled is stored in the computer memory. In this way, depending on whether the variable valve timing mechanism is in the operation allowed state or in the operation inhibited state, the engine operational region in which the cylinder deactivation operation is performed can be set so that the engine operational region is made suitable for each of these state. An electrical characteristic of a cable or a wireless module connected to the cellular-telephone interface is used by the processor to identify a type of a cellular telephone connected to the docking station.

1459826308-8e1bf029-4d70-49c7-936f-b78919a34ecd

A BJT device configuration includes an emitter finger and via arrangement which reduces emitter finger width, and is particularly suitable for use with compound semiconductor-based devices. The disk array comprises a plurality of data disks and a parity disk. Pharmaceutical compositions comprising these compounds, methods of treating diseases utilizing pharmaceutical compositions comprising these compounds and methods of preparing them are also disclosed.

1459826308-f2255535-04de-4b08-a216-35d5ddeefce9

A scaling system for compressing a bitonal image that has print density control. The proactive browser system includes three components: user-side proactive application terminals, network-resident proactivity enablement servers, and server-side proactive wireless web-based application servers. A plurality of physical sensors mounted to the vehicle generate physical data indicative of respective measured physical parameters of at least part of the vehicle.

1459826309-2f6b9277-edb0-467d-92e2-0311539b0905

A dual display type portable computer can include a first unit having a first display module and a second unit rotatably coupled to the first unit having a second display module. Also described are certain triphenyl acrylate monomers and polymerizable resin compositions. Another embodiment of the present invention is a pair of anastomotic compression rings formed in an ellipse. Corresponding to the latch, the frame includes a protrusion engaging with the latch for restricting the upward movement of the elastic arm. An electrode lead wire is associated with each electrode. Specifically, an ice axe having a rotatable spike which allows selectable fixed angular positioning of the spike in relation to the shaft of the ice axe.

1459826309-409364b8-e6d6-4ded-9ceb-e477928d8d56

A degasifier includes a gas chamber, a degasification unit and a resistance applying unit. The dispenser has a plurality of pins which engage in apertures in the cartridge to enable dispensing of the material. Next, the system generates a deposterized image from the posterized image, wherein color values in the deposterized image are not restricted to the set of posterized color values and instead can be selected from the entire set of possible color values to reduce artifacts caused jumps in color values that arise from posterization. The PSYNC module includes a plurality of PSYNC correlation branches. The illumination scheme also casts a larger area of more diffuse light on the playing surface immediately adjacent to the focus spot to reveal croquet balls resting therein and facilitate play around the wicket.

1459826309-78c3c0a2-f01c-458a-819b-e003562ee99d

A system and method for reducing interference between wireless terminals communicating in a mobile ad-hoc network. A series of acoustic energy pulses of successively increasing or decreasing burst frequencies are transmitted through a transducer assembly. In addition, a gate electrode potential which turns ON a transistor is maintained due to the capacitance of the transistor. Specifically, the plant liquid component can be processed to extract a plant-derived starch

material, plant-derived proteins, plant-derived sugars, plant-derived sugars, and the like. A center of the image is used as a point of origin for the processing tiles.

1459826310-250a70ec-f7e1-4f04-aca6-790b213b3b5f

Aspects of the subject matter described herein relate to adaptive retention for backup data. The apparatus and method may include a remote network controller that logically resides between the host network and the existing infrastructure that are used to provide communications network contact with one or more remote devices. A latch module coupled with the adder latches the output sum signal with a clock signal to generate the latched input signal. The at least one sensing device includes a photo sensor for sensing the produced chemiluminescence and generating signals in response to the produced chemiluminescence. The rotor is oriented generally in a horizontal plane and includes an adjustment mechanism for adjusting the angle of the vessel relative to the horizontal plane in response to the centrifugal force generated by orbiting the vessel about the axis of rotation. The host-fabric adapter comprises a micro-controller subsystem configured to establish connections and support data transfers via the switched fabric, and a serial interface which provides an interface with the switched fabric.

1459826310-9af9db7e-a8c1-4be4-8a61-124285b47111

The invention relates to a metal substrate with a corrosion-proofing bond coating containing adhesion-conferring polymers, based on organic compounds, as well as a method for applying the bond coating. The light source and optical detection system components can be configured so that the exit and entry apertures for light being directed to and/or received from the detection plane are the only members above the touch surface. A cover is coupled with the plate to define a space accommodating the antenna module. The image data format converter converts the print image data into image data in a format handled by an external device. The method and product are able to account for non-Gaussian statistics of noise fluctuations observed in the receivers of optical communications systems, in order to provide for the more accurate simulation of system performance than may be the case using prior art methods based on Gaussian approximation.

1459826310-da7bb07a-d4ac-4804-95a8-55c23afa1298

Disclosed is a control system for processing sampled servo data in a disk drive. Such boosted tag rankings may be used for search result ranking, tag recommendation, and group recommendation. The latch further includes an actuation tab coupled to the body to engage the body in a movable position. The controller is configured to acquire first positional data from a first trace of the first line segment on the touch screen and second positional data from a second trace of the second line segment on the touch screen.

1459826311-0dde9cb6-6915-42ea-853c-11c7199eb237

A dispenser includes a container providing a cavity and a discharge opening at one end. The resin composition comprises polycarbonate resin, an ultraviolet absorber such as 2--p-cresol, an ultraviolet absorber such as 2,2\u2032-methylenebis(4--6-phenol) and at least one compound represented by the following formula or and is used for spectacle lenses. As a result, the monolithic integrated device provides the expansion of the operation frequency range toward the terahertz region as a result of reduction of the parasitic inductance as well as of minimizing the other parasitic parameters of the electric circuitry connecting the resonant tunneling diode and resonator.

1459826311-2bfdd69b-a9f6-43f6-b4fb-e07a60758ac4

Disclosed is a toner composition comprising toner particles which comprise a resin having chemically bonded thereto a polyhedral oligomeric silsesquioxane, and an optional colorant. At least one anchor lug at or adjacent to the outer distal end of the anchor body movable by rotation of the anchor body between a first position

in which the anchor body is able to be inserted into or withdrawn from the cavity, and a second position in which at least one anchor lug engages a respective undercut shoulder portion in the cavity. Also, another via to be electrically coupled to the third wiring as the word line is directly coupled to a contact plug electrically coupled to the gate wiring part of another access transistor. According to an identifier for the phrase, the phrase is supplemented with artificial context information. In other instances, this defect inhibition involves causing a change in crystallization front direction relative to a crystallization seed location. The chipper inserts may include a left cutter insert, a center cutter insert, a right cutter insert and three different size spacer inserts.

1459826311-30ec5055-49c5-4466-828c-b569c97d594f

A circuit for transmitting a signal has a first signal line and a second signal line, wherein the second signal line is arranged adjacent to the first signal line, such that an interaction between signals being transmitted on the signal lines takes place. In one embodiment, the firearm includes a frame and a barrel-receiver assembly pivotably mounted to the frame. The sheet feeder has two open ends to allow for the transport of stacks by a conveyor belt. The lattice can alleviate toppling or other loss of structural integrity of the electrode structures, and the protective cap can protect covered portions of the insulative material from the etch. The urging-direction changing member receives outputs from the switching member, and is capable of urging the drawer member in a drawn-out direction and in an accommodated direction in a changing manner.

1459826311-5784e659-0a3b-4cd3-b9ea-ee3267e85d78

In a method for estimating a sequence of input data symbols of a CPFSK-modulated data signal transmitted via a faulty channel, in the course of an ACS operation for calculating a transition metric value, an estimated value is determined for the replacement symbol occurring during the linear approximation of the CPFSK. A switch alternatively electrically connects the common antenna to the AM matching circuit and the FM matching circuit for achieving the AM function and FM function. The predetermined event can be related to deterioration or improvement in network performance, and the device can respond by correspondingly decreasing or increasing the service quality of the packets being formed.

1459826312-e54c0fad-81dc-4203-8b69-d5705208dba3

A method of reactivating a catalyst, such as a solid catalyst or a liquid catalyst. The system is arranged to hold as a table attribute an insert-only attribute and a row deletion prohibition period, and as an access right attribute a row insertion date and time holding column name and to specify a row insertion date and time when a row was inserted, for disabling said date and time data. The semiconductor-based light source is disposed in an installation space between outer layers of a multi-layer circuit board. As the targeted chemical compositions increase in temperature, maximum energy is delivered using variable frequency radio frequency dielectric heating to adjust the rate of the heating process. By supplying the high temperature reducing gas from the start-up combustor, there is no need to provide an additional device for supplying reducing gas, and the heat required for the reaction may be supplied simultaneously.

1459826312-eea1bb5c-804c-4fda-9d80-8d08d470c896

A surfboard bag hammock that is configured as a carrier receptacle and a hammock by having two different sized layers of material fastened together. A hard disk drive can be included in the switch, with data logging performed to the hard disk drive and with the hard disk drive serving as a second level of virtualization to provide storage of large tables. The arced section can have the flat portion and the second flat section can have a right-angled extension. A holder is mounted on the support arm for pressing the chucking pulley toward the disk table while in contact with an end of the rotary slide knob when the recording medium is in rotation. Finally, the plugged green or calcined ceramic honeycomb is heated to a temperature sufficient

to sinter the plugged green ceramic honeycomb to form a porous sintered plugged ceramic honeycomb. A dielectric insulating film prepared from the coating composition of the present invention has an improved dielectric constant and superior mechanical strength and electric properties.

1459826313-737143b0-a512-47dd-bea4-ccb0f0dbc8f1d

An electronic device such as a computer, circuit board, or integrated circuit is built including circuitry for receiving temperature information. Each message includes a session key within the XML document containing the encrypted data, meaning that each message is interpretable in a 'stand alone' condition, without reference to some shared state between the parties involved in the messaging. The method is also conducted at a low temperature. The fixture or bulb may further include digital signal processing to modify the sound to account for obstructions in or near the fixture. A device and a method are provided for etching an opening in an insulating layer while depositing a barrier layer on the side walls of the opening without essentially depositing a barrier layer on the bottom of the opening. At least one machining aggregate is provided where in the supplying and discharge region one conveying system each is arranged.

1459826314-48123461-717f-40c1-9763-fd0ac0406c3b

A system for controlling an authorization procedure of a task according to a preferred embodiment is provided. One or more image capture devices obtain a plurality of images of an exception object in response to an exception generated in the view volume. The base station and the user equipment communicate amongst themselves by using a first transmission technique. In the standby mode, the method provides power to both a power bus and the electric motor-generator from an energy storage device. The side anchor and central cable may be connected via a predetermined breaking point. The exhaust discharged from the selective catalytic reduction catalyst may have a reduced concentration of nitrogen oxides.

1459826314-ac8204d8-d9c0-4538-8021-3f8e7fb61c7f

A system, electronic device and method are provided that utilize the positioning capabilities of impulse radio technology to track one or more moving athletes. The email server associates the at least one user-defined constraint with the first email message and sends the first email message to a recipient. Once the mobile device is awakened by the customized SMS message, the mobile device responds to the customized SMS message and initiates processing. The method maintains the bandwidth cost of proactive caching in proportion to expected demand for particular data.

1459826314-c75cbe89-92e2-4235-82e9-01a11f29ef05

Techniques for filtering a full-text search result in a full-text search engine level are described herein. The method comprises performing a capture phase of a scan operation on all of the TAP controllers in the star configuration and sequentially selecting one of the TAP controllers at a time to perform a shift state. Methods for producing a maize plant that comprises crossing hybrid maize variety 32N89 with another maize plant. As the transport and routing details change only the directory files need to be changed.

1459826315-2046a74d-2fee-4786-90cc-d7aaa2955082

A method of performing a medical procedure, such as surgery, is provided. The recombinant viruses can be NYVAC or ALVAC recombinant viruses. A control circuit is coupled to the transducer.

1459826315-547e85cd-7ab3-4857-8aa7-8ff5863d13da

A vertical trench double-diffused metal-oxide-semiconductor field effect transistor characterized by a reduced drain-to-source resistance and a lower gate charge and providing a high transconductance and an enhanced frequency response. In addition, the invention concerns a microscope, which contains such an objective. A socket is disposed within each arm of the forceps. Particularly, the end cap members 122 and

the top rail members 100 cooperatively provide a direct load path from any location on each of the side walls 14, 16 to the bracket 210 which may be coupled to a portion of the vehicle 12, thereby reducing the likelihood of damage to the sidewalls 14, 16 and the front wall 20. The frequency of debug signals is dependent on the frequency of a clock signal provided at the input, and each debug signal selects its respective mode for a length of time longer than that of each other mode of the multi-mode circuit, or each debug signal selects its respective mode for a length of time shorter than that of each other mode of the multi-mode circuit. The indication may be provided by changing the color or other display characteristics of the electrode on the navigation system display or by way of providing a waveform indicating the electrode coupling.

1459826315-694f618e-5d91-400f-a35c-c88714dc8e66

An alternating current-to-direct current power supply has a first stage providing a first DC voltage and a second stage providing a second DC voltage. Embodiments of the present invention reduce power over the desired range of frequencies by reducing the sidelobe power of tones comprising the UWB signal. Each blade has an apex region, at which the blade contacts the second shroud. At least one imaging apparatus is built in the mobile electronics device and applied to scan product serial number barcodes, product features, and two-dimensional barcodes associated with the products to receive, record or read production and test information of the products, and then store the production and test information in the storing unit.

1459826315-91e640d6-cb31-4a88-8c40-863f4933330e

An apparatus for measuring a spatially under-sampled Bidirectional Reflectance Distribution Function of a surface. An angled plate means set apart from the upper casing forms the paper feed opening. The shallow trenches and the deep trenches are parallel to each other. Inclusion in the message of the element, also known as the subset reset element, facilitates return to an idle mode of the user equipment units involved in the subset of the connections. Each imaging system illuminates the sensor elements of the associated sensor region with a light signal indicative of the object being monitored. In addition, the invention also provides a color wheel further including an auxiliary fixing element, which is set on the fixing element and has an outwardly extending holder.

1459826316-4c8a35c5-68e2-4983-b45c-98bcab840285

Methods are generally provided of reducing speckle of a laser beam from a laser source guided through an optical waveguide. At least one primary inductive coupling coil is mounted on an article of apparel worn by the user, so as to place a primary coil adjacent a first intermediary inductive coupling coil on the first independent accessory. An opening with an upper portion above a horizontal plane and a lower portion below the horizontal plane extends downwardly through the dielectric layer.

1459826316-63afecc4-2534-4995-b01a-cbc65741a3db

Selection criteria for dyes that predicts efficiency and performance for plastics welding. In one embodiment, the apparatus includes a processing object panel, a panel supporting unit supporting the processing object panel and a voltage applying unit including a first electrode and a second electrode positioned on the panel supporting unit via the processing object panel interposed therebetween and having different polarities. The second fuse block has second fuses for corresponding to a column address signal. The dynamic device is used in the establishment of inter-domain switch connections.

1459826316-de1469a1-0ca1-4983-a3cd-9945b4d65d53

A temporary rubber coating compound, which is preferably sprayed from a can, can be used as a protective coating for vehicle surfaces against insects and other debris on the front of vehicles and can be used as a protective coating in truck beds before a plastic drop-in truck liner is installed. The nozzle body includes a vapor path configured such that vapor recovered from the vehicle tank during refueling is

passable therethrough. A desired sampling time instant and carrier phase offset for synchronization may be simultaneously obtained due to correlation between carrier phase and symbol timing detectors.

1459826317-0d6d7374-6579-4900-8768-3dadd9f3a1d2

A two pin communication interface bus and control circuits are used with circuit boards, integrated circuits, or embedded cores within integrated circuits. The solid-state image pickup device 1 is back surface incident type and photoelectrically converts light indent on the back surface S2 of the semiconductor substrate 10 from an object into electrical charges and receives electrical charges produced by photoelectric conversion at the light receiving unit 14 to image the object. One method of the present invention involves providing a plurality of process modules, each of which has an independent module controller that is adapted to perform at least run-to-run control of the processing tools within the process module, yield management analysis, scheduling of materials, and movement of wafers within the process module. The performance of objects to be monitored in the party of the long monitoring interval is estimated from the performance of the objects to be monitored in the party of the short monitoring interval. The shared scan cells are coupled in series.

1459826317-910d6e5c-ecfd-4572-91f6-296fd8d838a8

A number of flat tubes, flat tube heat exchangers, and methods of manufacturing both are described and illustrated. 0.25% by weight based on the total weight of solids in the dispersion. In another aspect, at least one of the dielectric layers includes a dielectric material and nano regions embedded in the dielectric material, where an atomic composition of the dielectric material is the same as the atomic composition of the nano regions, and a density of the dielectric material is the greater than a density of the nano regions. A stopper tab positioner rotationally connects the stopper to the cylinder. Two of the pins are engaged by the pressing portions, and the other two pins are engaged by the pivot portions when the pivot portions are pivotally moved toward the printed circuit board.

1459826317-d77c862c-6f0e-4d56-99e7-0509b7d61894

A method and system to facilitate on-line trading is presented. The apparatus is distinguished by the fact that the control mark is registered by a color measuring instrument and that the intensity threshold of the optical sensor is calculated by the computer in dependence on the measured color value registered by the color measuring instrument. The shifted bits of data to be transferred may be sampled in a second clock domain at a fixed time within each clock signal of the first clock domain. A graph matching method is then used to compare the graphs and determine which failure mode and symptom correlations are common between them. The first manual handle that controls the first manual valve.

1459826318-7a295c96-31cf-4b40-a71a-f2c22ac8e88f

Aminoalkyl glucosaminide phosphate compounds that are adjuvants and immunoeffectors are described and claimed. The authorizer can be a single entity or comprise a hierarchical or distributed entity. In one form, the magnetic material being subjected to compaction is a mixture made up of two or more different magnetic material powder precursors.

1459826318-dbd39c1c-e903-485b-beea-ee05b2e674b2

A semiconductor memory device generates a precharge control signal asynchronous from a dock signal. Rather than introducing phase differences between the various vibratory excitations, as is the case in prior art, the invention introduces a frequency offset between the fundamental frequencies thereof in order to avoid a high-amplitude vibration at a common excitation frequency, arising from the spectral spread thus obtained. The BMC communicates with the tamper detection switch and sets a VPD flag to false when tampering is detected. At least one damping element is provided and disposed between the structure and the fittings.

1459826319-0530a208-191f-4314-bb9b-ff59bfeabdd8

The reliability of a semiconductor device including a power semiconductor element is improved. The modes can be transmit and receive modes, and the connectors can be configured to perform various functions depending on the mode of operation. The probiotic/prebiotic compositions disclosed herein are packaged using a nitrogen purge instant bonding anaerobic encapsulation process to maintain high viability for extended periods. The system also supports the assignment of devices to different partitions in the computer system. Each of the memory cell transistors comprises a first-conductivity-type source region, a first-conductivity-type drain region, and a first-conductivity-type channel region arranged in the semiconductor layer in the column direction, and a gate portion formed on a side surface of the channel region in the row direction.

1459826319-1732ef4a-44a9-4d6a-86c1-652711d01c8f

Data for switching a slew rate of a data output circuit included in a data input/output circuit between a slew rate in a normal mode and a slow slew rate is stored in a mode register. Accordingly, in the conventional processing in which rate of change in gradation is improved by making a drive voltage of liquid crystal at the time of change in gradation larger than normal liquid crystal drive voltage to increase response rate of the liquid crystal panel, interference component is also emphasized. The leg portions are slidable relative to each other, and an adjusting screw is engaged with the upper clamp to effect relative movement between the clamping surfaces to clamp a shelf between the clamping surfaces. At least one U-shaped auxiliary bow member, which can be pivoted in a limited angular area about an axis of articulation parallel to the plane of the bow member, is arranged at the level of the bow member and the length of the legs of the auxiliary bow member is greater than the distance between the axis of articulation and the bow element of the corresponding bow member. The controller determines a limited time period on the basis of the total number of the terminals, and sends a second request signal indicative of the limited time period to the terminals.

1459826319-71ee8913-2112-4cb6-bcef-b5a1c5810aa4

A planetary gear for variable transmission, particularly a planetary gear for variable transmission towards a tail rotor of a helicopter. The performance of the high-voltage lead and the can electrode can then be independently monitored, thus indicating which lead is inoperable, should one become inoperable. When power is diverted to the power stealing block, the power stealing block may steal power from the power source and store the stolen power on a storage device.

1459826320-1bb06081-6d5a-4efb-9f4d-a1a149938d73

Wireless client devices within a wireless network exchange data with other wireless devices during particular time slots determined by the network. At least a first data composed of first data bits and a second data composed of second data bits are arranged in order that at least a bit of an N-order of the first bits and a bit of the N-order of the second bits are stored in one of the cells, the N being an integral number. At least one proprietary database of newly discovered adverse event information is created and utilized, and new characteristics of or uses for the product or device are determined. The server compares the quantity of data items and the received indication of the display control size. In exceptional situations, the speed limiter can be temporarily suspended, it being possible for an exceptional situation to be, in particular, the upward transgression of the predefined speed limiting value or a depression of the gas pedal.

1459826320-59940527-cc03-4900-a70a-1a13fdd242c2

An exemplary method facilitates automatic recovery upon failure of a server in a network responsible for replying to user requests. For example, the suction apparatus may be arranged adjacent to an electrocautery electrode, which may generate smoke during operation, for evacuating smoke from a surgical site. The

article for protecting the automobile body is mounted to a second article formed of the same material as the automobile body. The clamping portion receives and retains a power pin coupled to one end of the spoolgun power cable in a receptacle that is manually tightened and loosened. In addition, security information may be first transmitted through the satellite to the user devices so that a peer-to-peer network may be established. Each substrate has a plurality of conductive bumps on its facing surface wherein the conductive bumps on each substrate are the mirror-image of the other substrate.

1459826320-7d839bf0-544d-48d9-bdda-c99b084b80b5

Multiple scanning modes are provided for an array of electromagnetic radiation sensors. The ramp is wedge shaped and comprises a folded bottom member affixed to a pre-formed top member having integrally formed guide rails. A second member extends upwardly from the second end. At least two wire bonds in the integrated circuit are substantially perpendicular to one another at a crossing point in a plan view of the integrated circuit. The face protector is particularly useful in activities such as sports, for example hockey, football, or baseball which involve activity specific lines of sight. A bottle is positioned beneath the dispenser.

1459826320-92182dd9-4f7b-44dd-94c2-6d6dc0918782

The yield of semiconductor devices is improved. One exemplary system includes a posting module, a retrieval module, and a web server. A first data density value may be determined for a first portion, and a second data density value may be determined for a second portion. Such displays include bi-stable displays, such as interferometric modulation displays, LCD displays, and DMD displays.

1459826321-71f39cd7-f804-4be0-9b56-a2230a0ea03e

The invention relates to a touch screen system with a touch screen comprising a transparent and electrically conductive surface arranged to receive touches from users of the touch screen system; and touch sensitive elements arranged to detect the position of said touches on said electrically conductive surface. In the scanner, the unit circuit constituting the scanner includes an output transistor that selectively outputs, to an output terminal of the unit circuit, a signal given from an outside. The present invention also provides compositions relating to the same. The neck portion of the stud and a center portion of the inner retainer are disposed within a center hole of the outer retainer. This control circuit monitors the pressure read by the pressure transducers to determine which gas source will be placed on service depending on user preferences, and directs the operation of the control valve to effect those choices. The method includes calibrating a ground base station antenna array according to forward link calibration coefficients received from an aircraft as part of a communication signaling protocol during operation of the air to ground two-way communication system.

1459826322-019f40c9-5a4d-4abd-8427-69acb2a81d13

A transformer comprises a substrate comprising a semiconductor material, a first conductor over the substrate, a second conductor over the substrate, and a magnetic layer over the substrate. The process for the production of its new intermediate products according to the invention starts from economical starting materials, provides the intermediate stages in high yields and high purity, without chromatographic purification steps, and allows production on an industrial scale. The method can further include disposing a conductive material in the via while the via is exposed to a supercritical fluid. The control system includes a first boiler unit controlled by a first boiler control unit and a second boiler unit controlled by a second boiler control unit. The estimates of the sources are output. An organic light emission layer and an upper electrode are disposed on and above the pixel electrode.

1459826322-f36e7929-77ef-4542-a6e4-16818e9351ad

A method to delivery encrypted digital content to a end user system for playing the

content comprising the steps of: reading from a computer readable medium metadata which has previously associated with the content. The hydrofoil includes a slip-on yoke designed to compressively fit on a cavitation plate of a boat motor lower drive unit. The system further includes a signal switching processor which compares the signal durations to predefined parameters which define various display mode switching thresholds. A volume control knob permits the traveler to set an appropriate volume level to provide his or her favorite music in surround sound and total comfort. An electronic component includes a barrier film formed on a semiconductor substrate. or less, a latex polymer which has a glass transition temperature more than 50°C.

1459826322-f49ec6cc-4b46-4e51-9229-8026b0f1e2f7

A device and method of providing any one of a plurality of desired levels of a regulated signal output to a load is described, wherein each desired level is a function of a corresponding reference signal. The fore body includes a planar front strike face, heel and toe side walls, a rear wall, a top surface and a generally planar sole. The test card can test all SD, MMC, MS, SMC devices and functions in one time in a bench without inserting and removing the media devices, thus accelerates the production line test speed.

1459826323-10963a93-297e-4003-a1e9-50a8b0aea7dd

According to embodiments of the present technique, a system and a method for obtaining low-noise measurements for a wide range of analog signal strengths is provided. The method and algorithms described herein may reduce data size to such an extent that data that was considered too large to be practically transmitted in a useful time frame can be transmitted in real or near real time. A hash function is performed for each memory element.

1459826323-30d0628a-1498-4f63-b31f-0526eead5b10

A method for managing a plurality of application window representations is described. It further includes an opposed high force actuator for operably urging second tooling into engagement with the first tooling. Each of the supports is attached to one of the bases and extends upwardly therefrom. Another aspect of the universal joint features an arrangement for cleaning the grease under the cap. The nutritional supplement composition is administered in amounts effective for limiting weight gain and/or enhancing weight loss, as well as promoting overall good health, in the treatment of body weight conditions, including overweight and obesity.

1459826323-d15fbba9-00eb-4aba-abd8-845ce8a378e4

A false twist yarn including synthetic fiber yarn having elongation, crimp rigidity, crimp appearance stretch ratio, dry heat shrinkage stress maximum value, deformation degree of single filament and entanglement number in specific ranges respectively. In an example, the cover includes sections that have differing pore sizes. Because their functions are different, the control system can determine which actuator is in which location, and thus locate the address for each actuator on the bus. An electrical component is connected in series in the loop for use in digital communication with the two-wire process variable transmitter.

1459826324-188fadcd-432a-4df8-990a-9f36598cb23b

A computer system having multiple components capable of being in either a wake or sleep state includes a controller and a voltage regulator. One mode of the present invention is a fluorescence measurement device for casting an excitation light of a predetermined wavelength into or onto a sample and detecting a predetermined wavelength of light contained in the fluorescence generated from the sample irradiated with the excitation light. The data of visual objects includes two-dimensional projections of the visual objects.

1459826324-7be9bdad-d3be-4224-bd84-890a87176455

A scalable method allows preparation of bulk quantities of holey carbon allotropes with holes ranging from a few to over 100 nm in diameter. The aluminosilicates are selected from a group consisting of blast furnace slag, clay, marl and industrial by-products, such as fly ash, and has an Al<sub>2</sub>O<sub>3</sub> content greater than 5% by weight. The reservoir is adapted to receive effluent from the wound and the pump is capable of maintaining a controlled level of suction at the wound. The dielectric layer can be formed by atomic layer chemical vapor deposition, physical vapor deposition, organometallic chemical vapor deposition or pulsed laser deposition.

1459826324-987d902f-8dba-43d3-8bef-6e5551b5cb93

When recording or reading an optical disc having plural data recording layers, which data recording layer the light spot is focused on is detected to improve playback signal quality and signals written to the layer on which the light spot is focused are read more reliably. The method comprises illuminating a body exposed to the plasma with electromagnetic radiation from a source, wherein the body and the source are cooperatively configured such that the body will generate photoelectrons upon exposure to the radiation from the source. The top surface of the carrier is designed to hold and rotate a wafer having a one or more formed layers to be prepared. The liquid crystal panel is provided for modulating the polarized state of light output from the incidence-side polarizer to output the modulated light. The holographic filter may then be used to simultaneously detect peaks in the spectrum of the matching substance.

1459826324-c95c032a-d12d-4825-8ace-37e1d3b0682b

The present invention relates to a safety device for a firearm with a trigger bar in said firearm. A main tool menu allows selected tools to be launched so that each tool populates a respective window. In other words, multipliers 31, 32 square the I signal and the Q signal, respectively, and an adder 33 adds the respective results of the multipliers 31, 32. The frames project around the body of the SCBA tank and extend out to position rolling elements for providing the transportation needs. Specifically, the invention relates to the use of compounds capable of modulating the expression or function of PC1F1 and their effect on the function of Pdx-1.

1459826325-b6745986-1201-4bb4-bb42-90d334bf3cfa

A system and method for enabling the replacement of electric toothbrush heads on toothbrush models that require users to replace the entire toothbrush head assembly is described. Methods of preparing the compounds are also described. The bay housing has a bay into which a drive unit is inserted. The end of the board is located in the open surface of the case. The pump is configured such that it pressurizes fluid within a workstring assembly during the pump's downstroke. The socket includes a socket grid to receive one or more pins from a component, a frame coupled to the socket grid to provide structural support, and a cable receptacle integrated into the socket to receive a cable.

1459826325-cec15da1-4fb0-4058-a63f-f6392004569d

A system and method for asset tracking and monitoring using antenna diversity. The battery pack includes a first case having an inner space, at least one battery cell arranged in the inner space of the first case, a second case coupled to the first case to accommodate the battery cell, and a coupling part arranged inside the coupled first and second cases. If so, the method further includes grouping search results by, for example, domain and displaying an indicator in proximity to a URL associated with search results that are related to the domain. An inert gas source is connected to the gas inlet, which is capable of allowing inert gas from the inert gas source to flow into the interior space. The process allows for selective acidizing of less permeable zones of the formation and more uniform stimulation of the hydrocarbon bearing formation. In particular, compounds from *Withania somnifera* are the preferred source of the withanolides, although they can be from other plant sources.

1459826326-0d975312-4f94-4c0e-82da-1db2a66cbc67

A method of ex-situ activation and dry passivation of supported noble metal catalysts including the steps of reducing in the presence of hydrogen and dry passivation by cooling in an inert atmosphere and exposing to air or by filling the pores of the catalyst with a low sulfur oil before exposing to air. The patient bed has a number of height-adjustable elements arranged like a matrix that are individually adjustable in terms of height. An attachment pin attaches the flange member to the cylindrical sleeve. Next, a fragment program used in a fragment processor of the GPU is optionally updated. The control board includes a processor that outputs an image signal and a control signal and a timing controller that outputs a first control signal to control the gate driver and a second control signal and a data signal to control the data driver in response to the image signal and the control signal.

1459826326-2c54bdb1-f3a1-48fe-8241-3acc1ab84223

A clot retainer for generally separating liquid from solid components in a specimen enclosed in a container having a closure. The top unit is first unfolded from a first folded position to an attitude angle of 160 to 170 degrees, and swiveled by 180 degrees to be folded onto the bottom unit in a second folded position at an attitude angle of 180 degrees. Alternately, in a perivascular configuration, the ultrasonically-matched material is operably intermediate the blood vessel and the sensor. The performance evaluation data may be used to present performance feedback to the game player while the game player is singing. A separate, attachable thumb spica member is provided for optionally configuring the wrist support to include a thumb spica.

1459826326-8d20fac9-32af-4032-928d-36e557548219

A user's domain expertise may be estimated through several factors by monitoring different aspects of a user's interaction with a web browser. A rotatable forming mandrel has a working surface with a contour corresponding to that of inner surface to be formed. A cooling device can be provided for cooling material in the interior cavity of the sampling vessel.

1459826327-873c24ac-56fa-43e1-92ae-6a7817a1847d

A logo data generating apparatus and method easily generate logo data suitable for storage to and output by a particular target printer without requiring a complicated process defining the image processing and data communication parameters. In a disclosed example, each gripper includes a plurality of prongs that are moved between neutral, closed and released positions that each facilitate a different portion of the assembly process. Location information for a border of a smart area being defined may be determined using a mobile node or determined using the plurality of nodes. The manipulated attribute information for each selected component is transmitted to a server. Both the first layer and the second layer bend to the center of the spiral-wound. , a structure or list of storage types in order of priority for different application data types.

1459826327-bfaa89cc-31d3-4f45-a271-e23a884fd563

In accordance with the present invention, a chip scale package is manufactured at wafer-level. The first transmission mechanism drives the massage seat to reciprocate moving in the outer housing. The dual DC output may connectible to the input of an inverter.

1459826327-dc7229af-88f7-444c-af09-3b48f06f9430

Systems and methods for image processing, comprising receiving a video frame, coding a first portion of the video frame at a different quality than a second portion of the video frame, based on an optical property, and displaying the video frame. Then a switch RSP is turned on and then a switch MIX is turned on to combine together the image and noise signals thus held and thereby produce, as a voltage signal, a noise-free image signal at the node between the capacitor Cs and the

switch MIX. An upper may comprise coarse aggregate and serve the primary function of weed suppression; a middle layer may comprise a mixture of coarse aggregate, fine aggregate, and fine organic material and serve primarily as a growth medium for vegetation; and a lower layer may comprise high-density hygroscopic material and serve the primary function of water retention.

1459826328-00d8f55f-170f-43f8-9213-37f4fbdc7f59

In a method for manufacturing a perpendicular magnetic recording head, a groove defined by the inner side surfaces of a first nonmagnetic layer and the top surface of a main magnetic pole layer is formed using the difference in etching rates for dry etching between the main magnetic pole layer and the first nonmagnetic layer. An inbound call comprising a call origination identifier is received by a call processing module, which uses the call origination identifier to retrieve call record and call processing information associated with a prior call session. The challenge preferably includes a question that the sender must correctly answer in his response. Capillary pump arrays are provided, and numerous applications for capillary pumps are disclosed. Transfer of the data may be to another network processor, another processing element, or to another memory.

1459826328-09b8c873-2544-4c25-a983-a813490b06be

An OFDM wireless transceiver uses a digital automatic gain control module. Using previously entered flow rate information, the meter establishes quantities of flow during each pumping cycle or totals for predetermined time intervals such as days or weeks. Preferably, there is a one-to-one correspondence between the location for a RO in a RO file and a location in the RO navigation file for the status bit which identifies whether its corresponding location in the RO file contains a valid RO or not.

1459826328-0fd5e0c3-eff0-4904-a527-2c24d9f7814c

The invention relates to an operating unit for architectural coverings, in particular roller blinds or shades. A groove is formed on the exterior of the tube between the first and second ends and receives a seal element which is engageable with the land surface on the fitting. for a time of between 90 and 120 minutes, quenching in air from 490 C. The invention includes an ATM interworking multiplexer and in some embodiments, a processor.

1459826328-1658a7cf-e435-4a38-9762-8507138e56c2

An apparatus, system, and method are disclosed for bad block remapping. The thermal body has an enclosed phase change material which provides latent heat to the device under test such that there is negligible temperature variation realized by integrated circuits being tested. The computed load is compared to a preemption threshold and if the computed load exceeds the preemption threshold, the state of at least one of the hash-buckets is changed from the first state to the second state. A drive shaft extends through the cavity and has a helical blade traveling along a major length thereof that is partially seated within the bottom support member. The isolation oxide is in a substrate, a gate layer is on the substrate, a patterned metallic layer is on the gate layer, and a first patterned etch-stop layer is on the metallic layer.

1459826328-483c33c9-207c-483e-bfb1-e27b7cdd80fc

An apparatus includes multiple first reservoirs and multiple second reservoirs joined with a substrate. The first material is harder than the second material. Variation in the emission spectra data relative to those of the spectra obtained with healthy subjects is a discriminatory factor vis--vis Alzheimers disease.

1459826328-79d20dc4-cec2-49a2-ae99-7fdd83a3bfe2

Photolithography methods using BARCs having graded optical properties are provided. The method and algorithm module queries those descriptors that are most likely to have activity, but also reliably queries all descriptors over time, and dynamically

adjusts the frequency of queries to maintain maximum efficiency as conditions change. A switching device is configured to generate an output control signal having a duty cycle that is a function of the drive signal.

1459826329-677de2d8-ec2f-4ef2-8d11-bc82d771f6e0

A ballistic-resistant material having a first exterior layer formed of a ballistic-resistant non-woven textile, a second exterior layer formed of a ballistic-resistant non-woven textile, and an interior layer of ballistic-resistant woven textile arranged between the first exterior layer and the second exterior layer. The total package weight includes the weight of a container, an article to be shipped and a normal amount of dunnage. The gas grill burner apparatus also includes first and second C-shaped hollow gas tube end portions slideably engaged within opposing ends of the parallel hollow gas tubes.

1459826329-c34e674c-6cf3-404b-9162-19adb8875448

A Variable Speed Drive for subsea installations, subsea vessels or subsea vehicles, as well as to a corresponding subsea installation, subsea vessel or subsea vehicle, has an alternating current/alternating current converter having a current-controlled capacitor-less direct current link. The present disclosure also relates to a method for increasing the current gain in a silicon carbide bipolar junction transistor by the reduction of the surface recombination at the SiC surface between the emitter and base contacts of the transistor. The stem is integral with a capsule and the stripper mounted on the neck of a small bottle containing the cosmetic product. In addition, other properties of the resulting nonwoven web, such as the tensile strength and energy to break, are not adversely affected, by the addition of the second polymer, in ways that make the resulting nonwoven web unusable for its intended purpose. This structure realizes a thin composite electronic component having an excellent high-frequency response. The tubular members are coaxial and have head surfaces tightly connected to each other by means of a first, upper ring and a second, lower ring.

1459826330-28b4b5c0-1b55-4b4c-a87c-97b1fc0f6201

A multi-player game system includes a lobby server and a plurality of game devices. Specifically, the apparatus, methods, and computer program products of the present invention, taking advantage of the independence of samples, updates each of the coefficients of the function as each sample is received. The nonmetal oxide layer is located on the first surface of the wafer. The plurality of resin-supply ports open to a cylindrical space formed between the inner surface of the mandrel insertion hole and the outer surface of the mandrel at a position separated from the extrusion hole in the die, and the plurality of resins flow together in this space. However, if the host is pass-through enabled, the host recognizes the pass-through information.

1459826330-40ea088b-00bd-48bc-82c3-9320dea338ed

A process for producing a conformal electroluminescent system. Provided herein are substituted 3-aminopyridine derivative compounds, substituted 3-aminopyridazine derivative compounds, and pharmaceutical compositions comprising said compounds. A polymer seal element extends along a recess within an exterior surface of the flange. The bonding method can be applied to a premade optical element or to a block of optical element material which is later formed or shaped into an optical element such as a lens or an optical concentrator.

1459826330-798ddbc5-08a6-49e5-9b7c-da6e63cc70c5

A method of operating a substrate processing chamber. The connecting block comprises a molded plastic housing and can accommodate a two-pair or four-pair IDC configuration. The invention further relates to a substantially bovine insulin-free proteinous material so obtained, and to its use as the protein part or raw material in the preparation of substantially bovine insulin-free infant formulae or other special nutritive preparations or consumption milk, other milk drinks or other milk

preparations, or as a raw material therein. Then, nth order surface related multiples in the pressure wavefield are iteratively calculated utilizing a product of th surface related multiple free data and the extrapolated down-going particle motion wavefield component.

1459826330-b4f7fc15-22ac-4523-922e-7dbb581d7e58

A flux sharing magnetic circuit has a parallel arrangement of secondary electromagnetic circuits with independent loads. As a result, the sub-threshold current can be maintained slightly above the holding current of a thyristor used in the memory cell despite substantial temperature variations. A conical portion formation step moves the second portion relative to the first portion in a second direction opposite to the first direction, eliminating the level difference.

1459826331-a662f677-a252-4e9d-ae2b-d2a031b358ae

A process has been developed for producing a diesel boiling point range product and an aviation boiling point range product from renewable feedstocks such as plant and animal oils. At least one alkaline earth metal peroxide is brought into contact with such waters or the like, especially to effect immobilization of phosphates and heavy metals except manganese and iron therein. The probe includes a sensor in the distal extremity for providing an electrical signal to the display module when the probe is disposed in the blood.

1459826331-fefdd657-5211-4e58-8c89-cdcbdade8339

A power supply for a guitar amplifier and the guitar amplifier and method of operating the guitar amplifier. First it contains a chart to help the golfer to determine the how hard to strike the golf ball when putting. The master appliance also causes a graphical representation of the current configuration of the controlling device to be displayed on a display device that is associated with the master appliance. An edge change is detected in the data in the buffer.

1459826332-13bf9184-f9c6-4ad7-9afd-b30f8ebdced8

By providing a pre-printed promotional system which employs two cooperating panels securely affixed to each other, with each panel being movable between a folded, compacted position and an unfolded, extended position, a unique, hands-on, printed, visually exciting and interest generating advertisingpromotional product is attained. A signor key is associated with a signor of a hardcopy document. In this way, in the infinitely variable transmission, input of an excessive torque when the speed ratio is in the vicinity of infinity is prevented. The computer system grants or denies access to the restricted records based upon the indication from the client. The management instructions includes the instruction to periodically and continuously, load certain performance, alarm or informational data into its OTN overhead and transmit that to a similar transceiver at the remote end of the communications link. The nautical instrument incorporates a mounting system that achieves slidable locking engagement of the nautical instrument to a bulkhead plate that is permanently secured to the surface of the ship.

1459826332-659cbec9-c34e-4bd2-a84a-5d074cd74dd9

Methods, apparatus, and products are disclosed for altering behavior of a multimodal application based on location. A cartridge may extend through the end cover and into the fuel nozzle assembly. The apparatus comprises an ion source for emitting ions in a pulsed manner, an analyzer for realizing a helical trajectory, and a detector for detecting the ions. A suction equipment is provided to suck dust containing air through the suction opening of the big container.

1459826332-b6d5bce3-ad79-4986-9369-3b81304ed14c

A cover assembly for a vehicle carried open top container wherein a cover is connected at one end to a vertically adjustable tower and an opposite end to a cross member connected to a pair of pivot arms that are mounted at their lower ends to be pivoted by at least one hydraulic actuator that is mounted to the vehicle

intermediate opposite ends of the container and adjacent the bottom thereof. The apparatus provides a main hearth, a plurality of optional refining hearths, and a plurality of casting molds or direct molds whereby direct arc electrodes melt the titanium in the main hearth while plasma torches melt the titanium in the refining chambers and/or adjacent the molds. The invention also relates to methods for producing a soybean plant containing in its genetic material one or more transgenes and to the transgenic soybean plants and plant parts produced by those methods.

1459826332-f7c8cd00-9af2-4b7a-97ad-086032917354

The invention concerns a method for synchronising clocks of base transceiver stations in a telecommunications system and a mobile communications system. The file creating method creates a rack of virtual RAM file that is divided into several units according to divisional units for individual divisional units, and a record allocation table file that stores a record position of each divisional unit of the RVR file. The outputs of the branches are combined to produce a combined signal which is used both for determining the data intended for the receiver, and in a feedback loop to improve the sets of weights. In addition, peripheral devices that include an electro-mechanical or electro-acoustical component connected to the system bus can also communicate directly to each other without using the system bus. 3Ag+X\u2296\u2192AgX\u2193+e\u2296\u2003\u2003.

1459826333-33ed15ec-5232-4cbd-8e27-d371181f80cc

A lighting system has first and second light sources operable to generate light having cool and warm white color temperatures, respectively. The utility vehicle comprises a generator and an attachment interface. The peak values of the reverse-recovery currents of the diodes are substantially less than their peak forward operating currents. A protective door may be between the upper cover and the middle frame.

1459826333-a81fba25-664e-491b-b4d6-5956ed7a4cfa

A location technique is utilized within a wireless communication system where power measurements from various nodes are weighted to determine a node's location. No high volume of water, no toxic additives to the water and no sand proppants are used for hydro-fracture of the gas shale or coal bed. The contents of the electronic attachment are then reformatted into a second electronic message using standard protocol, such as HTML and is sent back to the receiver. Web browsing by the user is supplemented by the information of the members of the focal group.

1459826333-af1b0f1a-134b-48d5-b3c4-7e7853ee49cb

Disclosed is a fuser member, including fusing apparatus and electrostatographic methods which employ the fuser member, which has improved wear resistance and a reduced tendency to contaminate with toner particles. One embodiment of the invention uses a processor's micro-code to verify a system's firmware, such that the firmware can be included in a trusted chain of code along with the operating system. Continuing, the method applies cyclical shift prior to transmission via the first grouping of the transmit antennas.

1459826333-ff287043-973c-45db-8dbb-99c6a71a4237

A gear unit comprising a shaft and a gear each having a first axial section and a second axial section. Multiple classifications and analytics may be defined by a user. The shell-like configuration comprises a plurality of optically active surface sectors alternated to connecting walls which are substantially radial with respect to the source. A movable cylinder unit coupled to the plurality of carriers may move the carriers. Criteria are applied to the features. The present invention contemplates various methods and apparatus that facilitate one-time or ongoing downhole fluid characterization by video analysis in real time.

1459826334-08e4f2bf-944c-433a-ab93-36ab4d33fe31

The present disclosure describes a system and method for reducing total batch

completion time using a per-destination max-min fairness scheme. The data processing apparatus comprises a plurality of processing units each having a local cache structure associated therewith. Also provided by the invention are tissue cultures of the soybean variety S110147 and the plants regenerated therefrom. Specific applications for the diplexer are also disclosed and include use in a GPS transmitter, GPS receiver and as part of an electronic scan array antenna. The partial non-display voltage output section drives at least one of the data lines based on the partial non-display voltage.

1459826334-8ffcfecf-518e-43ca-8bbf-eaba9c55bf24

A device for attaching a line or wire cable to a connecting element includes an upper and a lower die that each has a press surface. Particular biological environments contemplated by the present invention include but are not limited to vascular regions and cavities as well as mucosal membranes in animals including mammals, reptiles, amphibians and fish and in avian species as well as hooves of livestock animals. The desired information is estimated from the new version of the baseband signal. Benefits of such a system include reduced mechanical costs, longer drive life, better redundancy higher availability, correct drive power, lower energy use, closed loop system monitoring and reduced collateral damage. As opposed to the present technology, the instant technique does not require creation of quantum sized liquid metal droplets to synthesize nanowires. A guide bushing establishes the radial position of the cable axis and is stationary during blade movement, thereby permitting the opening in the bushing to closely approximate the cable diameter.

1459826334-b1af27f1-7921-41bd-81db-936887353bc1

A motor-driven lock includes a housing, a lock body, a motor, a transmission device mating with the motor and the lock body, a lid, an enclosure, and a cover. A clip attached to the belt is inserted into a slot in the drive spool of the belt drive platform. In response to the detected intensity, a determination is made of whether the optical fiber is properly connected to the device. A separate partition within the schema object is then automatically created for a) each identified unique date of the entries within the log file data that is not associated with an identified existing partition, and for b) each date immediately preceding each date in a) unless the partition has previously been created.

1459826335-90996ee9-dc76-4758-9a45-6857191a265e

A three dimensional puzzle assembly 12 is formed of a plurality of puzzle pieces 18. The method further includes dragging a second dragging kinetic frictional rolling force inducing member having a kinetic friction coefficient larger than that of the first dragging kinetic frictional rolling force inducing member and installed at an intermediate portion of the rolled tube to secondarily absorb and reduce kinetic energy. The memory circuit further includes a plurality of local bitlines, wherein each cells is coupled to one of the local bitlines. A method of administering the gellan gum film coated tablet as a pharmaceutical. 5 to 35 atm %, respectively, or formula :  $P_{Tu}R_{ux}T_{ay}T_z$ , in which T is at least one element selected from the group consisting of Ct, Mo, Nb, Zr, and T; u, x, y, and z are 40 to 70 atm %, 0. According to the present invention, a scheme is provided to enable devices which operate in TVWS to request response information on an available channel in a plurality of geographical locations in a more accurate and efficient manner.

1459826335-e71ef69f-3cee-453a-a085-44c7f8c889aa

An antireflection film laminate comprising a low refractive index film on the surface side and a high refractive index film which is disposed under the low refractive index film in contact therewith, wherein the high refractive index film is formed as a discontinuous layer in the planar direction. The tachograph additionally includes a further interface, by which a network connection can be established between an external data input device and the output unit, so that data kept available on the external data input device can be output by the output unit.

The soluble element is dissolved to leave a use fabric suitable for other processing, such as coating with materials such as latex, the non-fluid-soluble strand may be either a single strand or multi-filaments of steel wire. Such a topic-based score may indicate authority and/or impact of a user with respect to a topic. The phase interpolator circuit generates the periodic signal.

1459826337-fdcda18d-f839-48db-9755-3d06dd12f7f0

A microprocessor includes a functional block having dynamic power savings circuitry, a functional block control circuit, and a thermal control unit. A second planar distance between a first end of an electrode layer and a first end of a pad is greater than a first planar distance between the first end of the electrode layer and a first end of an opening. Alternatively, the suspension platform may be removably suspended between two front seats of a passenger vehicle. A second terminal is disposed on the second surface of the dielectric portion for connection to a second electronic component. A second group of threaded connections are determined and the assessed performance factor from the first group is applied to a second group, and the performance limits of the second group are defined over the range of conditions based on this characteristic performance factor, without requiring testing the second group. The pry flange has a portion that terminates short of a wall of the nozzle receiving socket to create a gap sized for ready insertion of a tool to facilitate removal of the nozzle from the nozzle receiving socket.

1459826338-53a58517-9cea-431d-b43a-9bdb887d85a8

The invention relates to the discovery of a selective cell surface marker that permits the selection of a unique subset of pancreatic stem cells having a high propensity to differentiate into insulin producing cells or into insulin producing cell aggregates. Labeling is accomplished by coating a particle with at least one dye or nucleic acid sequence encoding a marker protein. , and the decoding time point of the picture is determined to display the corresponding picture by appropriately adjusting the transmission bit rate and the status of the VBV buffer according to the trick play mode in playing back the digital video stream.

1459826338-54bf398c-5670-4497-9df5-d1c81a6161fd

A system to scan 3D images applies sensor fusion of a passive triangulation sensor in combination with an active triangulation sensor to obtain high resolution 3D surface models from objects undergoing arbitrary motion during the data acquisition time. In a first aspect, the method comprises a computer partitioning a query into a set of partitions along a dimension of a multi-dimensional data source, wherein each partition of the set of partitions comprises more than one member and the query has a query result count. The customized etching is a personalized statement regarding the passed individual that is imprinted into the glazing in order to preserve the memory of said individual for as long as the memorial stands. TiO<sub>2</sub> nanoparticles produced are of the anatase polymorph, of the rutile polymorph, or a mixture thereof, and have particle sizes in the range of from 10 nm to 100 nm. Therefore, the switching of the facsimile is not limited by the switching control requirements of the media gateway, which is favorable for flexible expansion and interconnection of the facsimile services.

1459826340-2fe5fa23-440a-4b3a-a38c-71b4979fc585

Backings for carpet and carpet tiles are formed from various post-consumer and/or post-industrial polymeric waste materials, for example, post-consumer textile waste material, post-industrial textile waste material, and/or other post-consumer and/or post-industrial polymeric materials. Timing adjustment circuits implement coarse timing adjustment and fine timing adjustment for chip timing analysis. A second image data is received, the second image data including the object captured in the first image data. Further, parts of the electrical lines positioned in the upper layer are made into ground lines for giving ground voltage to the spacers. Such a method allows for a real time prevention of intrusion by letting the intrusion

detection process interact directly with the access control system, and change the user authority dynamically as a result of the detected intrusion. The circulating fluidized bed reactor section maintains nearly plug flow conditions that allow continued conversion of unreacted feed components through primary reactions while limiting the time for secondary reactions to continue and diminish the final yield of products.

1459826340-6219785f-cde3-4351-9150-3777b2a70dce

A mounting apparatus is provided for a storage device. To be concrete, in a test mode, a stepped-up voltage  $V_{pp}$  higher than a power supply voltage  $V_{cc}$  applied in the normal mode is applied to a fuse element to be disconnected to remove a disconnection defect left in the fuse element, thereby enabling perfect disconnection of the fuse element. The pipelined processor core further comprises a second stage configured to selectively perform one or more operations on the combined data from the first stage and other data responsive to the one or more decoded commands.

1459826341-314722f6-c106-48af-b4dd-004c6bef406d

Disclosed herein is an apparatus for measuring residual stress, methods of measuring residual stress data and residual stress using the apparatus, and a recording medium for storing software of the residual stress measuring method. The filtering techniques may select one or more different types of filtering for each video block of the video unit based on various factors such as whether the video block is inter-coded or intra-coded, and whether adaptive interpolations were preformed during a motion compensation process during the encoding of the video block. An equipment-information setting unit stores the equipment information into the equipment-information holding unit based on image data read from the printed sheet on which the equipment information is printed.

1459826341-bb5b8f01-49b4-4e3a-89a5-906d00bac8ee

An electrical connector assembly of the present invention has a pair of connector housings 2, 3 able to be fitted, and a lock arm 4 engaged with one 2 of these connector housings and holding a fitting state of the pair of connector housings when the above pair of connector housings 2, 3 is fitted. Another aspect of the present invention provides a switching amplifier that is completely off when there is no input signal. In an initial step of the program, prestored viewer profile information is read. The example method also includes reducing a number of available transmission credits for the aggregation group and reducing a number of available transmission credits for the assigned virtual link. The environmental impact information collection system then obtains a set of environmental impacts in a product's life cycle. Information is processed by pattern recognition using the neural network by storing a plurality of output patterns to be recognized in a pattern index; accepting an input pattern and dividing the input pattern into a plurality of components; and processing each component according to the pattern index to identify a recognized output pattern corresponding to the input pattern.

1459826341-f6ae5a3c-417a-45e4-aea6-7a0b1539d088

Memory interleaving includes providing a non-power of two number of channels in a computing system and interleaving memory access among the channels. The system comprises a housing with sensor for monitoring environmental parameter in the vicinity of the manhole. The electronic enclosure may include an electrically-operated interlock mechanism preventing the insertion or removal of the electronic enclosure by preventing movement of a shaft attached to either or both of the levers.

1459826342-5a87a60d-d322-49fd-b0c1-469bed182e19

A method and system for cross-marketing products and services to customers of specific merchant web sites on the Internet by a merchant loyalty service provider web site on the Internet, provides a hyperlink to a merchant loyalty service

provider web site from a merchant web site whereby customers can access the merchant loyalty service provider web site directly from the merchant web site. The composition comprises: a biocompatible block copolymer comprising one or more elastomeric blocks and one or more thermoplastic blocks and a therapeutic agent, wherein the block copolymer is loaded with the therapeutic agent. A light emitting component delivers light into the photo-elastic material, wherein the light delivered by the light emitting component is directed through the photo-elastic material along an axis of the rotating shaft. The secondary rocker arm interacts with a hydraulic piston, which is displaceable in a hydraulic cylinder and which forms part of a hydraulic circuit having a hydraulic fluid source, and which permits switching between at least two different working positions. A representation of the telephone number associated with the at least one unclassified source of the incoming contact is transmitted to the second device.

1459826342-e8283ba0-c0c8-438a-a8ca-37903f476820

A user equipment including a processor configured to transmit control plane data irrespective of on-duration/off-duration status. The piezoelectric film preferably comprises polyvinylidene fluoride. The radiation members are made of a metallic material containing Cu or Al as a main component.

1459826343-2b13bf27-9e02-4f7c-9e52-5dd1886c427f

A plasma spray method for the manufacture of an ion conducting membrane, in particular of a hydrogen ion conducting membrane or of an oxygen ion conducting membrane. The system, as embodied in a mobile terminal device, comprises a mobile communications component that communicates wireless signals, and a location services component embodied in the mobile communication component to provide positioning information. A hydraulic system withdraws the wheels, rendering the cart stationary. The replay detection unit may be configured to detect that one of the operations in the scheduler should be replayed. Thus, a DRAM -based logic merged memory is implemented without degrading dielectric breakdown characteristics of the gate insulating film. A memory in the read channel interface is enabled by the programmable control logic for receiving servo field data from a read channel device, wherein the programmable control logic is configured to operate in a first mode and a second mode allowing the servo controller to process servo data from the read channel device.

1459826343-49bdb6d8-e1fd-4473-885b-118275eec79b

Device for taking radiologic images, of the type comprising a means of emission of an X-ray beam and a means of reception of the X-ray beam after it has passed through an organ to be studied. Each of the signal splittercombiner networks has a calibration signal sampling point in electrical communication with a signal input point, and signal output points. The data system is configured to receive data and the control signal and to align the data with the output clock, based on the control signal, to produce output data. The attachment assembly includes a T-bolt, a split pipe clamp support, a ratchet nut with peripheral ratchet teeth, and a ratchet lock washer. In the system, the VPN can include a directory enabled networking table management scheme. A middle part is comprised of a metal plate to which at least one circuit board can be attached and recesses are provided which, together with the at least one circuit board, can produce chambers into which the components of the one electronic circuit protrude.

1459826344-733e3dac-f888-42ee-9374-d951c3054d57

An electronic RF power device includes a transistor chip, a device input terminal and a device output terminal. When the arm joint angle value, which indicates the angle created by the upper arm and the lower arm at the arm joint, indicates the first angle value, the fabric of a first wrinkle image is generated on or near the arm joint. Workloads grouped together can all execute from the same source of instructions, on one or more different private data elements. A receiver unit is coupled to an actuator coupled to an actuatable device, such as an irrigation

valve, the actuator configured to actuate the irrigation valve to control the flow of water therethrough. When an operation to scan the next document is specified, the ADF or manual-feed scan operation is performed.

1459826344-73a90145-0733-4a88-a961-790bc4b45d59

An apparatus for an airbag arrangement including a frame part and an airbag package. In some embodiments, the sensors have a measurement zone that has a volume less than the volume of the sample chamber. The invention is distinguished in that within the rotary tubular furnace a weir is disposed which at least partly closes the interior of the rotary tubular furnace.

1459826344-ab8f5fa8-766e-4c93-8bbc-8865ac9b6422

A device for machining a material with ultrashort laser pulses is described. Each computer includes a computer chassis containing at least a processor and a data storage device and a plenum extending from the computer rack for channeling cooling air from the plurality of computers provided in the computer rack to a location exterior to a site where the computer rack is located. In some embodiments, the verification process may be repeated in order to ensure that the data has been rendered useless across all nodes of the remote cloud platform. The capsule is configured to be advanced down the catheter. The entire apparatus is made compact without decreasing a recording medium feeding performance and a printing process capability by that a plurality of processing units serving for the printing processes and recording medium feed path linking those units are arranged reasonably.

1459826345-123a4b02-a8f9-4b88-b1ba-adbea8be2879

A vehicle seat cushion composite is provided with a structural layer adapted to be mounted within a vehicle to provide support to an occupant. A mobile station initializes a radio link failure counter for detecting the radio link failure and determines whether decoding of a message on a downlink channel is successful. The formed memory device may be a NAND-type non-volatile memory device having a SONOS gate structure, for example. The facility weights each of the distinguished advertising messages based upon its expected level of performance, and randomly selects one of the distinguished advertising messages in accordance with their weights for presentation in connection with the selected instance of electronic content via the selected device. A merged variable length symbol comprised of the unprocessed data bits and a plurality of data bits from the second data block is extracted from the merged data block.

1459826345-a35bb67d-47cd-4547-b6f0-1376f441c365

A method and apparatus for treating slurries of organic solids is disclosed. The apparatuses and methods of the optical communication system also enable the dropping and inserting of selected single protocol signals at intermediate sites of a DWDM communication link which is less costly and makes less wasteful use of optical wavelength channels for the communication of lower data rate information. The sensor casing has a predetermined portion exposed outside from the connector casing. The converging layer, the second dielectric layer, the gate layer and the first dielectric layer are patterned to form a window exposing the substrate.

1459826345-d7eb5cc1-4f74-4247-83c2-bfc81dc76c83

The present invention relates to a signaling method and a network element for a virtual private network, wherein a request for dropping a signaling of the virtual private network is transmitted from a network element to a proceeding network element, if the network element detects that the virtual private network signaling cannot be continued through a connection of the telecommunication network. The double-ended inverter system further having a secondary energy source, a second capacitor coupled in parallel to the secondary energy source, and a second inverter system coupled to the secondary energy source and adapted to drive the load. Methods for producing a canola plant containing in its genetic material one or more

traits introgressed into NS6594 through backcross conversion and/or transformation, and to the canola seed, plant and plant part produced thereby. The selected mainframe events may then be converted from a character encoding specific to the mainframe to a generic character encoding, and routed to at least one destination Security Information Event Manager application.

1459826346-8664066e-8b2d-41e7-8ba1-6e8edcd107bc

A method for rapid prototyping by using plane light as sources treats the raw material by two stages. The article has a porous structure that restricts the passage of cryogenic fluid in the liquid phase while permitting the passage of cryogenic fluid in the gaseous phase. Each of the body and lid has a closure surface that is in close proximity with the closure surface of the other when the container assembly is in a closed condition. In one embodiment, an air duct is located over a plurality of the frame components. The cutting insert includes a contact surface for mounting the insert to the seat, and a plurality of fingers projecting generally radially with respect to the center axis.

1459826346-de4602db-c3e5-4598-88e1-9e8d39ad360c

Disclosed is a method for determining a wireless communication system by selecting a wireless communication system without considering a corresponding service area. Systems disclosed herein also include a detector, which detects electromagnetic energy from the area intended to be illuminated by the system, of a wavelength absent from a spectrum of the combined light system output. A drive device and an imaging device C of the present invention include a shape memory alloy actuator and the position control device 1. The presence of the antioxidant improves the stability of the poly-ene macrolide to oxidation. The persulfate microetchant composition is stabilized with acid and phosphate salts to provide a process that is stable, fast acting, environmentally acceptable, has high capacity, and can be performed at room temperature.

1459826347-1c489a23-46d0-4a53-8d44-460f64a106ad

A circuit board comprises a center segment distributing power and low-speed signaling, and outer segments for high-speed signaling. The front wheel drive consists of components located on the axis of steering within the head tube and positioned symmetrically in a counterbalancing fashion within the front fork in order to counteract the torque reactions from the rotating front wheel drive while providing a full range of steering. The one or more vortex generators may prevent stall of the diverter at high attack angles. Further, the method includes operations for sending a challenge to the second player, and for detecting that the second player completed the modular game in response to the challenge.

1459826347-837228b2-0a0b-4900-b73d-5a0af1d5ca0e

A robotic system that includes a mobile robot linked to a plurality of remote stations. The global clock is distributed to controllers of various networks, and from there to network access devices. A system for acquiring program guide information conveyed on one of a plurality of broadcast channels involves scanning through received broadcast channels to identify program guides available on individual channels.

1459826347-f429e5e3-847f-4f72-97a0-180ad75569ab

An inhibitive water-based polymer mud system and method for using the system in drilling and in stabilizing wellbores is disclosed for use in water sensitive formations as an alternative to oil-based muds. The process is comprised of taking a first pair of athletic shoes 14 and removing a portion of the sole having cleats therein, the selectively removed portion hereinafter referred to as the cleat plate 22. The optical pickup and the optical disc drive comprise two light source sections and a lens-supporting mechanism. In a second rotational direction, the frictional engagement is arranged to urge the engagement element to radially displace such that the first and second annular elements are rotationally

independent. The vascular device collapses during removal to prevent material from escaping from the sac. One or more semiconductor laser array chips overlies the second support component.

1459826348-0ebd28a5-87e4-42f9-89c9-0b346572d593

The present invention enables the remote activation of a device by a packet-switched service, e. The membrane also prevents blood clots in the atrial appendage from escaping therefrom and entering the blood stream which can result in a blocked blood vessel, leading to strokes and heart attacks. The system also includes a controller that collects data from the plurality of agents about current operating performance of the computing environment, and uses the data gathered to enforce policies and to deploy services in a way that honors one or more service level agreements of the deployed services. There is also provided a liquid pack comprising a container having a closable opening and an aqueous liquid in the container. Accordingly, the response to introduction of exhaust gas is not deteriorated but is maintained.

1459826348-9bd622fc-ad7f-4b40-8b88-1fa1e94d289b

According to one embodiment, an image forming apparatus includes an image forming section, a fixing device, and a control section. The touch screen overlay apparatus comprises a flexible membrane that covers at least a portion of the rigid contact surface. The frequency difference between the transmitted and echo signals are determined at least once per chirp segment. Based on the race logic audit results, race logic synthesis is performed on the common design database, and getting rid of all identified race logic in the IC design. The processing circuitry then extracts data from the set of information signals of the BBIF MFBMS signal. Miniaturization is achieved through providing a unique geometry for a resonant narrow slot antenna.

1459826349-5fc58609-f803-48af-ae51-195812f5984c

This invention provides an isolated nucleic acid molecule which encodes immunoglobulin receptor, Immunoglobulin superfamily Receptor Translocation Associated, IRTA, protein. The base station is adapted to serve the user equipment. In a closed state, in one embodiment, the present invention corresponds to the form used for typical cellular telephone use. A weighted sum using the set of scores and the weighted average score is calculated. When the displacement of the threading dislocation D1 expressed by Burgers vector is preserved to develop another dislocation, the spaces, vary the direction of its displacement. Carbon nanotubes are then grown in the pores.

1459826349-b7522451-e5c8-4666-9672-82569fe36c86

A bearing fixed assembly in a direct current fan includes a fan base, a motor unit, and a fan blade unit. The capacitor is preferably a super capacitor. Players evaluate evidence for relevancy in its ability to form solution concepts. The failover driver monitors connectivity information associated with the first network connection and, if failure of the first network connection is detected, establishes a second network connection between the host computer and the target on the storage router. The compiler configures a first instruction included in the plurality of instructions to access a first global virtual register.

1459826350-38e5c97b-81ef-4767-a7f6-30df531792f5

A debug control system and method thereof which includes a debug device and a wireless communication module. Particularly, the device is adapted for the insertion of electrode arrays having an elongate carrier member and a removable means extending through the carrier member. End caps configured for offset or inline supporting brackets can include the reinforcing ribs. The tracking circuit is electrically coupled to the third terminal and the node, and configured to receive the node voltage and generate a control voltage at the third terminal based on the node voltage. Each of said ferrule receiving structures is adapted to accommodate a flange of at least one of said ferrule systems and said ferrule

receiving structures are arranged such that adjacent flanges of said ferrule systems substantially abut each other or at least partially overlap. The charge pump circuit eliminates the need for diodes for preventing a current from flowing back from a high potential side of capacitors to prevent a reduction in the voltage due to a forward voltage, and reduces a reactive current and latch-up when the charge pump circuit is integrated into a single IC chip.

1459826350-9def8388-9ae2-466d-ac75-5998590a1310

A method and system for handling received out-of-order network data using generic buffers for non-posting TCP applications is disclosed. In each half of a semi-elastic plastic material, at least one groove is provided in the shape of half cylinder. The stylet has a tip containing at least one blade and a central passage. In the process, the fabric is treated with a dispersant leveling agent, the treated fabric is dyed and the dyed fabric is rinsed with a softener. The elastic members 36 are compressed on the positive side of the torsion characteristics, but are not compressed on the negative side of the torsion characteristics until a torsion angle exceeds a predetermined value.

1459826351-5fa31d76-dce7-4cc8-b2b8-945bd438448d

The present invention relates to novel synthetic polysaccharides with antithrombotic activity exhibiting at least one covalent bond with biotin or a biotin derivative and to a process employing avidin or streptavidin which makes it possible to neutralize these polysaccharides. The charge controller includes a voltage sensor 133 that detects the voltage of a capacitor 101, a current sensor 135 that detects the chargedischarge current of the capacitor 101, a battery ECU 123 that estimates the SOC of the capacitor 101 based on the detected voltage, and a management ECU 117. All droplets are polymerized and chain-extended in one step to form hybrid particles containing a polyurethane and a polymer of the monomer. The method may also include determining whether the transport request includes at least one error by at least evaluating the metric value for each of the one or more metrics and comparing the metric value for each of the metrics with a threshold value; and proposing, based on the determining, at least one training course when the transport request includes the at least one error. The present invention provides a BAN wireless communication control method, comprising the steps of transmitting a discovery request frame including a selective standard profile, and receiving a discovery response frame from a host that provides at least one of services specified in the selective standard profile.

1459826351-8eb80f7e-61b4-45ee-b7c5-a8cc769c5dd1

A media player having a touch pad is disclosed. The inventive method allows a user to select and compare business locations based on demographic and/or economic criteria and to optionally determine financial factors associated with operating a business in selected locations. It is determined whether an action of the request requires an unavailable resource and it is determined whether the mode option is for the action requiring the unavailable resource. of the foam rubber layer 6 is from 0. Therefore, a number of formed pages per minute may be increased, and images may be formed at high speed. The retransmitted data packets being retransmitted in form of a selected one of a plurality of different redundancy versions.

1459826352-a69810b9-0d07-4ee2-8a7b-ee5dcf42b2e1

The invention relates to a thermoplastic membrane which is formed from a blend of:. Thus, the electrical connector assembly avoids damage caused by vacuum suction during the manufacturing process and the strength of the cover is therefore enhanced. The gas generator is arranged on the upper surface of the seat pan and is fixed to the seat pan with a bracket. Xn Men+, wherein a, b, and x satisfy the formulas  $0 \leq a \leq 2666$ ,  $0 \leq b \leq 2664$ ,  $0$ . A device is also provided that is easily retrofittable with the existing ignition system of a powerboat.

1459826352-b6216193-963a-4dba-ac8f-355793fe2707

A belt conveyor system for creating an overland material transport assembly on a ground surface comprises a frame configured for transportation over the ground surface, a plurality of pivotally connected conveyor belt support sections, a head pulley assembly mounted to the first end of the frame, a tail pulley assembly mounted to one of the conveyor belt support sections, and a conveyor belt. Terrain correlation is used to get the missile within the acquisition range of the homing system, and the homing system is used in the terminal phase of operation. The mood projected by an avatar also may be modified based on user action, such as user input of a mood to be projected by the avatar.

1459826352-ce48d2b2-4210-43ed-b844-dbca695172ea

Production of heavy oil and bitumen from a reservoir is enhanced by cyclic radio frequency radiation of the well. The compounds and salts of the invention are useful in the treatment of conditions mediated by glucocorticoid receptor activity. Each PDU includes a message type field explicitly indicating to the intermediate party if a received PDU encapsulates another PDU intended to be sent on. The steel member is then quenched.

1459826352-d403e7df-ffbe-4e90-a43a-0ed8adf51011

The plant contains high temperature fuel cells which form a battery in which electrochemical reactions can be carried out with a fuel and a gas containing oxygen while producing an electrical current and a hot exhaust gas flow which transports waste heat. The predictive routing scheme may be used to provide Quality of Service guarantees for both Constant Bit-Rate and Variable Bit-Rate traffic types. The software system includes a computer-readable medium storing a software program having first, second, and third routines. A biasing member is arranged to urge theawl along the axis when the apparatus is mounted on the ion source to create a mark for aligning the laser beam. Alternatively, if the design \u201cdefect\u201d which was created is permanent, after the new electrical schematic is extracted from the modified physical layout, the product is fabricated and the known design \u201cdefect\u201d location is used to correlate to the electrically-tested defect logical location.

1459826353-d591b768-2bf3-4b12-8193-d80536cae314

A keyless chuck is provided, comprising a generally cylindrical body having a forward and rearward portion with respect to an axis, the forward portion including a radially outwardly projecting portion of the body. At least one communication device associated with an entertainment device is situated in close proximity to the entertainment device. The control system provides for responsive input and automatic directional stabilization of the motor. The method receives a plurality of replies to the transport stream map request. The movement of the fork element relative to the clamping member is limited by abutting surfaces on the fork element and the clamping member. Thus, in comparison with the conventional art whereby a positional recognition operation is performed every time bumps are formed on each IC, the number of times of performing positional recognition is greatly reduced, so that productivity can be improved.

1459826354-2f69dc73-b5a2-4dee-8f3f-ed678bd8eb21

In accordance with a first exemplary embodiment of the present disclosure, a mounting arrangement for use with an LED power strip module is provided. A radiation detection device and a radiation detection system that have the semiconductor device are also provided. In addition, using the switching module, the second part can maintain the coupling of subscriber lines to the backup communications equipment when the first part is removed from the card assembly.

1459826354-32a84a90-fb74-41f4-961d-eba9f9edf2d0

The invention relates to a method for dissolving carbon nanotubes consisting in reducing the nanotubes in such a way that the nanotubes which are negatively charged with positive counter-ions are obtainable. The video asset includes primary

elements such as a primary composite video module that produces different types of a primary video signal and outputs the primary video signal, and a secondary video source module that produces a secondary composite video signal and outputs the secondary composite video signal. Each of the surfaces extend a distance relative to one another. A collector of the transistor is connected to an upstream side of a resistor of a determination part. The inventive deburring tool is particularly advantageous in that it can be used in intermittent assembly lines with the latest manufacturing technologies. An exemplary use of a temporal database to manage roles and responsibilities within an organization is described.

1459826354-bf56a025-670a-42a4-9987-ebedd8e47ec0

A PLL -controlled oscillator has a temperature-compensated crystal oscillator having a quartz crystal unit, an oscillating circuit connected to the crystal unit, and a temperature compensating mechanism for generating a temperature compensating voltage for compensating for frequency vs. The invention also relates to the use of said pigment mixture, inter alia, in paints, dyes, especially printing inks, plastics, powder paints, pastes and cosmetic formulations. Additionally, a multilayer wiring area is formed on circuit element area. A clock signal is input to the second transistor. Devices suitable for performing high intensity focused ultrasound, as well as HIFU and ultrasound imaging, are also described. The method also includes the step of transmitting, with the processing device, at least one of the plurality of recipes to the consumer wherein the plurality of ingredients of the at least one of the plurality of recipes is correlated with the identities of items purchased by the consumer.

1459826355-0836b590-2fcb-4229-b770-f712c063e15c

A handheld nozzle cleaning device includes a cylinder and piston disposed within the cylinder. If CSI mode 1 is selected RI and W1 are jointly encoded using codebook sub-sampling in report 1. The second distance is a distance between the projecting unit and a second point in the projection area.

1459826356-200367f1-d448-4668-9e50-77a4ebfd1c14

The present invention provides an apparatus for determining a seat belt tension is within a proper range. A moveable sealing mechanism has a first position in contact with the catcher and a second position removed from the catcher that permits drops to travel past the catcher. A protective, non-conductive electrical shield is located between the electrical stud and other conductive components within the welding apparatus to prevent arcing between the electrical stud and those conductive components as well as to prevent arcing between the electrical stud and the metal enclosure itself. A first member and a second member are disposed in opposition to each other with the liquid crystal interposed therebetween. Bills are projected and kept to be projected out of said depositreturn port by the specified amount by said bill conveying device when the movement of the bills which are being taken out of said depositreturn port is detected by said takeout detecting device. One embodiment comprises a panel having a set of drivers connected to a subpixel rendering circuit in which the number of data lines going to the drivers is less than the different number of color data sets generated by the subpixel rendering circuit.

1459826356-86b68ff0-9616-4d05-a077-252a58169d80

A coolant circulation system for an engine efficiently cools the engine to prevent the capacity of an electronic water pump from being excessively increased. The sensor assembly has a pressure sensor subassembly with a pressure transducer positioned to detect pressure variations associated with a shock wave from a passing projectile or the muzzle blast following the shock wave. The compound slide system is controlled so that the wheel is configured in accordance with a profile. As the wastewater and the FSC polymer coagulant are mixed in the reaction tank, the coagulant flocs the slurry chemicals in the wastewater and removes the chemicals from solution in the wastewater as a precipitate before the wastewater is directed

to a clarifier.

1459826356-9ae3897f-3aea-4c28-8254-57ed04ddf4e3

A method and system for event polling have been disclosed. The compositions and methods are useful in applications such as radiation curable ink jet systems where viscosity is reduced by heating. 0hexanes, and related processes and intermediates for preparing these compounds, as well as compositions and methods employing these compounds for the treatment and/or prevention of central nervous system disorders, including depression and anxiety.

1459826356-a2fecada-8230-43b2-98f4-22aea93ed2f5

An apparatus is provided that includes a mold that includes a first cavity defining a toothbrush body, a first injection unit in fluid communication with the first cavity and a second cavity, and a second injection unit also in fluid communication with the first cavity. The meter includes a pipeline, a continuous dewpoint meter able to support negative pressure, as well as the use of a orifice plate and two vacuum meters capable of measuring the pressure of condensable steam as well as a orifice which, allow a pressure drop. In view of that sizes of the AF imaging devices 22A and 22B are smaller than that of the video imaging device 26, the object images formed on the AF imaging devices 22A and 22B are reduced by a reduction optical system 17. Tension is only applied to any additional length of suture that is extended from the device. When the transfer circuit is in standby, the feedback of the output voltage provides for voltage-balancing in the input-transfer circuit, thereby reducing or eliminating leakage current in the input-transfer circuit.

1459826356-e501ce11-075a-4e43-9867-4c81abd35856

A new and distinct cultivar of Fothergilla major plant characterized by its striking glaucous, blue green leaf color. A traffic flow of captured data packets received at an ingress port of a network captured traffic distribution device may be sampled at a frequency corresponding to a first time period. The refractive index of the substrate is equal to the average refractive index of the liquid crystal at a wavelength in the blue light spectrum. This in turn reduces the amount of additional data which needs to be created and can simplify the relationships between characteristics in different levels of the hierarchy. A Kinoform lens element is designed at 5000 GHz. The adjustable boom bar can be attached to an end of the boom opposite the projector such that adjustment of the boom bar raises and lowers the projector via a lever action about a fulcrum.

1459826357-4acf38db-a916-4120-9f07-a8e88f1d5333

A holder for securing a writing implement to a worn article is described. A network access point monitors operation of wireless devices within a service region. Embodiments of the anchor attachment system employ a pin, a cross-pin, a spring element, and a locking cam working in cooperation to secure the pin to first and/or second ends of the tensioning device.

1459826358-71ab3b51-2fff-4810-bce3-53a1a7679635

An arbiter and bus system adopting the arbiter are provided. Channel state information of a channel between two transceivers is estimated periodically. The first hardware unit performs 3-D clipping of primitives using a first processing unit used for a first graphics function, e. By adjusting the transparency level, a more effective visual presentation and user experience is created. The improved planarization process includes the formation of a flat planar surface from a deformable coating on the surface of the wafer using a fixed flexible planar interface material contacting the deformable material. The central flow body also includes a central, protruding flow diverter upstream and central of the annular seal.

1459826358-8f3f71e0-9e85-4ac4-a63f-4d9a6ba200dd

A method and a system for detecting the level of fluid in a container is provided: The level meter includes first, second and third generally parallel probes being positioned within the container. A graphical icon, such as a circle, may be overlaid on the neighborhood of the pixels to be processed. In another embodiment, the material can include an optical coupling material. In a multi-player variation, individual players attempt to achieve patterns of matches across their own matrix and combinations of contiguous matches spanning the matrices of two or more of the players.

1459826358-bf48760a-6cf1-48c3-babb-d521608ea69f

A signal output circuit for switching an output operation of an input signal is disclosed. A starting splash block is positioned proximate a building's foundation and under the building's water discharge line. In particular, this invention provides methods for development of therapeutics that selectively enhance fatty acid oxidation, increase energy production, and reduce adiposity while preserving lean mass, through the pharmacological stimulation of CPT-1 activity. A scanning arm driver moves the substrate holder in the scan plane in a desired two-dimensional scan pattern relative to the beam path.

1459826359-9e5a03d2-7566-4f5d-8173-17f09209b53e

A data converter for digitizing an analog input signal and providing digital output data at one or more conversion cycles includes a logic circuit for generating a data conversion diagnostic bit having first and second logical states. An active entry within a virtually hashed page table is populated. Existence of a well control event is determined when at least one of the following events occurs: the rate of the selective pumping remains substantially constant and the annular space pressure increases, and the rate of the selective pumping remains substantially constant and the annular space pressure decreases.

1459826359-bfcb8699-bb14-4f76-b9c6-12177d1ad15e

A polymeric electroluminescent device suppresses photo-oxidation and enhances luminous stability and efficiency by using a nanocomposite of a luminescent polymer and metal nanoparticles as its emitting layer. The invention further relates to a device for controlling a scanning probe microscope. These colour changes are visible to the users of such articles. The wireless communication device and wave antenna may be placed on objects, goods, or other articles of manufacture that are subject to forces such that the wave antenna may be stretched or compressed during the manufacture and/or use of such object, good or article of manufacture. The second spindle can move linearly along a fifth control axis parallel to the third control axis and a sixth control axis parallel to the first control axis.

1459826359-dd3fc022-01a3-44bf-a308-1f11d147117c

In a remote control communication system, a transmitting apparatus transmits operation information, which includes switch information indicating the type of the switch and operation duration information, to a receiving apparatus in a vehicle. To increase reliability and to reduce failure due to deformation stress, the invention provides said mold with reduced stiffness at areas located substantially at one of said interconnection elements providing increased flexibility of said package at said areas compared to other areas of said package. Furthermore, by making the cables using textile materials that have been developed for use in garments, the cables are capable of being subjected to standard garment care techniques such as machine washing in the home or dry cleaning. In another embodiment, the invention has a process for preparing the restructured meat product, or the vegetable product, or the fruit product, respectively. An implement with which at least one working function may be performed may be fitted to the vehicle. Moreover, the lower level table can be associated with a tag.

1459826360-91b25a41-283e-4886-90f6-71d23e4e5986

Methods and arrangements for fault localization. The friction element is engaged by

first and second hydraulic oil chambers that individually provide low torque, and can provide a higher torque when working in combination. The features may include skins on support member cores disposed below the tile lower surface.

1459826360-b875050c-01b4-4936-ad50-b581fba56a04

Disclosed herein are systems, methods, and non-transitory computer-readable storage media for enhancing presenter and participant interaction in a presentation. The stroker comprises at least an actuator arranged for displacing a tool in a longitudinal direction of the borehole and grippers arranged to anchor the stroker to the wall of the borehole, alternatively to a pipe wall. The web server introduces the wireless mobile communication device to a gateway. Second data subcategories have a common luminance that is thirty percent to sixty percent of the luminous output capacity of said display, a color saturation that is greater than seventy-five percent, and a transparency of at least forty percent. %, said elastomeric copolymer comprises units derived from ethylene and at least one C3 to C10  $\alpha$ -olefin, said composition has a melt flow rate MFR2 in the range of 5 to 80 g10 min.

1459826361-7e42aee3-5fdb-4103-b97a-d7a859739dc4

A digital system for evaluating foot and ankle radiographs having the advantage of providing accurate measurement information based on selected landmarks on the radiograph. The assembly comprising four equispaced hydraulic piston and cylinder thrust links connecting between the engine fan case and the air intake, which intake is mounted to the airframe. The bridge chip and the CPU are informed of maximum bit numbers of each other for data transmission therebetween via the front side bus. In the case that a transmission is not detected during the LBT procedure, the communication device transmits during the downlink subframe. Electrical noise emanating from a plurality of components of an image apparatus is identified, producing an electrical noise detection calculation based on the detected electrical noise, and inputting the electrical noise detection calculation into an image noise correction calculation apparatus, calculating an image noise correction calculation. The implant may also include a thin-walled sleeve that is coupled to the anchor and extended from the anchor into the intestine.

1459826361-a3490255-8c3a-474a-ada6-498ab676d4b4

On an insulating substrate, a first insulating buffer layer, a heat accumulating-light shielding layer having at least a silicon layer on the surface thereof, a second insulating buffer layer and a first silicon layer are laminated in the order recited from the bottom. The pattern is a self-assembled pattern. An address table memory stores an address table having a destination address and port number pair. Upon entering the carton, the clip is folded in a backwards C-shape. The linear electrodes are formed and arranged in the width direction on the principal surface of each of the substrates, and are electrically connected every predetermined period in their arrangement order.

1459826362-788729f9-1abf-4abd-9af0-31972601e016

A polyethylene may be prepared using a mixture of a silica supported catalyst and a magnesium chloride supported catalyst. The system in accordance with one embodiment of the invention includes a first entity that has a host function and a device function, and a second entity that has at least one of the two functions. In an illustrative embodiment, the amplifier also includes a cascode Darlington pair Q3, Q4 for holding the second output terminals of Q1 and Q2 at a desired voltage to further reduce distortion and to maintain a wide bandwidth.

1459826362-8af7cd27-8667-4b90-8ff6-1cb1c8398bdc

A method of real time ultrasound imaging of an object in at least three two-dimensional scan planes that are rotated around a common axis, is given, together with designs of ultrasound transducer arrays that allows for such imaging. A condition indicative of a bandwidth of the network path is monitored, and at an

intermediate point on the network path between the source and destination, the transmit bit-rate of the multimedia stream is adjusted to adapt to the condition indicative of the bandwidth of the path. The invention further provides a method for treating or preventing hepatitis C virus infection. The analog monitor circuit generates the time constant signal and includes N switches, where each switch is controlled by one of the N bits of the control word, each switch is configured to connect or disconnect one or more capacitors of the monitor capacitor assembly thereby generating a time constant signal that represents the time constant of the RC integrated filter. Because of the common fabrication techniques, liquid metal inductors can be more easily integrated with certain MEMS microswitches.

1459826362-93a6ef0a-58d8-437a-8366-64ef3f633af2

A clip to align a fiber optic cable with a light source within a fiber module. In one embodiment, when the power available from the one or more batteries is diminished, management of power consumption in a battery-powered electronic device can operate or be operated to preserve one or more functions supported by the electronic device. The browser then makes the necessary adjustments to the current display. The first beam serves as a detector; the second serves as a driver; and the third serves as a monitor. Methods of defining diversity sub-channels and sub-band sub-channels are provided, and systematic channel definition and labeling schemes are provided.

1459826362-db33afa4-f34c-459e-9242-7302f41c92cc

A handle is disclosed for tools such as shovels and the like. When a wheel of a wheeled pointing device is actuated by a user at a first rotational rate, the display in a window scrolls up or down one line at a time. This device is intended to alleviate all the known difficulties associated with the use of tubed substances. The inert gas saturated water is then pumped to a sparging column such that the inert gas and undesired gasses will be released from the inert gas saturated water to provide depleted water.

1459826363-01ebfb97-e90e-4a58-acaa-6da7512c9e3d

A heart valve assembly includes an annular prosthesis and a plurality of guide shields removably attached around a circumference of the annular prosthesis. The package is filled with liquid food, and a transverse seal of the tube packaging material is made to form a pillow-shaped preliminary shape container. While, the source and the drain of the PMOS device is epitaxially grown of a material which causes a shift in the strain of the PMOS device channel in the compressive direction.

1459826363-70fa72a3-c08d-423b-b1aa-73022d9b768c

An egg replacer composition is provided that has a low cholesterol content and that can be used for preparing bakery products. The adhering material interconnects the overlapped layers within the roll so that the roll is self-resistant to unrolling. Compositions comprising the pharmaceutical composition, as well as methods of use, treatment and screening are also provided. The standing surface preferably provides about the same standing area that typically provided by a base cheerleader.

1459826363-84b52c12-4433-404c-8fb8-8cd6d23cd528

A network adapter and corresponding method for its use are disclosed. The device includes a fuel tank, a line system coupled from the fuel tank to the injectors, a pump for pumping fuel from the tank to the injectors, and a first regulator valve for regulating the flow of fuel in a first line in the system which is connected to the pilot injector. The second semiconductor region is provided on the first semiconductor region, and includes silicon carbide. First, it functions as a substitute body part, and second, it functions as bioremodeling template for the ingrowth of host cells. A special sputtered electrode is formed which is extremely porous.

1459826363-aeb60cf6-b32e-4cbd-9aa4-b3902cefd074

A bidirectional pneumatic impact wrench has a pneumatic motor and an air control valve. RF transceivers and/or audio system in each media device may be used to wirelessly communicate between media devices and allow configuration and other data to be wirelessly transmitted from one media device to another media device. The collar is capable of being coupled to a leash so the animal can be taken on a walk with the protective collar in an operative position.

1459826363-b7664e99-59a8-41ff-90e0-451aa932a663

A new cultivar of Clematis named \u2018Zoqum\u2019, characterized by its free-flowering habit with bell-shaped flowers that are of red-purple in color and non-fading, its near sterility, a climbing plant habit and its cold hardiness to at least U. The interlock comprises a pivotal hook member that may be attached to a swinging elevator door. A barrel shifter for realignment of cached data during move operations and comparators for comparing a test data string to cached data a cache line at a time may be provided.

1459826363-c636f496-ca69-43cf-96e6-0c97352fc11b

An optical audio disc comprises the first pack, the second pack, the third pack, and the fourth pack in which the A-CONT Pack is placed at the head of a data array and a plurality of the A and V Packs follow the A-CONT Pack in each audio contents block unit. The disposable spacer is removed, and selective epitaxy is performed to form an integrated epitaxial source and source extension region and an integrated epitaxial drain and drain extension region. Access to the private directories may be limited by administrators of the private directories. Subsequent to the client computer hardware logging-on to the server computer system, the client computer hardware attempts to access the service. A shape prototyping system is also provided for designing a custom fit garment for an individual subject, the system being based on the method for categorizing body shape.

1459826364-19b5a523-f8cc-4b25-bde1-495d03e2941f

An algorithm for the promotion of terminal nodes to switch nodes in a PLC network reduces overall network overhead and collisions, while ensuring the appropriate selection of a switch node and minimizing the number of levels in a PLC network. The stored results may be received from local resources local which may be configured by the remote devices based on user preferences to deliver the stored results to the user. Estimates of amplitude spectra are determined from the seismic data. An engaging hole is defined in each bottom wall. Defective sectors in the selected copy are identified. The method facilitates the UE to automatically control MBMS access information acquiring procedure, and further reduces energy consumption of the UE to the maximum extent.

1459826364-99fca0a0-e8c9-4e06-957d-0295dc520534

When rotating a main body tube and an operation tube in a disclosed container toward a first direction, a moveable screw tube advances a predetermined amount. The extracted feature quantities are transmitted to a block degradation calculation part which compares the transmitted feature quantities and finds the degree of picture quality degradation for each block. In a Raman amplification method according to the present invention, the shorter the central wavelength of the pumping light the higher light power of said pumping light.

1459826364-9b7d59e9-af45-44bd-8e87-ac5bfbe2ea52

A method and apparatus for generating bits for a diagnostic routine of a memory subsystem. MR data acquisition is partitioned into at least low and high spatial frequency views and segmented within each of the partitions such that multiple segments of MR data are acquired from each phase of the cardiac cycle for the low and high spatial frequency views. The amount of the respective drying agent can be selectively set depending on the actual moisture present in the medium flow. Also, a measurement configuration for the first mixing product is determined.

1459826365-255c89ae-a16a-4a2a-aef2-83a08d1b903a

A firearm cartridge has a case configured with a relatively straight-walled portion and a shoulder portion for housing a quantity of propellant. The force feedback actuator includes a piston coupled to the control spool and defining a first control chamber and a second control chamber on opposite sides of the piston. The lower conductive member is formed on a lead frame.

1459826365-8c5f4bbd-a439-4fb9-9671-9c9d7b1e60e2

An audio information system that may be used to form and convey an audio message having speech overlapped with non-speech audio is provided. The hybrid driver, in response to detecting the transition, configures the first graphics processing unit to create a frame buffer. at a first temperature rate ranging from 0. In one embodiment, the reference signal is indicative of a predetermined tail current value for the DLL, and the tail current control signal adjusts delay of the DLL to equal the predetermined tail current value.

1459826365-ee7e9af7-38f0-45dd-b1d2-cc35778a6a1c

The disclosed is a memory such DRAM, particularly an X-address extractor, an X-address extraction method and a memory adaptable to a high speed operation. Roles of the pumping duration and character on the temperature and the efficiency of the up-conversion process in co-doped fluoride crystals are set forth. Participants' quantities bid at a given time may be restricted to be less than or equal to the quantities bid at an earlier time. In another embodiment the cart comprises a first platform and a second platform movable between a first position where said second platform is disposed above the first platform and a second position where the third platform is coplanar with the first platform. The reinforced card support post may be mounted to a board adjacent a card connector and the card securing device coupled to the card support post to retain a card in the card connector.

1459826366-533b68e2-5438-4644-bea3-454067aa8bef

To provide a magnetizing apparatus and magnetizing method in which, even in preparation of a ring-shaped permanent magnet having a narrow magnetization pitch with multiple poles magnetized on an extremely small diameter, sufficient magnetization and high magnetization quality can be achieved and powerful magnetization can be carried out efficiently and quickly at low cost. A method of providing configuration files in a computer device includes modifying configuration information provided in the base configuration file using the one or more supplementary configuration files to provide a merged configuration file, and deploying the application program into the runtime execution environment based on configuration information from the merged configuration file. The member extends generally forward and then upward from the body to provide a space above the body and behind the member wherein the space receives an excess cord. In a further embodiment of the invention, the stylet base and stylet cap are separated from each other by a resilient element, such as a spring.

1459826366-a41df7f6-fd3e-4eef-85b1-19087552db83

The invention provides a video camera fitted with telemetry means which provide, in parallel with the image, information relating to the distance of each of the filmed points of an image. The system and method employ a powder loader which guides the plurality of powder materials into predetermined locations in the magnetic compaction tool so that when the tool is electromagnetically energized, the plurality of powder materials are compacted to form a part having a plurality of densified metals formed by the plurality of powder materials. The log function latches the output of a counter in a 12-bit digitalanalog converter at the timing of outputting a pulse from a comparator to determine data written into a data register group. Once the last word segment is deleted, the wide word is considered to have been deleted because subsequent searches for the wide word will not find its last word segment. The enhanced test application sampling software generates a

reduced representative test application software program from the BBV and FBV data utilizing a global instruction budgeting analysis method.

1459826366-f21e103c-6d8f-4b91-b36f-3e3ea05bcdfd

Dihydroisoxazole derivatives are conveniently converted to  $\alpha$ -hydroxyamino acid derivatives which are important as various synthetic intermediates by a catalytic hydrogenation reaction. At high frequencies, the current flows in a superficial skin layer. To execute enlargement processing, the image data is compressed and stored, then enlarged; to execute reduction processing, the image data is reduced, then compressed and stored, whereby the memory resources can be used effectively. An informational tag rail may likewise be provided for removably mounting pricing information or other indicia to the front portion of the suspension rack. At the scene of an emergency, drop readers are scattered about the area.

1459826366-f85d93fd-afffe-4cd8-ad18-2b0a54ba2553

The invention relates to abrasive flap discs which are used for a variety of finishing, grinding and polishing operations, particularly on welded fabrications. A client transmits an RTSP request to a server. , transmission electron microscopy, or some other method that permits discrimination of the heavy element substituted nucleotide bases is described.

1459826367-5391dc5f-b22d-44b4-8065-eb9d5b70d831

The invention relates to a method for allocating an operating address to an operating device for luminous means, in which the operating address is transmitted to the operating device in digitally coded form via an interface which is configured to connect a light sensor. This invention is of foldable-type, when in use, it can be easily pulled open, without need of being connected by bolts. One or more network services are performed on the packet including terminating a TCP connection associated with the network transaction and generating a data stream. The terminals are connected to the busbars respectively to detect a voltage of the batteries.

1459826367-f1f40975-e3d9-4f61-9f0a-b3abb841381a

A safing and arming device is provided for a warhead or round which is to be launched by a rifled gun and which includes submunitions. A chemodenervating agent is disposed for delivery by the microprotrusions and a substrate is provided for supporting the microprotrusions and conforming the microprotrusions to a patient's palm in order to enable uniform penetration of the microprotrusions into the corneum. Said device comprises co-ordination means for co-ordinating operating functions concerning several exchanges. Data for the  $\alpha$  states is removed from the collected data to generate a filtered data set. The machine is highly portable and can be folded for storage.

1459826368-5706b3bd-10c8-4857-a314-66c3912130d5

A dispenser, configured to dispense material on a substrate, includes a dispensing unit having a housing with a chamber, a piston disposed in the chamber and axially movable within the chamber, and a nozzle coupled to the housing. The RF ID tag is coded with a unique identification and certification data on the ionizing radiation sterilization. Each one of the amplifiers is driven into saturation in response to one of the two discrete levels or pinched-off in response to the other one of the two discrete levels.

1459826368-68a7ca4a-4e61-4e6f-ae7-b6f40e96d637

Improper microphone position and speech level on a telephone headset is sensed by comparison of a speech envelope to multiple signal threshold levels. When at least one super-amphiphile molecule is a block copolymer, the resulting synthetic vesicle is termed a  $\alpha$ polymersome. Even if an unauthorized person was able to be positioned in relatively close proximity to a network appliance such as within the physical confines of a data center, these authentication and encryption measures

would make it extremely difficult for unauthorized wireless management of the operation of the network appliance. A vertically adjustable tray support arm mounts a support tray in close proximity to the utility cart. The method includes a projection function capable of creating or reading reduced scale cache images and displaying those images concurrently with full detail source chart images.

1459826368-7a69cf8c-12eb-4a53-a520-a6b85c5844f7

A compound having, in its molecule, a polymethine chain structure containing a partial structure represented by the following formula, and an image forming material containing the same. The watermark identifies the content producer, providing a signature that is embedded in the audio signal and cannot be removed. The spout assembly includes a cap, first and second tubular portions, and at least one corrugated portion. The ground bars 16, 27 adjacent to each other are disposed to be shifted in a longitudinal direction of the cable. A manganese alloy sputtering target which can form a thin film exhibiting high characteristics and high corrosion resistance while suppressing generation of nodules or particles is thereby obtained. Each of the plurality of tubes is selectively controlled to be operable open or closed at a particular length, responsive to identified problem frequencies.

1459826368-83cf21ef-2d61-4f5c-b4ea-9181fc9dc507

A manually operated implement comprising a housing for accommodating a drive motor that drives a tool. The interposer possesses a hemi-toroidal configuration in transverse cross-section and is constituted of a dielectric elastomeric material. Openings in the perimeter beam base align with the forklift tine tubes or sockets. The high voltage module can be being configured to supply a dosing voltage across the X-ray tube and the low voltage module can be configured to supply a dosing current to the filament.

1459826369-aa34c838-4386-4530-ab0b-44ffa652d438

A device is disclosed for removing slag from a coal gasification reactor and to a slag water bath enclosed by the reaction vessel. The present invention realizes a more compact biconical antenna by filling the dielectric member between the feeder portion and the ground portion of the biconical antenna. Also included is an adder configured to form a sum of the L path contributions and for outputting an estimate of a received symbol, and a decision circuit configured to make a decision about a value of the received symbol based on a value of the estimate of the received symbol output by the adder. Such decorrelation may be achieved by sending a first signal to a first receiver while sending a second signal, having a radio frequency spectrum that is the spectrally inverted version of the first signal, to a second receiver.

1459826369-ce97a7f1-4e57-40a0-8b83-a16616c6853f

A design verification system utilizing programmable logic devices having varying numbers of logic processors, macro processors, memory processors and general purpose processors programmed therein is disclosed. Each object is assigned to one of a plurality of sequential layers that correspond to visually depicted depths of the objects in the two-dimensional image. A portion of the encapsulation material is removed to expose a back surface of the microelectronic die which has a metallization layer disposed thereon. The sidewall has five straight sections interconnected by five arcuate sections. For its activation, the catalyst is caused to contact an inactive gas or a hydrogen-containing inactive gas consisting of less than 50 volume % of hydrogen gas and the remaining volume of inactive gas, thereby to avoid poisoning of the electrode of the fuel cell with carbon monoxide.

1459826370-82481644-aa15-43e4-b3e9-3c0eb407b8d0

An oil seal having the usual lips for retaining oil and a guide member made of a variety of relatively stiff or rigid materials. Here, the drive motor 22, which is arranged in the payout unit 20 through the latch mechanism, is prevented from

dropping since the resilient deformable members 40, 40 constructing the latch mechanism are limited so as not to spread by the limit members 53 formed on the inner side walls of the recess portion 51 in the base 50 when the payout unit 20 is assembled to the base 50. A method of the present invention comprises clamping a target tissue or organ with an electrosurgical probe.

1459826370-b90ece81-92df-45e9-87af-3661a11d6098

A vehicle airbag comprises a primary chamber, a secondary chamber affixed to the primary chamber, and a passage between the primary chamber and the secondary chamber. The present invention provides greater material and dimensional control during the forming process by utilizing a pressure sleeve to provide support to at least a portion of an end closure chuck wall and seaming panel radius while placing an end closure countersink in compression during the forming process. A sidewall of the housing defines an opening. The speech segment is converted to a text-segment and the text-segment is associated with the rendered portion of the video content.

1459826371-3e45a350-906d-405b-95e2-f2ecc55f8e06

The present invention provides a transistor 100 having a germanium implant region 170 located therein, a method of manufacture therefor, and an integrated circuit including the aforementioned transistor. The tear-open assistance unit produces an overlap of material in the separation region, the overlap of material extending at least approximately transversely to the conveying direction of the packaging material, and releasably fixes the overlap of material in the separation region. The mass portion includes two rod portions which cross each other in an X-shaped configuration. % of aminofunctional silica nanoparticles, and between 0 and 2 wt.

1459826371-5665e13c-fc16-4279-a4f7-2197815d9453

Methods and apparatus are described for processing data in a wireless communication network. At least one of the inner inner leads is bent in accordance with a bonding position with the inner-side bump electrode. Liners and constraining rings having no, one or more recesses also are provided. According to the method, a wafer with a lower cladding layer already formed by either CVD or oxidation is placed on a conveyer, which may include a heating element. In other words, the HNAs provide hardware-based, seamless access interfaces to overlay technologies used for communicating packet flows through the core switching network of the data center.

1459826371-f0d3a659-41a2-4f00-82b6-10c6c67df30a

A horizontal drive circuit employed in CRT displays which uses a switch-mode power supply operating in a boost topology to generate the appropriate supply voltage needed by the horizontal drive circuit is provided. Such restriction, with optional supervisory control by an authority, protects children from online predators, and can facilitate communication with known friends. Particular metadata are mapped to an address identifier associated with the receiver to determine a location for storing the message, as well as other parameters such as information relating to one or more intended recipients.

1459826372-a337d220-7c00-4426-895f-f5aef552230a

In one set of embodiments, the invention comprises a system and method for automatically trimming the center frequency of a VCO in a PLL. In one embodiment, a method for measuring the size and position of the lens capsule and of the implanted intraocular lens comprises generating and emitting one or more light beams at an angle adjacent to the eye, generating one or more eye images, and detecting the position and/or boundary of a lens capsule from its shadow casted by reflected light on the iris. Under the control of the first module, the user message concurrent with the first visual indicia are displayed on a screen segment of the first end-user's communication device so that the first priority assigned to the received user message is visually conveyed to the first end-user.

1459826373-0e24b8b2-3eed-42e6-8c57-0b9cd9e93cd5

A vehicle includes a first disconnect disposed between a prime mover of the vehicle and a certain one of the vehicle drive wheels. The inverting gates each have input terminals receiving an input signal. A priority-test-branch instruction, which causes the instruction execution module, responsive to one of the conditional tests evaluating as true and to the respective values in the registers, to execute a priority code module. An end wall that is in operative connection with the oscillation damper is acted upon on one side by the pressure in the spring chamber and has an effective area that extends obliquely to the axis of the oscillation damper and exerts a transverse force that is dependent on the pressure in the spring chamber and is perpendicular to the axis. A method of pairing communication devices which communicate along a non-data-cable medium includes sensing a data cable connection with a second device, entering an appropriate pairing state upon sensing the data cable connection, the pairing state being either an add device state or a join device state and performing pairing with the second device along the non-data-cable connection.

1459826373-b6be8e10-d435-42ec-83f4-72c146cbca39

A pixel for use in CMOS or CCD image sensors is disclosed. The neck scarf may be an endless ring, or so-called \u201cinfinity\u201d scarf, or a long rectangle. The method also includes initiating disengagement of the clutch, detecting movement of at least a portion of the motor, and recording a clutch parameter that is generally coincident with the detecting movement of a least a portion of the motor.

1459826373-e7abd1f7-e047-423f-9cbf-88c7358f6170

Aqueous strippable paint comprising one or more pigments, a polyether polyurethane binder having anionic stabilizing groups, and a second polyether having at least 20 wt. The ballasted lamp socket comprises a lamp-receiving portion adapted to be coupled to the gas discharge lamp, an enclosure mechanically coupled to the lamp-receiving portion, a dimming ballast circuit electrically coupled to the lamp-receiving portion and housed within the enclosure, and first and second electrical connections. For example, communications can be monitored to determine when a video game event occurs and then a video game event can be generated. A phase difference of 180\u00b0 is generated between the lights transmitted through the mask substrate and the transparent film or the groove, causing interference with each light to offset each other.

1459826374-460a0b6d-69b7-4d91-be51-59a9970989a3

In a device for damping rotary oscillations in a traction mechanism drive for auxiliary units of an internal combustion engine, having an overrunning clutch, which is arranged between a pulley and a hub, according to the invention a locking device is located between the pulley and the hub, axially behind the overrunning clutch. One device includes a camera configured to produce a motion invariant image of a bar code while the bar code is in motion and a processor configured to deblur the motion invariant image of the bar code. A plurality of bonding wires are attached between parts of the semiconductor chip and the multi-layer resin mask organic substrate to create selective electrical connections.

1459826374-67e16be9-1af0-4799-99b8-f9d7ec496e3f

An image processing apparatus in which an image signal is divided into blocks each comprising a plurality of pixels and a quantization and a variable length encoding are executed so that a code amount of a plurality of blocks lies within a certain range. The control transistors TC1 and TC2 are disposed in the pad arrangement region. The magneto-resistive device has a magneto-resistive layer formed on one surface side of a base, and an insulating layer formed of two layers and deposited around the magneto-resistive layer. The input data decoding portion decodes the first and second bit values based on the amplitude values in the signal that have been converted into absolute values by the absolute value conversion portion.

1459826374-6c4eb7fd-ea60-42d2-bcb9-11f28f2563fa

An apparatus for positioning a graft and catheter operable for subcutaneous access to the vascular system of a patient. The hospital site server generates a plurality of compressed data sets for use by the Internet Data Center. An attempt to write to the flash memory is successful only if a received encrypted certificate is authenticated by the cryptoengine. Thereafter, an average is determined over the plurality of receiver antennas and the plurality of tiles of the plurality of conjugate products for each of the first MS and the second MS. To enable retrieval of the SCR catalyst from the sleeve, a retrieval feature is disposed on a readily accessible, inner surface of the overhang extension.

1459826374-bf16a7ab-de10-4d72-a034-f49b676f34ab

There is provided a battery storage case which is capable of accommodating batteries of different selected types without an unused space being left in a battery storage case thereof and is therefore very convenient to handle by users. The living hinge enables the close-out panel to fold when the stowable vehicle seat is deployed and to open into a flat panel flush with the vehicle's floor that conceals the pivotable connections when the vehicle seat is pivoted to a stowed position. The method also includes coupling the inlet in flow communication with a feed air source. The processor is configured to estimate a quality of each channel based on one message received from the first device over each channel, select for wireless communication a first channel of the plurality of channels based on the estimated quality of each channel, and prepare a selection message indicating selection of the first channel for wireless communication. An authorization token is transmitted to the new device when the association request is granted.

1459826375-26f41357-8c7b-42c3-b04c-d432684ecf77

A bagging station within a check-out counter system and for use by a cashier positioned in a cashier location within the check-out counter system. Further, during a callback period, monitoring whether the mobile station has received a service request from the network and, if yes, ignoring the service request if the service request is a non-voice service request that is anything but a position location service request. Results of this analysis are used to assign a respective block function to blocks of the document content. In some embodiments, the corresponding pattern on the back side is a mirror pattern that matches the functional pattern in size, placement, and number.

1459826375-bd31d164-f46f-4258-ae05-fd7708c8d4da

Systems and methods for testing a network page without encapsulating the network page with a test environment are presented. The face mask includes a body having a peripheral edge for placement against the face of a wearer. In another aspect, DRAM circuitry includes a plurality of memory cells not requiring sequential access, at least a portion of the plurality having more than two memory cells for a single bit line contact.

1459826375-dd5d9f52-3a19-4729-88c4-8f4f1d1cfa2d

A scanner assembly includes a first sealing ring that extends around one of first and second actuating mechanisms of the scanner assembly. According to the method, the request for the key of the first length is received. The spectrum results formed with said different guessed data are used to determine the frequency shift. The controller selects at least one executable case for the collected events.

1459826376-5c4f150c-b230-4a63-b966-e1d74dbca5e6

A data storage tape cartridge used in a tape transport apparatus that incorporates air bearing technology is provided. The steps above can be repeated until all desired PC values and destination values are obtained. To remove, the bottom plate is rotated counterclockwise until the post in the top plate acts as a stop and prevents rotation, and the assembly is then removed from the stake hole.

1459826376-72e6b542-3568-4cf5-91c1-ad4ea4b75fb4

A heat system utilizing solar energy is disclosed herein, which includes at least one solar panel, an energy control unit, a temperature control device, at least one heat-radiating element, and at least one storage cell. In the other cases, the navigation device changes the position determination accuracy of the receiver to a low accuracy. A couple of division gage resistors.

1459826376-9edde6e4-a750-44ca-a47b-f035a79b2c94

Highly pure iron oxides are prepared by reaction of metallic iron, in the form of microspheroidal particles or of scraps or cuttings, with an agitated aqueous solution of a mono- or polycarboxylic acid with a pKa of 0. Conventional memory-space dependent instructions, such as MOV, MOVX, and MOVC, provide an optimized addressing scheme, and an extended memory-space independent instruction EMOV provides an optimized code efficiency, processing speed, and ease of code generation. The high density plasma is set and controlled to isotropically contact particular regions of the inorganic material to allow for trimming and control of a critical dimension associated with the inorganic material. Exemplary useable formats include a canned voice message, delivery to a call center that translates data to voice, text to speech, and text to instant messaging. The memory cell array performs write and read operations in response to signals designed for the operation of a memory cell array comprising memory cells of a type other than the first type. When the sender's address and the recipient's address do not match the list of health care participant addresses, then an identifier is received that associates the electronic message with another legacy system and with a non-participant legacy system.

1459826377-5d85dbeb-f3f1-4df5-a5c6-36f4a5d7fab3

A method for selecting an annotation processor associated with an annotation for reprocessing is provided. At each of the five positions, one or more position indicating signals are received by a microprocessor of a controller and stored for future use. The fin structures may be coated with a catalytic material to enhance or stimulate reactions taking place within the apparatus. Each action includes a tour time. The conductive material of the housing inhibits electromagnetic interference leakage through the panel opening.

1459826377-f30e8c1c-abca-4516-8a1f-7850d2eb2a81

A system including surgical compression clips is described and used for endoscopic full thickness resection. The process involves obtaining a specified parameter for the part at an individual fabrication step; measuring the specified parameter of the part at the individual fabrication step; obtaining a final specified parameter for the part upon completion of the sequence of fabrication steps; and disposing the part at the individual fabrication step. Furthermore, the method includes grinding the urethane sponge or rolling the urethane sponge using a roll press. A control gate opposes the floating gate. A first ring gear half is placed about the outer periphery of the intermediate gears, and attach a torque frame to the carrier. A pillar is formed in the semiconductor material under the isolation region, where the pillar is capped with a first dielectric material to form a void.

1459826378-0a75e5d2-18ca-4d40-b4e5-0d842665f59d

A method for detecting a media change includes the steps of comparing a previous media condition to a current media condition, detecting a media change when the previous media condition is in one state and the current media condition is not that one state and, prompting a user to make appropriate menu selections when the media change is detected. The apparatus may further comprise a rotatable second donor roll that receives the toner from the second magnetic brush roll and delivers the toner onto the photoconductive member, and a rotatable third magnetic brush roll that receives the developer material from the second magnetic brush roll and delivers the toner to the second donor roll. The electro-magnetic actuator includes an inverted electro-magnetic coil assembly and an armature disposed inside the electro-magnetic coil assembly and axially movable relative thereto. The method of

fabricating a liquid crystal display device coating or screen printing a TFT substrate with the light sensitive organic material, and then illuminating selected portions of the light sensitive material to form the organic pixel electrodes. Then the substrate is polished with a standard polishing pad to remove scratch defects created by the fixed-abrasive polishing pads.

1459826378-7b3fb029-695f-41f6-b13a-2c66b87b46c9

An exemplary system has circuitry that receives a first signal, the first signal being generated responsive to a user control for a play speed of a film. Photoconductive gain on the order of  $10^6$  is possible, while maintaining de operating voltage low. An auxiliary link mechanism has a first part supported on the moveable plate and, in turn, by the base and a second part supporting the key top. In immunostimulating composition comprising an encapsulating-microsphere of the biodegradable polymer has an average particle size distribution such that the majority of the microspheres will be taken up by the villous epithelium section of the intestines of a mammalian subject when administered as a vaccine against diseases caused by entero-pathogenic organisms. This forms a packaging structure without bare pins exposed to the environment. A message is transmitted in such a manner that the host designates and notifies the remote device of a maximum message length determined in a way corresponding to the transmission rate of the low-speed bus and divides the message into division messages each not exceeding the maximum message length thereby to transmit and receive the division messages between the host and the remote device.

1459826378-ce0ab11f-c9e9-4ad0-a80f-d169e8b875bc

A computer-implemented method for off-host backups of striped volumes may include identifying a striped volume of data on which to perform an off-host backup operation. The first pole portion projects from a flat surface of a first yoke portion at a medium-facing surface side and having a reduced width at its upper end. For each block, the sharpness according to the Kurtosis of the DCT is computed.

1459826379-9d9ca231-c91a-4c78-931a-ec30b2dca4f8

An image display optical system according to the present invention has an illumination optical system, a plurality of image display elements, a color separationcombination optical system, and a projection optical system. A transmitter 100 includes a slope estimation unit 102 and a slope reference attenuation signal selection unit 103. The system includes a battery powered camera requiring a first voltage to operate and an RF transmitter to send an activation signal to the camera. The expandable fixture may include a mechanism to lock the expandable fixture at the adjusted length. In particular a vertical tensile strain may be formed in a base and collector region of an NPN bipolar transistor and a horizontal compressive strain may be formed in the extrinsic base region of the NPN bipolar transistor. By doing this, it is possible to provide a field sequential lighting device using the light emitted from the light source efficiently and having desirable color reproducibility, and an image projecting device having it.

1459826379-d5b23603-6a31-4376-a784-97ee306e1703

A thermoacoustic device is formed with a resonator system defining at least one region of high specific acoustic impedance in an acoustic wave within the resonator system. A background-field magnetometer and an electrical coil structure are positioned within the enclosure. The thermal expansion of the ash accumulation baffle plate can be absorbed even under the operating conditions which produce a change in temperature, and charging and replacing the catalyst in the catalyst blocks are possible without on-site welding of the ash accumulation baffle plates. The shell set includes a press shell, a connecting seat, a rotating seat, and a supporter, the press shell being at a side of the base, the connecting seat being on the other side of the base, connecting the encoder, and being in the rotating seat connecting the connecting seat so that the connecting seat and the rotating

seat can be rotatably assembled with the encoder. The inner row includes a conductive corner segment at the first corner. The prime calculating apparatus generates a random number, calculates a multiplication value  $R$  by multiplying a management identifier by the random number, and calculates a prime candidate  $N$ , according to  $N=2 \times d7 \times d7 \text{prime } q+1$ , with respect to  $w$  satisfying an equation of  $2 \times d7w \times d7 \text{prime } q+1 = \text{verification value}$ .

1459826379-e1a34600-764a-427a-892a-81e5e3094892

A method for the manufacture of a circuit board containing a component and circuit board containing a component. The cartridge includes an outer covering enclosing a chamber. voltage generator, and the voltage across the measuring resistor being used as a difference measuring signal. A central cover is spaced apart from the wafer support. The phase conjugation technique, referred to here as complementary sideband regeneration, is accomplished on the retransmitted optical signal in the electrical domain, and requires no nonlinear optical techniques.

1459826379-f12a89ba-9d16-4024-b236-e0a1610f9b64

A heat spreader module includes a base, a heat spreader member arranged on the base, a thermal conductive layer arranged on the heat spreader member, a first joining member interposed between the base and the heat spreader member, and a second joining member interposed between the heat spreader member and the thermal conductive layer. Means of Solution The inner rotor 5 and outer rotor 6 having trochoidal toothed shapes are set in such a manner that when they are in a mutually intermeshing state, a tip clearance  $d0$  is created between the respective tooth crests 5a of the inner rotor 5 and the outer rotor 6. The flexible membrane deflects from any pressure difference between the reference pressure and the fluid pressure. Should the data reside in the IIC, the data is provided to the CPU from the IIC through the upper bus.

1459826380-72611854-6006-4e83-a55b-64b0eb2d2054

A method, apparatus and system for resource allocation in redirection of data traffic are provided. An RS flip-flop circuit provided in each of the bistable circuits functions as a memory portion for discriminating a start position of a display region for partial display. The valve manifold assembly further contains a bypass channel connected to and between the inlet and outlet channels, and containing a bypass valve positioned to control fluid flow within the bypass channel. The at least one working station being arranged for a stationary operator that is a human and the at least one working station being operated by a stationary operator that is a robot are arranged such that transfer of objects from one working station to the other working station is performed by one or both of the stationary operators.

1459826380-f2f21f02-e704-45dc-8660-029131548c9c

Crosslinked polymer blends comprising a poly and a nonlinear optical chromophore. A network server is provided and is configured to transmit a plurality of multicast streams of video content over the network. The housing has an interior in which a housing insulation pack is provided for retaining the evaporator therein. Hybrid maize seed, plant or plant part produced by crossing the variety PH1K1F or a locus conversion of PH1K1F with another maize variety. Tracking data is generated for the vehicle over a course of travel utilizing captured images from the in-vehicle vision based module. Other embodiments are described and claimed.

1459826381-4bfa9526-8647-4a01-a094-508505d2976b

Vertical device structures incorporating at least one nanotube and methods for fabricating such device structures by chemical vapor deposition. The DALI remains in a standby mode until signal activity on a DALI bus is detected, or the DALI may periodically switch from the standby mode to an active mode so as to sample any activity on the DALI bus. A drag chute is attached to the shaft to add resistance to the downswing of the golf swing to prevent the user from simply allowing the

weight of the club to cause the club to drop with little physical effort. Electromagnetic actuation of these diaphragms by solenoids housed inside the PCB drives or pumps fluid through the channel in a peristaltic fashion. The data is encrypted at the SRM as it comes by, and the key is revealed to the recipient if it is subsequently determined that the transfer is allowed.

1459826381-903160af-5a38-4837-8c22-5fbd646fef81

In an apparatus to increase the service life of bearings in an electric machine, the bearing currents that act on the bearings of the rotor are reduced by the application of a corresponding negative field voltage to the rotor, obtained with the aid of a compensation unit. A first dielectric material is formed over a workpiece, and a second dielectric material is formed over the first dielectric material. It is determined into which partition an entry corresponding to the incoming record should be grouped, and whether a matching entry is already present in the partition, using a hash function and a hash table built for the partition.

1459826381-b326edec-0a77-45e7-8a09-926946ef755f

An improved landscape watering system is provided that simplifies the installation and maintenance of multiple underground water control valves, that permits the on-site configuration of valve-electrical boxes, that limits egress of insects and other living creatures into a valve-electrical boxes, and that facilitates labeling of a valve-electrical box. Further, the photon escape layer has a refractive index that is between a refractive index of the light emitting structure and a refractive index of an encapsulating material with respect to the light emitting structure such that an escape probability for photons emitted by the light emitting structure is increased. The encoding also includes recording rows of the unitary matrix operator by applying, to a volume holographic element, a combination of an  $i$ th one of  $n$  reference waves and a superposition of  $n$  signal waves defined by the superposition defined in an  $i$ th row of the unitary matrix operator. The purchase token represents at least one requested asset. The magnitude of the resultant backward motion vector is reduced in accordance with a frame distance between each B-frame and the reference frame. For a disposable diaper, the array of disposable absorbent article graphic designs may comprise a first absorbent article graphic design for newborns and infants, a second absorbent article graphic design for toddlers, and a third absorbent article graphic design for older wearers, and other absorbent article graphic designs, and a wetness indicator.

1459826382-02e81212-f756-4e99-87e1-d01f5b49e1ef

A method for performing field operations is disclosed. A region of a lower wall of the housing forward from the lance is formed as an open part. A motor torque command is set with the load factor, and the motor is then driven and controlled to ensure output of a torque equivalent to the set motor torque command.

1459826382-50e9d70e-f6db-437e-96dd-957c88aa3547

Optical structures having an array of protuberances between two layers having different refractive indices are provided. When an initial node of the 1+1 protection service is outside the ASON, it associates the primary service and the slave service to realize 1+1 protection. The injector housing includes one or more fuel galleries annularly disposed about the longitudinal axis, and a compressed air inlet.

1459826382-7867ac1f-bd25-4316-b557-80f8cbe21798

A system provides a player tracking system and system gaming apparatus for playing non-base games by funding the credit side of a gaming cycle. The reagent may be dry or in an aqueous solution preferably buffered to a pH from 6 to 10, if desired incubating, if necessary inducing coagulation by the addition of one or more coagulation accelerants such as calcium chloride, and establishing a value indicative of the coagulation potential,  $e$ . The drum is rotatably mounted to a support frame and can be rotated from a position in which it receives solid

material from the supply source to a dispensing position in which it dispenses the solid material into a receptacle below. The inner surface of the trench has a first side wall and a second side wall located deeper than the first side wall and having a portion made of the second region.

1459826382-d2e1c03a-6e4a-4395-a942-74d6dcd2f3dc

A chord detection apparatus capable of detecting a wide variety of chords musically related to realtime performance. The steering wheel has an armature with a hub and is coupled to a vehicle steering shaft. A redundancy controller circuit, connected to the multiple routing engines, facilitates the selection and switching of the routing engines. After querying the second RNC, the first RNC receives session data from the second RNC, where the session data corresponds to the session that the access terminal currently has with the second RNC. The second reflector has a bottom reflective surface that is formed from a second conic cross section portion extending to and revolved about the central axis.

1459826383-71fd8fbb-56ab-4132-9d33-43757aa8409b

Recombinant proCVF exhibits substantially the same activity as CVF and is useful for lowering complement activity. An intake port is formed in a front panel of a disk device body along a lower edge of a tray entranceexit opening. The system also permits the users of the system to rapidly determine the current status of any content in the system. Actuation of a set screw or the like causes each of the pin cones to push the retaining balls radially outwardly in a simultaneous fashion thereby engaging a first and second members to be coupled. In its set-up or voting state, the ballot box receives ballots from the tabulating machine and stores them in one or more secure ballot compartments.

1459826383-de68127b-c16b-43a3-9e1d-fae527a14364

In an environment wherein a front end system receives a service request, and a back end system responds to the request, a user of a target endpoint must be authenticated. The toner container filling device is installed at a toner container filling base and is able to fill a toner container with toner automatically, and obtain information about the toner container filling process while filling the toner container with toner. The nitinol wire is secured to a connecting wire which extends upwardly into the housing and is vertically displaceable within the skewer. Classification may include, for instance, determining whether an electronic document represents unsolicited communication or online fraud such as phishing.

1459826384-31e3ac5c-3c08-4a29-a343-168e3f171893

A wheel hub for attaching to a vehicle includes a hydraulic engine received in a hub shell and attached or secured to the vehicle, for allowing the hub shell to be rotated relative to the hydraulic engine and the vehicle. In the method, the access node device first receives a packet from the Residential Gateway, then obtains a network prefix in a source UPv6 address of the packet, judges whether the network prefix in the source IPv6 address of the packet is a valid network prefix of a CPN corresponding to the Residential Gateway, and if yes, forwards the packet finally. The interior being substantially sealed from the exterior except at the first number of one way vents. The impedance control input controls the variable impedance between a high impedance, OFF state and a low impedance, ON state. The operating bar is mountable detachably on the supporting legs to stretch out the shading member. The first unit has a first cover and the second unit has a second cover.

1459826384-6d66be7f-fc1f-4cf5-9220-ecfe49209647

A hernia repair device includes a surgical mesh configured to extend across a tissue defect and a plurality of filament loops coupled to the surgical mesh toward an outer periphery thereof. In response to the monitored quality of service parameter, a number of parallel message processors that route messages from the plurality of smart items to the message routing engine is controlled. The printhead

assembly includes multiple controllable nozzles. Likewise, controlling the backlight using the characteristics of the analyzed image enables reducing power consumption and increasing the contrast ratio by applying backlight brightness according to the characteristics of the image.

1459826384-d75ec6a7-9690-4006-9303-8c6ad68aa4bd

A load control device for an engine of a work vehicle that purposes to render the work vehicle, such as a wheel loader or the like, capable of raising a vehicle speed in a short period of time by providing a sufficient traction force when a high traveling load is imposed, without causing degradation of a vehicle body performance, waste of energy, and other problems. The method includes negotiating allocation of a single user license over a wireless connection. The head-slider is coupled with the gimbal, and includes a plurality of head-slider pads. An error signal indicative of the difference between the fundamental mode frequency and the cavity resonant frequency is obtained by subtracting the outputs from the two parts of the photodetector.

1459826384-e97b6664-0ac8-4cd4-a7bb-65502032b33c

A method and apparatus for a wireless health monitoring system for interactively monitoring a disease or health condition of a patient by connecting an internet-enabled wireless web device to a health monitoring device which may be a medical device or other health related device. The switch includes at least one optical input for receiving an optical beam and at least two optical outputs. The additional electrode permits a direct measurement of the electric field in the gate dielectric and thus provides information which can be used both for characterizing the transistor and selecting its dimensions and for activating devices for protecting the transistor and/or other components of an integrated circuit containing the transistor. Methods of the invention disclosed herein enable users to perform customization projects and to print the documents created thereby, either at a remote printer such as at a document factory, or at the user's own, local printer. The low voltage swing pad driver and receiver generates a relatively low voltage swing when compared to CMOS full-scale voltage swings thereby significantly reducing the possibility of introducing any noise and/or distortion of data that is communicated via the interface. Additionally, a micro switch module comprises a micro switch; a layer of resilient material disposed on a loading surface of the microswitch; and an actuator element disposed on the layer of resilient material for transmitting a mechanical switching force therethrough to the loading surface of the microswitch for actuating the microswitch.

1459826385-4fd12bb5-e03f-4fdb-a272-d2db14fcfe76

The present invention is related to a microminiature lens module and a lens device with the microminiature lens module. The OSD associated with the analog broadcast and the OSD associated with the digital broadcast are processed in an image processor in an integrated manner under the control of the controller for controlling the OSD generator, thereby preventing degradation of the image quality of the OSD associated with the digital broadcast. The initializing module arranges the transmitting data in a 3D matrix to produce information data. Attempt to gain access to these internally imaged layers causes the image to be sufficiently disrupted as to prevent modifying such images.

1459826386-019d0149-d5d4-4feb-b1f8-b9661b29f9da

A vehicular upholstery fabric is made from a raw tricot fabric which is knitted by using a PPT-multifilament yarn whose single fiber fineness is about 0. The system includes uniquely configured, vertical support columns to which a number of different types of structural components can be quickly and easily connected and provides a highly versatile work station system which is very attractive, is easy to assemble, disassemble and adjust, and yet, is structurally sound and durable in use. The method further comprises coupling first and second remote units to the master unit, the first remote unit communicating the first signal over a first air

interface located within the environment at a first location, the second remote unit communicating the second signal over a second air interface within the environment at a second location.  $9 \times d710 \times u22123 \times u2266nM \times u201d$ , where  $n$  is the number of unshared electron pair not involved in aromaticity and not coordinated to metal, among unshared electron pair owned by the nitrogen atom, and  $M$  is molecular weight. To achieve this object, the apparatus has a light-emitting element array which illuminates a document to be read by a read sensor, and an illumination lamp which illuminates the document to be recorded by the photographing unit. The composition may optionally also comprise one or more short-chain alcohols.

1459826386-454c63ca-298a-441a-9490-f6a638e7271d

A 3D semiconductor memory device including a plurality of memory cell strings, includes a substrate and a channel that extends from the substrate. While a user makes motion, a CPU determines whether the user makes appropriate motion by the amplitude, the period, and the detection frequency of an acceleration signal inputted from an acceleration sensor unit, and when it is determined that the user makes appropriate motion, operates an alarm generator thereby to notify the user that heshe makes motion with appropriate motion intensity. An etch-stop layer is between the MOS transistors and the dielectric layer. The invention can also utilize the algorithms disclosed in an earlier application U. The level of loss that is introduced is based on the information content of the information-bearing signal.

1459826386-ad06943d-92d6-4dfb-a19e-7a425066b71a

There is provided an efficient compressor which is simple in structure and small in torque fluctuation. Each stream of data sets is allocated to a corresponding respective group of parallel data tracks. Because the silicon nitride spacer formed on the sidewalls of the contact hole can serve as a leakage current blocking layer, the yield and the reliability of the semiconductor devices manufactured by this example process are enhanced. The angle correction factor compensates for the difference between a desired input power and the measured input power.

1459826387-328e9890-993e-41a0-b918-22a701de8045

An electronic control unit includes a main microcomputer and a sub-microcomputer. A cavity of the manifold body resides over the substrate surface such that liquid is emitted from the liquid microjets into the cavity for contact with the substrate surface, while the drains orthogonally remove spent liquid from the cavity. The air plenum is closed off downwardly by a filter ceiling. An inner main portion-facing upper surface of the projecting portion is configured to facilitate the movement of the tool towards and through a seat belt, and the bottom outer surface of the projecting portion is curved for both easy handling and for enabling a firm grip when the tool is used to break window glass. A vibratory mechanism in the handle is activated causing vibration in the accessory assembly and thus improving the flossing, brushing or gum stimulation motions. Each pair of composite frames are opened and closed quickly and easily, by the user, for frequent changes of displayed material.

1459826387-5424cc79-9fc2-43a7-909a-7a779d83e925

Personal care appliances, such as hair care appliances, facial care appliances and body appliances, and attachments therefor are disclosed. The structure includes a chip guard ring for each circuit section having the at least one differing characteristic. A digital residue signal of the output of the one or more initial pipelined analog to digital converter stages is sampled.

1459826387-ce897371-3a50-4a87-88cc-37e1bb1e6743

The invention is directed to the cross-metathesis and ring-closing metathesis reactions between geminal disubstituted olefins and terminal olefins, wherein the reaction employs a Ruthenium or Osmium metal carbene complex. A lifting rib on the slider cooperates with a lifting wing on the upper seal member and a closure bar

cooperates with a closure bar groove of the lower seal member. The tub comprises a drain, a spout, and an inner space.

1459826387-e41187cf-9b31-4925-b92e-3f285c58bd3f

An austenitic stainless steel, which comprises by mass %, C<0. In one example, a method includes receiving, by one or more computing devices, location information corresponding to a physical location of a user. Thereafter, upon the detection of Pe in the input signal Si, a control tag signal is derived from a signal division between the detected Ps and Pe, and signals C1 to C4 for controlling various parts of the display device, etc.

1459826388-2c0381fc-876b-4c54-b53d-b26a2a44c7d7

A solid-state image pickup device includes a pixel array including a plurality of pixels, each having a photoelectric converter; a signal conversion circuit converting a pixel signal from the pixel array into an output signal; and a clamp correction circuit correcting a clamp level included in a predetermined signal dealt with by the signal conversion circuit. A multi-energy gamma attenuation device monitors bulk material flow and produces a spectrum that is compared to a baseline spectrum to produce a relative weightimpuritycomponent ratio. A feature analyzer evaluates features associated with the one or more web pages to identify content, layout, links andor metadata associated with the one or more web pages and identifies features that are labeled and features that are unlabeled. A table of known locations within the building and the base station signal strength at those locations is searched to find the most similar stored signal strength to the signal strength detected. If the non-volatile memory cell is programmed, the latch is coupled to a second voltage supply terminal, thereby storing a second logic value in the latch.

1459826388-61e79e37-3910-44de-84ef-049677634525

Methods and apparatus relate to treatment of fluids to remove mercury contaminants in the fluid. The stationary punch comprises a top plate surface of the housing maintaining drive motors and gears of the stacker itself. The games do not require a manual dealer and in one embodiment, played in a gaming establishment using low cost gaming stations. By Fourier analysis, the velocity of each species band is determined and the identification of the species is made by its electrophoretic mobility in the channel. After the setting needle has been pulled out of the tube, the sensor can be inserted in said tube.

1459826388-ad9aa703-5ab5-4820-be4e-3aa15116e97a

A touch screen panel and a manufacturing method thereof are provided, which can reduce the surface reflectance of a touch screen in indoor and outdoor environments, suppress degradation of the visibility of a display by a reduction in surface reflectance, and improve light transmittance. The battery separator preferably includes a first polyolefin providing mechanical integrity and a second polyolefin including the water-scavenging or acid-scavenging reactive functional groups. The lower front case has a keyboard unit mounted therein.

1459826388-dba27e59-8da8-4bd5-8234-21af0ef5763e

A dispenser capable of forming a uniform material layer and a method of fabricating an organic light emitting display device using the same are disclosed. 0\xd71017cm3, and a resonator length is not less than 1500 \u03bcm. The method includes identifying one or more text strings in the textual content that are to be processed differently than an identical or similar text string in other electronic documents, and associating, with the electronic document, data indicating that each of the identified text strings is to be processed differently than an identical or similar text string in other electronic documents. Raised markings may also be formed on the surfaces of packaged or bare semiconductor device components.

1459826389-b92416b4-0021-4cf7-9764-b629c0fb41c0

A printing blanket construction is provided which includes a reinforcing fabric ply comprised of a weft insertion fabric or a heavy gauge fabric, where the reinforcing fabric ply provides all of the necessary tensioning properties to the blanket. The biodegradable balloon catheter includes an elastomeric tube and a biodegradable balloon. In a first operating state, the valve devices are at least partially supplied with current and switched such that a compressed air line to the spring store part of the spring brake cylinder is aerated. When the request identifier is found in the string associative table, a string within the string associative table corresponding to the request identifier can be identified and presented upon the mobile device as text. The method further includes pressing the lid onto the electronic assembly. The shaft also includes a fastener or locking mechanism, which secures the lower shaft member within the upper shaft member.

1459826389-d2aa965a-d888-43f8-a378-5f363137867c

A cinch connector for connecting a cinch to a saddle. Alternatively, fabricating conductive lines in an integrated circuit includes patterning a layer of a transition metal to form the conductive lines, wherein the conductive lines have sub-eighty nanometer pitches, and depositing a protective cap on at least some of the conductive lines, wherein the protective cap has a thickness between approximately five and fifteen nanometers. The first module may include a transporter which shifts singulated first cards from a first location to a card delivery location with a card transferor shifting sets of first cards to be included in an assembled partition from the first card forming module to an assembly station. In some examples, power may advantageously be saved in part by eliminating or reducing a DC current path through the IO circuits.

1459826390-0c6d31ce-cd76-49b6-bf69-0ad9cb6cfdd9

The present invention provides 2,4-diaminopyrimidine compounds useful as kinase inhibitors, pharmaceutically acceptable compositions thereof, and methods of using the same. We form a dielectric layer over a conductive layer. Access times for each isochronous stream are scheduled only during a primary access interval, or an immediately following extension period. In some cases, the second end of the pin may be at least partially tapered, with the taper engaging the edge of an indentation in the button.

1459826390-6705a15c-4101-4dd9-8564-4ea8dda210d3

A system for dispensing a plurality of pressurized tanks. After a box is received on and secured to the second platform, the second platform is rotated so that the open top of the box faces the first platform and moved toward the first platform until the box substantially surrounds the product on the product support surface. A carburetor 6 is also provided to the top handle 41. In a third embodiment, a more robust MCS level is selected.

1459826390-8d3986cf-be1b-400a-9f86-3880c3b88ec6

Exercise apparatus and methods having adjustable frame members are disclosed. The test may be used to determine if a subject is suffering from, or is likely to suffer from, a disease state involving the fovea, parafovea, macula, neurological pathways used by these areas to communicate with the visual processing centers in the brain and cone photoreceptors and/or ganglion cells. The front terminal edge of the absorbent composite may be connected to the body side of the front body panel.

1459826390-992151ff-5075-42d6-a338-aa125e756fc0

The present invention relates to Notch1 binding agents and methods of using the agents for treating diseases, such as hematologic cancers. In either mode 32 bits of data from each of two memory arrays are prefetched into respective sets of 32 flip-flops. Transmissions from the mobile wireless device are preferably comprised of traffic transmissions that contain data packets and other transmissions that contain information for administrative purposes, such as for communication link management operations between the mobile wireless device and the wireless packet

switched network. The engagement gear and the rotational body are configured to selectively be positioned in one of a first state in which the second engaging portion and the first engaging portion are separated from each other, and a second state in which the second engaging portion engages the first engaging portion. The copper-tin alloy layer contains over 60 at % but no more than 90 at % of copper and 10 at % or more but less than 40 at % of tin.

1459826391-b91bfb1e-9eb3-44c3-b428-a94720389b55

A liquid crystal driving device for controlling a liquid crystal panel and a liquid crystal display apparatus. The elongated shaft includes a proximal portion, a distal portion and a flexible portion supported therebetween. A pickup device of the printing apparatus can access the media through the outlet. Because the registration is done automatically by each offeror of a service or product, the efforts of a central administrator entering this information becomes unnecessary, thus making it possible to advertise more products and services efficiently. The material layer is removed using the organic layer as a mask, so that an opening is formed in the material layer.

1459826391-bf9d2b74-68d3-42a2-9c19-67a4a668d021

Concentrates for lubricating oil compositions are prepared by blending at elevated temperature:. The method uses geometric principles and the fact that an impedance mismatch at the interface results in significant reflection. A signaling mechanism provides chest compression indication signals directing a chest compression force being applied to the chest and a frequency of such compressions.

1459826392-0cf6beaa-c1ce-4fc2-87ca-ada02a173809

Systems, devices and methods for the transmission and delivery of high power laser energy deep into the earth and for the suppression of associated nonlinear phenomena. The tack of an ink that is used in a printing group of a rotating printing press, or the temperature of a rotating component in the printing group is selected or controlled. A method of resisting corrosion in concrete containing metal elements is provided. Embodiments also incorporate the historical execution characteristics into executable file for the application, such that the historical execution characteristics can be used to manage subsequent executions of the application. Eye movement, facial expression, gestures and body motion in the image to detect a cued event situation.

1459826392-69d09833-cc60-4b78-a39b-956869047fd5

A printer includes a printhead having a plurality of ink jet nozzle assemblies. A user interface has an instant messaging window for displaying a plurality of conversation panes representative of concurrent instant messaging sessions between a local user and a plurality of remote users. At least one of mounting parts is formed integrally with the rotating member or the seat back frame.

1459826392-8ad034b1-4be1-4797-a528-d7892c3bede6

Methods and apparatus to compensate first principle-based simulation models are disclosed. The core part 3a presses a bottom portion 4b of a drawn portion 4a of a metal material 4 and is separate from a surrounding die part 3b and is provided with a space 3c at the whole outer periphery of the core part 3a. The stretching of the indentation prestretches a headband portion of the headwear, and enhances the comfort and fit of the headwear. A decision engine verifies through on-demand polling that a device is down.

1459826392-9c5923ee-0982-4c77-95fd-5cb116d55380

A gate line extending in a horizontal direction is formed on an insulating substrate, and a data line is formed perpendicular to the gate line defining a pixel of a matrix array. The leadframe has a die pad and a plurality of leads, and the leads are disposed around the die pad. The first RF antenna element is located proximate to the tag antenna and the second RF antenna element is located proximate

to the reader antenna. Similarly the high in-passage pressure expands a gas diffusion electrode 5b of the MEA 2 and a separator 7, which define the oxidizing gas conduit 7g, in opposite directions to make a clearance between the gas diffusion electrode 5b and the separator 7. The Cu<sub>2</sub>N bonds remain in the grain boundary portions in the surface of the copper interconnection even after the protection film is removed.

1459826393-103e436b-589a-4e2a-83c4-52334a909dc9

A method and system for generating multiple self-ID packets that are used for mapping a node topology is disclosed. 1% by weight of the powder; and sintering the green compact under non-oxidising conditions to form a ceramic material comprising alumina and carbon, wherein the green compact is sintered at a temperature of less than 1550°C. As a result, a remote copy system with high reliability is obtained.

1459826393-2582e29a-5f8d-4d69-9310-c607385de0f5

A system, a GUI and a method are provided that allow intuitive, flexible and robust editing of individually editable instructions generated by conversion operations applied to a defined step-and-repeat programming element in a machine vision inspection system. In order to improve resolution at high frequencies, acoustic resonators or micro-mechanical resonators are utilized in a sigma-delta modulator instead of electronic resonators. A bus configuration on the display substrate is utilized which combines repair flexibility, low parasitic capacitance, and the ability to easily make the necessary interconnections. The bar includes first and second magnets mounted on the bar along the substantially linear axis. The blended product exhibits elevated umami taste intensity and improved flavor characteristics over those exhibited by fish sauce or anchovy paste individually.

1459826393-535ec259-89b6-4038-9e34-e00699e7b4b8

A multi-transformer LLC power converter having at least two transformers including a first T1 and a second transformer T2 in series includes a switch network configured for receiving input power including a first and second switched node. The overlay is determined from the anti-symmetric component of the spectrum, which is formed by subtracting the measured spectrum and a mirror image of the measured spectrum. The method also includes generating output signals responsive to light from the wafer resulting from the illuminating step. A lock tab on the case engages mating recessed seats on the fork for securely retaining the fork relative to the case in each of its stored and deployed positions.

1459826393-ead882a8-9cc3-46e6-a4c1-f4aae4e5b9a3

A rotatable table includes a shelf unit which is mounted on a support structure and a rotatable unit having a work surface which may be rotated from a horizontal position to a vertical position. The haptic feedback is discontinued when the object is moved in a second direction opposite the first direction subsequent to the movement in the first direction. Shared channel space is divided into a number of communication slots that are repeated at a predetermined interval. Being portable, the device is a point-of-care device that can be used in emergency situations by paramedics, in the emergency room, and in a physicians office to detect and measure the concentrations and/or percentages of functional and non-functional hemoglobin derivatives in a patient's blood. In one embodiment, the cross-correlation is determined using a pre-whitened receive signal, obtained by adopting the variance values received over the network by the downlink Codec.

1459826394-27a34276-7cf1-4b01-9545-92a1298b8da2

A tensioning cable actuator has a housing with a nut held in the housing. The active material comprises a monoclinic  $\beta$ -type titanium composite oxide which contains fluorine. The adhesive compositions of the present invention are particularly suitable as topical adhesives for skin adhesion of articles such as disposable waste management articles, disposable absorbent articles, and personal

care articles. This bearing guide is spring-loaded by spring elements so as to urge the ball into the working position in which the ball bears the load. The control unit fetches therein the data, which has been outputted from the storage unit, at the timing which is determined on the basis of the pulled back clock signal. Moreover, the method and system for making a production plan allow a production cycle and human resources to be effectively controlled and adjusted respectively, so that sale, purchase and manufacture departments can realize the latest production and export conditions according to the production plan.

1459826394-9972ad03-43e6-4adb-9faa-aba9c1559a38

A method of making an antiglare coating using a mullite sol, possibly for use in a plasma display device, a photovoltaic device, or the like. The movable cap can be slidable to form a push-pull type closure, or can be rotatable to form a flip-type closure. A positive feedback component generates a positive feedback, such as a positive image in the user interface if the setting meets or exceeds a recommended performance metric for an operational parameter for the set of energy consuming devices. Each end ring forms an annular abutment surface that cooperates with the swellable member to inhibit axial movement of the swellable member on the substantially cylindrical body. Also provided are associated devices such as an integrated antenna and docking station, an SDARS receiver module for detachable connection to a player, digital transceiver circuits for connecting an SDARS receiver to various SDARS-ready devices, an SDARS digital antenna, and an SDARS subscription cartridge, as well as methods for operating same.

1459826395-028faa5b-d06d-462e-b96c-57198f370d96

A license of an optional feature used in a transmission source apparatus can be properly transferred to a transmission destination apparatus. In one example, a sequential device for use in a scan chain is described. The new stream inherits the beginning and ending addresses of the primary stream.

1459826395-28965776-340a-47fb-afa5-4c42dfe935aa

One aspect of the invention is a method of treating mitral valve regurgitation in a patient. Such antibodies include antibodies having novel high affinity complementarity determining regions, especially those with framework and constant regions derived from either humans or mice. The proxy server identifies a Uniform Resource Locator of a server process in the request and compares that URL against filter rules previously defined to the system. The lifting supports of each column are provided with their own motor. Pipes may have ends that may be moved around and bound to different peers at different times.

1459826395-b6bf6fa4-55a1-487d-83b3-480266faa1fb

A wheeled skate apparatus with a steerable front wheel connected by a steering linkage having two lever arm linkages which produce an instantaneous steering axis inclined with respect to the vertical to produce a caster effect and provide an angulation of the steerable front wheel with respect to the forward direction of travel to provide a change in the direction of travel of the skate apparatus. An image forming apparatus includes a toner image forming section, an intermediate transfer section, a transfer section, a fixing fluid applying section, a transport section, a fixing section, a recording medium feeding section, and a recording medium detection section. The controller monitors a received signal quality and a received signal power level. The freeze-cycle may be dynamically lengthened by the amount of time that the freezer temperature remains above the set-point temperature. Successive product lengths are alternately delivered longitudinally into one and then the other of the first channels. A sharing negotiation tool permits at least one consumer application to negotiate a service level agreement on a dataset which is being shared by a tenant application on a cloud.

1459826395-f509bda6-e03c-4dc9-86f9-37c17a346562

Monitoring and performance interfaces are disclosed for baler machines. Methods are

disclosed for determining an optimum aperture size for a single lens microscope including a lens of any type, and methods are disclosed for designing a single lens microscope lens system that provides superior image quality. The LCD further includes a common electrode opposite the pixel electrodes, a liquid crystal layer interposed between the pixel electrodes and the common electrode, and a domain partitioning member formed on at least one of the pixel electrode and the common electrode. The electrical junction box is configured to be disposed such that the through hole opposes the adjuster.

1459826396-751985a5-a12e-4958-9aad-7e77e6b3cd97

Disclosed is an optical compensation film for improves viewing angle of twisted nematic liquid crystal display, especially in the vertical viewing direction. The device comprises a light generating layer disposed between first and second layers of semiconductor material, each having a different type of doping. The process in some embodiments uses a closed loop power generation system.

1459826396-bbfa1969-9320-4633-9c91-4ce5f39b84b4

A method and device for using magnetostriction to generate electricity from fluid motion. A first high supply voltage and a low supply voltage are coupled to the first inverter. The board may include more than one section. The first end of the transport roller is mounted at the housing board side and is releasably connected to a drive device and the second end of the transport roller is releasably mounted at the mounting member side. Preferable distance, time, and angular parameters are specified.

1459826397-044dcf45-feeb-408f-9f23-cc110d92f151

A classifier is used to predict relevant results with arbitrary filtering conditions specified by the user. A contactseparation motor for driving the development roller is accelerated or decelerated based on the detected duration of contact between the development roller and the photosensitive drum. A plurality of stationary blades 61 are arranged between the first impeller 7 and the second impeller 35 in the housing 59. A connecting lever is used to attach the shelves to the chain or other transport means and along with the tracking system ensures that fill storage utilization of the shelves and the space between them can occur. In this condition, the spray gun is moved in a preselected direction in order to coat the entire inner periphery of the heat roller.

1459826397-78e9e041-6739-48f1-b7e4-002ed4aec9af

The present invention aims to suppress calorific value and prolong a lifetime of an apparatus that generates soft X-rays. These proteins exhibit different expression patterns among the organs of mammals. The orifice has a diameter-changing portion which restricts a separation of gases from an inner surface of the measure-passage.

1459826397-7afdb561-97f3-4258-9352-767578db93ea

Articles, including fabrics and film layers, are disclosed which can protect against multiple hazards, including radiation, chemical, biological agents, metal projectiles and fire hazards. Packets received by a packet processor may be prioritized based on the urgency to process them. Inquiries are solicited from prospective patients, and referral lists are provided to those patients who request them. during the exposure to the microwave radiation. In addition, a displacement apparatus is disposed in the channel for radially positioning the seal to control a flow of a fluid in a fluid path. The link mechanism is operational without the cam grooved wall in the entire cam surface region.

1459826397-87a3d934-b7c0-498c-8fe9-fc284caa5a53

An aerosol generator device for delivering an aerosol of a nicotine salt is provided. The short-arc discharge lamp includes electrodes which are located in an emission space, a metal foil electrically connected to the electrodes, a quartz tube part which surrounds the metal foil, a sealing quartz component in contact

with the inside of the metal foil, and a metallic component inserted into the sealing quartz component and electrically connected to the metal foil. The third element includes a single lens, the opposite lens surfaces of which both include a toric surface of an aspherical surface shape in the main scanning plane, the curvatures of the opposite lens surfaces in the sub scanning plane being continuously varied from the on-axis toward the off-axis in the lens's effective portion. the Rapid Spanning Tree Protocolis used. The cosmetic compositions containing such a mixture formulated in topical form have a moisturizing, emollient, elasticizing and skin compactness and smoothness improving action.

1459826398-4fbd0d66-633b-4a8e-ac9c-e7da598bae20

Systems and methodologies for stall-time fair memory access scheduling for shared memory systems are provided herein. The organic silicon compound is suitable for use as a preferable precursor in the manufacture of silanes that contain alkyl groups. A backlight control signal is generated based on the amount of data expansion in the sub-pixel rendering portion.

1459826398-764c7886-3b95-4d7e-ac4c-8e3d74c15ca5

Precursors for use in depositing antimony-containing films on substrates such as wafers or other microelectronic device substrates, as well as associated processes of making and using such precursors, and source packages of such precursors. of a set of intended end users of the virtual resource instance. The spacers are positioned between the magnets and are held in place on the shell of the rotor by fasteners. Penetration depth is detected by measuring a displacement of the indenter relatively to the reference tip.

1459826398-b44b47f0-2dce-475b-9eeb-5570f10fe913

A method for manufacturing O3 type piezoelectric material having an improved relative dielectric constant and an electric-field-induced strain is provided. The computer system can use the neurolinguistic information to neurolinguistically analyze meaningful text sequences to derive statistical information and identify dominant cognitive motivation orientations expressed in those text sequences. In a second step the fibers are placed on a sieve belt and thermobonded. The signal is converted to a numeric value that is indicative of a vibrational amplitude of the rotating body. Conductivity can be further enhanced by forming the plunger of silver or a silver-bearing alloy.

1459826399-4d385e98-c4e6-4c59-9172-bbf371494154

Electronic devices may be provided with displays having polarizer structures. The panel driving circuit includes a selecting circuit, a driving signal generating circuit, and a touch sensing circuit. Subsequent communication with the given memory die is performed while applying the preferred termination setting. The modulated pulses are transmitted to input B of the coupler.

1459826399-a2ce18bb-d200-4b0d-b3f7-9ab7b8cbf5ea

An image forming apparatus includes an image forming mechanism, a transfer mechanism, a fixing mechanism, and a heat radiation mechanism. The first voltage follower amplifies without being saturated even if an input signal voltage approaches a level of a power supply voltage when the input signal voltage is at least equal to a bias voltage, but does not amplify when the input voltage is less than the bias voltage. In either case, a query including a search condition based on a specified search term may be modified to include additional conditions based on a set of expanded search terms. The listener passes this first set of data to the requested network component. Another aspect of the invention relates to arylsulfonium compounds containing fluorine-18 that are useful as imaging agents. The two memory registers are programmed to provide two different soft-start settings for two distinct charge pump turn-on conditions, initial power-up and flash programming.

1459826399-d20c8348-2ce0-42f1-a882-2d2992c1d1cf

A communication system, a mobile station apparatus, a base station apparatus, and a processing method are provided that can perform decoding processing of a PDCCH related to a search space efficiently, and can perform communication promptly. The present invention also relates to methods of treating ABC transporter mediated diseases using such modulators. The methods also include a ribbon-focus procedure whereby imagery data are acquired continuously, while the slide and objective lens are in motion. The radio link control entity further includes a plurality of data transfer modules configured to provide data transfer between upper and lower protocol layers, the interface modules are coupled with the processing module and the unified interface.

1459826400-0c3e9672-6864-444a-a943-55cadedf420cf

A financial transaction system that does not require the need for cash, checks or credit cards to carry out financial transactions. The system provides a directional path to areas of safety for occupants in harms way. The pedestal is etched in a gate conductor post etch treatment that is selective with respect to the support devices. An energy management system comprising a heating system is provided to facilitate the removal of spent ice particles, and prevent ice accumulation in the enclosure.

1459826400-6eb1b3b5-58ab-4111-ab35-318709100e06

The segments of the vanes of a stator and the blades of a rotor for a gas turbine engine are dampened by utilizing braided wire cable that is affixed to adjacent segments such that each of the wire strands forming the cable is allowed to move relative to each other to dissipate the vibratory energy inflicted on the stator or rotor. The compositions are biodegradable and environmentally friendly. The eight more significant bits of 12-bit data for conversion are applied to a decoder 21, while the four less significant bits of the same are applied to a current addition circuit 22. The molding compound is located above the first surface and covers the light emitting device. The method further includes the first member encrypting a communication using the encryption algorithm and the encryption key to obtain an encrypted communication, and the first member sending, to a second member of the group, the first encrypted communication. The connection part is assembled to the tabs in such a manner as to allow the branches of the shim to spread apart.

1459826400-f3dbc0d1-2c3b-407a-ad57-0a15620c7868

Software and apparatus are provided to automatically detect and map ganglionated plexi that are found within areas of complex fractionated electrograms in cardiac chambers. The method involves the measuring of state parameters of the system. The method partitions the two or more entities into a plurality of classes, and applies a type of anonymization to the communications graph.

1459826401-0275d387-d557-474d-a727-6c3a91b84a13

The present disclosure relates to pyridoindolone derivatives of general formula :in which R1 to R5 are as defined in the specification, to processes for preparing said derivatives, and to methods of use thereof. The parametric audio system includes a modulator for modulating an ultrasonic carrier signal with a processed audio signal, a driver amplifier for amplifying the modulated carrier signal, and an array of acoustic transducers for projecting the modulated and amplified carrier signal through the air along a selected projection path to regenerate the audio signal. Thus, the liquid crystal display may have reduced thickness and weight and enhanced brightness, thereby improving the display characteristics of the display.

1459826401-3b01d6db-7be0-435d-b046-268f5f79ec97

The present invention describes an apparatus comprising an optical array generating a distribution of partial coherence of light energy and an aperture to select a subset of said distribution of partial coherence. A streaming manager is configured to send the application files to a client as a plurality of streamlets, each

streamlet corresponding to a particular data block in a respective application file. Any of the common circuits is determined as the common circuit of a first test target. The player then controls the crane assembly to select a desired prize. When the lock is in the unlocked position, the steering column can be adjusted along the path. In addition to the internal interlocking teeth, antenna arm has a skirt to further preclude contaminants from entering the area where the teeth and teeth engage one another.

1459826401-94a8d784-b545-4de8-890b-fa34f09b96da

A control deck and system for controlling and driving blood fluids through an extracorporeal blood circuit kit. The platform can be used for securely mounting a wheelchair or a fishing type chair to provide a rotational means for persons with impaired mobility. Moreover, the voltage regulator further includes an output current detection circuit for detecting an output current, and a circuit for changing connection of the output transistors based on the output current to allow a WL value of the output transistors to be changed based on the output current.

1459826402-48e9e306-2c92-476a-9789-2de9ace2e152

A computer network system includes a client-server architecture, where the client transmits SCSI commands over a network using TCP/IP to a server to request input and output operations for a physical storage device that is communicatively coupled to a storage device. A new vector, the discriminating feature analysis vector, is introduced to represent an image to be analyzed, from the DFA vector as processed using a Bayesian Classifier technique. The method includes machining the second surface to form the plurality of fins having predefined dimensions. The pawl is rotatably supported via a support shaft as a first shaft and is capable of rotating to a position in which the pawl can engage the hook.

1459826402-4e4eea25-c3a4-4ea8-a2d4-abff65b7307b

Systems and methods balance fluid in a fluid processing procedure during which an outgoing fluid is removed from an individual and an ingoing fluid is supplied to the individual. This invention also relates to pharmaceutical formulations comprising these compounds and methods of using them for inhibition and prevention of cell adhesion and cell adhesion-mediated pathologies. 25  $\mu\text{m}$  and a ten-point average surface roughness :  $R_z \leq 22669 \text{ Ra}$ . The toy also includes a digger assembly mounted to the rear portion of the frame and having a bucket with wheels that is removable, the bucket being operative as a wagon when removed. The valve engagement portion is disposable within the bit bore retainer portion such that the valve conical outer surface is disposed within and against the bit conical inner surface to retain the valve coupled with the bit.

1459826402-cfc45e32-07f2-4b05-84b4-6aa67ccb881e

A roller shade clutch is disclosed. These reactions lead to formation of a kind of carboxylic salt containing polymer, which can be used alone in concrete. The source process may populate the shared memory section with information.

1459826403-c4a99adb-0060-4da9-bd62-2d373acc3058

Establishing secure communication between an implantable medical device and an external device includes: accessing, at the implantable medical device, biological data; utilizing the biological data, at the implantable medical device, to generate a public cryptographic key; and utilizing the public cryptographic key, at the implantable medical device, to generate a private cryptographic key. In accordance with one aspect of the invention, the system positions at least one track beside the datapath stack in a netlist, and identifies placement of clock buffers needed in the at least one track. The resampling comprises computation of a sample value at a position  $i, j$  in a resampled array. The presence availability server also informs a notification server of a change in the presence and availability status of the first user. Furthermore, the memory module can include an optical layer.

1459826403-eaf8f4a7-a007-4c76-be67-2276aa6677a8

An MOS-bipolar hybrid-mode LDMOS device has a main gate input and a control gate input wherein the device operates in an MOS mode when both gate inputs are enabled, and operates in a bipolar mode when the main gate input is enabled and the control gate input is disabled. The method includes storing an emulator program on the computer, wherein the emulator program imitates the functions and display of the mobile device. The contact portion is provided with a central or intermediate section to which a forward portion is angularly inclined. A latch can be coupled to at least one of the door and the body, and at least a portion of the latch can be movable between a secured position and an unsecured position.

1459826404-075aa168-8667-4167-beef-e17a48a3b701

An optoelectronic component and a method of manufacturing such a component. The positioning or spacer block is a generally rectangular block having corded-out cavities to reduce weight and tabs or projections for cooperatively engaging the sides and top of a support post as well as the edges of the guardrail during roadway safety barrier system installation. The client browser communicates with a web server in a web-transaction. A fluid outlet is formed with the body portion and communicates with the fluid channel downstream of the fluid inlet. The drive signal outputting section outputs a drive signal for causing the element to perform the ink ejecting operation. This enables the frit to melt and form the hermetic seal while avoiding thermal damage to the OLEDs.

1459826404-37a52a94-0f55-4862-ba14-4e611d7f1472

A vacuum die casting method according to the present invention solves the problems relating to seal performance, differential pressure, and the stability of the degree of vacuum. The tread has through holes in which inserts made of plastic material such as rubber or the like are assembled hermetically, the inserts in turn having through holes. The steering system performs a reduction control to provide a smaller steering control amount for the rear wheels in a range where a steering angle becomes smaller than a predetermined value, compared to a steering control amount for the rear wheels in the other ranges of the steering angle. The second pulse generator is configured to output second pulses. Information-transfer means transmit control signals from the switching means or pedal switches to the appliances or appliance groups.

1459826404-6a83aad8-69ff-410e-ae4a-502476e30706

A system and method for radio network planning comprises a grid generator and a Monte Carlo analysis module. In one aspect, the oral care implement comprises a body comprising a handle, a head coupled to the handle, and an internal cavity containing an oral care material; and a roll-on applicator rotatably mounted to the body, such that the oral care material is delivered from the internal cavity to an exposed portion of the roll-on applicator due to rotation of the roll-on applicator. The washing machine has a washing machine barrel and a drum therein, wherein the heating unit is displaced at the bottom in the washing machine barrel outside of the drum.

1459826404-9b9a0e8f-5087-4930-a9eb-301a388260f5

A photoconductor that includes, for example, a supporting substrate, a photogenerating layer, and a charge transport layer, and wherein the photogenerating layer contains a vulcanized fatty ester. A test station may include a test host and a test unit coupled to the test host. That is, a quality parameter calculating part calculates the frame data number possible to further store in a frame buffer obtained from an accumulated data volume detecting part, and a decode quality updating part updates the quality parameter for the decoding part. As a consequence, a control board can be configured in an easy manner while at the same time reducing manufacturing costs. A second message is generated based on the first message and the first data.

1459826405-1e0cd546-d041-4a14-a4c0-314c0b56b8b7

Catheters such as guide catheters can be configured to provide distal occlusion, while still providing sufficient interior lumen space for device delivery. Each of the plurality of impedance elements is configured in pairs of MOS transistors. A management device stores information about an initial message.

1459826406-0ad5bac3-b1f1-40c8-8ca7-89fb54cf940f

An integrated type optical pickup module apparently approximates a plurality of light-emitting points of semiconductor lasers. The piston valve is held in a closed position by springs supported at the drum bottom part. The receiver may determine a first chip sequence representative of the secondary code by extraction of the primary code and the data portion from a first received wireless signal. With the blade stabilizer held in a pre-staged position, the distal ends of the blades are protected from being inadvertently knocked and bent which would cause misalignment.

1459826406-6085ca10-ab0c-4789-9cd0-f0644641ac61

There are described methods for making polyhydroxyalkanoate and its copolymers, by culturing a host cell transformed with a vector comprising a polyhydroxyalkanoate biosynthesis-related DNA fragment isolated from *Alcaligenes latus*. A sound transmitting device is electrically connectable to one or more of the outputs, and includes a speaker for transmitting the tones received. The data processing system prevents such activity concurrently with garbage collection on a second object not currently being allocated. An area where the animals are allowed to move freely communicates via an entrance with the feed platform, the width of the entrance being sufficiently large to enable simultaneous access of several animals to the feed platform. The rod is first rotated by a motor and then actuated upwardly completely through the thickness of the layer of x-y material by an actuator. The antenna members may be used for receiving and transmitting signal of different frequencies.

1459826406-b0e8be9e-2456-4335-bf09-a70d0d423503

A modular house toy comprising a plurality of stacked room modules in the form of open-sided boxes, including a triangular peak module and open deck modules, all comprising stiff wood panels that are covered with felt, and an array of felt-covered furnishing accessories having felt external surfaces to be positioned in the modules using the adhesive qualities of the felt. It is determined whether a spreading factor required by a service request is greater than a remaining capacity of assignable spreading factors of a code tree. Flashback margin is increased for the combustor by incorporating a means for introducing an inert gas, such as nitrogen, into the premix chamber at the region proximate the boundary layer to purge the boundary layer of combustible mixture, thereby ensuring that no combustion reaction occurs in the boundary layer. A single step of engaging the actuator causes the electrode to be introduced into the target tissue and causes energy to be delivered from the power supply to the tissue via the electrode.

1459826406-b1f36d17-9a76-438c-9939-284317f24842

A blind rivet assembly includes a mandrel having a male threaded portion at its distal end to be screwed into an internal female threaded portion of a rivet body. An input voltage for the power supplies powers, and is monitored by, a first control unit having outputs for enabling the power supplies. The resolver receives a request to identify a set of resources of the provider network based on specified criteria.

1459826407-130502f8-3386-4b2a-bd4a-aa975f0e6f6b

Heatingdefrost constructions of a very low temperature refrigeration system having a defrost supply circuit and a defrost return bypass circuit optimizing the heatingdefrost cycle, preventing overload of its refrigeration process and protecting components from damaging temperatures. The camshaft is biased in one axial direction thereof by a driving force that the helical gear receives from an

engine crankshaft. The MCDN terminal devices may also include wireless telephony devices for mobile remote viewing functionality. Alternatively, a two-dimensional or three-dimensional object can be attached to the fabric material. Air compressor 200 can provide a means for producing energy through compressing compressible fluid and a source of heat for generating steam to produce electricity on-site or downstream.

1459826407-2567de4f-9d8a-43c2-8c83-abd5f2df4044

A three-dimensional laminating molding device includes ejection heads that eject support material for a support, and an ejection head that ejects mold material for a mold. The integrated communication apparatus includes a Bluetooth earphone having a signal transmitting terminal, and a body having an earphone receiving slot and a control circuit board. A plurality of support columns extends between the top plate and the bottom plate, with each support column formed of a plurality of fluid-filled bladders. Medical implants utilizing the present invention include surgical implants for spine stabilization.

1459826407-ec0bd3de-3a43-4c2f-84fd-d311714ecfd4

A cover and insert assembly includes a cover having a pocket or sleeve formed between cover sections. A vacuum cavity may be disposed around a portion of the belt to remove captured particulate therefrom when a negative pressure is introduced in the vacuum cavity. The isocyanate component includes an aliphatic polyisocyanate. If that variance exceeds a selected threshold, the controller automatically determines that the amount of refrigerant in the system is outside of an acceptable range. The device comprises a fixed bar compensator at an adjustable oblique angle with respect to the winding line of the thread which varies the length of the free path of the traversing thread. A synthetic aperture is produced by the waves output by an antenna being concentrated initially in spatial terms, the point of high concentration being moved on a reflector along a circle.

1459826408-a08bace5-cc56-4645-859b-2dce84820621

An adjustable delay line phase shifter is configured as a microstrip transmission line having a MN matrix of conductive elements mounted on a insulating substrate. Airside equipment for providing supply air to a room or zone. or lower and is contained in an amount of 25 to 45 parts by mass in relation to 100 parts by mass of the vinylidene chloride copolymer mixture. The recorded flush test diagnostics and further test diagnostics are then analyzed to identify a call to one or more probable failed or failing shift register latches in the tested scan chain. The maximum transmit power may be adjusted dynamically by the control circuitry based on data from the proximity sensors, data from a magnetic sensor that detects whether a cover is present on the device, a connector sensor that detects whether the device is coupled to a dock or other accessory, and other sensors. Electrodes of the substrates are accurately aligned to be electrically connected to each other.

1459826409-1d6219b9-2780-4f88-89da-cf65843379f6

A lightweight vehicle ladder for the recovery and traction of vehicles includes a central recessed portion bordered by longitudinal strengthening ribs and ramps at either end. Since this type of memory cell becomes unusable after a finite number of erase and rewrite cycles, although in the tens of thousands of cycles, uneven use of the memory banks is avoided so that the entire memory does not become inoperative because one of its banks has reached its end of life while others of the banks are little used. The N signals are subjected to band pass filtering using N band-pass filters, so as to generate NXM signals  $s_{ij}$ ,  $i=1$  to M,  $j=1$  to N.

1459826409-6edd2aa1-e05c-4cc4-87ff-6445cf48b5c3

Described herein are techniques for distributed key management in cooperation with Trusted Platform Modules. This includes acquiring sensor data from the sensors and creating a blog entry containing the acquired sensor data. High yield of TSV

formation can be achieved by utilizing a substrate that embodies bulk micro defects at a density between 1e4cc and 1e7cc and having equivalent diameter less than 55 nm. Nodes failing to gain control of the coordinator virtual device remove themselves or are removed from the cluster.

1459826410-974e4d07-6b61-42e1-85a9-1c0cf6121c70

A greater variety of frequency combinations may be utilized in multiple situations, including, by way of example but not limitation, hard handovers, soft handovers, macrodiversity, etc. Said inner narrow band optical wave guides bend out at the ends of said outer hollow core optical wave guides to extract and guide out the selected component of the incident optical spectrum. actinomycetemcomitans, the population of regulatory T cells will be enriched ex vivo and adoptively transferred back to the patient.

1459826410-9b36ab84-6b8d-49e9-818e-49f5a05fbcac

In a method and device to automatically determine a rest phase of the heart of an examination person in an imaging device, multiple images of the heart are acquired during a cardiac cycle and the rest phase of the heart is automatically determined by post-processing of the acquired images, and the determined rest phase is used for subsequent measurements. A first projection control block is constructed, by a computer processor, to describe the first projection operation. A run-off portion is formed in the restricting portion so as to allow the inner cylindrical portion of the hammer to move thereinto, so that the hammer can move backward for a distance corresponding to a depth of the run-off portion. The system on a wireless device further includes a processor in the wireless device for configuring settings of the wireless device in response to the user action. When creating a socket for connecting to the internal host, the socket is configured based on the tunnel configuration data.

1459826412-a97916b7-e3c4-4834-8854-a80f6ebc00ce

A lens barrel includes a barrel wall disposed about a longitudinal axis, an external thread continuously formed on the barrel wall and having a continuous crest, and two parting lines that are longitudinally formed on the external thread and that are symmetrical about the longitudinal axis. The power system module includes a plastic case, a molding type power module package, a control circuit board, and at least one external terminal. In addition, the process can be used in damascene applications, and can be used to form a wide variety of capacitive structures while reducing the number of mask layers required for formation. The number of changeover operations of the amplifier is considerably reduced and thus the detection time is shortened.

1459826412-d00a9531-5090-42e1-8548-c796a370c3f6

When performing an inspection using a charge control function in a SEM wafer inspection apparatus, acceleration voltage, control voltage and deceleration voltage are changed in conjunction so that incident energy determined by \u201cacceleration voltage\u2212deceleration voltage\u201d and bias voltage determined by \u201cdeceleration voltage\u2212control voltage\u201d do not change. Each area of the divided electrodes is formed differently from one another, and each curvature of the film in the divided section also is formed differently from one another. The clock adjustment apparatus includes a phase error calculation circuit which calculates the phase error of the clock signal based on the sampled values of the readout signal. The bottom section via can have a larger cross section for ease of forming a conductive path therethrough. An appropriate range of the oblique cross angle is 24\xb0 and 34\xb0. Additionally, methods and nodes are disclosed for OAM configuring one or more tandem connection monitoring layers through GMPLS signaling after GMPLS sub-network connection establishment, that is, for existing connections.

1459826413-0a75ada2-ff61-4dfa-8a3a-2431501e6a3c

The invention relates to a reuseable seat delivery pallet for transporting seats. The photo-addressable type recording display apparatus is provided with a recording unit that displays an image, a light writing unit that writes an image in the recording unit by the pattern of light, and a control unit that controls the recording unit and the light writing unit. The slot of the expandable sealing element enables the expandable sealing element to expand around a spoolable sensor array. The media handling system is configured to access the plurality of data media received by the media storage device. To accommodate the required movement of the movable arm, the bracket has a deflectable locking edge that moves between a rest position and a deflected position. This process prevents the gate structure from degradation caused by thermal stress.

1459826413-c16c668c-102d-4910-bea5-9a4c352a99b3

The present invention relates to a polyurethane foam dressing material with improved moisturizing rate. The Interface Tier supports interaction with users, and includes an On-Line Analytic Processing Client that provides a user interface for generating SQL statements that retrieve data from a database, and an Analysis Client that displays results from a data mining algorithm. The water distributing pipe comprises a connecting part connected to the water supply pipe, a water discharging part extending from the connecting part and discharging the water to the ice cube tray, and a projecting part provided in the water discharging part distributing the supplied water. In another embodiment, the device may suppress transmission of a beacon request to join the communication network based on a density-aware redundancy count of other beacon requests from neighboring devices, and transmits beacon requests at an adaptive interval that increases in response to each unanswered beacon request. Software means is based on the C++ procedures with levels of LUT.

1459826413-e89a2057-d527-4de9-99af-9e24be811e44

A retractor and a surgical tool are positioned at the distal end of the cannula. As a result, a card member 108 is provided with a single card that serves as both a credit card and a club membership card for access to the service partner's exclusive club. The spin motor functions to rotate the chuck while the air cylinder shaft functions to elevate the chuck. Furthermore, the chin support central portion is essentially perpendicular to the rest of the front collar portion.

1459826414-1fc1ae57-92f9-4a5e-995d-4700073f570a

The reassembly timer in a TCP/IP receiver is dynamically set to avoid data corruption on fast networks caused by IP identification wrap-around. The device includes a support structure, an obstructing member carried by the support structure that reduces ventilation to the lung portion by preventing air from being inhaled into the lung portion, and at least one anchor carried by the support structure that anchors the obstruction device within the air passageway. Then, it identifies a location of the UE where the poor performance is detected, obtains an identity associated with the UE, obtains an address associated with the UE and identifies that the location of the UE is residential and that the address corresponds to the location. The dampening spring is mechanically coupled to a blade control plate, where the blade control plate is mechanically coupled to a first blade control pusher bar, a second blade control pusher bar and a blade control plate stem. The kits can be used to treat various surfaces to alter the physical properties of the surfaces.

1459826414-91612c55-54e8-436d-a4c6-a47c6cff8b5f

Provided herein is technology relating to isolating nucleic acids. The methods involve sampling soil comprising hexavalent chromium to determine a reaction amount of a reducing agent, providing a frame on a top surface of the soil, wetting the soil, spreading a reducing agent on the top surface of the soil, and flushing the soil with water to dissolve the reducing agent. During the period of charging the photosensitive drum or cleaning its surface, the rotary brush is rotated in a first

mode in which the brush rotates rubbing and sliding the surface of the photosensitive drum, and during other periods, in a second mode in which the brush is rotated passively as driven by rotation of the photosensitive drum. The second periodic signals are output from the optical signal output device connected to the displacement detection target and have amplitude gradually decreasing with the displacement in the predetermined direction of the displacement detection target. A fluffer comprises a rake pivoted to the scraper is extendable for fluffing bedding while performing the vacuuming operation. The growth apparatus controls the oxygen concentration of the Si single crystal ingot to various values thereby producing the Si single crystal ingot with high productivity and extremely controlled growth defects.

1459826415-238586fc-1c68-4a71-9bc1-40551afb831a

Disclosed herein are polyurethane golf ball compositions. A metal gate region is formed at a top surface and at least one side surface of the fin. A plurality of electrically-conductive elements are arranged about the surface of the at least one hemi-toroidal interposer and extend radically inwardly and downwardly from an uppermost end thereof into electrical contact with at least one component located on an opposite side of the electrically insulating carrier plane. Information that identifies the first and second media types for printing the first and second page ranges of one or more pages of the electronic document are transmitted to a printing device.

1459826415-a3462c9e-61b6-4c0e-9189-4079f89f52ae

A fiber optic gyroscope including a non-coherent light source for producing a first beam of light, an optical circulator in the path of said first beam for providing polarized second and third beams, respectively, with polarization orthogonal to each other, and a time division multiplexer in the path of the second and third beams. The network element is arranged to deliver packets between the wireless telecommunication system and other packet data networks. A system controller is responsive to the signal from the detector. Furthermore, the wireless transmitter including the lockout unit may be tested as a standalone device, facilitating regulatory agency certification as a modular transmitter. A power decrease is initiated for selected ones of the unneeded functional units that are determined to be in an operable power state. This double authentication ensures the authenticity of the program for its overall execution in the terminal and the origin of the second card, distributed through conventional channels, for the network operator.

1459826416-7a60ea61-2d7c-4934-b9fb-748a44fc222f

A bracket system for forming gate assemblies comprising at least two brace members that are rigidly attached to hinge assemblies. An IC assembly including a substrate with bumps and at least one layer of filled underfill on the substrate surface and a layer of unfilled underfill over the filled underfill and the bumps. It is possible to conduct patterning using a photolithography process due to the simultaneous development of black and bus electrodes, which can act as electrodes due to simultaneous sintering. Since a part of the surface of the nickel hydroxide is covered with the high-order cobalt compound containing alkaline cations, the high-order cobalt compound with high conductivity produces a highly conductive network within the positive electrode so that the rate of using the active material is improved.

1459826416-94fdb076-4aba-41d8-a018-28eea88acc35

A method for making a catch-pit, such as the catch-pits often associated with underground pipeline junctions, manholes, or the like, where it is desirable to join a horizontal pipe with a larger-diameter, vertical, hollow, cylindrical works by means of a cottering or sleeve joint. The temperature indicator can be various forms of contact thermometer, temperature strip or sensor and can be integral or temporarily affixed during installation or for later assessment for correct panel gapping. The device moves along the riser downwards and upwards by a combination of

gravity, buoyancy, thrusters and action of expansion of gases. The layer of thermal insulation is sandwiched between the top cover sheet and the heating element, and the bottom pan sheet is formed from a thermally conductive, corrosion resistant material, the bottom pan sheet having a lower wall and at least one sidewall.

1459826416-c9f4ea40-e625-4626-860c-98ae847f9b93

A method and apparatus for intelligent power management for low power link states. The semiconductor integrated circuit device secures a sufficient delay time with a small area. The display panel includes first and second sealed chambers in adjacent relationship.

1459826416-e93d0cea-0939-4619-a68a-70122f97daee

An intervertebral spacer device having a pair of opposing plates for seating against opposing vertebral bone surfaces, separated by at least one spring mechanism. The support system includes a port side float connected to the paddle board such that the port side float is parallel to the central axis. A management system creates a topology agent for each SIP-domain and registers it with the governor proxy of each SIP-domain. In yet another aspect, methods have been developed for the preparation of such retinoid receptor ligands from readily available compounds.

1459826417-fa7d2d0b-82ee-404e-b357-3b4c707ac0cc

A method is performed in a mobile device for selecting or excluding an access point for use in wirelessly connecting to a network. In one arrangement the additional spinal construct extends an existing spinal construct ipsilaterally with an inline rod connector in a minimally invasive or preferably, percutaneous procedure. The actual capturing area of the image capturing device is selected from a capturable area of the image capturing device in accordance with first information which is sensed by a sensor device. Lubricating fluid is pumped through the channel to lubricate the inter-axle differential gear assembly.

1459826418-2b7a2962-b2b7-4407-b25d-203fa0ad2b6d

A system and method for subscriber reminders. Second, a correction is made for dividing the photomask into a plurality of mesh regions to correct the pattern configuration of the photomask in accordance with the occupation rate of the mask pattern in each of the mesh regions. A release mechanism is disposed between the chassis and the holder for disengaging the latch from the cartridge when the cartridge is unloaded from the holder.

1459826418-403c8d03-0b4f-4c30-a46a-1a258a4cc2f1

A method for hemming an inner panel and an outer sheet metal panel together. A respective port attempts to establish a link when a corresponding one of the enable signals is in a first state, and the respective port detects physical layer activity when a corresponding one of the enable signals is in a second state. The resources are fully selectable and allocable by a system architect. The protruding portion and the side face form spaces opened at both ends therebetween. If the signal component of the measured signal is a periodic signal characterized by a specific asymmetric shape, a specific adaptive filtering is applied to the measured signal, resulting in the enhancement of the signal component relative to a noise component. Each of the resistive random access memory cells in the array includes a transistor and a resistive random access memory element connected in a common gate configuration.

1459826418-623b7824-13d6-4fc9-b0c3-ce0aca6acf24

A portable, on-line barcode printer has a very small number of variable function keys, each of which is actuatable to perform a large number of non-data entry functions for monitoring various components, performing diagnostic testing and setting up the operation of the printer. The controller is shaped in a form identical to the character and comprises a posture detector, whereby the controller

can be moved to operate various movements of the character. The insulation is bounded in lateral direction of the semiconductor body by a circumferential diffusion barrier.

1459826418-70fffd407-7168-4979-8129-fca8a94bfc7

An epidural patient support includes an upper body support and a foot support. The transfer device comprises a first conveying device which is moved in cycles, a second conveying device which is moved in cycles and extends, at least in sections, parallel to the first conveying device, and a pushing device which performs a pushing motion substantially perpendicular to the transport direction of the conveying devices. The information also includes a state identifier that indicates a state of a device that includes firmware components. A movable stop includes two legs movably coupled with lower ends of inner sides of the lens receiving portions. The algorithm inputs azimuth angle elevation angle and range and is capable of inputting data from three different data pre-processors. The polymer is obtained by polymerizing urethane acrylate oligomer and acrylate.

1459826418-902a0273-a882-4b93-a1df-26960f5ee3f3

An improved induction lighting system is presented where the electronic power supply device powering the induction lamp is insulated and an extensive set of heat sink fins is provided to control the temperature of the power supply. The apparatus and method include the use of a penetrating individual independent lead finger clamp during the wire bonding process to provide increased stability of the individual lead finger for improved bonding by the clamp penetrating a portion of the lead finger being bonded. The system further includes a control system configured to disable a load output of the DC-DC converter and enable the output of the linear regulator when the detector detects that the signal characteristic has moved outside a predetermined threshold range. In one embodiment, delamination features are included to inhibit the tendency of laterally oxidized mirrors from delaminating.

1459826419-533be629-eb0-43aa-8e54-384b27c0a2e0

A discriminative machine learning system for labels text and non-text strokes in digital ink. A catalytic material promoting dissociation of the ultrapure water and having water permeability is disposed between the workpiece and the cathode. The speech server supports static grammars that do not change and dynamic grammars that may change after a commit. The core includes silica, a concentration of alumina of between approximately 0.

1459826419-d179e488-c882-419b-a454-65dad8ed8c34

An electronic system having a hard disk drive is provided with a transparent cover that allows the elements of the disk drive to be observed while they are in operation. A control based class can be extended to produce a Java Server Face. An estimated resource utilization is established for each of the backup tasks based on a set of backup statistics. The network file access transactions directed to the network storage resources are modified counterparts of policy selected client network file access transactions modified to reference mapped network storage resource mount points and support the secure transfer and storage of network file data.

1459826420-06392814-2de3-4d32-8380-815077b7c09a

A delivery system and method for vaporizing and delivery of vaporized solid and liquid precursor materials at sub-atmospheric pressures between a heatable vaporization vessel and a processing tool. Each sidewall defines a plurality of contact recesses. The isochronous phase and/or frequency of the repeating isochronous transmission may be variably adjusted to reduce signal interference.

1459826420-1e4c8996-1a32-4ddd-b27d-c5e3f3559d2d

An apparatus for shining shoes is provided in which an oil shoe polish containing

5 volume % of an oil ingredient is substantially coated on a shoe surface by using a rotating sponge and is maintained for a certain time period under a high temperature environment of above 60°C. A method includes simultaneously forming a terminal bond pad on a terminal wire and a thin film resistor on two other wires. A guide plate on the housing is positioned over the adjacent segments of the conveyor with a slot located to guide a specimen carrier from the first segment to the second segment. The motor is operable to drive the cutter elements so that the cutter elements shred the articles fed therein. The disruption processor inserts disruptive content to the input content creating output content that impedes the ability of optical recording devices to make useful copies of output content. The fixed column fixed with the toilet has a third axle hole receiving the rotating shaft.

1459826420-3a6cb90b-d8b3-489f-928e-d2a4f3b7cf63

Briefly, in accordance with an embodiment of the invention, a phase change memory and a method to manufacture a phase change memory is provided. The polymers so prepared can be used as the main film-forming polymer in high solids coating compositions, especially those useful for finishing automobiles and truck exteriors. The transformer includes a primary winding electrically coupled to the secondary winding and configured to drive a load. Evaluation of traffic against multiple definitions may also allow traffic to be classified or verified more specifically than would be possible based solely on explicit type indications provided in traffic overhead.

1459826420-46f9f5cc-1795-4fdf-9608-cf9dcb6ee126

A capacitively loaded magnetic dipole is configured with an E-field distribution so that the thickness of the antenna can be reduced while still maintaining high efficiency. To this end, a spring-loaded locking pin is integrated into the peripheral cam, said locking pin being co-rotated when a rotor pertaining to the steering column lock is rotated. Openings providing access to each of the longitudinally extending lumens are spaced from one another longitudinally along the body.

1459826420-c989d1f9-23d4-4a39-8b15-7ba9fc3cb7fb

Methods and apparatus are provided for treating congestive heart by actively or passively enhancing perfusion to the renal arteries. The system includes a delay chain of components having a plurality of components wherein each component of the delay chain of components has a first delay time interval. In addition, the clamp element has a clamp part to hold the lamp.

1459826420-da7c558b-d928-44c8-8ccb-fabb70b94771

The invention relates to an automation network and to automation equipment, network components and field devices for an automation network of this type. Each AD conversion unit has a pulse delay circuit including delay units connected in daisy chain to form a ring delay line. The motor is positioned forward within the housing in motor receiving section, with the drive shaft of the motor facing rearwardly.

1459826421-29269485-f012-45d0-8b21-b8b804be8e76

In a read label as an information recording medium and a method for recording information thereon according to the present invention, the read label includes: an adhesive layer 3; a metal film layer 4 disposed on the surface of the adhesive layer 3; and a light-transmissive protective film layer 5 disposed on the surface of the metal film layer 4. An insert is inserted into a recess of the piston up to a first stop, the insert having a ball seat and an expandable insertion sleeve which is undercut with respect to the ball seat and protrudes with its expandable region. The coolant flow path in the main spindle includes a coolant receiving portion that receives the coolant supplied from the coolant supply section, and a plurality of hole-shaped flow paths formed to extend in the axial direction of the main spindle from the coolant receiving portion. During a swing, undesired lateral

head movement is indicated by contact between the golfer's head and an arm, with the arm resisting such lateral movement to provide a proportional tactile feedback regarding such lateral head movement.

1459826422-6b314cf6-87cf-4838-bdb4-f7c5e680aad7

A lid for a container includes a side element extending from a front of the lid to a rear of the lid. The replaceable absorbent core component may be removed and a like component may be substituted in place of the removed component without the removal of the absorbent article from the wearer. The base has a top, a free end, a pivoting end and a pivoting portion. A pair of elongated rigid arms are pivotally mounted at their inner ends to the second module member pivot mount, while a pair of electromagnets are fixedly mounted to corresponding outer ends of the rigid arms. The single package of resources excludes the identified page resources already cached on the computing device.

1459826422-f8842cd9-e7ba-43da-8e56-6ff2fc27ddca

Disclosed herein are an electrochemical system, a hydrogen gas fueling system, a cascade system, and methods for using the same. The tissue expansion device may be an olive or wedge formed near the tip of the cannula, and the expansible sheath includes two elongated shells that are fixably attached near proximal ends, and that are resiliently connected near distal ends. One of the rotating connector assemblies is positioned on the propellant charge igniter and provided with a connection to the electrical line section that is oriented at an angle to the axis of rotation of the rotating connector assembly. When these values are combined, the result is the present calculated carriage height. At least one of the medial and lateral side portions comprises a skirt portion integrally formed with and extending therefrom, the skirt portion being folded inwardly to form a sole having an upper surface for facing the plantar surface of the foot. In one embodiment, a feedback circuit is associated with each antifuse element to stop the flow of current through the antifuse element once it is programmed.

1459826423-1880e084-a16c-4b8b-a22b-5e6c5d2ea9eb

An infant positioning system and method for positioning an infant during sleep. In the light-emitting diode, the n-side electrode has an n-side connecting portion and an n-side extending portion, which extends in the longitudinal direction from a predetermined part of the n-side connecting portion, and the p-side pad member has at least a p-side connecting portion to be connected to a conductive member. The method and apparatus of the present invention have applications in parallel synthesis of molecular sequence arrays on solid surfaces. The parabolic mirror and selected additional components may be commonly mounted on a translatable stage which is moved along a radius of the disk when the optical inspection is being performed. The body is separable from the platform when the platform is mounted to a circuit board.

1459826423-bde945f4-fe29-4272-b194-bfe6fe54eb33

A system for managing dictionaries, such as an application dictionary and a domain dictionary, and for adding entries to a data log is described herein. The order of processing may be restricted by selectively locking the context for exclusive use by a selected lane in a multi-lane serial-attached small computer system interface hardware protocol engine while the selected lane processes a selected one of the frames. It is then possible to dispense with loudspeakers and the like in the appliance which contains an electric motor with such a motor controller in order to output, for example, signal tones which indicate an operating state of the appliance to the user. Furthermore, the method gives economical and environmentally friendly values from natural marine algae.

1459826423-d83fd555-f696-4887-b1a3-fa7c28243cd0

A highly integrated DRAM is provided. A 4-wire assembly is used for replacing conventional incandescent light bulbs with fluorescent light bulbs in existing

lighting fixtures recessed downlights, in particular. This map indicates the type of change.

1459826423-e0fc1bd6-5500-4029-97b0-b7d01a74a280

A sealing part that is inexpensive and enable excellent durability to be secured without the need for a predetermined sealing space as would be required for a double sealing structure. More accurate and timely information concerning the status of customer tanks serves to improve operational efficiencies and increase safety. At least one attitude sensing device is coupled to the second spacecraft for determining estimated spacecraft attitude data for the second spacecraft. The receive portion of the physical device can then deserialize the random pattern of bits, and present those bits to logic within the test system. In one embodiment, the implant is a satiation device and the body cavity is the esophagus and/or stomach. If a call origination has occurred, a calling user element sets up a voice data channel with a called user element and forms a data path with the called user element to transmit caller image information.

1459826424-0d79beb2-625e-4352-965e-1f98139fe746

There is provided an EL light-emitting device with less uneven brightness. A control method is also provided. The invention monitors table activity and decides if the data in a table has changed sufficiently to require a refresh of invalid statistics. The water exiting the water nozzle has an average diameter of 60 microns or less, which facilitates complete evaporation and effectively produces a cool, dry air stream.

1459826424-14c507c0-b249-46db-a14c-e02c8c5c7407

The apparatus for analysis of physiological fluids of the invention contains equipment for automatic introduction of reference fluids to a sample aggregate inlet of the apparatus. The pipe chamber 14 may be welded at 28 to the plates 12. Hence the temperature of the environment can be reduced at the higher rotation speed. The transport member includes three sections with the second section located between the first and third sections. The Clock Data Model collects, manages, retrieves, and queries all of the simulation information.

1459826424-6a40903d-0126-41ab-9baf-fdef317ebce6

The detection device comprises an electrical power reserve, a voltage regulator configured to regulate the voltage supplied by the electrical power reserve, at least one capacitor charged by the voltage regulator, a detection circuit powered by the capacitor and a switch. The transmitter also includes logic configured to determine values of the bits in the control character and construct a corresponding plurality of rebalancing control characters based on the determination of the values of the plurality of bits in the control character to have bit values selected such that the combination of the control character and rebalancing control character is DC balanced. The first photonic node is coupled to a first electronic mosaic and is configured to transmit electromagnetic signals encoding data generated by the first electronic mosaic to a second electronic mosaic and receive electromagnetic signals encoding data generated by the second electronic mosaic. The exposure dose for the individual exposure operations is chosen in such a way that, proceeding from a predetermined minimum exposure dose, the exposure dose is increased for each exposure operation compared with the respective preceding exposure operation. To achieve a good shaving result while at the same time protecting the skin to be best possible effect, it is proposed providing the blade with an outer boundary section which is raised in relation to the cutting edge, faces in the direction of the outer cutter and inclines upwardly from the cutting edge toward the outer cutter.

1459826425-42789a2b-a636-4ec6-ba45-dbd6f6a40829

A fabric light control window covering in which fabric vanes are adhesively bonded between two sheer fabric sheets such that relative movement between the sheer

fabric sheets in a direction perpendicular to the longitudinal direction of the fabric vanes changes the angle of the fabric vanes and, thus, controls the amount of light admitted through the shade. The master node and the slave portion provide a differential transmission system for differentially transmitting a signal among the master node and the slave nodes. The blocks contain bits of information which define an absolute position. 4 protocol or equivalent, and at least one processor. The coupling capacitance 27 changes the gate voltage of the NMOS 13 when the input clock signal rises so as to keep the above on-resistance constant.

1459826425-d5cd59f5-0c6a-4a4a-acb3-7aa39074d163

A heat sink includes first and second fin sets. The perfusion tube is connected to a stent formed of a wire-type material. The forms are provided as angled corner or straight forms having an overall length of four feet. A DC-DC down converter can be used as a power supply for the receiver, and a SAW resonant circuit can be used as an IF oscillator for the receiver.

1459826426-85ac298b-33ce-4a42-8c70-b6b2634cbb17

A cardiac rhythm management system includes a heart sound detector providing for detection of the third heart sounds. The current detection unit 10 comprises an optical fiber sensor 11 extended or looped around a conductor 30. The yarn or wire has a characteristic value of tension and/or speed and/or quantity during this feed, and the actuator has a stator and a rotor acting on an exit drive shaft, which has its own piloting arrangement. A viewport region corresponds to a portion of the representation of the process system less than the entirety of the representation of the process system. Optionally a surgical microscope, an ultrasonic diagnostic system as well as a calibration procedure may be integrated in the Neuro-navigation system in accordance with the invention.

1459826426-fe352bb2-97d0-46c3-9f7d-6590103c3927

A nonmetallic pump with a gear pump assembly having an adapter spool mounted to an electric motor. Methods of using compounds of Formula Ia and Ib, and stereoisomers, geometric isomers, tautomers, solvates and pharmaceutically acceptable salts thereof, for in vitro, in situ, and in vivo diagnosis, prevention or treatment of such disorders in mammalian cells, or associated pathological conditions are disclosed. In general, the switch is structured to only carry a level of current that is a portion of the current required to obtain a full field by the superconducting magnet. The spring member retains the bearing with respect to the boss portion and restricts rotation of the cap member. These virtual machine execution environments can independently set their own page size variable as can the page size of an associated hypervisor 62. The module is arranged so as to form a diplexer in which the septum is included and where the access points by rectangular waveguide are extended by filters, each access point being endowed with a filter provided in order to transmit a frequency band which is different.

1459826427-09c47fab-be2b-44ab-97ea-1590a31c738f

An interchangeable die system in accordance with the present invention may include two main parts: a shank and a die assembly. Prior to a flame treatment, a joint surface of the metal plate is heated with a direct flame of 900° C. The device is attached to an object which is subjected to vibration, such that the apex of the device points in a direction away from the object. Each of the silencing passages communicates with the ventilation passage through at least one opening formed in the dividing partition and at least one of those silencing passages is provided with at least one passage extending partition to extend the length of the silencing passage. Then, in response to the finalization command, predetermined data is recorded in a temporary defect management area to prevent further data recording on the write-once recording medium. An intermediate portion of the valve is in facing engagement with the collar deck, and an annular wall portion of the valve extends from the inner end of the intermediate portion.

1459826427-238b4506-e8b5-4c8b-8df7-e87dea72f2aa

An aluminum gallium nitridegallium nitride layer is formed on the surface of a silicon carbide substrate. According to one example of the invention such a semiconductor device includes a semiconductor chip including an active area. In some embodiments, a width of the first transistor may be larger than a width of the second transistor. The semiconductor device further includes a first material having a first portion and a second portion, the first portion of the first material filling the first portion of the at least one opening. This makes it possible to realize a communication device which can easily transmit the content data, obtained from the outside, to the communication counterpart device, that is, this makes it possible to realize a communication device which can easily share the content data, obtained from the outside. During the formation of the upper capacitor plate in a capacitor structure, metals or their alloys are simultaneously patterned as an upper capacitor plate and as a fuse.

1459826427-67b0fbd9-a081-4aeb-a45e-1dd7dcc44cec

An electronic apparatus, to which Chinese characters can be input by using a phonetic input method. The system may vary parameters of a light drive signal used to generate the photonic signal from a light source such that power consumption is reduced or optimized. While the surge is passed, the potential of the power line 1 rises to turn on the three transistors 3, 6, and 7. The device forming the object of the invention, preferably in the form of patches, is useful for in vitro cell cultures or for treating tissues damaged by wounds or necrosis, such as cardiac walls bearing the sequelae of infarction, or a tissue damaged by a diabetic ulcer. A groove portion is provided at the leader block. The positioning section adjacent to the ventilative recess achieves a ventilative portion to discharge gas inside the positioning section so that optical fibers are assembled and processed precisely and rapidly.

1459826428-6125197a-ec6f-4736-a4bf-5f9321902c01

The present invention relates to an automated safety system having at least one projector to direct electromagnetic energy into a region of space associated with a security, warning, or safety zone. The device includes a semiconductor substrate; an STI layer in a predetermined portion of the semiconductor substrate, dividing the semiconductor substrate into an active region and a field region; and a field channel stop ion implantation layer in the semiconductor substrate under the STI layer. The at least one client is configured to send messages to the primary server. The bicycle maintains its position with gravity and only contacts the invention with its front tire, thus protecting any delicate bicycle components from physical contact with the storage rack. The conditional statement controls execution of the body of the generated constant looping statement, which includes the body from the original variable looping statement.

1459826429-02a97893-9e25-4a90-a93d-6f9c9f39753c

A user is registered to use telecommunications services provided by a home service provider in a wired home network. The outer surface of the core includes a plurality of polygonal protrusions aligned on a common sphere and a plurality of grooves that extend radially inward from the sphere and respectively separate and define each of the polygonal protrusions. The method also includes repairing holes formed by the specific triangles if the all specific triangles have been determined, adjusting a normal vector of each specific triangle, and outputting a triangular mesh surface constructed by the adjusted triangle.

1459826429-262ef242-435f-4432-b7aa-03a4180599b7

A hard disk drive system including a controller and a plurality of slave testing modules located in respective components of the hard disk drive system. 3a and 3b show two side elevation views of a vehicle passenger cabin defining a passenger space wherein are featured an actuation device, generally designated 2, balancing gas springs, generally designated 65, pivoting hinge member 4, inner weather seal

50, outer weather seal 51 and draught proof brush seal 62. The use of the method and composition alleviates problems associated with crystalline dithiazine deposit build-up associated with the use of triazine based scavengers. A request to reload the first webpage is received. Data in second areas disposed between the first areas of the memory component are estimated. In a first embodiment, first and second liquid crystal polymer dielectric layers are directly bonded, respectively, to first and second opposing surface of a thermally conductive layer, with no extrinsic adhesive material bonding the thermally conductive layer with either the first or second LCP dielectric layer.

1459826429-5b5ba696-ec43-405e-a5b2-d439d047c68a

An apparatus for removing dust and fumes from a flow of air, particularly a flow of air exhausted from an industrial work area. The RF switch circuits are configured into a multiplexed circuit to route video signals from a selected host computer to a target monitor. The present invention includes the lower fascia having a molded and support structure which is attached to a main body through the use of living hinge features.

1459826429-5dc86239-f8e3-49d8-b2d0-b739000655bd

To provide a semiconductor device that can effectively suppress the short channel effect without deterioration of carrier migration, an impurity ion is added from a direction of the  $\langle 110 \rangle$  axis with respect to a silicon substrate on forming a punch through stopper under the gate electrode. By use of discontinuous or non-concentric surface engagement in such orientation and pattern to lock together the collar-clamp and the associated mounting component assembly, better load distribution and overall strength results while retaining an ability to position a component at any selected radial orientation relative to the post. The user receiving device stores tuning data for the local channel with program guide data stored in the user receiving device in response to the control command. A conformal dielectric layer formed on sidewall and bottom of the first and second trenches. In another specific embodiment, a series of clamp diodes are coupled between ground and an input pad, while a resistor is off-chip and in series with the input pad. A coefficient of current battery power consumption is directed in accordance with a user.

1459826429-64ff0c13-a6be-434e-a255-293612e35257

A vacuum seed planter uses a single seed plate for planting multiple plots of seeds. The method further comprises the steps of estimating an average distance between said peaks, and using the estimated average distance as an estimate of the pitch. In addition, the light conductor guides the light source of the luminous element outwardly so as to generate luminous and warning function. A cylindrical casing houses the rotor therein. The base station apparatus includes a preamble-sequence securing unit which secures, as preamble sequences not to be used in signal transmission, some preamble sequences of multiple preamble sequences used in the random access channel; and an interference power estimating unit which estimates interference power using the preamble sequences not to be used in the signal transmission. The filter system comprises at least one high temperature and, corrosion resistant filter.

1459826430-2d09e6e2-6722-466d-b61b-aebe326400d5

The present invention provides a method and a system for stripping volatile compounds such as ammonia from liquids. The ink composition further includes lithium and water. The force-applying unit, such as a spring, is disposed to urge the deformable portion in contact with the substrate to form a substantially fluid-tight seal. An influent port is formed in the upper case part for directing liquid flow approximately vertically into the approximate center of said volumetric measuring container.

1459826430-951f2517-8e23-4e5b-b00f-631324a8334f

This invention is a new and distinct cultivar of a zonal geranium named \u2018Hope\u2019 the cultivar has a large dark purple blossom and darker green foliage with a medium dark zone on a stable, full, well branched plant. A gate electrode is formed overlying the active semiconductor layer. Samples from the reference and relative channels produce relative amplitude and relative phase difference values that are plotted on the display. The curved display system also includes a digital light projection device for projecting images of one or more reels onto the curved material. The quantum well barrier composition may or may not have Kane-like bands.

1459826430-a1427948-cccd-43ed-8d01-e430615d6a74

A method and an apparatus are provided for encoding frames of image data. Ions corresponding to a plurality of peaks P11, P12 and P13 with the intensity or SN ratio falling within a predetermined range L are detected as MS2 precursor ions based on the MS1 spectrum. The vent spacer has a hub and a plurality of radially-extending fins coupled to the hub, the fins extending approximately to a radial periphery and extending axially between the opposed axial sidewalls to form a plurality of radial cooling channels extending between the sidewalls. The spheres move downward into a locking position upon movement of the sealing plug, to secure the sealing plug in its upward sealing position.

1459826430-b0ee403b-fc2f-41b0-bc7f-ab27d85b89ad

In a motion detection circuit, a difference signal between the video and one-frame delayed video signals is generated. The protocol gateway is implemented as a registration authority that operates as an intermediary between routers and a certificate authority, allowing routers operating in accordance with one protocol to obtain and maintain certificates for a VPN from a certificate authority operating in accordance with another protocol. The mesh pattern includes a trench-etched region in a mesh shape and a non-trench-etched region in an island or ribbed shape left in the trench-etched region.

1459826431-320455b5-c0a4-4655-b1b4-105456fb837f

A structural element for a fuselage cell structure of an aircraft, in particular a stringer profile or an annular former segment, the structural element being made from a composite material, in particular from a carbon-fiber-reinforced epoxy resin. The waveguide device includes a substrate, a polymer bottom cladding layer on the substrate, a polymer channel waveguide on the bottom cladding layer, and a polymer top cladding layer. The attachment assembly also includes an anti-rotation feature to prevent rotation. An auto diagram builder generates one or more message sequence diagrams.

1459826431-8e9d8930-5fde-40e6-87b3-d15cf014a849

A transmittingreceiving circuit holds a communication at a frequency f1 by using an antenna or an antenna, and a transmittingreceiving circuit holds a communication at a frequency f2 by using an antenna. The device utilization for one or more network devices are measured or read from measured data. The method includes determining a vibratory resonance condition of the rotor blade and forming a blade extension between the rotor blade root and the rotor blade tip that alters the determined resonance condition. The correction parameter can be applied to anode and cathode contacts on a single implanted lead. The leadthrough element projects through the ceramic plug with a close fit and is connected thereto in a gastight manner by way of a sealing ceramic. An immune response can be induced by administering the poxvirus 7 to 2 days prior to infection with the infections agents.

1459826431-f20b0192-b652-4045-bebd-c8e12ea75337

A detection framework that matches anatomical structures using appearance and shape is disclosed. The utilization of such metalated silica as a filler in rubber compositions results in improved polymer filler interaction and in turn improved physical properties. The non-cleavable-fluorescent group is designed to terminate

DNA synthesis so that DNA oligomers can be sequenced efficiently in a parallel format.

1459826432-6e192544-91c1-4bdc-84bb-43b2b7943b47

A lubricant injector having a body containing a reciprocal piston for dispensing lubricant from the body, a pin extending from the piston through an opening in the body, and a sealing assembly in the opening surrounding the pin for sealing against leakage of lubricant from the body along the pin. Thus the compounds or the salt thereof are expected as a drug for treating epilepsy. In order to provide a metal-ceramic composite having a high joint strength which is less likely to cause defects such as cuts or cracks at the joint, the joint metal layer 15 and the ceramic member 55 contact each other at an annular region of W in average width which extends circumferentially about the end face 55a of the ceramic member 55. An absorbent assembly including a liquid pervious bodyside liner, a liquid-impervious outer cover, and an absorbent positioned therebetween, is secured to the front and back panels. The smoking device may further be utilized as a practical means of proportionally and consistently regulating each draw of tobacco smoke.

1459826432-abf7e5f0-a7f5-4a0f-96cf-0a6391398f15

A customized surgical fixture is formed by scanning a body to form a three-dimensional image of the body, and then identifying in the image a target in the body, and mounting points or structures on the body. The ferritic stainless steel, contains: C: 0. The method also includes determining one or more image parameter values based on social activity of the target user. A second output communication is generated when a difference between the quantification of at least one type of information for at least one category and a reference for the at least one category is detected involving a psychological state, attitude or characteristic of the author to which a responsive action should be taken.

1459826432-d9efcf2f-4600-4460-b379-f5276044a741

A developer's system compiles a source-language program by parsing it into an intermediate language program that is independent of the architecture or resources of any particular processor. The energy will preferably be applied to the endopelvic fascia and/or an arcus tendineus fascia pelvis. The base assembly includes a base member, an aperture, and one or more base assembly rings.

1459826433-c96a6b0a-8114-4049-8fda-8670338828e1

An improved adhesive composition having increased insulative properties is provided. The present invention further provides a kit for use in detecting neoplasia. Based upon such the monitoring, the first gateway transmits information to the client device relating to establishment of a second tunnel connection or tunnel with a second gateway of the private network. The method includes providing a non-rotatable conditioning member configured to engage the polishing pad.

1459826433-cba21309-57a0-4144-b4ef-a26ce6c63a54

Disclosed is a device for connecting an ear-microphone to a mobile phone through an interface connector of the mobile phone. The stack memory apparatus includes a semiconductor substrate, and a plurality of memory cells, each including a switching element and a variable resistor connected in parallel, stacked on the semiconductor substrate. Further, for the metallic material, an aluminum or aluminum alloy material is used as industrial waste including refuse and cutting chips of an industrial aluminum material. The filter is movable, basically perpendicular, to the irradiation direction of the radiation source. When each track hook is positioned under each rail of the track and downward force is applied to the first bar member, the first and second bar members form the substantially straight line thereby lifting the track off the ground. Among other things, embodiments of the disclosure allow full access to application servers and other network devices that a client is allowed to access, while preventing all access of network devices the client is not allowed to access.

1459826434-3c6c5011-5ef4-42c2-86af-88b766b0f557

In a receiving section, a first mixer and a second mixer generate an I signal and a Q signal from a modulated reception signal, a local signal, and a local signal obtained by shifting a phase by 90 degrees. During storage, the engagement portions abut each other to be kept out of engagement with each other, whereby a drug containing space is defined between the gaskets. Therefore, the present invention is useful for all agents for skin external use, particularly cosmetics. The clutch part may engage with a cooperating clutch part when the sleeve is in the second axial position.

1459826434-c9a28d6c-7af3-4196-b01d-c11dbd38675d

A milking arrangement includes a milking robot with a gripper. The compiler apparatus creates threads for performing prefetch and prepurge. A core is provided in the interior space for providing strength to the pallet. The cleaning mechanism, which is configured to engage the head, includes the cleaning pad mounted to a carrier disposed near the head.

1459826434-f1087264-d25b-4849-86fb-327578a53c4b

A gas turbine combustor transition piece outlet structure enabling a reduction in the temperature difference of a flange formed at the transition piece outlet. Each transition arm is coupled to the headband portion and extends away from the headband portion length at an angle greater than zero degrees. The system determines whether the incoming call to the voice mail originates from the prepaid subscriber, i. A first module is activated based on the type of the interrupt signal to perform one or more functions. The disc members include an inorganic fiber, mica and a clay having a content of particle components that have a particle size of 5  $\mu\text{m}$  or larger of not higher than 30% by weight based on the weight of the clay. The method utilizes the detection of magnetic resonance signals from within at least one region of a primary, substantially non-homogeneous, external magnetic field.

1459826435-49eb023f-a64a-4b07-a7e6-79fcf7beabc3

A method of making a sterile adhesive composition includes placing a mixture of a polymerizable adhesive monomer and a thickening agent in a container, sealing the container, and sterilizing the mixture and the container. The use of Carrier Interferometry coding further improves the effectiveness of peak reduction. A finishing wheel is fixedly connected with each of the sliders. The inverse quantization unit inversely quantizes a quantization coefficient obtained by decoding by the lossless decoding unit by using the quantization value for each sub macroblock supplied from the sub macroblock inverse quantization unit.

1459826435-6eccae8c-f49a-44b6-9f8b-20dea8518bd6

Embodiments of the invention generally provide an apparatus and method for replenishing organic molecules in an electroplating bath. The scintillating fibers are manufactured from a GOS ceramic material. The powerline coupler provides voltage estimates of the common mode signal component to a signal processing unit. The disk substrate has a first major surface, a second major surface, and an outer edge. Optionally, piezo-electric fibers within the piezo-fiber layer are poled by inter-digitated electrodes supported by the thin film polymer, arranged as alternating symmetric longitudinally-poled  $\mu\text{CPush-Pull}$  units.

1459826435-7dbb3b23-ced8-4662-9d5b-7051df681f0b

A flash storage device includes a power hold circuit including a double layer capacitor. The surface channel transistor is either a PMOS or an NMOS device. A digital value associated with the integrated circuit is generated using the output of the first component, and then the generated digital value is used in operation of the integrated circuit. When the drive unit is brought into connection to the grip section, the pin is pressed distally to project out of the grip section into

engagement in the catch, to thereby prevent relative rotation between the neck section and the grip section. To reduce the likelihood of interference, a processing unit may determine whether to permit a transmission under one wireless network when a reception under another wireless network is already in progress.

1459826435-a1e4bfc5-2251-44a4-a4dd-f5104ae6538c

A content data distribution system uses a single key and multiple program authorization to transmit a plurality of programs in multiplexed data packets such as those used in Digital Video Broadcasting. The switching elements are connected to a power terminal through a corresponding resistor each, wherein the resistances of corresponding resistors or equivalent resistance of combination thereof are different. The compliant apparatus has mechanisms for monitoring and/or controlling its compliance. The system is capable of being handheld. The piston includes a sealing ring adapted to circumferentially seal against an inner wall of the cylindrical chamber and at least two axially aligned ribs.

1459826436-0ed71d11-ec08-4924-b979-1bed23f200af

An accessory support apparatus for use with a patient support includes a handle positioned adjacent an end of the patient support. The device adjusts gain of push-pull signals to raise the signal to noise ratio of the land pre-pits signal to the wobble signal. In certain operating conditions of the internal combustion engine, the pressure in the high-pressure region is lowered by means of a release device. The myocardial infarction detector detects an event indicative of myocardial infarction.

1459826436-4dd6b4a8-aa1b-4c87-ae54-c02685fcff1c

A process for continuously preparing a compound which bears at least two functional groups which are each independently selected from the group consisting of nitrile group, carboxylic acid group, carboxylic ester group and carboxamide group. The pneumatic tire includes a noise absorbing member of a porous material which is attached to an inner peripheral surface of the tire. This composition is subjected to a separation step to yield a purified composition comprising at least 95 weight % of dichlorotrifluoroethane and less than 0.

1459826436-54efee5f-3fe4-4b5e-b32c-bf74049f62e7

A photodiode for detection of preferably infrared radiation capable of detecting two different wavelengths wherein photons are absorbed in one region and detected in another. At least a portion of each leg of the stent comprises a discrete plurality of continuous filaments braided together, and at least a portion of the body comprises one or more of the continuous filaments from each of the legs braided together. The at least one granular material container includes a plurality of separate and distinct chambers, each chamber including a different granular material. The blowervacuum may further include a vacuum receptacle having an opening that selectively communicates with the air outlet when the passageway of the tube communicates with the air inlet. The lock has a blocking element which adjusts on introduction of the key into the holder and/or removal of the key from the holder.

1459826436-6d16be7d-333e-4bf2-a9ab-19a916efaa94

According to one embodiment, a wafer includes a substrate, a base layer, a foundation layer, an intermediate layer and a functional unit. The method comprises, for each of at least a few of the layers, dispensing and hardening at least a first modeling material and a second modeling material to form a core region and one or more envelope regions at least partially surrounding the core region. The device includes a detection apparatus for detecting a height position of the nozzle and a control apparatus for varying the height position of fluid injecting device in accordance with the detection. The first eAN sends a Traffic Channel Assignment message to a User Equipment based on the session transfer response, so that the UE can switch from a Long Term Evolution network to an

evolved High Rate Packet Data network based on the TCA message. The drink cupholder has a wall that mates to the bracket, and includes skirt walls that cover the bolts used for attaching the bracket and the seat backs to the seat standard. The dry fertilizer contains a contains nitrogen, phosphorus and potassium compounds, as well as a mixture of plant growth stimulators including at least one of each of growth promoters, vitamins, amino acids, carbohydratespolysaccharides, and adjuvants.

1459826437-05822ba3-d84f-4516-879d-a2fb560be554

The invention provides tissue engineering compositions and methods wherein three-dimensional matrices for growing cells are prepared for in vitro and in vivo use. The first band corresponds with a first emission sub-band of an emitting ion, and the second band corresponds with a second emission sub-band of the same emitting ion. The present invention provides the ability to dynamically partition row sources for parallel processing. The UE then determines a prioritized downlink CC for CSI reporting based on priority levels of the feedback types to be transmitted for each downlink CC at a given time slot. A stylus or other receiving device may determine its position relative to the electronically addressable display by analyzing the position-unique signals.

1459826437-52dbe411-2fdb-41d5-a83f-a0fdfaa0d909

A method, cache controller, and computer processor provide a parallel mapping system whereby a plurality of mappers processes several inputs simultaneously. Also disclosed herein are humanized COL-1 monoclonal antibodies that have reduced immunogenicity, compared to a parent antibody. Advantageously, the article of clothing is subjected to the action of gas jets on both sides. Thus, if one path is disabled due to an SEU, the other path can still provide the necessary connection, and the functionality of the design is unaffected. The angular position of the rollers may be aligned with an external reference such as the side of a column, a wall, or a jig. Such methods accurately evaluate the relationship between a disease and adiponectin through selective assay of adiponectin multimers and provide information that cannot be obtained through measurement of the total amount of adiponectin alone.

1459826437-76fd620c-40ca-4ef2-b1ac-4dc47e95c638

An induction sealing device which may be used for producing packages of pourable food products by transversely sealing a tube of sheet packaging material having at least one layer of induction heatable material covered with plastic material. As this matter is eliminated, the pressure drop is decreased and the heat exchange efficiency is increased. The seat base is slidably coupled to the chassis and rigidly coupled to the chair seat.

1459826437-ff2cedf4-c357-4b36-94f7-3f5289f143a3

A track light assembly adopted for a track light has a conduction track having two lateral sidewalls opposing each other, two lateral retaining members extending inwardly from the two lateral sidewalls respectively, a cavity formed between the two lateral sidewalls, and a cutout formed between the two lateral retaining member and communicating with the cavity. Thus, the press strips are snapped onto the back plate and rested on the mirror plate to retain the mirror plate on the back plate, so that the wide-angle mirror is assembled easily and rapidly. In particular, the present invention relates to a container closure made of an expanded elastomer by means of a thermal moulding method, characterized in that the expanded elastomer can be produced by means of a step of expansion by a supercritical fluid. The method continues with detecting iteratively the first probing signal at the unassigned wavelength through each of a set of ports of a second wavelength switching device during a time period, and recording a connection between the first port of the first wavelength switching device and a port of the second wavelength switching devices when the first probing signal is detected. Then, interval values are randomly generated based on the selected average interval value, and the

management data is transmitted from the sender to the receiver at irregular intervals corresponding to the interval values. An oxide-nitride-oxide dielectric structure or stack is formed on the surfaces of the floating gate structures and the dielectric material.

1459826438-04ae0cbf-d079-4a1b-87dd-b7cc1df70dba

A processor based system and method for virus detection is described. In embodiments, an MTF detector generates a value representative of a low frequency portion of the analog signal and a second value representative of a high frequency portion of the analog signal. In one phase, the flow graph is formed without modeling asynchronous transfers.

1459826438-9c0ced49-cefc-4386-a355-9737071b442f

A basesheet for use in an aircraft gas turbine engine exhaust nozzle includes a plurality of basesheet segments extending between longitudinally extending spaced apart basesheet leading and trailing edges, respectively, of the basesheet. The mode of action is by a route selected from blocking the conversion of testosterone to dihydrotestosterone by inhibiting the 5 $\alpha$ -reductase enzyme or by reducing oxidative stress or both. A second base member of the airflow meter, provided with a drive circuit and a signal processor, is housed in a casing holding the flow-rate measuring element. Based on the historical user interaction data, the sleep interval setting unit adjusts the sleep timer's sleep interval. The invention also relates to a CT method of examining objects, in particular of various sizes, by means of an X-ray CT examination installation generally identified above. Each joints is respectively disposed between the protruding portion of the control handle and the engaging member, each joint has an insertion aperture.

1459826438-ba89cb96-b943-4658-b06c-1cc3ed3c0918

A planar inverted-F antenna structure is parasitically coupled to a conductor loop at an open end of the main radiator of the inverted-F antenna. Such approaches avoid persistent tissue leaks and their consequences such as fluid leaks and air leaks. This prevents or reduces power loss due to capacitive coupling. The color filter elements may be interposed between the thin-film transistor layer and the backlight structures or the thin-film transistor layer may be interposed between the color filter elements and the backlight structures.

1459826438-f93d88a0-8f22-4f00-80e5-94eb6de06f12

An illumination device includes at least one solid-state light source, a thermoelectric cooler, a heat dissipation device and a first metal film. The modular sight system includes a replacement back plate receptacle for guns having a slide with a rear sight and rear back plate section for receiving a cover plate. The plurality of filtering passageways are used to filter fuel passing through the needle guide and induce swirl in the fuel to improve atomization. The electroconductive structure is electrically connected to the electrical output portion. Not only are the aesthetic properties conferred by these compositions thus improved, but their useful life is also increased, since they allow access to the desired shade right from the first application.

1459826439-212b796d-9699-4b7d-a54b-90382d854536

A compound having a structure and therapeutic methods, compositions, and medicaments related thereto are disclosed herein. The specification includes an input-output pair with a first data entity and a second data entity. One geometry fixture is at a ready position of the work station to support an automotive component during a processing operation. The first plug includes a first electrical data connector configured for insertion into a receptacle of the host computing device. In an advantageous development the transverse, depth and vertical profiles, as well as the associated fixing extensions of the corner connectors having a triangular construction. licheniformis host cell, which mutant host cell is mutated in one or more gene encoding one or more secreted polypeptide which is at least 80% identical

to one or more of the polypeptides shown in SEQ ID NO's: 2 to 248, wherein the mutant host cell secretes at least 5% less of the one or more secreted polypeptide than the parent host cell, when they are cultivated under comparable conditions.

1459826439-2a72fcf1-3849-411f-8845-bb10139c8323

A substrate holder for vertical furnaces is configured to support substrates in slots at inner portions of the substrates, rather than solely at the edges. A service method definition section defines a value of each of the plurality of constraints by defining a value of each of a group of constraints to thereby determine a value of each of the other group of constraints which are related to at least one constraint of the group of constraints. If no feasible single bit update is possible, feasible two-bit updates are considered.

1459826439-e0ac0174-60f7-4ae3-8bb6-5c586ae49072

A liquid crystal display device includes a liquid crystal display panel, an area light source device which illuminates the LCD panel, a driving unit which drives the LCD panel and the area light source device, and a control unit which controls the driving unit. Through the administration of an effective amount of at least one alpha adrenergic agonist at or near a target site, one can reduce, prevent or treat pain and/or inflammation from tendonitis, carpal tunnel syndrome, tarsal tunnel syndrome, osteoarthritis, bursitis and/or an oral-facial disease. The system then searches for the specified conditions. The flexible substrate can stack with the water/oxygen barrier layer and the touch-sensitive device layer, or stack with the multi-function layer.

1459826440-075ae0c7-5003-44e8-935a-65dd3d9453e8

A method for assembling an electrical circuit includes measuring actual values of components of a given type that are held in a stock, and storing the measured actual values in a computerized stock-record. The holder has a groove surrounding the LED module at a top surface of the holder, with a rim of the globe inserted in the groove. The element 301 includes: a first additional conductor 303 spaced from the first signal strip 102a; a second additional conductor 305 spaced from the second signal strip 102b; and a third additional conductor 307 connected to the first and second additional conductors 303, 305 at respective points. The castellated ends of the barrel and the portions of the interrupted groove between the slots form a criss-crossed pattern that prevents the wire from entering the slots or entering the barrel and tangling during payoff of the wire, even when the spool is heated. In particular, the present invention provides transgenic animals expressing a transdominant negative Rex gene product that inhibits retroviral replication.

1459826440-4b8024af-0854-49b4-b336-f818f5c176c0

Pairing is achieved between a host communications device and a peripheral communications device, in order to establish an ad hoc wireless or wired network. In some embodiments, the data is written in a writing mode selected in accordance with an extent to which the flash memory storage device or a flash die thereof is full of previously-stored data. or higher; an aromatic hydrocarbon content of 40 to 55 mass %; and a polar substance content of 10 to 15 mass %. The input stage provides an interim output that is available during a defined period, and the latch stage is operable to latch the temporary interim output during the defined period using a common clock. The connector defines upper and lower channels or slots and can rest on a lower panel and receive an upper panel, thereby enabling a second level of panels to be formed over the first level of panels. The memory cell has a gate electrode connected to a word line, a drain region connected to a bit line, and a grounded source region.

1459826440-b1350510-2403-46d6-81b8-ec1cf2c38b00

The present invention provides a method of detecting fraudulent clicks in an online environment to reduce fraudulent paid clicks for online advertisers. Hydraulic

fluid lines link each transmission's hydraulic fluid reservoir to the other transmission. The first elastic body has a first contact portion adapted to contact the mating side. A sheet shift portion shifts the sheet of paper to the shifted reference position based on the deviation detected by the deviation sensor. The electrical connector includes an actuator movably held within the housing. A fourth semiconductor region adjacent to the third region may have a first concentration of the second dopant type.

1459826441-46aaa27d-251c-4495-bd47-e7d2250cf5b4

The invention relates to insect attractants containing compounds with pentagonal heterocyclic structures that are effective in attracting fruitflies. The compound can be administered systemically, locally, or a combination thereof. An adjustable spring mounted to one of the truck tractor and body unit to act between the truck tractor frame and the body unit frame to adjust a loading between the truck tractor frame and body unit. The golf ball's moment of inertia is increased while utilizing only a small amount of the coating material as a result of the pattern of coating material, which locates the coating material at an outermost radial distance from the golf ball's center of rotation.

1459826441-fb1274a0-10e8-440a-90d8-7e6f531988ec

Embodiments of the invention generally include a method of forming a nonvolatile memory device that contains a resistive switching memory element that has an improved device switching performance and lifetime, due to the addition of a current limiting component disposed therein. The capacitor includes: a lower electrode; a dielectric layer formed on the lower electrode; and an upper electrode formed on the dielectric layer, wherein a portion of the dielectric layer contacting one of the lower electrode and the upper electrode is formed by alloying hafnium oxide and aluminum oxide together. A camera positioned above the substrate captures two images thereof, one using the first light source and one using the second. The pointer is updated in the third memory area to point to the added entry in the packet queue and the updated pointer in the third memory area is written to the queue descriptor in the second memory area in one write operation. The invention also relates to magnetohydrodynamic stirrers comprising a conduit or cavity having at least two electrodes disposed in such an orientation that, upon the application of a potential or current across the electrode pair within a magnetic field, secondary flows such as chaotic advection is generated. The device also includes at least one fluid passage being connectable to a fluid source.

1459826442-486a0482-6853-4cbe-a5a5-d80448904b65

A method of processing biometric data, includes receiving biometric data including a data set P, selecting a secure hash function h, and for each data set P to be collected, computing h, destroying the data set P, and storing h in a database, wherein data set P cannot be extracted from h. In a low-consumption state it waits to receive a command to acquire and condition sensor signals. Projections at one end of the hub are matingly received within notches in the opposite end of the hub of the next adjacent wheel so that the wheels are interlocked for rotation in unison. A method for manufacturing an integrated circuit chip and for identifying a known good die are also disclosed. The base palette has cutouts, to define feet and to provide for forklift arm access in at least two directions.

1459826443-39bd5ca6-a9b9-41f6-b1bc-22315afa03cc

A system for tracking and monitoring at least one item in an environment includes at least one transmitter assigned a unique identification number for the item and attached to the item and at least one receiver for receiving a first data packet which includes the unique identification number from the transmitter. A roofing shingle has a rectangular plate provided with first through fourth seam portions. The elongate member is constructed to be: a) operatively held in a user's hand that is configured to hold the elongate member in the same manner that an elongate writing instrument would be held by a user's hand during a writing action; and b)

moved while being operatively held to thereby cause the actuating base to be moved relative to the surface. The conduit includes a first end fitting that is attached to the enclosure and a second end fitting that is affixed at a port or other aperture of the external device. The invention claimed herein provides features, such as, but not limited to, electronic transfer of funds, authentication of parties, seamless integration with merchant's Web page, and reporting of suspicious activity.

1459826444-a838a243-2037-47d3-b305-fb439825e1da

According to the present invention, a system for reordering commands to achieve an optimal command sequence based on a target response restriction is disclosed. The compounds find utility as medicines for treating or preventing central nervous system disorders, for example schizophrenia, by exerting an antipsychotic effect without motor side effects. The machines also may be equipped with a control system that tests the operability of at least a portion of the detection system and/or the reaction system. To speed up the shift-in/shift-out operation during decompression, the decompressor can be further split into two or more pipelined decompressors each placed between two sets of intermediate scan chains. The second end portion of the flexible layer is deflected until the second end portion contacts the base member.

1459826444-f2ab2138-5b31-4757-8746-4663d5f4cf39

A novel apparatus for moving passengers between an airport terminal building and a doorway of an aircraft located rearward of a wing of the aircraft. The memory area includes a plurality of cells, and the ECC circuit is configured to determine whether uncorrectable error data exists or not by using a parity according to cell data of the memory area in a read mode and a parity according to an encoding result of corrected data of the cell data. In addition, the instant invention allows individual the ability to read electronic books, download and upload technical information, curriculum and personal data, programs and data in real time. The filter device can be used to ionize the ionizable interferents existed in the air, separate the ionized interferents from the other components of the air under the influence of the electric field, and discharge the interferent out of the filter device, thereby reducing the consumption of the consumables or even eliminating the need for consumables. By controllably varying these stresses within NFET and PFET devices formed on a substrate, improvements in IC performance are achieved.

1459826445-da069e1c-8fcc-450a-a35d-45aeb1478482

A method of treating chronic disorders associated with the presence of abnormal microflora or an abnormal distribution of microflora in the gastrointestinal tract involves removing the host's existing enteric microflora and substitution of feces from a disease screener donor or composition comprising microorganism selected from the group consisting of Bacteroides and E. The interposer includes flexible solder pad elements that are formed from a core material of the interposer, such that the interposer may absorb thermally induced stresses and conform to warped or uneven surfaces. The activation count is zeroed whenever a new frame is created in a stack and incremented for each frame encountered during periodic intervals. This space is advantageously completely filled using a vapor deposition process where a coating is deposited as a vapor which flows over all surfaces of the die stack, including into the spaces between the die in the stack.

1459826446-08379394-db3a-43b2-a02c-32b37991282a

Shaving apparatus having at least one cutting unit with an external cutting member and a movable internal cutting member. Furthermore, a questionnaire response section and a test response section collect skill information of a trainee in a question and answer format, via on-line. The movable handle is movable through an actuation stroke. In addition, the system sets a stores\_encountered indicator when a first store is placed in the store buffer during the transaction. The error magnitude is compared to an error threshold. configured to add the N multiplication products to generate an analog signal power estimation value which corresponds to a

degree of correlation between the sensor output signal and the selected predetermined digital sequence.

1459826446-4607da86-3641-4772-9094-3ae6abe273a0

A method is disclosed for operating a memory device, including providing a timing signal comprising a plurality of clock cycles, providing an activate signal, and providing a bank address signal. The hitch has two spaced apart sockets on a rigid frame that pivotally connects to the vehicle providing a rigid extension thereof. A session is maintained and a plurality of requests for service by a client and a server responds to those requests by providing the requested service or an error message. The retainer engages the catches for securing the coupling member and carrier section in a fixed position relative to one another.

1459826446-a25b3c99-d49e-4a4e-a418-3e336e3e2015

A description is given of a connecting device for tubes for medical use having a connection element comprising a main body designed to be attachable to the end of a first tube, and a shut-off element made of an elastically deformable material and at least partly housed inside the main body, to allow or prevent, as required, fluid communication through the main body. The system includes an active building model system generating one or more user-selected two-dimensional views of a three-dimensional building model. Axially extending first slide grooves along an inner circumference of the hole have an inside diameter almost equal to a diameter of the material. In addition, non-assigned CEs can be maintained in a third portion of the CEDL, by packing requests initially from opposite ends of the first and second portion, and be re-packing dropped traffic within the CEDL. The pallet defines a peripheral groove structure opening upwardly in the platform structure between each beam member and their respective outer edge of the pallet.

1459826446-bb63a75a-73a6-4a85-9747-c7a4b06f90eb

New aerogels are disclosed which comprise silica and at least one organic polymer having polar functional groups. The plastic apparatus contains sodium chloride User operates the plastic apparatus to release a dosage of salt-filtered air for inhalation when the apparatus is aimed into the user's mouth by way of corrugated plastic tubing and a plastic breathing regulator located next to a plastic mouthpiece. A second switch may be provided for coupling the receptacles to the power source via a low impedance path.

1459826447-14dfbd46-93ee-4532-82e3-972af3a923ce

An output stage compensation circuit and method for a low drop-out regulator configured to facilitate stable operation while providing output voltage and current to downstream circuit devices is provided. The oral skin improving agent contains as a principal component refined hyaluronic acid having a purity of at least 90%, preferably at least 95%, and an average molecular weight in a range of 750,000 to 1,200,000, preferably 800,000 to 1,000,000. A method of diagnosing a disease or condition, comprises contacting or administering a sample obtained from a subject suspected of being afflicted with the disease or condition with the cell, plant or animal, detecting any signal produced by the reporter in the presence of the sample and comparing the signal to controls for 0% and 100% signals.

1459826447-153943ae-b4fe-4a47-872a-64f6731d115c

An electronic commerce system includes one or more seller databases that store product data for one or more products. A typical process of applying a self-assembled monolayer is to ink a hydrolyzed n-octadecyltrimethoxysilane solution on to a stamp and then to transfer the solution onto ITO. Other embodiments are described and claimed herein.

1459826447-966f6d9a-998f-4fbb-b296-0aad092e81f4

An apparatus and method for generating 3D graphics objects utilizes algorithms to generate the objects when driven by audio events. Code division multiplexing or

orthogonal frequency division multiplexing may be selected for each traffic segment, which may correspond to specific time frequency resources. The contact electrically connects the capacitor element to the MOS transistor on a source thereof.

1459826447-f83b0b56-6b6a-4355-abdd-2bbb579fe364

A computer implemented method, apparatus, and computer usable program code for presenting terrain along a route on an aircraft display. The apparatus can be attached either into the jumpboard connection located near the footbar or into the shoulder rests depending on the reformer model. The prescription entry system transmits and receives information from the communications network and provides an input system for the doctor to electronically enter individual prescriptions for each patient. At least one weight in the sleeve causes the sleeve to rotate to a position with the row of slots at the bottom of the sleeve while the well pump is oriented horizontally. A connector is configured to connect an output of the board to a load. The walls and the bottom define an enclosure for containing products to be finished.

1459826448-b36fb4be-b47a-483a-8f45-453e21b6bb74

A semiconductor chip package is formed by a first semiconductor chip and a second semiconductor chip, which have electrodes for wiring at surfaces thereof, being integrated and mounted in a state in which reverse surfaces thereof oppose one another. The eScript is extracted from a Siebel repository and received in a DAVID (Development Application Verification Information on Demand for Siebel application where the VB. The sheet tray is easily adjustable for the length and width of the sheets delivered to it and for the depth of the stack of sheets. In some embodiments, the multiple types of dyes have steric configurations that are different relative to one another. The outer conductor portions are disposed on a side opposite to the inner conductor portions, the top pole layer being disposed in between.

1459826448-ec9412f6-7cc9-4ef3-a683-d8c178c1fba0

Various systems and methods are provided for minimizing an inrush current to a load after a voltage sag in a power voltage. The operation amplifier includes a positive input terminal, a negative input terminal and an output terminal. Each MPS accepts data from a respective plurality of local input flows. A fan opening is formed through the base plate.

1459826449-13e93fc3-97cb-4e96-85e6-39b61129e2b9

Disclosed is a disposable surgical stapling unit configured for use with an actuation device that has an elongated shaft assembly. The outer contact surfaces have an arrangement so that, in a first orientation, the component pad layout matches the landing pad layout and in a rotational reorientation of the entire electronic component about the component axis by an angle other than 360° $\times$ b0, the outer contact surfaces are translated to each other so that the component pad layout matches the landing pad layout. Hence, by controlling the commutation of the motor on the basis of a detection signal from the position detector, a commutation timing can be precisely detected even if the motor is in a low speed zone. An insulating layer is formed on the solder mask exposing at least a portion of the solder pillar.

1459826449-76306bf3-28c2-4d3a-b370-c97581c8cbfa

A Propagation Test instruction, a Decay Test instruction and a Cycle Test instruction provide testing of DC and AC interconnect circuits between circuits including JTAG boundary scan cells. The flower stems are about 50 cm in height. The controller has the ability to switch from controlling withdrawal pressure to controlling infusion pressure based upon the detection of an occlusion.

1459826449-89b89c2d-3433-4f8d-b298-8cf4f2e6cb4e

The present invention relates to a process for producing a flexible holding system for transporting piece goods, consisting of an outer envelope and intermediate elements which each consist of a flexible web material, which are connected to one another such that compartments are formed within the envelope. A significant number of layers underneath the amplitude defect are undamaged. A cover is hingedly connected to the housing. The extension member defines a receiving through hole and includes at least one second guiding portion corresponding to the at least one first guiding portion.

1459826449-f7410292-453c-4ec3-8a62-fabc726097f9

A light emitting device includes a nano-structure, a first semiconductor layer on the nano-structure, an active layer on the first semiconductor layer, and a second conductive semiconductor layer on the active layer. In the region adjacent the first layer and the second layer, there is provided a concentration gradient layer formed of a mixture containing a metal or metal alloy contained in the first layer and a metal or metal alloy contained in the second layer. The scheduler software module is executed by the DSP in response to the interrupt request signal indicating a change in highest priority runnable event.

1459826450-1f71d844-3f71-4d07-a97f-3e80f17de00b

For the offset compensation of a digital signal, particularly of a communication signal transmitted in a cordless digital communication system, a recursive digital filter is used. The automatic diver identification unit includes a buoyant main body portion having at least one interior chamber. The SMA line resists on the resisting surface. Upon recovery from a database failure, a recovery point may be determined that indicates a consistent state of the database. The final output signal is fed back via a multiplier circuit and the combined signal supplying circuit to the respective delay loop circuits to thereby simulate the acoustic feed back to the coil springs.

1459826450-f71f6494-0f04-4edf-a0df-07cddf69a71c

A gear train of an automatic transmission for vehicles has the advantages of improving power delivery performance and reducing fuel consumption as a consequence of realizing more than eight forward speeds by combining four planetary gear sets with three clutches and three brakes. The coaxial capacitor of the present invention in a preferred embodiment thereof is configured to modulate capacitive electrode area rather than inter-electrode spacing and as a result a highly linear transfer function can be achieved. The shaft first end is adapted to be combined with and rotated by a drilling machine. The compressed feature data is stored onto at least one of the second portions.

1459826451-3ab00eb3-c48e-42b5-833e-d178f22b633e

A mechanism is provided for avoiding cross-interrogates for a streaming data optimized level one cache. The method also includes the step of subsequently swaging the first ring portion by moving the first ring portion in a direction toward a second end of the swaging tool, such that a portion of the first ring portion is positioned within the annular space to fix the first member to the second member. The wustite layer is bonded to a base metal substrate of the processed sheet metal.

1459826451-aff4bcf3-23b0-40f7-8ce1-860f7085bf8c

An apparatus is disclosed providing a portable, multi-purpose golf apparatus. Bi-ventricular stimulation is constantly provided with and without sensing to encourage normal pumping of the heart on a consistent basis. A reel-to-reel mechanism is provided comprising one or more reels associated with the carrier, such that the part can be spooled and unspooled upon the one or more of the reels prior and subsequent to a performance of a manufacturing operation upon the part for the purpose of creating an electronic circuit. A synchronized system and method for the coordinated reading and writing of data to and from the shared main memory

by the processing units also are provided.

1459826451-cae5c2af-f036-4dcd-9405-5af7bb0e5709

An inductively coupled plasma source is provided with a peripheral ionization source for producing a high-density plasma in a vacuum chamber for semiconductor wafer coating or etching. The first heating element generates heat to increase the temperature of the semiconductor chip. The inductor is compatible with integrated circuit manufacturing techniques and eliminates the need in many systems and circuits for large off chip inductors. In that respect the invention is based on the realization that, in the case of a rotor blade which does not go to a point at the tip, the effective rotor blade area is maintained unreduced precisely in the outer region in which the effect is greatest. A method of delivering a medicament to a patient including imaging a gastro intestinal tract with an autonomous device, identifying a target location in such tract, and releasing a medicament from the device at the target location. The disclosed implementations are robust to signal degradation through incorporation of a noise model into the classifier construction phase.

1459826451-dfb5153a-1aa5-42b6-bb6e-bac5551d3051

A load includes a device for inductively powering it, the device including an insertion part, following the insertion of which into the load the powering of the latter is provided. Secure items are authenticated by shape level lines. The method further includes inserting the lead lines in the restraining portions, aligning the distal portions of the lead lines with the corresponding connecting portions using the positioning jigs, inserting the lead lines into the corresponding connecting portions, and electrically connecting the lead lines inserted in the connecting portions to the corresponding connecting portions. When the spool is in a specific location, two outlet ports are in fluid communication with each other.

1459826452-2af3a6dc-545a-42df-b1b4-7beb233d57bd

A phased array antenna includes a plurality of subarray lattices connected together in a linear configuration and forming a substantially rectangular aperture. The method also includes monitoring kernel level events of an operating system executing on the virtual machine and monitoring application level events of the operating system. Further, this can make the release draft correction operations easier than that in the prior art.

1459826452-3278962e-7a5f-42cd-a650-226181b2ef15

Methods, systems, and devices are described to fabricate precursor intermediaries and carbon fiber or graphene materials. In one exemplary design, an apparatus includes first and second delay circuits. If a suitable base station can be found, handoff is made and the annunciation information is acquired. A second housing holds the condoms or wet wipes and has an opening that corresponds to an opening on the first housing whenever the second housing is received within the first housing. The GMAW welder or MIG brazing device then follows the laser and deposits a material that fills the channel to weld the two pieces together.

1459826452-3b1227f9-5450-491d-a97e-abf07420c377

A safety handrail apparatus including a support component with channel element and a light emission component. The connector is configured to connect to a coaxial cable of a communication system, the communication system including a connection to a network employing internet protocol communications. The key aspect of the present invention is by adjusting system clock to change the data generated rate corresponding to the transmission rate of the transit interface.

1459826452-6453ce33-39f3-4dcc-afea-62b14b318cf9

The subject disclosure is directed towards detecting software vulnerabilities in an isolated computing environment. The container comprises a generally elongated channel having a first end and a second end positioned below the first end. The

plurality of layer portions include a first-type layer portion and a second-type layer portion. Two of the clock signals in the sequence are applied to a phase detector so that the signals at the outputs of the delay line have predetermined phases relative to each other. The reference voltage generating circuit controls the reference voltage such that the reference voltage assumes a midpoint of trails of a signal value distribution indicative of \u201c0\u201d data and a signal value distribution indicative of \u201c1\u201d data. Alternatively, the plurality of light sources, the one-dimensional linear batwing lens, and the housing may be formed, along with a power supply, as a standalone retrofit fixture for use in enclosed storage structures, such as refrigeration cases, where the retrofit fixture replaces a conventional fluorescent fixture.

1459826453-96b47ecc-44cb-47b9-96a4-498595ca12ec

Bidirectional wavelength cross connects include a plurality of ports, each configured to receive an input optical signals, each input optical signal having a plurality of spectral bands. In particular, in an Multiprotocol Label Switching environment, a method of hierarchical bandwidth management in a multiservice network supporting various quality of service levels and a number of applications is disclosed. Further, the computing system causes a device to display a graphical user interface through which a user can define panels that will be associated with various received data objects, so as to define a record, by time or subject matter, of relevant data objects. The replicas may be de-correlated through techniques such as selectively delaying some of the replicas.

1459826453-96e8dbb6-9fea-4378-b1ab-c5985de0f31c

A semiconductor memory device and a write control circuit which may detect write failures and a write control method for the same are provided. The method includes applying a composition to a polymeric component of a medical device which has little or no conductivity. The body has a face portion, a crown portion, a sole portion and an aft-mass portion. The video capture buffer stores the image data block.

1459826453-c7631d07-2a19-4ef4-b0ff-21f7e8c9a0b5

Zonal isolation apparatus includes at least one packer assembly and can be used in completing an open-hole portion of a wellbore, which open-hole portion extends through at least two subsurface intervals. The pad includes an adhesive layer on the first surface, or a hook and eye fastener for removably attaching the pad to the compression plate. The resulting flavorless malt base can be used to formulate flavored malt beverages. A recordingreproducing apparatus to record extended part version information on a reserved zone of a physical format information zone of a recording medium.

1459826453-cc6f0aa6-6a0b-42d0-b203-ffb185ebce3b

A downhole waterflood regulator installs in a side pocket mandrel to regulate fluid flow in a waterflood completion. The driving portion provides a driving signal to the external FET. The conductive outer shell includes sidewalls depending from the sides of a face having a plurality of tip seats for receiving a plurality of pipette tips.

1459826454-0f930da3-9c34-4f21-add7-4838e972f986

A schema is provided that defines people, groups and organizations by their corresponding contact information and other related characteristics. The first MIS transistor includes a first gate insulating film, and a first gate electrode including a first metal film and a first silicon film. A separating film member is provided to prevent the chemical solutions flowing in the mixing flow path from coming into contact with a pressing means, which is for pressing a seal ring member of the mechanical seal against a rotation ring member. The aerial delivery system is capable of attachment at the wing box, pressurized delivery from the nozzles, and nozzles directed straight downward. Embodiments of the system can integrate

with electronics rack passive rear door liquid heat exchangers.

1459826454-847d01fa-1473-400c-b531-b0d5bdeefb6b

A master cylinder for electro-hydraulic braking systems having a body of longitudinal axis pierced with a bore to receive a piston mounted to slide therein in a sealed fashion while axially dividing the bore into a supply chamber sealedly connected to a brake fluid reservoir and a working chamber. The method of forming a hybrid tubular filter includes wrapping a first layer of fiber, wrapping a filtering material and then wrapping a second layer of fiber. The optical waveguide core is a substantially non-electrooptic material.

1459826455-644d24df-9f30-4584-84f7-330dc1c86211

A system to interworking a call between a plurality of networks having different formats. The generation assembly has a compressor and filtration components to generate breathing air. The apparatus allows a dentist to illuminate the interior of the oral cavity without needing additional equipment that hinders access to the oral cavity. In certain embodiments, the scooter includes a brake element pivotally coupled the elongated deck and spring biased away from a rear wheel of the scooter. The solid support can be porous, and can be functionalized with a nucleoside or with a universal synthesis of polynucleotides. A plurality of wafers are consecutively inserted between the two tissue surfaces to create a column of wafers.

1459826455-bcfbab3c-6483-4c8f-9359-ed2ecdf348a9

A shoe for driving a car according to one aspect of the present invention comprises a heel part 5 on a foot sole 4 and an inclined face 5B increasing gradually toward a rear side in a side view. The catalyst system comprises an activator and a bimetallic complex that incorporates two Group 3 to 10 transition metal atoms, which may be the same or different, and a neutral or anionic indigoid ligand. The replacement material has a different coefficient of thermal expansion than a parent material of the second portion of the case. The processing means processes the image data read by the original document reading means and forms an image thereof based upon the control data extracted by the control data extraction means.

1459826455-cdf44403-7af1-425a-b7b0-a5c5e4d596c7

Structures and methods for programmable array type logic and/or memory devices with asymmetrical low tunnel barrier intergate insulators are provided. The cover is made sterile and disposable for allowing multiple use of the protected optical device. When generating an arbitrary gradient magnetic field, a compensation magnetic field which compensates for an eddy current magnetic field according to application of an arbitrary gradient magnetic field on the basis of the measured eddy current magnetic field in each direction is generated together with the arbitrary gradient magnetic field.

1459826456-3f8c7fd3-4d6e-44d1-b22e-85ae106947c6

Heterocyclyl-substituted thiazoles of the formula , in which the symbols have the meanings given in the description, and also to the agrochemically active salts thereof, and their use for controlling phytopathogenic harmful fungi, and also processes for preparing compounds of the formula. The present invention further relates to an object for incorporating such a hanging device. The angle of the antenna array is automatically held at a proper value owing to swinging movement of the antenna angle holding means.

1459826456-44f91a0d-4a23-47b0-8362-7cf6bc487abe

Apparatus, systems, and methods are provided for measuring and analyzing movements of a body and for communicating information related to such body movements over a network. Because of the positive temperature coefficient element, no temperature control loop is necessary for controlling the temperature level. The prism preferably has a cross-section defining a parallelogram, so that the optical signal

is reflected twice within the prism to minimize cross-sectional distortion and avoid spectral effects. The normalized content is sent to the requesting mobile device. The device may take the form of a webcam having auto tracking functions and retractable prongs that plug directly into a wall outlet. A simple operability is achieved because the operating device has a server which is assigned to the cooling device control, and has a network connection as well as at least one personal computer, which is connected via the network connection and via a universally accessible network and has an assigned web browser, by which the data retrieved from the server can be visually displayed.

1459826456-bcc7b2d0-b6b0-46af-855a-18f284c04d62

A medical electrical lead includes a first low voltage electrode adapted for intimate contact with tissue at an implant site, in order to provide pacing stimulation, and a second low voltage electrode positioned in proximity to the first electrode, isolated from the first electrode and adapted to function in conjunction with the first electrode to provide bipolar sensing of near-field signals. Following a refueling request, a fuel system may be sealed from the atmosphere while one or more fuel system valves are adjusted to divert fuel tank pressure or vacuum to an engine intake. The composition is applied and dried on a planar, hydrophilic substrate to form an image forming element, in particular, a planographic printing plate. A communication device operatively associated with the processor communicates the fault signal and an alarm.

1459826456-f44b09e6-81f7-4ae9-ac03-5852a95bf6a3

A displaying ornament with rotatable color disc includes a base and a color disc circumferentially rotatably mounted on the base. On the top surface of a multilayer substrate, substrate-side drive electrodes and substrate-side detection electrodes are provided and a ground electrode is disposed between the drive electrodes and the detection electrodes. The implant has a wedge-shaped profile to restore disc height and the natural curvature of the spine. An axially extending second end of the outer combustor liner defines a combustion chamber output opening. The unused display device is powered off. The imager is configured to obtain image data of the projected phase shifted patterns.

1459826457-65da6713-9038-41ac-ae5c-9ce29f1eaf79

A power over Ethernet powered device with power fallback states. , in 20 weight times water dilution, is 2 to 4. The wireline cable includes one or more conducting members for communication between the wireline tool and the surface. Uploaded and downloaded set screw embodiments are disclosed. The skin characteristics are filtered out from the plurality of detected signals. This 3 by 3 layer of trays comprises a so-called \u201cnine-down\u201d configuration.

1459826457-b6a9f893-3b35-4cdb-a705-03113b44721f

The present invention discloses systems and methods for the performance enhancement of rotary wing aircraft through reduced torque, noise and vibration. The first protrusion has a hole defined in an inside thereof and a clamping member is eccentrically received in the first protrusion so that a friction portion of the clamping member is movably extended through the hole and protrudes into the receiving space. In one aspect, a separate encoding bus is used to provide the encoded common values in various processing of additional received operations in the microprocessor instead of a full-bit bus of the microprocessor, the encoding bus having less bits than the full-bit bus. The encoder and decoder microchips are provided with means for changing, e. Order is maintained by allowing a participant to make a request to speak, and by granting said requests in turn. According to this, a fabrication cost is lowered, a capacity variation width is greatly increased, and an operation is facilitated.

1459826457-e0c6474b-c0f6-434a-a5ba-877820adf9c7

A system and method for retrieving certificates and/or verifying the revocation

status of certificates. In one embodiment, an apparatus for retaining a web of polishing material includes a platen that has a first clamp and a second clamp disposed on opposite sides of the platen. The invention is applicable, in particular, to human or veterinary pharmaceuticals, to dietetics or to food products.

1459826457-e9b12351-f24c-4e84-913d-78fb7b2d8f34

A piezoelectric ceramic that includes barium titanate and 0. The first one is restricted from being reselected during a subsequent half-cycle of the clock until the first one is reset. The external interface, embedded in the vehicle, is capable of receiving a first set of teletype signals from a portable TTY terminal and capable of sending a second set of teletype signal to the portable TTY terminal. A detector is disposed inside the interior passage between the magnetic source and the output end of the housing and the detector is configured to respond to the electric current induced and generate a signal representative of the amount of oil in the flow of fluid.

1459826458-4cd432d7-e812-445f-8832-ba0fec273438

Provided is a display system for transmitting FM signals to an external audio system having an FM reception function. That is, the angle between the direction of the back and forth work off movement and the direction of the forward movement at the lowest work off zone is less than in the centre of the inclined work off path. A protection circuit is electrically connected to the gate and data lines, and disposed in an outer peripheral portion of a display region in which the switching elements and the display electrodes are formed on the one side of the substrate. The second telecommunications line may be electrically connected to a port of a telephone jack. Then, ink is sucked for each of the three nozzle caps by a suction pump.

1459826458-6ea7a25e-e185-46c2-a064-c420e0cfc8f7

Techniques are disclosed that provide for femto base stations to become synchronized with other base stations in a wireless network. Each planar heater zone uses at least one diode as a heater element. Cellular antennas and/or base stations may be reassigned to switches based on use data. The peer node then determines if the extracted checksum is associated with a malicious data object by comparing the extracted checksum with checksums of known malicious data objects stored in a local malware database. The result is that damaged or inoperable signal processing components can be repaired in space without having to physically attend to the hardware by transmitting to the spacecraft commands which reconfigure the particular FPGAs thus to alter their signal processing function.

1459826459-273871c0-4dde-4f7a-bd34-5c19894a7261

The process of identifying and associating information with objects in a hyperlinked video sequence is automated by creating an accessible list of object information, including semantic representations, which updates with the identification of new objects. The method comprises interrogating metadata associated with the data repository to establish a latest two consecutive synchronization times at which no updates were processed. A random code is produced and compared with a user code. Each actuator is coupled to the housing and adapted to apply onto the housing a rotational moment about a torque axis that is at least approximately parallel to the housing axis.

1459826459-3fb477d9-65f1-4fc9-9b3a-01e3c883fe83

The invention concerns a method and apparatus for monitoring the polar compound content of a liquid bath disposed within a cooking vat to insure the liquid bath remains suitable for human consumption while in use. This invention incorporates hydrogen peroxide and/or peroxy-carboxylic acids or their constituents to inhibit corrosion by inducing passivation of the metal. The SSI circuitry includes local monitoring circuitry coupled to a central processing unit of the computer. The

sensitive data are then moved to the runtime memory space and the copy on the storage device is deleted or made unusable by users. The processor device is configured to receive reports of operating system identities for a single host; determine which of the operating system identities are an intersection of the reported operating system identities; and assign the intersection of the reported operating system identities as a resolved operating system identity.

1459826459-5d1f5b2c-9a98-4e70-8637-15740ea97bc0

An integrated circuit has a circuit part and a trimmable resistor, the resistance whereof may be modified by Joule effect. Also disclosed is a novel apparatus for measuring the volume of liquid displaced by the insertion of an object into a liquid filled cup which is on a cup holder basin, the liquid filled cup and cup holder basin being inside a rectangular support assembly, the measurement obtained by determining the buoyant force produced as a result of the displacement of the liquid by the animal paw. The first contacts are arranged and retained in a pitch direction by the first housing. The first housing is covered at least in part with the first shell. The first shell includes a spring portion and a contact portion. The illuminator further includes a secondary diffuser that is located a predetermined distance from the front portion of the light guide forming an air gap there between. and a pressure of from 50 to 250 mbar, and the second distillation step being carried out at a temperature of from 80 to 200 C. A device adjusts the space between the working cylinder and the anvil cylinder, independent of the device to exert the defined prestress.

1459826460-d24e1e32-4b3e-4229-8fe3-2a8127334b0d

Processes for inspecting a surface during device fabrication include contacting the surface with a tactile sensor. By bringing the packing into contact with the surface of a filter covering a supply hole and by pressing the head unit, the sealant makes intimate contact with the head unit while the end of the packing is kept in intimate contact with the filter, thereby sealing the supply hole. A controller generates a reference signal sequence corresponding to a bandwidth of the allocated resource blocks, and maps the reference signal sequence to subcarriers according to an allocation of the resource blocks. Computer-readable media embodiments and system embodiments associated with the present methods are also provided.

1459826461-a7eedaa1-bb40-4cd1-b493-4781a4d5a2c6

A gradient coil system for a magnetic resonance apparatus has at least one component of a cooling apparatus, and a latent heat storage apparatus which undergoes a phase transition during operation of the gradient coil system. Moreover, the unit activates, as a second state, the motors in a power running state, thereby generating motor driving torques, and causes the mechanisms to generate friction braking forces. Five friction clutches and brakes plus one one-way clutch control operation of the primary unit, and operation of the auxiliary unit is controlled by a clutch and a brake plus one one-way clutch. Further the present invention provides methods for treating diseases associated with colon.

1459826461-b1549eb0-fe92-4939-a807-98270139cbd1

A system, method and computer program product for approval and allocation of costs in electronic procurement is described, wherein approval and allocation of costs are made in response to an electronic invoice, which includes information used to allocate procurement costs to one or more cost centers. An electroless plating apparatus, including an electroless plating vessel and recirculation systems, is presented. The single-piece bearing shell includes a radial slot based on a wall thickness of the bearing shell and has at least one contoured bulge.

1459826461-dce0c413-0084-4c28-b188-d2daa7f2980b

In the present invention, a plurality of carriers in a multi-carrier DMT communication system is grouped into one or multiple carrier groups according to at

least one carrier group parameter. The first stage trapping media has less surface density than the second stage trapping media, so that the first stage trapping media collect more than half, preferably 90-95% of the  $AlCl_3$  vapor with the media at ambient temperature, and so that the second stage trapping media remove the remaining  $AlCl_3$  vapor with the media at ambient temperature. A catch is coupled to the closure member that extends toward the jar when the closure member is fastened to the jar. Other devices can include dies all of the same type, or two or more dies of a first type and two or more dies of a second type different from the first type. A first electrode is assigned to the pixel area, wherein the first electrode is provided over the first substrate. The first mating port includes first and second mating tongues providing corresponding first and second mating faces opposite to each other.

1459826461-e80cd678-76cb-4cb1-ac7c-7a9aabbf2a53

A neck ring for molding a glass container neck finish that includes at least one closure attachment feature. An inversion detecting unit detects an inversion of a changing direction of the atmospheric pressure periodically measured by the measuring unit, and a communication control unit controls a timing to acquire the altitude information through the wireless communication unit at a set timing, based on the inversion detected by the inversion detecting unit. Policy-based management is distributed across the system and is handled locally by management agents allowing control of a sub-network. The rod extends through and is slideably disposed within a channel in the control bracket. The present invention relates to the composition for cosmetics which can be appropriately used in producing a cosmetic giving a highly excellent feel in using and having a very good texture, a cosmetic showing a very high stability over time as an emulsion, and a two-separate-layer-type cosmetic. The telecommunication terminal device is capable of exchanging telecommunication signals regardless of serial or parallel connection to additional external terminal devices.

1459826462-3c1146c5-1cf0-46bb-be53-9333d999b26b

Embodiments of the present invention relate to configurable inputs and/or outputs for memory and memory stacking applications. The method may include forming top wiring patterns in a substrate, depositing a primary undoped silicate glass layer on the top wiring patterns to fill a gap between the top wiring patterns, and coating a SOG layer on the substrate on which the primary USG layer has been deposited. A method of manufacturing the package of the present invention is featured by mounting the silicon wafer on the insulating substrate. In case the calculated magnification is decided as being not in excess of the predetermined limit value, a stitch data modifying device 6 is operated to enlarge and reduce the stitch data of the pattern on the basis of the calculated magnification rate so that the pattern may be stitched in accordance with the so processed stitch data.

1459826462-6bffa9763-7cd0-4e96-83c9-345d259321fe

Electrical networks are formed to produce an approximation of at least one desired performance characteristic, based on the recognition that fabrication variations introduce slight differences in electronic sub-networks which were intended to be identical. Also provided is a wafer having such a configuration and a process for providing such a configuration. The user setup data recording device sends setup data of the objective device, which is set in advance by the user, to the objective device on the basis of the received user information and device ID.

1459826462-e242cffa-e56e-4729-aba1-86928812e537

A non-annular, hollow chain link is provided with a gap and is capable of being intertwined to form a jewelry rope chain. The hot press includes a frame that has a press unit attached thereto. A die subjected to the surface treatment method exhibits improved surface smoothness and glossiness, as well as high corrosion resistance. The entire process may execute from the pre-boot image on the computer's local persistent storage medium without ever booting the primary

operating system. The compounds of Formula I are useful as diuretics and natriuretics and therefore are useful for the therapy and prophylaxis of disorders resulting from excessive salt and water retention, including cardiovascular diseases such as hypertension and chronic and acute heart failure.

1459826463-2e1ce401-5fdf-4018-9125-3de999df391c

Antisense oligonucleotides that inhibit expression of human replication-initiation protein as well as methods of preventing or treating hyperproliferative conditions using said oligonucleotides are disclosed. The plurality of liquid-impermeable layers have a coextensive area A1. Thus, the structure includes three basic components: a power inductor that spirals around the transistor array, the transistor array itself, and the transistor array metallization that is used to form a distributed inductance situated over the transistor array. The control word is then passed to the attenuator to adjust the gain.

1459826463-653f39b6-12a7-4229-8b95-643e309e3f84

Systems and methods described herein are directed to solutions for NoC interconnects that provide end-to-end uniform- and weighted-fair allocation of resource bandwidths among various contenders. The method is ideally suited for video-based machines or Internet-based applications. The use of the universal header of the present invention works to significantly reduce the number of different models of implantable medical devices that a manufacturer must have available. The accumulator includes an outlet opening laterally offset from the station. The expiratory cassette also has a locking mechanism for locking and unlocking interaction with a receiving section in the ventilator. The canopy can comprise a first panel and a second panel.

1459826464-052355e2-3a2a-4f7e-8541-18187f1de471

A unidirectional and bidirectional optical fiber couplers using polymer optical fibers having mirrors formed within the polymer optical fibers for reflecting optical signals. The housing provides environmental protection and is adapted to be mounted to a customer's house. The technique can maximize the resolution obtainable from axial ejection over a wide mass range. A slot, semi-circumscribing the pad and extending on both sides of the trace toward the distal end of the trace, is cut through the substrate to allow the proximal end of the trace to be displaced in a cantilevered manner below the lower side of the substrate when a force is applied to the pad. A control device controls both the traversing movement and the changing movement. In addition, by having a cross section of the downstream-side end surface of the cylinder 53 shaped in a semicircle and providing a back surface wall 2d having a curvature being equivalent to a curvature of the semicircular curved surface, compressed air flow making 180 degrees turn can be made uniform and free from disturbance.

1459826464-429d3cf1-c00e-431f-ae8c-04d0771180ab

A high-strength and high-toughness ferritic steel having a tensile strength of not less than 1,000 MPA and a Charpy impact value of not less than 1 MJm<sup>2</sup> is provided. The shelves may also include other details such as a raised front lip. 1\u201310 and heated under a reflux, thereby obtaining a metal hydroxide gel. The GUI is web-based and is viewable by a user using a web browser. An image processing apparatus and method are provided which can process image data of an arbitrary size at high speed independently from the capacity of a buffer memory, and a computer readable storage medium is provided which stores a program realizing such a method.

1459826464-7e29d06a-990a-4b61-9f0e-4eef2114fa9a

An object counter performs a method for counting objects that includes capturing images representing moving images of a predetermined counting view, detecting a motion region in the moving images of the predetermined counting view, calculating a motion region speed value indicating a speed of movement of the motion region. The blade includes a blade edge adapted to engage a material, and the blade is

coupled to a blade shuttle. The sputtering material does not cover at least one end portion of the backing tube. To send information to the base station, the terminal transmits a series of QPSK symbols that make up an OFDM-code. In one possible implementation, the set of predicted readers are generated by applying a function to the current set of readers and one or more additional sets of readers. A defective line information store circuit stores information showing the defective line.

1459826465-38fcae48-5b87-45cf-9a3b-9b3b4b775976

Compounds of formula I:are antagonists of the human 5-HT<sub>2A</sub> receptor, and hence useful in treatment or prevention of a variety of neurological conditions. The core member includes a core main unit having said insertion port and the insertion room and a plurality of ribs provided upright from an outer face of the core main unit to cross one another, and sealed rooms are formed through the outer face of the core main unit. A circular guide pin head cap covers the outer end of the head ring, and includes a support collar that is closely received in the counterbore of the ring, and engages the retainer ring to securely hold the same in place. The folded ribbon is subjected to sufficient heat and pressure to set the at least one folded portion. A method for assembling the mirror mounting apparatus is also provided. Furthermore, some embodiments provide that the lists being sent are encrypted and/or embedded in otherwise inconspicuous files.

1459826465-43a5eab8-0310-4b6b-aff8-8e4c68a2bb4b

Compounds having activity as inhibitors of IKK are disclosed, particularly IKK-2. The central compartment is designed in a generally parallelepiped shape, and has a leading surface which leads the side bags through an airstream when said trailer is traveling forward. In order to simplify the production and configuration of the bracket without comprising its stability, the bracket is comprised of a tubular hollow profile and a lid, which is fixed on the end opposite the sill of the hollow profile covering said end and which has the opening for the receiving element.

1459826465-9670984e-14f7-4758-b6ee-f7a9761a9212

A spectrum coding apparatus capable of performing coding at a low bit rate and with high quality is disclosed. The pattern comprises a circuit design that is fractured into a plurality of arbitrary polygons. A test signal is injected into the null signal feedback control loop. The gripping teeth of the rigid ring are oriented so as to be out of contact with and initially angled away from the outer surface of the male plastic pipe.

1459826466-60a376bd-3105-43ab-a3fd-6629ab314252

Constant speed drive of a reticle and a wafer in a relative scanning direction and positioning of the reticle and the wafer are simultaneously performed with high precision by a slit scanning exposure scheme. The cover is removable, and a test cover can be put into position for mounting in place and providing outlets connectable to pressure sensor for determining pressure drop across the nozzle plates at each impactor stage. The envelope may be formed of a flexible material to enable it to be collapsed or folded for storage and/or transportation. Each plate contacts with the magnet to form a magnetically conductive system.

1459826466-63077c82-e9d1-4d6c-a9aa-5131c735e54f

There is provided a novel series of synthetic analogs of hGH-RH<sub>NH2</sub> and hGH-RH<sub>NH2</sub>. An integrated receiver decoder determines whether or not ATRAC data requiring authentication is contained in selected piece-of-music data in accordance with determination data added into transmitted data. 2 position locating withdrawn from said No. No or few additional hardware components are required to be added to a disk drive in connection with implementing embodiments of the present invention. A rotatable member is secured to one end of the second cylinder and is spaced from the first cylinder so that the member can rotate the second cylinder about its axis without rotating the first cylinder.

1459826467-1eddd6743-372f-4a62-bae7-496899a49980

Substituted monocyclopentadienyl, monoindenyl, monofluorenyl and heterocyclopentadienyl complexes of chromium, molybdenum or tungsten in which at least one of the substituents on the cyclopentadienyl ring carries a donor function which is bonded rigidly, not exclusively via sp<sup>3</sup>-hybridized carbon or silicon atoms, and a process for the polymerization of olefins. Four-terminal three-layer BTRANS provide substantially identical operation in either direction with forward voltages of less than a diode drop. Furthermore, the main discharge gap and a line part gap between adjacent line parts are provided such that a discharge current waveform of the display electrodes has a single peak when the gas discharge panel is driven.

1459826467-6e53e677-b3d5-40f7-9dd1-050d4cae8ff0

A new and distinct cultivar of Weigela plant named 'Carlton', characterized by its uniform plant habit; freely branching habit; developing leaves that are yellow green in color and fully expanded leaves that become yellow green in color during the mid-summer through autumn; dark red purple-colored flowers; and good garden performance. The system and method comprise a manager that controls access to a bridge for a client where the bridge communicates with the manager to provide the client Internet access. To the best of my knowledge, there are no other patents comparable to the Easy Auger Adapter. When the coating composition is applied to the porous substrate, waterfast prints are produced which are resistant to smudging or bleeding when subjected to moisture.

1459826467-afd57c1e-fa24-4497-b8d7-0f76fb0bd6c6

A method of forming a MIM capacitor is disclosed whereby adverse affects associated with copper diffusion are mitigated even as the capacitor is scaled down. The can end is preferably shaped during the forming operations so that a major portion of the end panel is curved. A circuit is configured to logically AND the outputs to generate a hit output.

1459826467-b2f1913e-5b34-4ddc-add3-cadb8a893203

A surgical retractor configured for use in surgical procedures to repair patient wrist distal radius bone fractures. The test structures are fabricated in the same fashion as the MR elements, however, the active sensor region or track width is omitted from the test structures. The on-board computer disables ignition function through supplanted firmware that recognizes the status of the signal received from the radio receiver. The method includes digitally representing, on a display device, the facility and/or the physical locate mark to generate an electronic visual representation of the operation.

1459826468-07cca544-02dc-4e6b-b6bf-8d6a0950bf3c

A mobile station transmitting and receiving method and a corresponding mobile station transmitter and receiver of a smart antenna system for forming uplink eigenbeams of the OFDM-TDD, wherein OFDM symbols are received from a base station through a downlink via multiple antennas and an FFT is performed on the received OFDM symbols by the FFT units. A conveyor oven is used to bake flattened and pre-shaped naan bread loaves. The data is moved on as an image of the logical volume, on a cylinder by cylinder, track by track, and bit by bit basis. If the plurality of requests to access the requested data have occurred during the predetermined number of most recent data accesses, the method may also include storing the requested data in the memory. In connection with the proposed network architecture, methods for handling service scripts within the network with regard to creation and storage of service scripts, provisioning the service scripts for a user, distribution of the scripts in the network and execution of the scripts during call processing are also described.

1459826468-3014b104-7f2d-4aa4-902f-ecf9d5559e3b

A system, method and computer program product are provided for scanning files. A gate electrode 1G is formed over the channel layer 13 via an insulating film 15 and a source electrode 1S and a drain electrode 1D serving as ohmic electrodes are formed over the channel layer 13. An optical fiber joins the sensor to a transmission cable and is fixedly positioned within the tube. A first control device is connected to the source of the fluid pressure for initiating the supply of such predetermined pressure to the operating mechanism. The nucleic acid selector is then contacted with the nucleic acid sample, such that a portion of the nucleic acid sample remains associated with the nucleic acid selector.

1459826468-705a525f-952f-4e38-a02d-893810917b37

Liquid coating compositions are provided that comprise siloxane containing polymer, volatile polydimethylsiloxane, and aliphatic hydrocarbon. A wireless communication is received from the wireless device at a host system. The calibration pattern is received from the communication link using the receiver on the second component.

1459826468-df45192c-7112-4e04-854e-d5c55c4c7dc5

The present invention provides cell culture media and methods useful for determining levels of intracellular function of glutathione or cysteine and for providing biochemical analysis of antioxidant function in human lymphocytes. The signal is received and analyzed by a remote control receiver and transmitted via a wired transmission path to a remote control re-transmitter. During formation of the printing elements filler material is applied to the feed channel. Furthermore, similar methods and apparatus' are herein described for dynamic reconfiguration of an accelerator device in a processor socket.

1459826469-2650fdeb-15b4-43af-8eb7-43f98e91d029

A wireless communication system according to the present invention is a wireless communication system including a mobile station and a base station that wirelessly communicates with the mobile station. A pressure differential across the porous member may be maintained at below the bubble point of the porous member so that a single-phase liquid flow is obtained. The data collection device is communicatively coupled with a velocity measurement system and configured to output the collected data to the velocity measurement system. After the polymer and the binder have been removed, the part now comprises a powder skeleton that contains the internal undercut feature within itself.

1459826469-79840cae-4949-48d5-8213-809d1143fca1

An image forming device having a developing unit for visualizing an electrostatic latent image formed on an image carrying body by utilizing a developing agent containing toners and carriers which transfers a toner image to a recording medium to obtain a record image. The method includes prompting a user of a mobile device to make a particular action that is detectable by the mobile device, and prompting the user to select a particular operation that the user desires to have effectuated when the particular action is subsequently carried out. or higher and returning at least a portion of the oligomerization solution to the reactor.

1459826469-a21c7268-efcd-40ba-ab64-84f35252a48b

Provided is a reusable food storage container, comprising a vessel that can store a food and/or beverage and a removable cap that closes the vessel. The method begins by forming a prepared substrate material consisting of a metallic inner substrate and a bound layer of a noble metal intermediate. Code is downloaded to the host computer, and is configured to create a virus scan module on the host computer upon such a request. The alignment can take place by electrical, magnetic, or optical acting means.

1459826469-dc70d8c3-a08d-4b66-9794-a3b3f5328dc9

The invention relates to machine dishwashing agents containing specific polycarbonate-, polyurethane-, and/or polyurea-polyorganosiloxane compounds or

precursor compounds thereof of the reactive cyclic carbonate and urea type which help to avoid the formation of water spots and filming after the use of the agents and accelerate the drying of dishes. A locking mechanism prevents outward movement of the movable sub-assembly in the storage position relative to the sleeve. Additionally, the display rack can be provided with front and/or rear removable panel carriers configured to removably receive front and rear panels.

1459826469-fa6bc02c-8f61-449d-ac6a-89b91b55ae5a

A coated string for a stringed device which includes a coating applied to the surface of the string. The method includes detecting objects in a predetermined vicinity around the ego-vehicle, and determining the relative velocity or other measure between each detected object and the ego-vehicle. Tension on the endless track 76, 198 is maintained with two tensioning members 170, 244 operatively connected to the forwardmost roller 82, 202. Next, the plurality of first chips 1 judged as the superior product are adjacently arranged on the front surface of the second chip 2 judged as the superior product in plane in a Y direction so that lower electrodes 5 of the adjacent first chips 1 are electrically connected with each other via a through electrode 6, a bump 8, and a wiring layer 7.

1459826470-616d1f57-1186-4196-91ad-611ced657322

The present invention relates to antenna calibration for active phased array antennas. A pair of terminals, an intermediate contact member and a rotating member with a ratchet respectively on two sides is fixed in the insulating body. The first type of information includes enunciated data.

1459826470-d9e7fe7b-79d3-4d9d-8629-4a036fb3db29

A thin air outlet structure to a vehicle compartment exhibiting excellent directivity while ensuring sufficient volume and velocity of air conditioning air stream. The radar includes a first discriminator for receiving a portion of the swept frequency signal generated by a frequency sweep generator and for producing a reference difference-frequency signal of frequency equal to the difference between the frequency of the swept frequency signal and the frequency of a time displaced swept frequency signal derived from the swept frequency signal. The current sense signal is compared with an upper threshold value and a lower threshold value. An elastomer body interconnects the inner sleeve and the outer sleeve. On the other hand, a threshold at each comparator circuit is configured to be able to be set individually in accordance with external setting, and thus a drive start timing of each element constituting an actuator array can be set flexibly.

1459826470-eb09d239-5a8d-4f01-aba1-22d74b6e1c6a

The present invention provides compounds of formula I. In one embodiment, an example of a process for generating DRR images includes, but is not limited to, loading a volume rendering program into a graphics device, the volume rendering program representing a predetermined algorithm according to a non-linear attenuation model. Then the control structure is transmitted to the one or more target devices during the period of the source device's configuration and is utilized to configure the one or more target devices to communicate with the source device via the base station, thus reducing the total time required to set-up the communications. Compared with the prior art, the lifting trolley provided by the present invention saves time and effort, is accurate in positioning, and facilitates conveying of goods. An analog receiving signal amplifier outputs an output signal representing an amplified receiving signal that has passed the analog receiving signal bandpass filter to the demodulator, and the gain of the amplifier is controlled in accordance with the level of the same output signal. The second end cap circumferential wall permitting the second end cap to be closed around the securement washer.

1459826471-33289e26-f8b4-43f2-8eb2-31cabae17e51

Methods of forming metal compounds such as metal oxides or metal nitrides by

sequentially introducing and then reacting metal organic compounds with ozone one or with oxygen radicals or nitrogen radicals formed in a remote plasma chamber. The base includes transverse front and rear base members, with a central base member extending therebetween. Each of the at least one detector sets includes a plurality of detector elements. The first operation is verified by applying a verify voltage to each of the at least one word lines. If the registration is determined to be successful, the assigned TMSI is then bound to the new ESN2. The resulting extract is used, preferably together with vitamins C, E and A or components thereof to form a skin treatment product that has efficacy as a photoprotectant and antioxidant.

1459826472-6271d245-5554-47e9-9495-9cbd5a1996bf

The protective tape applied to the front surface of a semiconductor wafer to protect the wafer during backgrinding must be trimmed so that excess tape, known as tape bur, does not extend beyond the perimeter of the wafer. Each of the adhesives 4 and 5 is caused to have proper adhesive properties suitable for the adherend to be bonded with by, for example, adding different kinds of coupling agents. A catheter according to the invention includes a probe or sensor arrangement for generating a signal representing the instantaneous amplitude of the fluorescence or the incident illumination.

1459826472-8d187be2-de99-42d3-b00d-8a6de449aff5

When electric wires are disposed adjacent each other in a peeled state of coatings, a gap corresponding to the total thickness of both conductors' insulating films as skin layers is formed between end joined face portions of the conductors. The lens array device produces a lens effect in a direction, the direction of effect being changed between in the first arrangement state and in the second arrangement state. Accordingly, the occurrence of printing failure can be lowered and the printing time can be shortened. The exposed conductor part 2A can be elastically deformed in the thickness direction in which the substrate 22, the reinforcing plate 24 and the like are stacked. The forceps and the forceps closing mechanism are disposed below the clamp magazine with the forceps being exchangeable.

1459826472-f82af7bf-5d70-4e6c-aa44-00ffb74bdbe8

Techniques to automate the transformation of an application involving programming language constructs from a composite of source grammars to a composite of target grammars, while maintaining the fidelity of the program semantics and functionality, or extending or changing it to explode the capabilities and avoid the limitations of new technologies are disclosed. This invention can compress, restore, match and classify signals. A refrigerator cools the superconducting coil and the radiation shield by conduction. There is also provided a plurality of movement arrangements for each moving a respective engagement arrangement along the length of the chassis. The communication node includes: a relay signal generation unit configured to generate a transmit signal by reducing, from a receive signal, an interference signal from another communication node and performing a process such that the transmit signal is not received as an interference signal by another communication node. 86 or higher and an Abb\Xe9 number vd of 28 to 36; a preform for precision press molding and an optical element that are comprised of this glass; and a method for manufacturing the optical element.

1459826473-4bd4137a-cac1-48ac-a7d2-30353dd03981

A two stroke internal combustion engine having a compressed air inlet port and an exhaust port the flow through which is controlled by suitable valves. Each of the link mechanisms includes end portion link members on input and output sides, and an intermediate link member. When the connector is inserted into the bulkhead casing, the latch dogs snap into latch-receiving slots of the casing to latch the connector in place. The front lens group is a cemented lens in which a first lens having a negative refractive power is bonded to a second lens having a positive refractive power in that order from the object side to the image side.

1459826473-5cda511a-1b9e-4c0d-90b4-a300d5b77f78

Data is stored in a nonvolatile memory so that different pages of data stored in the same memory cells are encoded according to different encoding schemes. In a conventional connecting member, its portions to be connected to the jumper wires are figure-U shaped and have openings on the opposite side to a core's end-face where the jumper wires are disposed, so that, in order to insert the jumper wires into the openings, complex drive controls have been required for the connecting portions being figure-U shaped. The length portion and the width portion each include sliders that may be positioned in an abutting relationship with areas of the foot. In this case, the amplification of low frequency components are performed by the switching regulator, and the amplification of high frequency components are performed by the linear amplifier and the high frequency amplifier. The microaspiration tip extracts and encapsulate a cell into an ultra-low volume plug. The mold assembly preferably includes two mold members held together by a gasket.

1459826473-ae0ece08-8601-4634-a837-e7b629a77146

A new and distinct cultivar of *Alstroemeria* plant named \u2018Jalua\u2019, characterized by its erect and strong flowering stems; vigorous growth habit; large light red purple and yellow-colored flowers with purple-colored flecks and streaks, flowers arranged in symmetrical umbels; and excellent postproduction longevity. The lighting devices communicate over a wireless network using radio frequency communication protocols. Different confidence ratings are assigned to different segments of the content based on determining that the different segments correspond to different thresholds of the predetermined criteria. The absorption member is arranged at a position opposed to the nozzle plate and located farther from openings of the nozzle plate than the recording object in a direction in which the liquid is ejected. The potassium sulfate is an additive for improved high early strength and accelerated setting times, thereby allowing the concrete structure to be put into service sooner, reducing labor cost, and allowing precast concrete and concrete masonry manufacturers to achieve rapid form and mold turnover.

1459826474-060a24bb-3883-47e8-baad-8ec4f886214a

The invention discloses design concepts and means and methods that can be used for enhancing the reliability and extending the operating life of electronic devices, and assemblies incorporating such devices, and substrates and/or PCBs, especially if such assemblies are exposed to severe environmental conditions such as thermal cycling or power cycling. A donor eNB can create at least a portion of a tunnel endpoint identifier for a relay eNB communicating with a UE or other device. In one embodiment, the transponder operates at 10 GBs. A carrier inflow width controller is included to control the width of a path of carriers flowing from the p-type electrode into the active layer. The composite signal includes the first video data stream modulated to a first radio frequency band associated with a first user and the second video data stream modulated to a second radio frequency band associated with a second user.

1459826474-1e1e27ba-5872-4af6-bc0b-b21ffb6cc974

This invention provides cephalosporin compounds and salts thereof. The camera focusing system includes a distance measuring device, a video receiver that receives videoimages, a graphics overlay unit, and a monitor. The method and system also includes computing the number of photographs required to be taken and the azimuth angle of the center point of each photograph for building a spherical environment map representative of the spherical panorama. Further, the present invention relates to an integrated circuit and an electronic apparatus comprising the device for generating a random sequence according to the invention. All of the skirts have the same outer peripheral size and shape. When both the SC and IS are mutually authenticated, the IS and the specific customer are allowed to complete the registration process.

1459826474-84c556df-126f-4fcb-b502-d8104f12b63a

A bedding assembly having a storage area integrated therewith. Feed enters the gas-phase thermal zone, where it passes to a liquid-phase thermal zone. In addition, in case where a flexible printed circuit is used to connect the connector and the circuit board, the plurality of terminals included in the connector can be connected simply with the circuit board and interference with other components can be minimized.

1459826474-e8592132-f91c-4278-b872-9f7e5cec965c

A device is for separating water and contaminants from fuel that is being supplied from an upstream fuel reservoir to a downstream internal combustion engine. The system includes a first bone plate extender and may additionally include a bone fixation element and/or an additional bone plate. A second portion clamping engages the beverage bottle to hold the cap on the bottle.

1459826475-6623e33e-b74c-418d-ab19-0281a2e35125

A user-wearable illumination assembly comprises a mounting fixture that is adapted to be coupled to a user-wearable device, such as eyeglasses, goggles, face masks, helmets, or other devices. When a detectable member is operated and a force applied from a displacement electrode to the movable switch electrode reaches a specified value, the movable switch electrode is elastically deformed and depressed drastically with buckling at the nearly top portion thereof and is brought into contact with the fixed switch electrode. Orientation pegs are provided along the sealing surface of the air dryer manifold and receive corresponding indented regions in a cut out region in the mounting bracket. In another embodiment, the probe includes a generally spoon-shaped transducer including a plurality of individual emitter elements.

1459826475-837de649-b383-4b75-ae4-eb676f1f332a

A method for providing intake air to an engine in a vehicle comprises delivering compressed fresh air and EGR to the engine via first and second throttle valves coupled to an intake manifold of the engine. In one particular example, the size of the speech data portion and the size of the non-speech data portion are variable. In one embodiment an inorganic-organic hybrid coating is formed by combination of a sol, prepared by the hydrolysis of tetraethoxysilane and  $\gamma$ -glycidoxypolytrimethoxysilane with an excess of water, and a sol, prepared by the hydrolysis of titanium tetrabutoxide and  $\gamma$ -glycidoxypolytrimethoxysilane with a deficiency of water. The light guide comprises first optical means to orient received light rays approximately parallel to the rotation axis of the index, and second optical means to focus the previously reoriented light rays towards at least the first exit surface. Spacing elements are found on opposite side of the chain, specifically between the guide links and the adjacent outermost inside links.

1459826476-a3c086a5-b8e0-4ab1-81ee-a0b55336f3ac

A method of analysis to process jitter information by using a window average statistic model to determine a pointing accuracy. A determination is made as to whether a data processing system is publicly accessed. The ARSE techniques produce a code spectrum transform yielding a power spectral density versus spreading code index relationship from which the spreading codes in the received forward link signal may be identified. Even if the distance of image shifting is great, an image of a high resolution can be formed and dimensions can be measured in a high accuracy. The BIOS having a set of macros, each macro of the set of macros having a reference to an effector of the set of effectors, each macro of the set of macros having a set of arguments. In order to accomplish a simple construction requiring a minimum of space, the one or more devices that generate that tactile response may include at least one piezoelectric element configured to generate vibration which is forwarded to the user in response to a key of the touchscreen keypad being pressed.

1459826476-e3c97c34-4dcc-4924-a0e9-aa84baa833a6

The present invention is directed to the use of an improved hydrocarbon adsorbent coating for the treatment of evaporative emissions from a motor vehicle. The grooves are shaped to provide for substantially uniform steel disk temperatures in friction launch of a vehicle. The printer managing server, when receiving a subject-of-registration-device identifier, tentatively registers the received subject-of-registration device identifier to the storage device.

1459826477-139e985f-a78e-4a90-b187-4d34122e5da5

A molded clip for closing bags and the like includes a pair of claws with a latch and a hinge at opposed ends. In this context, the internal combustion engine includes at least one adsorption catalyst in at least one exhaust branch. Signal values may be calculated for each of the microphone.

1459826477-251fe782-17a3-45ac-bd7c-d1f2df1ff3bf

A method includes simultaneously collecting both x-ray count data and energy charge data from a single cell. The compartment divider can be attached to a longitudinal wall of the box-shaped body and extends over more than half of a depth of the box-shaped body. A second transistor has a source coupled to the drain of the first transistor, a drain coupled to the second node, and a gate. Sockets are provided in the resilient webs of the keys for receiving under-blocks co-molded to the light-strips. Based on compliance by the bulk message sender with the set of policies, digital communications sent by the bulk message sender are distinctively treated. The cooling sleeve has a cylindrical base member and a cooling pipe spirally wound on the outer peripheral surface hereof.

1459826477-64935fc0-39d9-410d-97e8-2dda53dcf0ea

A method for fabricating a semiconductor lighting chip includes steps of providing a substrate with an epitaxial layer thereon. Upon the reception of the audiovisual content, frames annotated with watching levels are extracted and displayed in a single view. The caliper bracket includes lower-side and upper side circular-shaped counterbores which are opposed, respectively, to the counterbores of the brake caliper.

1459826477-f124ac78-92b4-4581-9496-35989430def7

A zinc oxide precursor for use in deposition of a zinc oxide-based thin film contains a zincocene having the following formula or a derivative thereof: where R<sub>1</sub> and R<sub>2</sub> are hydrogen or C<sub>n</sub>H<sub>2n+1</sub>. The portable terminal includes a shielding member disposed on an external part, a first coil disposed on a surface of the shielding member that faces the external part, and a second coil disposed on the surface of the shielding member, and surrounding the first coil on a same plane. Audio input corresponding to the current terrain is received for the plurality of positions. The first and second ends of the spacer are inserted at least partially into a first counter bore and a second counter bore formed in the lower and upper vane rings. The object measuring apparatus calculates the number of moving objects passing the boundary line on the basis of the integral value. The printhead assembly comprises: a printhead having an ink ejection face; an ink supply system for supplying ink to the printhead; and a foaming system for providing a liquid foam on the face.

1459826478-0113790c-b753-447d-ad5c-fc90eae328a0

A package includes a base body to which an electronic device is fixed, a lid body that faces the electronic device, and a frame body that encloses at least one of a space between the electronic device and the lid body, and the electronic device. A foundation for supporting the outer cylinder is provided. The interface between the block and the heat transfer device contain a number of tongues and grooves to allow for positive location of the block against the heat transfer device while the clamping mechanism is fastened to the support. A microprocessor can then determine which of the first and second zones a head is reading, based at least in part on which of the first and second demodulators detects the SAM pattern. The whole

system has a configuration which has a reduced number of lenses, and which is small and simple. The write access of the second entity to the first data is locked.

1459826479-06b1009b-b1de-4f63-bb6a-938f2af60075

A method and system for operating a photovoltaic module includes providing a reversed electrical bias to the photovoltaic module. The actuator may include an array of a thousand or millions of individual actuator cells for strength and mechanical robustness. A specified pattern is sent, and the output bins are investigated to look for that pattern. A frame drive is coupled to the lower frame for moving the two frames between loading and unloading positions. The present invention also relates to a system and method for automating the process of analyzing hardware failures that cause path and parity alarms in a telecommunications digital cross-connect system used in a long distance network. According to the inventive method, the yarn feed device pulls the yarn from the supply spool with varying speed and forms and maintains a yarn intermediate store.

1459826480-0f309d5b-af7d-4f46-8de7-70cd5b46771c

Provided are methods and a system for the transbronchial reflectance oximetric measurement of mixed venous oxygen saturation in the pulmonary artery of a patient, and a device therefor. Such novel pyrimidine derivatives are useful in the treatment of abnormal cell growth, such as cancer, in mammals. The cam-contacting sliding surface is formed as a concave surface to provide better retention of the lubricating oil. The second end of the panel is selectively pivoted upwardly from the frame to define a deployed position. A preset value that presets the loop divider is changed to adjust the phase of a feedback signal with respect to a reference input signal.

1459826480-c0247c13-49de-4461-9dd4-b4e60dcf68bd

To provide a transparent resin molded product with less yellowing due to thermal deterioration of a dispersant by melting and kneading during molding process, and having excellent visible light transmittance and excellent heat ray shielding function. The first instruction processing unit is adapted for receiving and processing a stream of instructions, and for issuing, in case data is required by a certain instruction, a corresponding data read request for fetching said data. A nitride layer is formed on top of the oxide layer and holes are etched for the source, drain and gate contacts. An external calibration signal from a stationary RF-source is sequentially injected to all of the phased array antenna elements so that different phases of the external calibration signal arrive at each of the antenna elements. Accordingly, the phase relation among the plurality of signals at the point of generation is the same as the phase relation among corresponding signals obtained after the time division multiplexing. The wafer has electrically conductive sites on the surface for soldering to the posts.

1459826482-19d9f6a6-541f-404a-8375-9791bfd87fa9

Aspects of the disclosure provide an integrated circuit that includes a processing unit and a signal-terminal matching circuitry. To prevent heat-sensitive filling material from being heated up when it is passed through the filling wedge, arranged between the feed channels and the wedge surfaces is a means reducing the heat transfer, preferably in the form of a respective cooling channel. There is also a process that has the semiconductor wafer being inclined with respect to the direction of flow of the etching medium, so that there is an angle of less than 180 between the direction of flow of the etching medium and a first side of the semiconductor wafer. Output circuitry is provided for detecting the logic state of the bit stored by the memory cell, such output circuitry comprising a position sensor for detecting whether the structure is in the first position or in the second position. The substrate transfer robot transfers the at least one substrate from each of the cassettes to the second apparatus.

1459826483-78024ddc-a740-47d2-8539-90b8ade7cb43

The disclosure provides mutant ribonucleotide reductase strains of poxviruses including for example vaccinia viruses. The pedestal support heads are each connected in a matrix orientation with a plurality of horizontal stringers. After storing the data, second storage values are read from the cells using the read reference levels, so as to reconstruct the stored data. The audit log is retrieved from the protected memory in response to receiving an attestation request.

1459826484-2ac7d89b-1c09-401e-a7aa-ff16f29d13e2

A telescopic mascot includes a head core, a shoulder supporting the head core and a body having a pair of upright telescopic tube assemblies adapted to support the shoulder. The semiconductor device includes a dual stacked MIM capacitor formed on the semiconductor substrate. Before outputting the starting signal, the switching element is ON as a stand-by state. detecting an overspeed signal from the at least one stage, and ii.

1459826484-91c89174-e797-4782-99e3-df39a9126236

An imaging device supports the taking of an image with a suitable composition without requiring user operation. A device receives via a single transport layer connection a plurality of packets carrying a plurality of protocol data units. As a result, gaseous contaminants that include organic molecules are reacted to alter the polarity and reduce the molecular weight of the molecules. , when data encoded by a run-length coding method is re-encoded by a coding method using typical prediction, the data is conventionally temporarily decoded into original data before encoding and then re-encoded.

1459826484-a0df30cb-1037-4da4-9d70-617f5e810c53

Local mobility within a subnet is supported by classifying wireless base stations, and the routers used to forward packets to those base stations, within defined domains. If traffic needs to be redirected from a primary physical interface, the router remaps the virtual interface to the backup physical interface without needing to update routes and select one or more alternative routes due to the need to redirect traffic. A second wafer includes at least one first MEMS sensor second subassembly, at least one second MEMS sensor second assembly, and a fusing matrix. The server subsystem comprises an interface, a processor, and a memory. Partially immersed versions have higher efficiency and protect against severe weather by inverting into the water. This invention further relates to methods for producing maize varieties derived from maize variety X08B735.

1459826485-45c556b1-bf5d-4a2a-b083-5f1ac97e5e07

A method and system for producing false three-dimensional images for amusement may be used in haunted houses, fun houses, or similar attractions found at fairs, amusement parks, and/or tourist areas. A rubber composition exhibiting an improved abrasion and cut resistance is based on at least a diene elastomer, a reinforcing filler, a crosslinking system, and a plasticizing system comprising between 5 and 35 phr of an MES or TDAE oil and between 5 and 35 phr of such a resin. The feeding device is for transmitting a microwave signal.

1459826485-92099042-4fd9-499b-bae7-7ee313c6d154

A ceramic precursor batch composition comprising inorganic ceramic-forming ingredients, a binder, an aqueous solvent and a heteroatom polyol agent. The present method achieves minimum dot visibility for a given dispersed-dot screen by performing a CMYK to CMYKRGB conversion which uses less visible dots as much as possible before more visible dots are introduced. Based on the reputation, the most secure route, which can have multiple paths, is selected for packet communications. Data is obtained for layers in each of the number of section cuts. The one or more alternating-field components are configured to provide an alternating magnetic field having a microwave frequency and an orientation that is at least partially transverse to the magnetic write field. The long-term performance degradation and self-discharge caused energy losses of the electrical double layer capacitor can be

reduced.

1459826486-166a1c9e-24d6-4c43-a344-2bf2e93e669d

A armrest portion moving forward away from seat backs for allowing an object to be placed thereon is provided at the central portion of the seat backs of a rear row seat, and a movable cushion provided at a central portion of seat cushions in the vehicle width direction. The flexible device is advanced distally beyond an outer layer of the annulus fibrosus. The inks are sorted in order of glossiness.

1459826486-267a5dc8-fcc0-4518-b69d-b33e36ec5e2c

A handle pipette including at least one cylinder with an upper end and a lower end, said cylinder having a movable piston, an elongate handle, by which the pipette can be manually gripped, said handle having an upper part, and in the upper part of the handle, a sideways extending finger support, which finger support is at least partly flexible and/or it can be shaped by the user. The method also includes determining a first and a last storage element of the wordline to identify a set of storage elements. The first recording layer is formed with a continuous first microscopic pattern of grooves that is different from the second microscopic pattern. A connector connecting the cushions creates a valley to receive an upper arm of the user.

1459826486-3aeae967-68a8-4b29-9a7d-48c95290f4aa

An airplane security system, particularly for a commercial airliner, includes an on-board device for allowing a person not on-board the airplane to override an on-board piloting system for the airplane. The system comprises a solid modeler and a nonlinear equation solver. A remaining portion of the spacer material remains over the top surface of the gate electrodes and over the doped region, and a portion of the protective layer remains over the doped region.

1459826486-cfa81c75-c999-4d26-81b5-1799b2f703aa

Providing a UVfluorescence detecting apparatus and a sensing method thereof which is capable of detecting a fluorescent pattern and an ultraviolet reflection light and small and cheap. The labeling sheet comprises a plurality of friction coated labels removably secured to the release liner. A presser includes a pressing plate connected with a rod, the pressing plate is inserted into the first cup to force contaminated water in the first cup to pass through the one-way valve, the filtering part and is collected in the second cup. This prevents the driver circuit TFTs from being damaged. Using helium, the shelf life determination can be accomplished in about 17th the time of conventional shelf life tests. The second fiber ply runs on the first wire into the combining section at an angle less than 90° with respect to the belt entering the combining section.

1459826487-03e4e359-9f87-41d7-a759-8f6affdba970

Methods and apparatus for mixing and delivery of process gases are provided herein. The scan test circuitry comprises scan cells configured to form scan chains. The bismuth telluride nanoparticles may be dispersed in a matrix material comprising particulate bismuth telluride. The cable management system may have an articulated arm with a first end coupled to the assembly and a second end coupled to the first part of the slider mechanism so that bending of the arm accommodates movement of the electronics assembly. A notification may also be provided from wireless communication equipment to a communication device to which it is operatively coupled responsive to receiving a notification that remote wireless communication equipment has determined that the wireless communication path should be shut down. In some embodiments, a workpiece may be processed at one or more of the positions using two or more processing stations, such as a first processing station that cuts the workpiece into segments and a second processing station that performs another processing operation on the workpiece.

1459826487-42c2c4ed-8a97-480a-b421-33890cc83a52

The present invention relates to a process for forming a near-planar or planar layer of a conducting material, such as copper, on a surface of a workpiece using an ECMPR technique. A strap is provided for securing the blanket in its folded condition, and a handle is secured to the storage pouch for enabling the blanket to be easily carried when secured in its folded condition. The first data storage unit is connected to the bit line. Each hook is inserted through the elongated opening of a corresponding connector with the bump on each wing fitted inside the opening of the hook to retain the hook inside the body of the connector. The chargedischarge speed controlling circuit, according to the first analog signal, outputs a control signal to the chargedischarge circuit to adjust a chargedischarge speed of the cell. If wrap up of departure times is possible, departure times are transposed based on a zone associated with the last departure time.

1459826487-da115801-81ef-43d1-9150-2105f3d9b841

With the mounting of a semiconductor chip onto a substrate having a portion of adhesive the bondhead is lowered to a predetermined height H above a support holding the substrate. The decision system enables separation of effects of defects within one component from other components within a common subject. The mobile device operates in a full communication state if the operating variable is detected to be within the first range of values, a first limited communication state if the operating variable is detected to be within the second range of values, or a second limited communication state if the operating variable is detected to be within the third range of values. This allows the optical pickup to be used for recording as well as for reproducing. As a result, an efficient search can be achieved when searching audio data.

1459826489-28775e01-a82a-49ac-b0af-89d2196f2d25

A lens module includes a lens barrel, at least one fixed focus lens fixed in the lens barrel, and at least two variable focus lenses fixed in the lens barrel. An incident indicates a performance of the application in which a problem object produces an outcome that had not been expected by a user or by a ticketing tool. A cathode layer is formed on the tunneling layer to provide a surface for energy emissions of electrons and/or photons.

1459826489-6915a566-dcaf-4e65-b033-f146bd23a409

A crud-resistant nuclear fuel element cladding in which the axial locations that experience nucleate boiling during reactor full power operation are highly polished so that the maximum size of any surface defect on the highly polished surface is approximately 0. The method comprises the step of determining if a random access response window value is being signalled from the network for a first serving cell currently associated with the user equipment node. Since the current is alternating, the associated motion of central axle is reciprocating, ready for the purpose of massage. The at least one heating device is located in the contraction section for preheating the airgas flowing through the at least one heating device. This unique design allows for construction of a precision virtual hole of very long depth, which enables two optical fiber studs to butt against each other with a core to core misalignment of less than 1  $\mu\text{m}$  for single mode fiber optics cables.

1459826489-fc274e5b-514a-4973-95af-e1a7de2ef4cc

An electrophotographic photoconductor, including an electrically conductive substrate, an undercoat layer containing a filler and a binder resin and provided on the substrate, and a photoconductive layer provided on the undercoat layer and containing a binder resin. Embodiments may identify systems of a cluster potentially impacted by an error and identify one or more error events associated with those systems. in the presence of a hydrogen-containing gas stream to form a reactivated catalyst. The inner body is configured to move along a longitudinal axis relative to the outer body. In addition, purchase orders for components needed for the IT migration based on the migration information can be generated using the IT migration tool. The arcuate side walls have a plurality of overlapping folded

flaps.

1459826490-a5206c0a-d3c0-4b9d-bce0-c1b06c698874

Topical formulations and method of using the same are provided. Under such bilateral data transfer system, each of the one-way data links may be subject to separately administered security restrictions and data filtering processes, enabling secure bilateral communications across different network security domains. The target object is also aligned to the reference object.

1459826490-c00926bf-3f18-4590-a39e-dd49ee0bb0ad

Sediment control devices and systems are provided. The central processing unit serves as a game board displaying unit to display a game board on a display, a game piece deploy controlling unit to initially deploy game pieces, and a game piece movement permitting unit to permit the movement of the game pieces. In other embodiments, additional processing may further include determining that the generating and sending of alert messages are to be delayed until a later time. A scanning laser vibrometer is positioned within the housing and directed to detect vibrations of the acoustic window.

1459826491-05db95d3-44a7-4773-9fcd-7dcfbc67365d

A transporting apparatus includes a transporting plane and a transporting platform which can be displaced in different directions in a largely friction-free manner on an air cushion above the transporting plane, the air cushion being generated by air nozzles which are distributed in the transporting plane and are adapted to be optionally opened and closed individually in each case by a valve. A first application, via a unidirectional communication with the first environment, modifies a first parameter, wherein the first parameter is extracted by a first interceptor that, based on a look-up, executes a pre-defined action affecting the first remote session. Thus, generated is a threshold matrix capable of reducing graininess in a halftone image with directionality in the tilt direction, and improving the reproduction of thin lines and characters. A mixing element is disposed within the compartment of the collapsible bag. The robot substantially reduces, or eliminates the out-gassing of hydrocarbon molecules in a range from about 0 to 200 a. The materials of construction are selected to also enhance trouble-free operation.

1459826491-ad91cec6-ba2d-4d09-9de2-133a3937592b

The present invention relates to novel felbamate derivatives and their use to treat neurological diseases such as epilepsy and to treat tissue damage resulting from ischemic events. The acoustic dampener further comprising a pair of side arms, each having a first end and a second end. The network node identifiers may be uniquely assigned by a network administrator, while the identifiers of the mobile stations may, for example, be set to a universal MAC address assigned to the station. The linear movement of the piston within the cylinder compresses a gas with a high compression exponent.

1459826491-d8917a76-631d-4697-81e1-bbafc792a1b5

Disclosed is a wire for arc welding of high feedability having a hardness deviation of less than 18 between a central portion and a surface of a cross section of the wire, and a hardness deviation of less than 15 between each interval of 200 mm in a longitudinal direction when measured by an Hv1 hardness tester. A single instruction is decoded. The systems and methods provide advantages in that the speed, reliability and accuracy of the design process are improved and the affect of circuit interconnects is taken into account.

1459826491-db36d880-1292-4005-bee1-2d46090e073f

The invention relates to a projection lens assembly for directing a beam toward a target. According to the inventive method, the test sample to be examined is first subjected to a method for accumulating or depleting tumor cells, and a reaction is

carried out on the accumulated or depleted tumor cells. A touch screen display is connected to the processor.

1459826492-1cf3936b-dbb1-4dff-9d6c-e00b4b23b183

A system and method for shaping the energy spectrum of a pulse train used by a pulse transmission system. The aperture stop, the first lens, the second lens and the third lens are aligned in that order from the object side to the image side. The bar carrier is driven in an oscillating manner with a superimposed horizontal and vertical movement by a crank mechanism drive. Each pixel electrode is disposed in the region, and is electrically connected to the thin film transistor.

1459826492-e9cf49a7-fbd0-49d0-8943-8aaff422a634

A system and method is provided for detecting emitter signals and for determining a scan strategy for a receiver system that receives such emitter signals. The predetermined period of time corresponds to a current speed of the motor upon arrival of the subject to be driven at the speed measuring position, and the speed measuring position is at a predetermined distance before a target stop position of the subject to be driven. A detection unit that detects a removal/attachment operation of at least one of the first and second connectors and an interruption unit that interrupts supply of electrical power to the optical transmission unit and optical reception unit when the removal/attachment operation is detected by the detection unit are provided. The completed product design can be uploaded to the server for production of the corresponding printed product. During the synchronization process, the system ignores objects stored on volumes that are not currently accessible to the portable computer. In addition, methods of producing the system carrier and the electronic component are encompassed.

1459826493-393f1037-8c3b-430f-bfea-82cf4e684f5f

A protection film is formed on a silicon oxide film 6 formed on the surface of a semiconductor substrate, a silicon oxide film is removed from a region where a thin gate-insulating film is to be formed by using, as a mask, a photoresist pattern that covers a region where a thick gate-insulating film is to be formed, and, then, the photoresist pattern is removed followed by washing. A capacitance element is disposed between the gate and the source of a driving TFT, video signals are inputted to the gate electrode, and then it is in the floating state. Furthermore, it takes into account data outside the realm of communications and the press, such as a company's commercial and financial market performance to normalise the quantitative results and facilitate comparisons between competitors. A second flexible shaft may be provided either within or about the flexible drill shaft.

1459826493-9786b2e6-ee11-4af0-9bc8-bcc6fa5ebccb

Techniques and tools for performing fading compensation in video processing applications are described. A flange extends outwardly from an upper edge of each depression. A scanning line 101 to supply a scanning signal to a switching element, such as a TFT, for the pixel is formed under a bank provided between the luminous elements and partitioning between the luminous elements. Such compositions can be used in numerous applications, including, for example, any application for which a soft material with very good recovery is desired.

1459826493-d301dbaa-7f3c-4437-93f6-38b0892db73a

Methods and systems for facilitating the selection of alternates for hand written word. The outer joint part includes a first longitudinal axis and a longitudinally running cavity with an open end. The computer system runs a security policy check on the mobile device.

1459826493-d95db7d3-1cce-4f38-9a0f-843b421382be

A machine-implemented method receives job specifications for at least one direct mail printing job from at least one user and creates at least one workflow related to the direct mail printing job. Each transport unit has side by side loading and

support capability and is operable to receive packages from induction stations and discharge the packages at an appropriate discharge station. Accordingly, the direction of a target is detected by finding the direction of the highest reflected-signal intensity. Accordingly, the electrical bus member mounting system consolidates a substantial portion of the electrical bus assembly at a single location within the second one of the sections of the housing, in order to facilitate access thereto.

1459826494-15a5cb6d-96af-42a2-9cb3-b9b87a5d3e85

One embodiment disclosed relates to a laptop computer system including a display casing, having display circuitry and a display screen, and a main computer casing coupled to the display casing. With this configuration, fine chips such as fine semiconductor chips can be mounted at desired positions on a mounting board with a high efficiency and a high yield. The sealing member has a locking portion to be locked by a locking member provided in a main assembly of the apparatus, and a coupling portion to be coupled with a drive coupling member provided in the main assembly. This design makes the width of the part of the bumper beam adjacent the vehicle small. The node forwards the received packets such that packets assigned to the LSP are distributed over two or more distinct component links of the bundle. During the assembly of the vehicle, the assembly line operator couples the propeller shaft to the input shaft through a cardan joint cross by aligning the marks on the propeller shaft and the input shaft so that the marks are located opposite to each other.

1459826495-718e09f2-06d7-489e-ad8f-3485adedfc0d

A thermoacoustic device is formed with a resonator system defining at least one region of high specific acoustic impedance in an acoustic wave within the resonator system. Further, test tubes having a diameter smaller than a width of the first lane extend between the walls of the first lane so that the test tube has a vertical orientation and is supported by a cap engaging a top edge of the walls of the first lane, and test tubes having a diameter larger than a width of the first lane rest on the top edge of the walls of the first lane in a horizontal orientation. An electrical signal processor is electrically coupled to the electrodes for processing the electrical signal and a patient alarm is further provided and electrically coupled to the electrical signal processor. A further embodiment transmits maintenance data during predetermined time intervals, coordinated between the field units and BTS, allowing power levels to be adjusted accordingly. A second member may be rotatably coupled to the first member, where the second member has a second surface that mates with the first surface to form a seal for the pocket if the second member is rotated to a closed position.

1459826495-ae638377-08c4-4971-9a20-bd814c472cb7

A vehicle lift control maintains multiple points of a lift system within the same horizontal plane during vertical movement of the lift engagement structure by synchronizing the movement thereof. The optical security element has a substrate layer in which a relief structure defined by relief parameters, in particular relief shape, relief depth, spatial frequency and azimuth angle, is shaped in the surface region defined by an X-axis and a Y-axis, for producing an optically perceptible effect. A data processing step coming after the simultaneous source separation acts to conform model-simulated data to the measured geophysical data for source and receiver combinations that are missing in the measured geophysical data. A decision engine retrieves the decision rules from the second data store and the account history information from the first data store, then determines, based on the decision rules and the account history information, whether a method override should be applied to the financial account. The growth journeys are shown through the role's progress in the game. The pharmaceutical composition is used for treating autoimmune and tumoral diseases and/or for immunosuppression.

1459826496-9e6ab8a4-c299-4dc6-9dba-d0dc65a3783d

A method and an apparatus measure blood oxygenation in a subject. The structure comprises two concentric hollow spheres spaced apart by a transparent fluid. The attaching end is opposite a handle end which a user grasps to rotate the device to block a portion of liquid being released from the exit port of a nozzle.

1459826496-a8979d28-76b7-439c-b0f5-f1fece809fa9

An electronic device and a method for changing an object according to a bending state. A headlight line defined by a top surface of the headlight unit and a fuel tank line defined by a top surface of the fuel tank unit together extend along a fixed curved line in a side view of the motorcycle. The auxiliary processor then monitors the speech of a user of the device to detect a wake-up command by speech recognition processing the audio signals in parallel. The mixture is injected into the water line at a mixing control valve to ensure that the water and surfactant are thoroughly mixed before being injected into the media carrier.

1459826497-00d6f923-6a39-4a78-b6d3-2df830c1d240

A system accurately performs function restriction on a user-by-user basis, even in the case of an image processing function that is realizable with use of a plurality of apparatuses. For each link to the destination, the link cost is calculated based on at least two parameters, the link having the lowest link cost is selected. The upper reservoir section is easily lifted and transported, such as by crane. It is thus possible to achieve a ball-joint like articulation, whereby the spherical surfaces may have a relatively large production tolerance without the above affecting the clamping connection between the articulation surfaces. The servicing execution logic is further configured to select one of the one or more servicers as a purchaser for a servicing asset of the mortgage loan from the lender based upon parameters specified by the servicers and/or by the lender. In addition, the encryption method includes the further encryption flag data in an adapted component of a modified transport header.

1459826497-229f16b3-f377-4d32-b2c3-9db529cf1544

A mobile station dynamically adjusts its data transmission rate based on periodic load indications from a base station. The burst mode optical receiver can automatically control a gain of a pre-amplifier according to the amplitude of an input optical signal using an output signal of a first peak detector. The system also incorporates features that promote ease of use by persons who are not skilled at using technology. At this time, when the film stress decreases, the total charge amount Qbd regulating dielectric breakdown of the film increases, improving reliability of the gate insulating film. Then, the laser radiation is illuminated to crystallize and activate the channel formation region, and source and drain regions. A field type from the plurality of field types is determined based on matching semantics of the received user input.

1459826497-b9a290e0-7ff3-4ffe-ac69-d64b02cbde00

A process for producing a modified polymer which increases low heat buildup and reinforcing capability of a rubber composition and which has excellent abrasion resistance, mechanical characteristics, and processability; a modified polymer obtained by the process; and a rubber composition using the modified polymer are provided. The device has a handle and first and second pluralities of tines having different heights. A signal is generated from the bar code format to simulate a reflection of a scanning beam being moved across a static visual image of the bar code format; and the signal is transmitted as light pulses from the mobile communications device. The cartridge identification information includes at least one feature on the tape cartridge leader having characteristics indicative to the tape handling device of the format of the tape cartridge presented to the tape handling device.

1459826497-dbe338c2-600f-44fd-88d3-96b8993ef916

A printed circuit board includes a positive differential signal line including

first and second segments, a negative differential signal line including third and fourth segments, first and second connecting elements soldered on opposite surfaces of the PCB. The male support base is fixed on the upper frame of a blind and provided with a protruding clasp block having its upper side formed with an engage shoulder. Also included is a top electrode which is electrically isolated from a top ground extension. A component interface creator automatically generates a component interface based on the information gathered by the parsing mechanism. The mail stream is then divided by alternately supplying the mail items to two gap-correcting units, in which said mail items are shifted to the ejection gaps in such a way that the required minimum gaps are attained after both partial mail streams have been combined.

1459826498-7243bacb-da71-4c96-8b0e-d35d541ffa0

A device for spacing, bracing and leveling tiles during installation on a ceiling substrate, comprises a, spacer and a bracer having a threaded substrate penetrating screw to releasably engage with the substrate for bracing and leveling tiles. In the preferred embodiment, the hierarchical multiplexing method comprises sequentially processing a packet at each of a plurality of hierarchical levels by characterizing the flow at each hierarchical level and either passing or discarding the packet. The device compiles the GPU-executable portion of the program code to create a compiled GPU-executable portion of the program code, and compiles the CPU-executable portion of the program code to create a compiled CPU-executable portion of the program code. The triple point is allowed to move if the critical angle is exceeded. A double-sided adhesive foam tape is provided on an interior wall of the channel section to bond the molding to a glass panel received within the channel.

1459826498-a556774f-ce49-4fdd-86e1-7aeef11dd9b9

Apparatus and methods are described for encoding and decoding an enhancement layer. The method also includes requesting and receiving credits from an end controller and responsively incrementing a credit counter. A method for producing the sheath liquid and a method for analyzing particles using the sheath liquid are also described. Preferably, the application definition file is an XML file.

1459826499-3be1a67e-8e49-4bd8-9dfa-55cbbaa2aa8b

An electronic circuit is for the gradual start-up of electric loads, particularly halogen lamps. The apparatus determines an operational state of a header compressor or a header decompressor by determining a transition between different operational states associated with the header compressor and/or by determining a transition between different operational states associated with the header decompressor. A reallocation fraction is then calculated based on the initial composite rates. The scanner device also includes a display device that displays images in response to the metallurgical, nondestructive testing.

1459826499-557f11f4-c005-4b6e-bb21-209408a1bbcb

Disclosed are compositions for anchoring materials in or to concrete or masonry. The CRS server includes a plurality of software modules, including a runtime server, a master server, a simulator, a query editor, a report generator, a report editor, a seating chart tool, and a simulator. The following operations are repeated until a threshold criterion is satisfied. An associated server-based service enables discovery of the virtual peripheral hub device and connected peripherals. The level shifting switch turns on in response to the level switching signal.

1459826499-63bf10a2-07e4-404d-8947-8f240130d8ad

For synchronization purposes, a transmitter multiplexes a pilot carrier with carriers whereon data elements are modulated, and transmits the pilot carrier together with the modulated carriers to a receiver. Nozzle holding means operation control means for controlling hardening operation on a workpiece by the nozzle are provided, and communication control means are provided for exchanging information

necessary for hardening operation on a workpiece to be machined with each machine tool between the control means and a control means of each machine tool. A gate valve is coupled to the gate collar. The data delivery network is selected for the communication from the multiple data delivery networks. Also disclosed are methods of use of various embodiments for the intonated string nut and string-locking mechanism.

1459826499-9578b62f-f34c-4fb7-8ad9-36c689db5f63

A towable, articulated elongated traffic barrier includes traffic barrier modules having articulating interconnected ends. The moving rig 1 has at least two field coils 7. An autocorrelation matrix having noise-related eigenvectors is generated in response to the signal. When the proxy client wants to access a target service on behalf of the user, it sends a proxy request to the trusted security server. A method or compiler for generating or compiling a file that contains information used by a device to change the user interface presented by the device. In another embodiment, the workload requirements are obtained as a detailed list of transactions, expected execution rate of those transactions, and the composition of those transactions, including SQL statement type and parameters upon which those statements operate.

1459826499-b6028ba7-21c5-443c-862c-a0af155c0b23

A system and method are provided for assembling of a bundle of conductors into a connector that defines a plurality of cavities for receiving the conductors. The first support member is secured to the second support member with the first plurality of fins nested between the second plurality of fins. Methods for preparing crosslinking agents are also disclosed.

1459826500-05e67ffe-7a76-43dd-b386-83110608bbac

A media management module maintains and uses device profile data stored on a computer-readable medium. A network interface then sends the graphical commands via a home network to a media center extension, where a display interface renders the graphical commands into the user interface on a television. The device incorporates a voltage reduction circuit which reduces a voltage from its network value to approximately the nominal lamp voltage, while also retaining the lamp itself and connecting it electrically. The first gate insulating film includes a first insulating material with a first element diffused therein, the second gate insulating film includes the first insulating material, and the amount of the first element contained in the first gate insulating film is greater than the amount of the first element contained in the second gate insulating film. The pocket is disposed on the closure flap.

1459826500-06ef6c6f-83fe-445f-b3bb-0543b8e427e0

Embodiments of the present disclosure are directed towards a bullion arbitrage kiosk portal device that enables a customer to buy and/or sell precious metal bullion. The combined feedstocks are subjected to molecular averaging via dehydrogenation to form olefins, metathesis of the olefins, and rehydrogenation of the olefins to form paraffins. The outer tubular body completely overlies the distensible stent.

1459826500-ce89e7f8-6aa8-4454-bf35-ccd14d246f57

In the present invention, for each set of blocks # to # storing update data, a history block # storing an update state value, for example, a generation, time or check code, showing an update state is provided, constituting a set of management data as a check object. The package is defined by a unitary package piece that is divided into a set of sections, and each of the set of sections is capable of having printed data thereon. The UTRAN interface may be an lu interface, an lur interface, or an lub interface, which are, respectively, interfaces between a core network of the UTRAN and a radio network controller of the UTRAN, an interface between RNCs of the UTRAN, and an interface between a Node B of the UTRAN and an

RNC of the UTRAN.

1459826501-50480dde-fe13-4501-aee1-5ca6c34d1c9c

Text in web pages or other text documents may be classified based on the images or other objects within the webpage. The pivotal arm 14 and guide 16 are detachable from the rafter square portion 18 by unscrewing the thumbscrew 20 that secures the device to its pivotal point 22 located on the heel portion of the right angle square 18. The mobile card can be virtually inserted into an electronic gaming machine when a portable electronic device with an associated mobile application is in the vicinity of an electronic gaming machine.

1459826501-59c76b82-3097-4702-82cb-fde0ab9ec58d

A golf training apparatus and method for maintaining proper position of a golfer's hands on the grip of a golf club during a swing. A theoretical wheel speed for an inside non-steered wheel is computed. A selection of one of the graphical components is detected.

1459826501-a05026a9-c7d8-4f3d-a8d5-9105671cc28d

An apparatus and a method are provided for discharging a plurality of fluids downhole. Anonymization strategy for data anonymization is provided. For ease of use and adaptability, the various functions of the device are separated into multiple units.

1459826501-c861f229-b0bf-48d9-b1b7-c589c60d3482

Methods of analyzing three dimensional data sets obtained from a sample over time are provided. A second permutation specification of a second permutation of the first plurality of inputs is generated, the second permutation being a composite permutation of the first permutation and the permutation modifier, reflective of the first specified interaction between the first permutation and the first permutation modifier. Multidimensional functions with multidimensional parameters can be tested. When two differential side gears turn synchronously, the differential pinions turn around the power input sprocket gear. The inventive flat sealing material is suitable for highly stressed joints, in particular for cylinder head gaskets.

1459826501-edd5c8e6-bc52-4360-be25-3d11c4a0c7b5

The present invention provides a block useful in the construction of walls and structures that is shaped in the general form of a rectangular solid. The interposer can surround or be placed side by side with the controller die. The RAID subsystem and disk manager dynamically allocate data across the pool of storage and a plurality of disk drives based on RAID-to-disk mapping.

1459826502-32dd7b66-bf8e-4fe6-9034-6bd44ded9911

The invention concerns the use as direct dyeing agent of at least one tetra-azapentamethine compound, a dyeing composition comprising at least such a compound, as well as a method for dyeing keratinous fibers, in particular human keratinous fibers and more particularly hair, which consists in applying at least one composition comprising such a compound. Communication from the base to the terminals is by way of a radio-frequency carrier having a first frequency, and communication from the terminals to the base is by way of a second radio-frequency carrier having a second frequency. The vector switching circuit fixes the vector to 0 vector in the case where the moving vector detecting position is adjacent to the effective image edge portion.

1459826502-47f4cd3f-c75c-41cb-add9-b63b3800d30e
